Brood mare, Rokeby Valeria	Mr Blunt	43
Brood mare, Blackmore Belle	Mr Blunt	42
Brood mare, Calwick Lassie	Mr Leek	10
Peak Lilly, two-year-old filly	Mr Hardy	48
Peak Lilac, two-year old filly	Mr Smith Carrington	58
White Meadow, yearling filly	Mr Kearns	45

Devon Cattle Breeders' Society.

At a meeting of the Council of the Devon Cattle Breeders' Society held on Thursday at Taunton, the sub-committee of the society reported that at a meeting held on August 2 it was resolved to ask the Bath and West Society to provide two classses for pedigree Devon cows at their Dorchester meeting in 1908, one for milk dairy and one for inspection. The secretary wrote in accordance with this recommendation stating that if such classes were provided the Devon Society would be in a position to offer prizes and subscriptions. Mr. Plowman, secretary of the Bath and West Society, replied that the Stock Prizesheet Committee had resolved to recommend the acceptance of the proposal.

On the proposition of Mr. Kidner, seconded by Mr. C. L. Hancock, it was decided that a show and sale of Devon cattle be held at Exeter on or about February 19 next, and that the prizes be the same as last year.

Sir Gilbert Greenall, hon. director of the Royal Agricultural Society, wrote that they were preparing the schedule for their next show at Newcastle, and hoped the Devon breed would be represented.

A letter was also read from the Hon. E. W. B. Portman, of Hestercombe, Taunton, saying that he thought it would be well for the Devon Society to keep pegging away at the Royal for more classes for Devons and better prizes. He thought it most undesirable that two-year-old and yearling heifers should be exhibited in one class.

It was agreed that Mr. Risdon should write to the secretary of the Royal Society urging the desirability of having one class for male and one for female, and to express the opinion that it was not right that animals of mature and younger ages should be shown in the same class. It was also agreed that the Devon Society give the same champion prizes as before for the show at Newcastle.

RECEIVED TOO LATE FOR CLASSIFICATION.

FOWLER, P. T., Importer, Watford, Herts. A choice selection of pedigree Jersey and Guernsey Cows, Heifers and young Bulls from prize herds of the Islands; particulars forwarded; inspection invited.

BELL, CHARLES, Norley Hall, Norley, Cheshire. Shorthorn Bulls for sale, from Kirklevington, Red Rose, Barrington, and Cruickshank tribes. Telegrams "Norley"; railway stations, Acton Bridge and Delamere.

BLACK CURRANT BUSHES. An extensive stock of strong fruiting bushes offered at very low prices. Naples, 3 and 4-year, £3 per 1,000. Naples (extra branched), 2-year, £2 10s. per 1,000. Send for samples. Our plantations are perfectly free from Mite.—E. W. Beaven, Fruitgrower, Holmer, Hereford.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The season has become more favourable for autumn sowings, but the work on the farm is much in arrear. Wheat will be sown with freedom where the thing is practicable; it is a pity that the season is against a general desire to trust the approaching year. The markets have been weaker since the 21st, but no real reaction has to be chronicled, and the rush of supplies does not look as if it would continue for many weeks. Barley, of course, is king just at present, market sales exceeding those of wheat and oats combined. There is a large crop of second grade, and the price made for it, though not high, is just above remuneration level; farmers are not losing by the crop. Malting barley of the first quality is so scarce that fancy prices are mooted, in fact, 46s. is said to have been paid for finest Bohemian for prompt delivery. The new malt is not yet on sale, but is expected to touch 40s. for pale and be quoted about 36s. for brown.

A welcome exception to the general inefficiency of our consuls is the British Consul for the three "Pacific" States of Idaho, Washington, and Oregon. Would that California, which is about as important as the three put together, could be added to his charge! He tells us, in a report dated October, 1907, and just to hand, exactly the things that English farmers want to know:—

"The largest wheat farms are in Eastern Washington and Oregon, an average of twenty-two of the larger farms being 1,500 acres. The average yield in Idaho is 25·4 bushels winter wheat and 23·8 spring wheat per acre, the average farm value being 2s. 4d. per bushel; in Washington, 24·1 bushels winter wheat, and 19 bushels spring wheat, average value 2s. 5d.; and in Oregon, winter wheat 22·3 and 17·5 spring wheat wheat averaging 2s. 8d. Wheat can be grown on these large farms at about 1s. 1d. per bushel when there is an average crop. The yield of oats is, per acre, 42·3 bushels in Washington, 40·7 in Idaho, and 33·8 in Oregon, and the average farm values 1s. 8d. in Oregon and Idaho, and 1s. 7d. in Washington. The averages of barley are 41, 36·5 and 35 bushels per acre in Idaho, Washington, and Oregon respectively, and average values 2s. 1d. per bushel in Oregon, 2s. in Idaho, and 1s. 11d. in Washington."

Similar reports from the other forty-one States of the American Republic would be simply invaluable, and the officials of the Canadian districts of Manitoba, Saskatchewan, and Alberta might do well to imitate the methods of Mr. Conul Laidlaw. The fine Oregon wheat, which fetches 21s. 4d. per qr. on the farm, costs 43s. in London; so that 21s. 8d. is swallowed up in charges of one sort and another. English farmers should note this, for it threatens severe competition whenever the American people get the upper hand of these Trusts. The Oregon barley, which the farmer sells for 16s. 8d. per qr., is now fetching 33s. per qr. at Mark Lane.

Some leading prices per ton are as follows. Where there is uniformity of weight comparison is facilitated:—

	£	s.	d.
English wheat	8	1	6
New Maple peas	8	0	0
Fine middlings	7	15	0
Egyptian cottonseed	7	8	9
English barley	7	6	9
English rye	7	1	3
Russian oats	7	0	0
Maize germ meal	6	18	9
American maize	6	10	0
English oats	6	9	0
Indian dari	6	6	8
Indian cottonseed	6	5	0
Good bran	5	15	0
Locust beans	5	10	0
Dried ale grains	5	5	0
Malt corms	4	5	0
,, screenings	2	17	6
Ground rice husks	2	15	0
Coffee husks	1	15	0

The sales of British wheat at the 186 statute markets since September 1 have been:—

This season ... 511,000 qr. at 32s. 4d. per qr.
Last ,, ... 568,000 ,, 26s. 0d. ,,

The smaller offerings have had, as will be seen, a most admirable effect on prices.

The sales of British barley thus compare:—

This season ... 492,000 qr. at 25s. 3d. per qr.
Last ,, ... 912,000 ,, 24s. 8d. ,,

Of British oats the sales have exceeded those of last season, without making the price unremunerative. This is a good feature of the present autumn.

This season .... 330,000 qr. at 17s 9d. per qr.
Last season .. 277,000 qr. at 16s. 4d. ,,

The price of English rye and buckwheat is also higher on the year, though no official figures are published.

The wheat gradient last week was as follows:—

Mark Lane	35s. 11d.	per qr.
Norwich	33s. 5d.	,,
Range	2s. 6d.	per qr.

The East Anglian markets are just now at the top of their supply.

The barley gradient has been:—

Mark Lane	29s. 2d.	per qr.
Doncaster	25s. 9d.	,,
Range	3s. 5d.	per qr.

At Chichester 29s. 1d. was averaged.

The averages for oats are nowhere up to a sovereign, but, on the other hand, no markets are below 17s., so that a fair profit is being made.

Mark Lane	19s. 9d.	per qr.
Salisbury	17s. 5d.	,,
Range	2s. 4d.	per qr.

Mark Lane will be seen to head the list for all three cereals, and the London trade is in a thoroughly healthy condition.

The imports of the United Kingdom last week were:—

Wheat, 355,000 qr.: fair.
Flour, 161,000 sks.: good.
Maize, 283,000 qr.: large.
Barley, 186,000 qr.: heavy.
Oats, 99,000 qr.: moderate.

Imports of breadstuffs since September have been as follows:—

Wheat	3,298,000 qr.
Flour	695,000 ,,
Total	3,993,000 ,,
Last season	4,142,000 ,,

It is significant that despite a rise of 6s. 4d. in the wheat average the importation of foreign wheat and flour on the twelvemonth has not been increased. Holders are warranted in taking up a very firm position.

The quantity of wheat on passage to the United Kingdom on the 26th inst. was smaller than on the 19th. This is a very important circumstance, as it would seem to limit reaction in wheat prices to what the Term Market calls "near futures." The figures may with advantage be studied in detail:—

	Oct. 19.	Oct. 26.
California	105,000 qr.	140,000 qr.
America	390,000 ,,	360,000 ,,
Russia	250,000 ,,	215,000 ,,
India	658,000 ,,	560,000 ,,
Argentina	85 000 ,,	100,000 ,,
Australasia	415,000 ,,	360,000 ,,
Various	50,000 ,,	40,000 ,,
	1,953,000 ,,	1,775,000 ,,

Flour figures support the same conclusions as those for wheat, there being on the 26th only 226,000 sacks on passage against 246,000 on the 19th.

Other supplies on passage on the 26th were as follows:—Barley, 780,000 qr.; oats, 150,000 qr.; maize, 1,010,000 qr.; linseed, 160,000 qr.; rapeseed, 10,000 qr.; cottonseed, 47,000 tons; and rice, 30,000 tons.

The shipments of grain from North America last week were 476,000 qr. of wheat, 15,000 qr. of barley, 71,000 qr. of maize, and 160,000 sacks of flour,.

South America sent off 40,000 qr. of wheat, 152,000 qr. of maize, 60,000 qr. of linseed, and 4,000 qr. of oats.

Russia was a very energetic shipper sending off 394,000 qr. of wheat, 470,000 qr. of barley, 90,000 qr. of oats, and 48,000 qr. of maize. Roumania shipped 174,000 qr. of wheat, 172,000 qr. of barley, 52,000 qr. of oats, and 144,000 qr. of maize, which are large quantities for a country afflicted with a short home harvest to spare. We cannot, however, accept the exports as correcting previous reports, for the rests this spring were due to autumn sales out of the country of grain required by a starving peasantry.

India last week shipped 80,000 qr. of wheat and 32,000 qr. of linseed, while Australasia exported 19,000 qr. of wheat, and Egypt 15,000 tons of cottonseed.

LONDON HAY TRADE.

Saturday.—Although the weather has been somewhat finer during the past week it has as yet made little difference on the supplies which continue on a very restricted scale, there being a general shortage of all kinds and qualities, and the trading has been of a very firm description. Values show little change over last week's rise, but occasionally more money has been paid for extra prime quality lots.

So far the season has been a bad one for the London trade; with a large crop much lower prices had been expected, and contracts have been taken at rates which show heavy losses, and now with the small arrivals it is found extremely difficult to keep them supplied, and to do fresh business is well nigh impossible; consumers will not pay the enhanced rates, and are allowing their stock to get well nigh exhausted before buying. Clovers are a very firm trade, and mixtures and hays find a very strong demand; in fact, whatever the quality, a ready sale is found. Straw continues in fair request at about previous rates. The foreign trade is almost a dead letter, supplies are short, and very little business doing in this class of stuff, prices being nominally unchanged.

Prices ruling are about as follows:—English 1907 crop. Best hays, 70s to 75s per ton; good hays, 62s 6d to 67s 6d per ton; plain hays, 57s 6d to 60s per ton; best clovers, 85s to 87s 6d per ton; good clovers, 80s to 82s 6d per ton; inferior clovers, 72s 6d to 77s 6d per ton; best mixtures, 82s 6d to 85s per ton; good mixtures, 75s to 80s per ton; plain mixtures, 67s 6d to 72s 6d per ton; seconds hays, clovers, and mixtures, 45s to 60s per ton; wheat straw, 26s to 27s per load; barley straw, 26s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 60s to 62s 6d per ton; second quality Dutch hay, 55s per ton. New French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

HAY AND STRAW.

Birmingham, Friday. — Small supply. No quotations obtainable.

Derby, Friday. — Quotations:—Clover, best old, 90s to 100s; new, 80s to 90s; hay, best old, 90s to 100s; new, 80s to 90s; seconds, 65s to 70s; straw—wheat, 60s to 70s; pressed, 50s to 60s; chop, 55s to 65s; peat moss, 35s to 40s.

Hereford, Wednesday.—Hay and straw very dull at recent rates.

Lancaster, Saturday.—Meadow hay, 6d; clover, 7d; oat straw, 4d; wheat straw, 4d per stone.

Leeds, Tuesday.—A steady consumptive demand is passing in the warehouses, and the prices of old hay are firmly maintained. Quotations:—Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Manchester, Friday.—Hay, 4½d to 5½d; clover, 5d to 6d; straw, wheat, 3½d; oat, 3d to 3½d per stone.

Newcastle, Tuesday.—Old land hay, from £3 12s 6d to £4 7s 6d per ton; new land hay, from £4 10s to £5 5s; this year's growth from £4 to £4 10s. Barley straw from £1 to £1 2s per load; oat straw from £1 2s to £1 4s

Nottingham, Wednesday.—Large supplies on offer, which met with a slow sale. Quotations:—Inferior to good hay, 40s to 60s; prime ditto, 70s to 80s; inferior to good clover, 50s to 60s; prime ditto, 75s to 85s; wheat straw, 45s to 50s; old hay, 90s to 100s; old seeds, 90s to 100s per ton.

Sheffield, Tuesday.—A quiet market and moderate supplies, with very little alteration from late prices. Choice seeds, £5 to £5 5s; choice hay, £4 5s to £4 10s; straw, £2 10s to £2 15s per ton.

Whitechapel, Saturday.—Good supplies met a fair demand at steady prices: Best clover, 84s to 95s; inferior ditto, 72s to 80s; specially-picked hay, 85s; good ditto, 68s to 78s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 28s to 33s per load.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet, at about unchanged prices. Whites quoted at 39s to 42s; reds at 38s to 41s. Foreign slow and in poor demand at 1s decline since Monday. No. 1 Northern Manitoba, ex ship, quoted at 45s and 44s 6d as to position; No. 2 at 44s; choice white Karachi at 41s 6d; red Karachi at 41s. Flour steady, quiet. Hungarians quoted at 39s; Iron Dukes at 28s 6d to 29s. Maize dull, with prices tending in buyers' favour. Odessa, ex ship, held at 27s 9d to 28s; landed at 28s to 28s 3d; Danubian and Galatz-Foxanian, landed, at at 28s 9d to 29s. Barley quiet, easier tendency. Azoff-Black Sea and Odessa-Nicolaieff, ex ship to arrive quoted at 25s 3d to 26s 6d. Oats slow and rather easier. La Plata and 38 lb South Russian held at 19s to 19s 3d as per sample.

Mark Lane, Friday.—Wheat: English steady, quiet. Whites quoted 39s to 42s; reds at 38s to 41s. Foreign steady, but inactive at about Wednesday's prices. No. 1 Northern Manitoba, ex ship, held at 45s; No. 2 at 44s; choice white Karachi at 41s; red Karachi at 40s 6d; No. 1 Durum at 40s 6d to 41s. Flour steady and held at late rates, but demand very poor. Hungarian held at 39s; Iron Dukes at 28s 6d to 29s; Kansas Patents at 31s to 32s. Maize slow, easier tendency. Odessa, ex ship, held at 27s 9d to 28s; landed at 28s to 28s 6d; Danubian and Galatz-Foxanian, landed, at 28s 9d to 29s. Barley slow, unchanged. Azoff-Black Sea and Odessa-Nicolaieff, ex ship, held at 25s 6d; landed at 26s. Oats firm, quier. South Russian, 38 lb, quoted at 19s 3d to 19s 6d; La Plata, at 19s to 19s 3d.

COUNTRY.

Appleby, Saturday.—A light show. White oats (horse corn), 19s to 23s per 26 stones.

Ashford, Tuesday.—A reaction took place in the market for wheat, and sales were made at a reduction of 1s on the week, though transactions were very few. Other corn was firm. Prices:—Wheat, 36s to 39s; English barley, best, 31s to 33s; second quality, 27s to 29s; foreign grinding barley, 26s to 27s; Mazagan beans, 28s to 30s; ticks, 33s to 35s; maize, 30s to 31s; peas, 32s to 33s; black oats, 20s to 21s; white oats, 19s to 22s per qr.

Banbury, Thursday.—Wheat, white (new), 36s to 37s per qr; ditto red (new) 36s to 37s per qr; barley, 28s to 33s per qr; beans (new), 31s to 32s per qr; oats, 19s to 22s per qr; peas, 29s to 33s per qr.

Berwick, Saturday.—Average attendance. The continued wet weather has prevented threshing operations, and there were few samples on offer. Barley in demand at 6d to 1s per qr over last week's prices. Oats again dearer, making up to 28s for finest. Barley, 25s to 32s; oats, 22s 6d to 28s per qr.

Birmingham, Thursday.—Trade here was generally quiet, and prices have eased slightly from the top. Foreign wheats met with but slight inquiry, and were about 3d per qr cheaper. English wheats ranged from 13s to 14s 6d per 186 lb delivered. Oats were in demand, and made from 20s 6d to 21s per 312 lb delivered. Beans, 13s 3d per 196 lb delivered. Both Galatz-Foxanian and Bessarabian maize were on offer at 28s per 480 lb, the former being 6d and the latter 9d lower than last week. Grinding barley was 6d lower at 26s 3d per 400 lb at Sharpness.

Brighton, Thursday.—Quiet trade at about last week's prices. Wheat in better supply, and 1s to 2s per qr cheaper. Barley, 29s to 36s; grinding ditto, 28s to 29s; oats, English, 18s 6d to 21s; peas, 32s to 33s; beans, 33s to 34s.

Bury St. Edmunds, Wednesday.—Wheat: There was a fair supply, but the condition of the samples was not very satisfactory. Dry reds made 38s to 39s 6d; damp parcels, 35s to 37s per qr. Barley in average supply, demand steady, and trade firm at 31s to 33s 6d for malting runs, and 34s to 36s for finer parcels. Oats 6d per qr dearer. Grinding barley firm at 28s to 29s 6d per qr. Maize steady at 30s per qr delivered.

Cambridge, Saturday.—Wheat has about maintained its price during the week. Spring corn is still offering in short supplies. At this market on Saturday there was a good supply of wheat, which made 38s to 39s into the mill. A few beans offering, making up to 33s; oats made £1; barley, 28s to 34s.

Canterbury, Saturday.—Recent top prices were not at all freely offered, and, as sellers for the most part decline a reduction, business was on a better scale. Samples scaling 63 lb to the bushel sold at 37s 6d, and others of 62 lb made 35s and 36s, fetched from the farm. Seed wheat was worth 40s. Oats are steady, with a short supply, ranging from 19s for 38 lb, up to about 22s for 44 lb lots. A quiet demand for barley, most of the transactions ranging between 30s and 33s; grey peas, 31s to 32s; tick beans, 31s 6d to 33s; and Mazagans, 29s to 30s per qr.

Carlisle, Saturday.—Very small supply of oats in our market to-day. Weather very bad, and good part of the corn still in fields. Good demand at more money, 20s 9d to 21s 6d per 336 lb new, 23s per 336 lb for old.—Thomas Robinson.

Chester, Saturday.—There was an easing off in the price of American maize, which was 3d per sack cheaper, and River Plate corn sustained a corresponding fall. English wheat was firm, and English corn showed an improvement in values. Offals are still obtaining full values. Quotations: White and red wheat, 5s 4d to 5s 6d per 75 lb; new grinding barley, 4s to 4s 3d per 64 lb; old oats, 3s 1d to 3s 6d; and new, 2s 10d to 3s per 46 lb; Indian corn (feeding), 15s 3d to 15s 6d per 240 lb; ground corn, 14s 6d to 15s 6d per 240 lb.

Chichester, Wednesday.—A good attendance, and trade firm without much alteration in last week's prices. New white wheat, 36s 6d to 40s; new red ditto, 36s 6d to 40s; barley, 29s to 37s; grinding ditto, 23s 6d to 25s; oats, English, 18s 6d to 24s 6d; rye, 27s to 29s; peas, 31s to 32s; beans, 32s to 33s; tares, 5s 6d to 6s 6d; maize, 26s 6d to 27s 6d; flour, 31s to 33s.

Colchester, Saturday.—Wheat, slight advance on last week. Oats and beans steady. Barley firm.—Colin Taylor, King and Co., Ltd.

Coventry, Friday.—Average attendance. Wheats in limited supply, and prices a trifle lower. Barley a quiet business at recent quotation. Oats firm, and few offering. Beans met a fair demand at full late rates for dry samples. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; old oats, 24s 6d to 27s per per 352 lb; new oats, 21s to 23s 6d per 352 lb; beans, 13s to 13s 9d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Derby, Friday.—There was a limited supply of wheat, and prices showed an easier tendency. Barley firm at full rates. Oats in good demand at 6d to 1s dearer. Beans rather dearer. Quotations:—Wheat, 37s to 38s; red, 35s to 37s; grinding barley, 25s to 27s; new beans, 35s to 36s; oats, old, 25s to 27s; new, 21s to 22s.

Devizes, Thursday.—Trade for other corn was dull, at late rates. Best old wheat, 21s to 22s; best new wheat, 19s to 20s; secondary, 16s to 18s; malting barley, 30s to 35s; grinding barley, 27s to 29s; winter barley, 26s to 30s 6d; old oats, 22s to 24s 6d; winter oats, 18s to 19s 6d; white Garton oats (330lb), 19s to 20s; black Tartar oats (320 lb), 19s to 20s; rye, 27s to 30s; beans, 17s to 19s; fine flour, 32s to 34s; extra fine, 35s to 39s; vetches, 5s 3d to 6s 6d.

Doncaster, Saturday.—Small supply of English wheat. Trade was rather slow, but prices were firm at last week's rates. Foreign was steady at late rates, whilst forward wheat was 6d per qr dearer. Moderate supply of barley, which sold at an advance of 1s per qr, making up to 33s per qr. Oats were exceedingly firm, and in some cases advanced 6d per qr. Old beans dearer. Maize declined 1s per qr.

Dorchester, Saturday.—Although a favourable break in the weather has occurred to-day, the attendance was by no means large, owing to yesterday's fair, and there was only a moderate quantity of grain on offer, the almost continuous wet weather throughout the week having put a stop to threshing operations, and, in fact, to farm work in general. Holders showed but little inclination to accept less money for their wheat, and consequently the few transactions which resulted were practically at the previous week's currencies, many farmers showing a strong disposition to hold their corn back in anticipation of a further rise in values, which received somewhat of a check at some markets the day previous. Foreign may also be quoted at fully late currencies. Most other articles are steadily held, farmers declining to accept anything like a reduced price unless, as in some cases, a few needy sellers had special reasons for disposing of their corn. The flour trade closed strong and firm, factors asking outside vrlues for both fines and seconds.

Exeter, Friday.—Fairly good attendance, trade not very brisk. Wheat 6d to 1s easier. English barley unchanged; grinding barley 6d dearer. Maize, 6d to 9d cheaper. Oats 6d dearer. Flour unchanged. Quotations:—English wheat, 4s 3d to 4s 6d; English barley, 3s 9d to 4s 6d; superfine flour, 30s to 33s; fines, 29s to 31s.

Glasgow, Wednesday.—There was the usual attendance at to-day's market. Wheat met with an easier tendency, with demand slow. Flour, in sympathy with wheat, is 6d per sack cheaper. Maize the turn easier for Plate, owing to a fresh arrival; but Danubian unaltered. Corn scarce and dearer. Barley firm at full rates. Oats held for 1s per boll advance for all qualities since last Wednesday. Beans steadily held. Peas, none on spot. Bran and thirds unaltered. Oatmeal 1s per sack dearer on the week. Other articles firm.—Gibson and Clark.

Glasgow, Friday.—Wheat and flour steady at the late decline. Maize and corn nominally unaltered. Oats on spot very scarce, and consequently held for a further advance. Barley dearer.

Grantham, Saturday.—There was a fair supply of corn, and a good inquiry prevailed at the following rates:—Wheat, 36s to 38s; barley, 25s to 35s; oats, 19s to 21s; beans, 31s to 33s; peas, up to 76s per qr.

Hereford, Wednesday.—English wheats were moderately offered, but met with disappointing trade at 2d or 3d less than last week for English wheats. English barleys were easier to sell, but English oats remain steady at last week's prices. Beans also firm at 4s. Maize 9d per qr easier.

Ipswich, Tuesday.—Small supply of wheat, trade steady at about late rates for good condition lots; 38s to 39s for reds; whites to 41s per 504 lb; out of condition sorts, 36s to 37s. Not much barley on offer, trade steady at fully late rates. Oats dull. Maize steady. Beans and peas unaltered.

Leeds, Tuesday.—The sudden collapse of the American markets last week caused a rush of resellers to quit their holdings, with the result that momentarily prices suffered a set back of 1s 6d per qr. The position of the trade, however, is inherently strong, and in a single day practically the decline was recovered. The drought in India and Australia continues, the demand for wheat for the Continent is strong and active, and yesterday's American decline has no perceptible effect, the market to-day being firm at about last week's rates. Maize quiet and 3d easier. Beans and oats rather dearer.—Dunns and Co.

Leeds, Friday.—With fair arrivals, and an impression amongst buyers that prices of English and foreign wheats have reached their top limits, orders were placed cautiously, and there was no advance upon Tuesday's quotations. Flour was steady, medium qualities making 27s to 28s. English and foreign barley steady. Beans, peas, and oats unchanged. Maize easier. Plate, Russian, and American averaging 27s to 28s.

Leicester, Saturday.—Good average attendance of buyers and dealers, with moderate supplies of home-grown wheats, which came to hand in variable condition. Trade inclined to be slow. Red wheats, 33s to 38s 6d; white wheats, 36s to 40s per 36 stones; barley (bright samples) 27s to 32s per 32 stones; old beans, 36s to 40s per 38 stones; oats, 19s to 22s per 24 stones.

Lincoln, Friday.—A good attendance, but a small supply of English wheat, in variable condition, and selling at a reduction of 1s per qr on the week. Foreign quiet, and prices easier. Barley, oats, and beans firm at late rates.

Maidstone, Thursday.—The trade to-day was slow. After the recent advance in wheat follows calm, and millers would only buy at a reduction of 1s per qr, but this was not generally conceded, as owners of bread-making grain are of opinion that rally will soon be accomplished. The quietude was observable in other products, and though the cost was very little less than last Thursday, the foregoing remark was applicable.

Manchester, Thursday.—English wheat was 1s lower, and in moderate demand. Foreign, fluctuatedly and closed about unchanged. Flour ruled firm. Maize: Mixed American, 1d to 1½d per cental lower; Plate and other sorts generally unchanged. Barley: English, 1s per qr higher; foreign, ¼d per bushel dearer on the week. Oats steady; English, 1d higher; foreign showed no change. Beans, &c., in good request at unchanged rates.

Newark, Wednesday.—Only a moderate attendance; samples not fairly shown; wheat easier kinds firm. White and red wheat, 37s 6d to 38s; malting barley, 29s to 32s; grinding ditto, 26s 6d to 28s; white oats, 19s to 20s; black, 18s 6d to 19s 6d; old beans, 35s to 36s; new ditto, 30s to 32s per qr.

Newcastle-on-Tyne, Saturday.—The demand for wheat at our to-day's market was quiet, holders, however, was firm at last Saturday's price, maize favouring sellers. Beans and peas remain steady at last week's full prices. Oats of all description dearer, fine quality 6d, common sorts 3d on the week. A fair trade in barley for fine dry qualities. Soft parcels, however, were neglected.—Joseph Pollard and Co.

Norwich, Saturday.—The wheat market is fairly well supplied, and firm at last week's values, 38s per qr delivered. Barley in larger supply, and prices firm. Trade very firm in feeding stuffs, though maize is slightly easier. Grinding barley made 30s, linseed cake 2s 6d to 5s per ton dearer, and cotton cake steadier at last week's prices.

Nottingham, Saturday.—Wheat in fair supply, trade ruled slow at late rates in some instances for out of condition lots, holders gave

way 6d per qr. Barley not much offering, and full values maintained. Oats 6d per qr higher. Beans firm.—Robt. Hubble.

Newport, Wednesday.—Fair trade passing. Prices about the same as last week. Oats in good demand, with a hardening tendency. Flour steadily held.

Oxford, Saturday.—There was a fair attendance, and moderate trade at the market. Wheat sold at 6d reduction on previous rates, while barley was offering at last week's prices.

Peterborough, Saturday.—Not a large supply of wheat at market to-day, trade being quiet at about 6d less money than last week. Oats, small supply and rather dearer. Barley, a quiet trade at late rates. Wheat, 37s to 38s; barley, 28s to 32s; oats, 19s to 20s.—Thomas Hill and Son.

Plymouth, Thursday.—There was a very good attendance at our market here to-day. Wheat unchanged. Barley and maize 6d cheaper. Oats 3d dearer.—Orlando Davis and Co.

Preston, Saturday.—Business in foreign wheat has been slightly reduced during the week. Moderate attendance. The supply of new wheat is practically nil; last Saturday's rates were obtainable for anything offering. Flour 6d per peck dearer. Quotations: — Wheat white, new, per windle of 220 lb, 16s to 16s 6d; ditto red, 15s to 15s 6d; oats, old, per bushel, 3s 7d to 3s 8d; ditto new, 2s 11d to 3s; beans, per windle of 220 lb. 16s 6d to 17s.

Reading, Saturday.—A good attendance, and a very good trade was done; there was, however, not a lot of wheat on offer. Barley and oats were firm. Prices:—Wheat, 34s to 40s; malting barley, 30s to 35s 6d; grinding barley, 27s to 30s; oats, 18s to 21s; beans, 32s to 35s; peas, 31s to 33s; hay, specially picked, 85s; best clover, 80s to 95s; straw, 28s to 34s.

Retford, Saturday.—About the usual attendance, and a fair supply of grain. No change in quotations for wheat, which remains at 37s to 38s per qr, with a moderate demand. The best of the malting barley sold freely at 29s to 31s; secondary 27s 6d to 29s; and grinding, 25s to 27s. Grain for feeding purposes continued fully as dear, maize being quoted at 29s to 30s, delivered here. Black oats, 18s 6d to 19s; white up to 20s; and oldo ats 24s; new English bean, 30s to 32s; and old ditto, 35s to 36s per qr.

Ripon, Thursday.—Business was active, but the supply of samples was limited. Prices show an upward tendency. New wheat, 37s to 38s; wheat, foreign, 46s to 48s; barley, grinding, 27s to 28s; barley, malting, 28s to 32s; new oats, 20s to 20s 6d; old ditto, 26s; maize, round, 30s; maize, flat, 30s per qr.

Shrewsbury, Saturday.—Wheat, 15s to 16s 6d; oats, old, 16s to 17s per 225 lb; new, 12s 6d to 14s per 225 lb; barley, 18s to 20s.

Sheffield, Tuesday.—After weaker markets towards the close of last week, prices of wheats and maize have recovered, and values stand to day much as last Tuesday. Beans, oats, and barley make 1s and 1s 6d per qr more on the week. Peas scarcer, and dearer. Bran and sharps in good demand, bran being 5s per ton dearer. Quotations:—Wheat, white, new, 38s to 38s 6d; ditto, red, new, 38s to 38s 6d per 504 lb; oats, black, 24s to 25s; ditto white, 24s 6d to 25s; ditto new, 21s 6d to 22s per 336 lb; peas, grinding, 36s to 36s 6d; ditto blue, new, 75s to 90s per 504 lb; beans, English, 36s 6d to 37s per 532 lb; barley, grinding, 28s to 30s; ditto malting, 28s to 32s per 448 lb; Indian corn, small, 30s to 30s 6d; ditto Plate, 29s 6d to 30s; ditto flat, 31s 6d to 33s per 480 lb.

Stamford, Friday.—Fair attendance, and the tone of the market was rather easier. Wheats were depreciated to the extent of 1s to 1s 6d per qr on the week, making 36s 6d to 37s 6d, although 38s was freely asked. Oats were a slow trade at 19s to 19s 6d per qr. Beans were firmly held for recent currencies; barleys were increased 1s to 1s 6d per qr, making 32s 6d to 33s 6d for malting, and 26s 6d to 28s for grinding parcels.

Stockton, Wednesday.—There was not much local wheat showing, which made 37s 6d to 38s per qr. Owing to the financial position in America, prices for foreign wheat have receded 6d to 1s per qr on the week, and the demand was very limited. Oats 3d to 6d dearer, and maize 2d per qr lower on the week. Malting barley was showing in small quantities, some in poor condition, and made from 17s to 31s per qr according to quality.

Tunbridge Wells, Friday. — New white wheat, 38s to 39s; new red ditto, 37s to 38s; barley, 29s to 32s; grinding ditto, 26s to 28s; oats, English, 20s to 22s; rye, 27s to 28s; peas, 34s to 38s; beans, 34s to 38s; tares, 40s to 48s; maize, 29s to 30s.

Warwick, Saturday.—A fair attendance, but few samples of corn on offer. Wheat a shade higher than last week. Feeding stuffs firm.

Winchester, Saturday.—English wheat, unchanged prices, condition variable. Foreign, occasionally 6d cheaper. Barley and maize 6d lower. Oats scarce and dearer. Flour a steady trade at late rates.—Fear, Colebrook and Co., Ltd.

Wisbech, Saturday.—A small supply of wheat at market, making 38s to 39s per 504 lb. Oats dearer, 20s per 336 lb. Barley from 28s to 31s per 448 lb.—James Fletcher.

Wolverhampton, Wednesday.—There was a fair attendance, and business was brisk. Quotations: Beans, 13s 3d per 196 lb; oats, 12s per 196 lb; Indian corn, round, 13s per 196 lb; flat, 32s per 448 lb.

Worksop, Wednesday. — Good attendance and more grain on offer. Wheat easier at about late rates, and barley and oats about 6d per qr dearer. White wheat, 37s to 38s; red wheat, 36s to 37s; best malting barley, 30s to 31s 6d; secondary, 27s 6d to 28s 6d; grinding barley, 27s to 28s; old white oats, 25s 6d to 27s 6d; new ditto, 19s 6d to 22s; old black oats, 25s to 26s; new ditto 18s 6d to 21s; maize, 28s to 29s per qr.

Yeovil, Friday.—Farmers who have been holding back their grain in anticipation of record prices were to-day surprised to find the market all against them. Wheat (home-grown) was down 1s per qr.; foreign, 6d. Barley made from 3d to 6d less money, and maize 6d. Oats realised last week's rates. Best new wheat, 38s to 40s per qr; secondary, 32s to 34s; malting barley, 30s to 35s; grinding ditto, 27s to 29s; winter barley, 26s to 30s; foreign barley, 26s 3d; winter oats, 18s to 19s 6d; white gartons, 19s to 20s; black Tartars, 19s to 20s; Irish black, 19s; beans, 34s to 38s; rye, 27s to 30s; vetches, 6s to 7s 6d per bushel. Flour values gave way somewhat, fine selling at about 32s per sack, and extra fine 35s upwards. Offals and meals continue a firm trade, the demand being exceptionally good.

York, Saturday.—Farmers offered very little wheat, and prices remained without change. Fine white wheat made 38s to 39s; red and mixed, 37s to 38s per qr of 36 stones. Malting barley was rather dearer, fine fetching 31s to 32s; good, 30s to 31s; and common 28s to 29s per qr of 32 stones. Oats were very scarce; white Tartary, 19s to 20s; black ditto, 20s to 21s; and short oats, 20s to 21s per qr of 24 stones; rye, 28s to 29s; and old beans, 36s per qr of 36 stones.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed Cake: There is a slight improvement noticeable in the consumptive demand, and with continued light shipments of foreign and a firmer attitude on the part of home manufacturers, values have been forced up fully 5s per ton since last Monday. Russian offer sparingly at 3s 9d per ton more money. East Indian seed pures are quoted slightly dearer, to arrive. Fine seedy Calcuttas make an advance of 5s. London made attract most attention, being relatively offered at 2s 6d over last week's quotations. Cotton Cakes.—Only a limited quantity of Egyptian is available in warehouse, and for these full prices are demanded, but there are sellers for slightly less for early arrival. English move off quietly and without alteration. Decorticated.—London-made pures find a ready sale, while American brands are neglected. Rape Cakes.—Only nominally quoted. Maize Germ Meal.—Nothing offers in White American, and English makes are firmly held. Maize Gluten Meal continues in good request. Rice Meal.—Landed lots of Rangoon may still be bought at late rates, while for arrival quotations are also the same. Locust Beans remain good value. Dried Brewers' Grains are scarce and dear. Nitrate of soda is unchanged.

Nitrate of soda 11 2 6

—Pinnock Bros., 30, Mark Lane, E.C.

Liverpool, Friday.—The tone of the nitrate of soda market is firm on the spot at £11 5s to £11 7s 6d per ton, according to quality. For kainit and phosphates for autumn deliveries there are inquiries, but business as yet is not very active at the advanced rates on last season. The colder and more seasonable weather should stimulate an increased demand for feeding stuffs, which up to the present has been most disappointing; with Indian corn at present high prices, however, and the small stock of foreign oilcakes and light shipments, there would seem no likelihood of easier prices ruling in the near future; but, on the contrary, holders are firm, anticipating the likehood of further advanced values. To-days prices are as follows:—

	Per ton. £ s d	£ s d
Cottonseed Cake, N.A., decorticated (prime)	—	—
Cottonseed Cake, English, decorticated, prime (soft)	8 7 6	8 10 0

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £13 to £13 10s; ditto wethers, £12 10s to £13; Kent fleeces, £12 5s to £12 10s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £12 to £12 10s. Colonial—per lb.—Vic., scoured super., 2s 3d to 2s 4d; scoured, good, 2s to 2s 2d; scoured, average, 1s 10½d to 1s 11½d; greasy, average to fair, 1s 2½d to 1s 3½d; N.S.W., scoured, average, 1s 10½d to 1s 11½d; greasy, average, 1s 1d. to 1s 2d; S. Aus., greasy, average, 11d to 1s; N.Z., scoured, average, 1s 11d to 2s; greasy, average, 1s to 1s 1d; Cape, scoured, super., 1s 10d to 1s 11d; fleece, average, 9½d to 10½d; greasy, average, 8½d to 9½d; Natal, scoured, 1s 6d to 1s 7d; greasy average, 8½d to 9d. Crossbreds—grs.—Vic., good to super., 1s 3½d to 1s 4½d; New Zealand fine, 1s 3d to 1s 4d; medium, 1s to 1s 1d; coarse, 10d to 11d.

Canterbury, Saturday.—Firm, but not much offering at present rates. Kent fleeces, 11d; lamb wool, 7d; half-bred fleeces, 11d; Downs, 13d to 14d per lb.

Halifax, Saturday.—Market quiet all round. Merinos very firm owing to light stocks. Crossbreds dull. Spinners still doing good business. Reports as to piece trade better. In certain branches of woollen trade overtime continues to be worked.

HOPS.

Canterbury, Saturday.—Choice Kent Goldings in good inquiry up to £6 per cwt, but supply very small.

Worcester, Saturday.—There was a further falling off in the attendance at market to-day owing to the growers having sold their growths. Fine hops were scarce and sold readily at late prices, but the trade generally was not fast as brewers are only buying sparingly as yet; 2,851 pockets have been weighed over this week, making with 12,789 pockets previously weighed, 15,640 pockets to date.—Charles Faram and Co.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 p.m.

Arrivals to 23rd inclusive, comprised 66,460 qr. of wheat, and since then over 100,000 qr., not yet officially checked, but known to exceed that figure, have arrived on the Thames. Naturally there is a halt in prices for breadstuffs. English wheat is in good request for all grades, and thus the price is well maintained. Maize and oats vary in proportion to the quantities of the fifteen chief types represented in the recent arrivals. Maize is inclined to fall for La Plata and Russian, but is firm for American.

Barley is a large business, with a good price readily obtainable for anything which itself is good. Oats are also a ready sale of English, but foreign have been held above a proportionate value, and consequently rather tend to decline. Beans and peas, tares and dari are on the upgrade. The market is a little cheaper for inferior grinding barley from Russia and Persia, but fair to good barley from North Africa and Asia Minor is rising steadily in appreciation.

THE FLOUR TRADE.

MARK LANE, Monday, 3 p.m.

The top-price has been raised to 38s., and the finest Hungarian has to-day reached 40s. per sack. Town Whites and Town Households, on the other hand, are inclined to fall in price, though the quotations of the 21st still stand, rebates are, it is understood, being allowed to old customers, and so forth. Country flour is, if anything, a little firmer on the week, but American sorts are rather weaker, thus the flour market is very fluctuating as a whole, yet with considerable strength beneath the surface.

Milling offals are paying the miller very handsomely just now, but farmers who require them for fattening stock and poultry are gravely inconvenienced. Locust bean meal is commanding an unwonted sale, as it is appetising to cattle, and makes food rather lacking in flavour go down. Barley meal is selling well, and seems going rather higher in value. Oatmeal is decidedly firm.

CLOSE OF THE MARKET.

THE MARKET CLOSED QUIETLY, BUT THERE IS NO LOSS OF ESSENTIAL STRENGTH IN THE HOLDING OF ENGLISH GRAIN, AND THE BETTER ADVICES FROM AMERICA HELP THE "BALTIC."

THE BALTIC.

Monday, 1 p.m.

State of Trade.

There is to-day an improved inquiry for wheat cargoes at full prices. Maize, oat, and barley cargoes open a little in buyers' favour. Cotton-seed cargoes are dearer on the week, but not quite so good to day as on Saturday. Other articles unchanged.

Business Done.

Wheat. — Californian, 42s 6d per 500 lb, prompt shipment; Walla Walla, 42s 3d per 500 lb, prompt shipment; Australian, 44s per 480 lb, on passage; Argentine, 40s per 480 lb, February shipment.

Barley.—Argentine, 26s 9d per 480 lb, November shipment; American, 27s per 480 lb, November shipment; American, 25s 6d per 480 lb, January shipment; Galatz, 29s 9d per 480 lb, due.

Barley.—Azof, 26s 3d per 400 lb, on passage; Persian, 23s 6d per 400 lb, November shipment.

Oats.—Petersburg, 18s 3d per 304 lb, October shipment; Libau, 17s 9d per 304 lb, October shipment; South Russian, 17s 9d per 304 lb, on passage; Argentine, 17s 9d per 304 lb, March shipment.

Linseed.—Argentine, 45s 9d per 416 lb, arrived.

Poppyseed.—Indian, 63s 3d per 387 lb, on passage.

Sesame.—Indian, 62s 6d per 384 lb, on passage.

Cottonseed.—Egyptian, £7 6s 3d per 2,240 lb, November shipment.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—The fluctuating markets in America, owing to financial difficulties, has had the effect of stopping sales of flour. Grain.—The price of American corn is well maintained owing to scarcity, but round maize is 6d per boll lower. Beans unchanged. Pease practically exhausted on spot. Oilcake firm. Oats in brisk demand, deliveries of home oats being very small. Oatmeal 1s per sack dearer. Millstuffs steady at full prices. Winter wheat patents, 31s to 31s 6d per 280 lb; spring wheat patents, 32s 6d to 34s 6d per 280 lb; American corn, 17s 9d to 18s per 280 lb; round corn, 16s 4½d to 16s 6d per 280 lb; grinding beans, 19s per 280 lb; broad bran, 117s 6d to £6 per ton; medium bran, 112s 6d per ton; fine thirds, 140s to 142s 6d per ton; common thirds, 120s per ton; American oilcake, 152s 6d to 155s per ton.—McKinnon and McDonald (Glasgow).

Offals.—Bran in good demand, and in some instances 2s 6d per ton advance is being obtained.—Greenhill Bros. (Belfast).

Flour.—Prices a few days ago were somewhat irregular, owing to conflicting advices from America. For the moment, however, the market is again steady, and prices not only firm, but tending upward.—Greenhill Bros. (Belfast).

TERM MARKET.

The ups and downs of speculation have left quotations for futures as follows:—

Wheat—				
No. 2 Red Winter,	8s. 6d.	(per cental, Dec. delivery		
,, ,,	8s. 7d.	,,	Mar.	,,
,, ,,	8s. 6d.	,,	May	,,
Maize—				
Mixed American,	5s. 10d.	,,	Nov.	,,
,, ,,	5s. 9d.	,,	Dec.	,,
,, ,,	5s. 7d.	,,	Jan.	,,
,, ,,	5s. 6d.	,,	Feb.	,,
Maize—				
Argentine yellow	5s. 8d.	,,	Nov.	,,
,, ,,	5s. 9d.	,,	Dec.	,,

The forward market is strong for wheat for early 1908 delivery, but English farmers should note that by waiting into January they will probably be able to buy a good store of maize at 2s. per qr. under present prices.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: With a steady trade and owing to slack brewings, prices have advanced slightly during the week. Business has been done at 18s to 20s ale per ton, and porter 3s per ton less on rail, London. Dried Grains.—An upward tendency has set in with the approach of colder weather, and 105s ale and 100s porter mixed are the prevailing prices ex factory, in buyers' bags. American cane treacle 95s, and kiln-dried sea-damaged wheat from 22s per qr ex wharf.—Hamlyn and Co., 37 and 38, Mark Lane.

SEEDS.

Mark Lane, Monday.—More geneaal business passing. Rape very firm. Mustard unchanged. Rye scarce and firm. Winter tares still selling slowly at unchanged prices. Seed wheats in good demand; prices firm. Peas, more business, but supplies still backward. In clovers, whites and Alsikes firm. English reds dearer, dearer. In grasses, Perennials and Italians again higher, after the slight lull experienced.—John Pickard and Co.

Weekly London Averages.

An account of the Quantities and Prices of British Corn bought on the London Market and in the area within five miles from the Royal Exchange during the week ending Tuesday, October 22, 1907:—

	Imp. Quar.	Bus.	Total Amount. £	s.	d.	Av. Price per qr £	s.	d.
Wheat	2,533	0	4,549	7	3	1	15	11
Barley	4,223	5	6,160	1	3	1	9	2
Oats	3,321	2	3,272	16	6	0	19	9

POTATOES.

Borough, Saturday.—A fair assortment met a fair inquiry. Epicures, 70s to 75s; Llewellyns, 80s to 85s; British Queens, 80s; Blacklands, 75s; Up-to-Dates, 80s to 90s per ton; French and Dutch, 3s 6d per bag.

Berwick, Saturday.—Potatoes are showing a rise in price, and in consequence trade is not so brisk. Very little disease is noted here. Price, 65s per ton.

Carlisle, Saturday.—Fairly large supply, and a good demand at 7d to 8d per stone.

Goole, Wednesday.—Good attendance, but few potatoes changed hands. Prices ruled firm at last week's rates.

Spitalfields, Saturday.—Moderate deliveries were in fair request. Epicures, 75s to 80s; Blacklands, 75s to 80s; Up-to-dates, 90s to 95s; British Queens, 95s to 100s per ton. French, 3s 6d; Dutch, 3s 3d to 3s 6d per bag.

Stockton, Wednesday.—Potatoes £4 4s to £4 10s per ton.

Manchester, Saturday.—Potatoes: Yorkshire, 11s to 12s; Cheshire, 8s 6d to 9s; Lincoln, 10s to 11s per 18st.

Preston, Saturday.—Potatoes: 8s to 9s per load of 240 lb.

Retford, Saturday.—Potatoes were not shown in great quantities. Best home-grown lots made 7s 6d to 8s; other varieties, 7s per load.

Doncaster, Saturday.—Ample supply and a good trade, prices advancing to 8s to 9s per load of 18 stones; retail, 10d to 1s per peck.

Lancaster, Saturday.—Potatoes, 6d to 8d per stone.

Malton, Saturday.—Supplies small, and prices firm. Dealers' quotations ruled the same as last week, retail to 5s per cag.

Whitby, Saturday.—Potatoes, 8d per stone.

York, Saturday.—The market was rather more brisk, though few potatoes were offered. A firm trade took place at rates ranging from 80s to 85s per ton.

BUTTER.

(Price per lb.)

Altrincham: 1s 3d to 1s 4d. Appleby: 11½d to 1s 1d. Barnstaple: 1s 1d 1s 2d. Berwick: 1s. to 1s 2d. Camelford: 1s. Carlisle: 1s 1d to 1s 3d. Dartmouth: 1s 1d to 1s 3d. Derby: 1s 2d to 1s 3d. Devizes: 1s 1d to 1s 5d. Doncaster: 1s 2d to 1s 3d. Dorchester: 1s to 1s 4d. Hereford: 1s 1d to 1s 3d. Ipswich: 1s 2d to 1s 3d. Lancaster: 1s 2d to 1s 3d. Lincoln: 1s 1d to 1s 2d. Market Drayton: 1s 2d to 1s 3d. Otley: 1s 7d to 1s 8d per 24 oz roll. Penrith: 11½d to 1s 2d. Penzance: 10d to 1s 2d. Plymouth: 1s 3d to 1s 4d. Preston: 1s 3d. Retford: 1s 2d to 1s 3d. Ripon: 1s 7d to 1s 8d per 24 oz roll. Scarborough: 1s 3d. Shrewsbury: 1s 2d. Spalding: 1s. Stamford: 1s 1d to 1s 2d. Stockport: 1s 2d to 1s 3d. Stockton: 1s 1d to 1s 3d. Totnes: 1s to 1s. 1d. Truro: 1s to 1s 1d. Worcester: 1s 1d to 1s 4d. Worksop: 1s 3d to 1s 4d. York: 1s 2d to 1s 3d.

EGGS.

(Number per 1s.)

Altrincham: 5 and 6. Appleby: 7 and 8. Barnstaple: 7 and 8. Berwick: 1s 4d to 1s 5d per doz. Camelford: 10. Carlisle: 6. Dartmouth: 1s 6d to 1s 10d per doz. Derby: 7. Devizes: 9 and 10. Doncaster: 7 and 8. Dorchester: 1s 8d to 1s 9½d per doz. Hereford: 8 and 9. Ipswich: 8 and 10. Lancaster: 5 and 6. Lincoln: 9. Market Drayton: 7 and 8. Otley: 6. Penrith: 7 and 8. Penzance: 1s 4d to 1s 7d per dozen. Plymouth: 7 and 8. Preston: 5 and 6. Retford: 2s 6d per score. Ripon: 7 and 8 Scarborough: 8. Shrewsbury: 7 and 8. Spalding: 10. Stamford: 8 and 9. Stockport: 6. Stockton: 6. Totnes: 1s 8d to 1s 10d per doz. Truro: 1s 3d to 1s 4d per dozen. Worcester: 7. Worksop: 2s 4d to 2s 6d per score. York: 8.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fruit and greenstuffs in good supply and steady demand. Quotations for English produce:—Apples, 4s to 9s per bushel; peaches, 3s to 12s per dozen; green figs, 6d to 2s 6d per dozen; pears (English Duchess), 2s to 2s 6d per dozen; ditto (Fertility), 4s to 5s per bushel; grapes, 8d to 3s 9d; pineapp'es 2s to 4s each; cranberries, 7s 6d to 10s per case; cobnuts, 4s to 4s 6d per 12 lb; walnuts, 4s to 4s 6d per half bushel; tomatoes, 3s to 4s 6d; melons, 1s to 2s; celery, 8d to 1s 3d per bundle; horseradish, 10s to 15s per dozen bundles; endive, 1s 6d to 1s 9d per dozen; cucumbers, 7s 6d to 10s per flat; cauliflowers, 4s 6d to 6s; cabbages, 3s 1d to 4s 6d per tally; onions, 4s 6d to 5s 6d per cwt; parsley, 1s 6d to 2s; leeks, 1s 6d to 2s; mint, 1s to 1s 4d; turnips, 1s 4d to 2s 6d per dozen bunches; carrots, 2s to 3s per bag; ditto, 30s to 35s per ton; cos lettuce, 9d to 1s 3d per score; shallots, 2s 6d per 12 lb; potatoes, 60s to 85s per ton.

TO-DAY'S MARKETS.

CATTLE.

Metropolitan Market, Islington.

	Monday, Oct. 28, 1907. British.	Total.	Monday, Oct. 29, 1906.
Beasts	1,320	1,320	1,150
Sheep and Lambs	4,310	4,310	5,540
Calves	10	10	10
Pigs	—	—	—
Milch Cows	10	10	45

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 4	3 4	4 8
Sheep	4 8	5 6	6 2
Lambs	—	6 6	6 8
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, nil; Eastern Counties, 51; Midland, Home, and Western Counties, 1,099; Devon, 40; Ireland, 130.

We note to-day an increase of 80 head in the number of beasts offered for sale compared with Monday last. For both prime and second quality English descriptions trade ruled of a very slow nature, however no sufficient fall in value was noticeable to warrant our quoting any lower rates. The Irish arrivals consisted of 65 Dublins and 65 Waterfords (no store cattle being included), these shared in the poor trade, but maintained late currencies. Fat butchering cows and bulls again met with a very slow trade owing to the scarcity of buyers present; however, all sales were based on last Monday's values. A clearance will not be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s d	s d	Monday, Oct. 29, 1906. s d	s d
Scotch	—	—	4 10 to 5	0
Devons	4 6 to 4	8	4 8 to 4	10
Herefords	4 4 ex 4	6	4 4 to 4	6
Norfolks	—	—	—	—
Runts	4 2 to 4	4	4 2 to 4	4
Lincolns	3 10 to 4	0	3 8 to 3	10
Irish	4 0 to 4	2	4 0 to 4	2
Canadian	—	—	—	—
Fat cows	3 4 ex 3	6	3 4 ex 3	8

There was a decrease of 180 in the number of sheep and lambs penned compared with Monday last. For all descriptions of both wethers and ewes trade ruled of a brisker nature; however, not sufficient to enable the sellers to make any advance in value. Both Scotch and Irish descriptions shared in the better trade, notwithstanding the latter being in larger supply. A few lambs were offered for sale and were disposed of early in the day at last Monday's prices. The supply included 200 Scotch, 1,085 Irish, and 158 from the Eastern Counties. A clearance is expected to be made in this part of the market to-day.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	s. d.	Monday, Oct. 29, 1906. s. d.	s. d.
7½ to 8 st Downs	5 10 to 6	0	6 2 to 6	4
9 st. Downs	5 8 to 5	10	6 0 to 6	2
10 st Halfbreds	5 4 to 5	6	5 8 to 5	10
10 st Yorkshires	—		—	
12 st Lincolns	—		—	
10 st Irish	5 6 to 5	8	5 4 to 5	6
10 st Down Ewes	4 0 to 4	2	4 4 to 4	6
11 st Halfbred ditto	3 10 to 4	0	4 2 to 4	4
5 st Down Lambs	6 6 to 6	8	—	
6 st Halfbred ditto	—		—	

A few calves and pigs were offered for sale, but not sufficient to note or quote.

London (Central), Monday.—Trade slow for fair supplies. Beef, English, 3s 4d to 3s 8d; Scotch, 3s 10d to 4s 6d; American, 3s 4d to 3s 9d; refrigerated hindquarters, 3s 8d to 4s 4d. Mutton, English wethers, 4s 2d to 4s 8d; ewes, 3s 2d to 3s 6d. Lambs, 4s 8d to 5s; Scotch tegs and wethers, 4s 8d to 5s; ewes, 3s 2d to 3s 6d. Veal, 3s 4d to 4s 8d. Pork, 3s 6d to 4s 2d per stone.

FOREIGN.

St. Ives (Hunts) Monday.—Beasts, 764; sheep, 557; pigs, 499. Fat cattle fair; stores in good demand; fat and store sheep and pigs good trade. Prices: Beef, 7s to 7s 6d; mutton, 8s 2d to 10s 6d; pork, 6s 3d to 7s; milch cows, £14 to £22.

Deptford, Monday.—Beasts, 480. To-day's supply compared with Monday last showed a decrease of 260 head, and consisted entirely of shipments from the United States, which were of rather poor quality. Trade ruled of a slow nature at less money. The best on offer were quoted at from 4s to 4s 2d; seconds, 3s 8d to 3s 10d per 8 lb (offal given in). On Saturday 1,210 beasts from the United States, 370 Canadians, and 490 Canadian Ranchers were offered for sale, and with a slow trade were quoted per 8 lb as follows:—States, 4s 2d to 4s 4d; seconds, 4s to 4s 2d; Canadians, 3s 8d to 3s 10d; ditto Ranchers, 3s 4d to 3s 6d.

Liverpool, Monday.—The supply of cattle was smaller than last week. Good qualities in demand at prices in sellers' favour. Middling and inferior sorts unchanged. Sheep supply also smaller. Trade slow for all classes, and although lower prices were accepted, a clearance could not be made. Beef, 6¼d to 4½d; mutton, 8½d to 6d per lb. At market 1,493 cattle and 6,048 sheep.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—Consumers are beginning to realise that cake is, compared with other feeding stuffs, very good value, and there is now a better feeling in the trade with an advance of 2s 6d to 5s per ton. Foreign cakes continue to be sparingly offered.

Cotton Cake.—A fair trade doing in Egyptians at last quotations. Linseed.—There is a good business passing in the feeding sorts, and market closes 1s per qr dearer on the week.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 2,720 bales, and from foreign ports, 13,296 bales. There was a firm demand for bacon throughout the week, but the market closed quieter on Friday. Quotations ranged:—Irish, 61s to 63s up to 67s; Danish 56s to 62s up to 65s; Canadian, 62s to 63s. Butter: Butter was a firm market. French, 112s to 122s; Danish, 128s to 132s; Russian, 88s to 112s; Dutch, 120s; Irish, 94s to 124s; Victorian, 96s to 118s; New South Wales, 96s to 118s; Queensland, 96s to 116s; New Zealand, 106s to 120s. Lard.—Lard was a steady market. Irish, 50s to 58s; Danish, 46s 6d to 47s 9d; Danish 52s to 54s.

HOPS.

Borough, Monday.—The best and brightest samples still command the chief attention of buyers, and the good medium sound copper hops are also being entertained. Sound brown hops are finding buyers at good relative values.—W. H. and H. Le May.

Five Years' Comparative Averages.

(OFFICIAL.)

Comparative statement of grain sales and prices at the Statute markets for the week ending October 26, and for the corresponding week in each of the years from 1903 to 1906:—

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market the trade for fat beasts of both prime and second quality was of a rather slow nature, especially for the latter. The supply included a large number of the Devon cattle and a few cross-bred Scotch; the former, however, commanded our top quotation. The Irish arrivals consisted of 66 Dublins, 69 Waterfords, and 20 stores (one and two-year-old heifers), for which there was very little inquiry. Irish fat beasts shared in the inactive trade that was experienced, and met with a fall in value. Fat butchering cows and bulls were also slow of sale owing to the scarcity of buyers present. However, last week's currencies governed all transactions. On Thursday only fat cows and bulls from the South-western Counties were offered for sale, very few transactions being recorded.

At the Foreign Cattle Market, Deptford, there was a fair average supply of States cattle and a large number of Canadians, the supply including some Ranchers. Trade throughout the week ruled of a slow nature, however prices became firmer as the week advanced. The total number of beasts offered for sale at both markets was 4,970, as against 4,052 during the previous week, consisting of 1,290 British (increase 200) and 3,680 foreign (increase718), these latter comprising 1,680 from the United States and 1,820 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal):—90 stone Devons, 4s. 8d. to 4s. 10d.; 90 to 95 stone Herefords, 4s. 4d. ex 4s. 6d.; 95 stone Runts, 4s. 2d. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 4s. to 4s. 2d.; 90 stone States, 4s. to 4s. 2d.; 95 stone Canadians, 3s. 10d. to 4s.; ditto Ranchers, 3s. 4d. to 3s. 6d.; 90 stone fat cows, 3s. 4d. ex 3s. 6d.

The sheep trade, as usual, was confined to the Islington market, and with an increase in the supply ruled of a slow but steady nature at the previous week's values for all grades of English sheep, both wethers and ewes. Scotch descriptions ruled firmer, enabling us to quote an advance of 2d. per lb. in value, whilst Irish were in larger supply and meeting with no corresponding increase in the demand, only succeeded in making late values. A few lambs were sold at late currencies. On Thursday trade ruled of an extremely slow nature at late values. The total number penned was 4,560, as against 4,240 during the preceding week, showing an increase of 320. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 6s. to 6s. 2d.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Irish, 5s. 6d. to 5s. 8d.; 10 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone halfbreds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s. to 4s. 2d.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Only twenty calves were offered for sale throughout the week, trade for which ruled of a slow nature, the best on offer being quoted at from 4s. 10d. to 5s. per 8 lb. (sinking the offal).

Trade in the West.

Now that all the principal fairs are over for the present season, supplies of most kinds of stock are coming to hand on a far less extensive scale, which, however, is quite sufficient to meet the present demand. The terribly wet weather experienced during the last fortnight, although of considerable benefit to the arable land preparatory to ploughing, has materially checked the demand for grazing cattle, as many in the low-lying districts have been at a loss what to do with their stock in the present water-logged condition of their pasture lands, especially where they are unable to move their stock to higher ground till the floods—in many parts of a serious character—have subsided. This drawback has had some effect on prices, which are scarcely as good as they were, except for graziers in a particularly forward condition, which are still selling up to £32 per pair for heavy-fleshed bullocks, distinctly plain poor-class lots favouring buyers to the extent of quite 10s. a head. Young stock, too, though meeting a strong sale, are not so anxiously sought after as they were, despite the fact that the pastures in many districts are full of keep. But if graziers have experienced a slight reaction, the same cannot be said of any kind of dairy stock, which has seldom ever met a better trade than at present, it being no uncommon thing for the best type of milcher to realise £23, £24, and £25 apiece, whilst at a sale in the famous Vale district this price was altogether eclipsed for a Shorthorn, though it is only fair to state that this particular herd has long enjoyed a a record reputation for its unequalled character as a milking dairy. More ordinary runs of milch beasts—both heifers and cows—are also selling very readily at from £16 to £20 or £21 apiece, the greatest difficulty having been experienced in getting a sufficiency of milchers to adequately cope with the demand from town dairies, who in many cases are unable to supply the wants of their customers owing to so much more milk being consumed at present than was formerly the case. In-calvers also continue to meet a very quick sale at uniformly good prices, the more especially those soon coming to the pail. Most flockmasters have, ere this, disposed of all their surplus sheep, the high prices ruling now for so long proving a strong inducement to sell, even to those who generally keep a few over for disposal at the fag end of the season; and all that now remain on any of the farms of which we have any knowledge are a few "culls" of the roughest possible type, some of which may yet be wanted where a flockmaster has not yet quite made up his numbers. And for these we believe a good price will be obtained, as long as a sheep remains over unsold.

The fat stock markets are generally a trifle easier, though there are a good few steers coming up which make from £22 to £24 5s. for the best weights, and heifers from £16 to £21 (or 11s. to 11s. 6d. for the ripest, and 10s. 3d. to 10s. 6d., for secondary qualities). Fat steers and heifers at all suitable for the Christmas trade are now being acquired for home feeding, consequently these commanded a good price. Fat cows may be quoted about 10s.; old animals can be bought at 6d. to 1s. less money. Fat tegs and wethers where of choice quality, command a good trade at from 52s. to 70s. apiece for heavy sheep, which we cannot quote under 9d. per lb., if not more; fat ewes are selling from 41s. to 60s., 7s. being made in one instance that came under our notice (or fully 8d. to 8½d.); whilst well-finished fat lambs command from 42s. to 52s. each (or 10d.), and smaller lambs of poorer quality from 31s. to 38s. (or 9d.). Fat meaty calves are in good request up to £7 apiece down to £3 for smaller weights (or 8½d to 9d per lb.). We consider pigs scarcely as dear as they were, only very special weights in porkers commanding 10s. per score, the great bulk of hogs selling at 8s. 6d. to 9s. 6d., and anything very weighty or coarse 8s. to 8s. 3d.

Trade in Ireland

On Thursday last the Dublin cattle market was held; it was well supplied and had a large attendance of buyers. The supplies all showed an increase (from a small one of six head on cattle to the large one of 1,230 on sheep for the week), the number being 5,114 for the former, and 7,980 for the latter. This shows an increase of more than 1,000 head of sheep on the corresponding week of 1905 and 1906, and a slight increase in the number of beasts. There was a big attendance of buyers, but a dull opening was made in the cattle market. In the early hours some very fancy lots of cattle were sold at prices nearly approaching the previous week's rates. Cattle, as a rule, with rare exceptions, gave way fully 10s. to 20s. per head, and even at this reduction a large number were left unsold.

Bad accounts from across the Channel made the market rather a poor one for prices. Best heifer and beef was worth from 50s. to 54s. 6d. for beasts of extra quality; second quality beef, 46s. to 50s.; and inferior quality beef from 42s. 6d. to 45s. per cwt.

The dead weight price of beef for very choice lots was for top lots 29s. to 29s. 6d. per cwt., as against 30s. to 31s. 6d. at the recent market. Really good beef averaged from 26s. 6d. to 28s. per cwt., and less taking beasts at lower figures. There was a sluggish demand all round for cattle, and a good many had to be held over unsold. Sheep, with a very large market, met with a reduction of from 2s. to 4s. per head. There were in fact a great deal of sheep on offer over what were required. Some of the nicer classes of Cheviots got pretty well placed, but at more or less of a discount ranging from 2s. to 4s. per head; but many good sheep were hardly looked at at all. Horned sheep were pretty largely in evidence, but were taken little notice of. Lambs met with a poor inquiry, as it is getting too late in the season for them. The best wether mutton sold at 7d. to 7½d. per lb.; do. ewe, 6d. to 6½d., and other sorts at from 5d. to 5½d. per lb.

Veal was rather down, in sympathy with the other branches of the market. Best veal made from 7d. to 8½d. per lb., while coarse veal went for from 4½d. to 6d. per lb.

There was a good market of fine dairy cows, but prices tend downward, and they are cautiously dealt in by intending buyers. Store cattle are not a very lively trade just at present, though at the country fairs people prefer waiting over for a little before buying. However, there is plenty of keep in the country, and no doubt farmers will buy freely as soon as they see what turn things will take, as the future of the grazing farmer in Ireland appears rather uncertain in this country just at present.

LONDON.

Central Market, Friday.—Fair supplies, and trade very slow, with lower tendency in prices. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 6d; Deptford and Liverpool killed, 3s 4d to 3s 8d; refrigerated hindquarters, best, 4s to 4s 3d; ditto seconds, 3s 8d to 3s 10d; ditto forequarters, 2s 4d to 2s 8d; inferior beef, 2s 2d to 2s 8d; mutton, Scotch wethers, 4s 8d to 5s; ditto tegs, 4s 8d to 5s; ditto ewes, 3s 2d to 3s 6d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 2d to 3s 6d; Dutch sheep, 4s to 4s 8d; English lamb, 4s 8d to 5s; veal, 3s 4d to 4s 8d; English pork, 3s 8d to 4s; Dutch ditto, 3s 6d to 4s per 8 lb.

Islington, Thursday.—Supply of beasts consisted entirely of fat cows and bulls. Owing to few buyers being present, very few sales were recorded, though Monday's values governed all transactions. Top prices paid per 8 lb.:—Fat cows, 3s 4d; extreme, 6d; fat bulls, 2s 6d to 3s. Increase of 40 in number penned in sheep market compared with Thursday last. Trade for both wethers and ewes ruled extremely slow, Monday's rates governing all transactions. Best pens made per 8 lb, as follows:—7½ to 8 stone Downs, 5s 10d to 6s; 9 stone ditto, 5s 8d to 5s 10d; 10 stone ditto, 5s 6d to 5s 8d; 10 stone half-breds, 5s 4d to 5s 6d; 10 stone Down ewes, 4s to 4s 2d. Calf trade not worth noting. Quotations per 8 lb, sinking the offal:—Beasts, 2s 6d to 3s 6d; sheep, 4s to 6s.

COUNTRY.

Ashford, Tuesday.—Beef unchanged, best making up to 4s 8d. Mutton rather dearer: Downs, 5s 10d to 6s; Kent wethers, small, 5s 6d to 5s 10d; ewes, 4s 2d to 4s 6d; veal, 5s to 5s 6d. Roasting pork, 3s 8d to 4s; large hogs, 3s 2d to 3s 4d per stone.

Aylesbury, Wednesday.—There was an excellent show of cattle, 190 choice quality beasts being on offer. These met a fair trade, but no advance can be quoted on last week's rates. Bullocks made up to £21 12s 6d and heifers £21. 490 sheep were penned and met a good demand, being easily disposed of, wethers realising up to 61s, ewes 59s, and lambs 40s 6d.

Berwick, Saturday.—Attendance of farmers and buyers small, and trade slow. Calves, £5 10s to £6 10s; heifers, £9 10s; stirks, £8 10s to £11; two-year-olds, £11 10s to £13 10s; three-year-olds, £16; Shorthorn bulls, £12; cows, £1.

Birmingham, Thursday.—Fair supply of pigs; small supply of beasts and sheep; trade fair for pigs; but slow for beasts and sheep. Quotations:—Beef, 5d to 6½d per lb; Hereford, 6½d per lb; mutton, 6½d to 8½d per lb; bacon pigs, 9s 2d per score; cutting pigs, 9s 6d per score; porkers, 10s per score; sows, 7s 6d per score.

Bristol, Thursday.—Fat cattle were plentiful, but business was slower at rather weaker prices for best qualities, and 1s per cwt less for secondary. Sheep and lambs were in average supply. Trade quiet. The value of light Down wethers advanced to 8¾d per lb. Pigs, as usual, were scarce, and quotations unaltered.

Calne, Friday.—Prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s 0d per score, 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s 0d. Pigs outside these limits at their value.—C. and T. Harris and Co., Ltd.

Carlisle, Saturday.—The attendance was small, and a quiet trade resulted. Small wintering heifers, £6 10s to £8 10s; better descriptions,

to £12 10s; stall-feeding cattle £16 10s; polled bullocks, £9 10s to £11 10s each.

Chester, Thursday.—Supplies of stock were large, but the quality was scarcely as good as usual. Buyers were numerous, and high prices were obtained for suitable lots. Cattle of inferior class were more difficult to sell. Sheep were scarce and in slow demand. Quotations:—Milch cows, £17 to £22; calvers, £16 to £20; barrens, £10 to £13; heifers, £8 to £15; bullocks, £9 to £14; and stirks, £6 to £10 each.

Chichester, Wednesday.—Trade for the best dairy cows and heifers was very good, but inferior animals were very hard to sell. Quotations:—Devon steers, 4s 6d to 4s 10d; Shorthorn steers, 4s 2d to 4s 6d; Southdown tegs, 6s 6d to 6s 8d; West Country tegs, 6s 2d to 6s 6d; West Down ewes, 4s 4d to 4s 8d; Southdown ewes, 4s 6d to 5s; fat calves, 5s to 5s 6d; porkers, 3s 10d to 4s 4d.

Derby, Tuesday.—A fairly busy market, and the demand for best beasts and sheep was well maintained. Beasts, 5½d to 6½d; sheep, 7d to 8½d.

Doncaster, Saturday.—Good supply of cattle and a moderate demand, especially for milch beasts, which were firm and made fully late rates; top price, £23. Bullocks realised £12 to £17; heifers, £11 to £16; drapes, £10 to £15; and stirks, £9 to £12 each. Plenty of sheep offered, but a smaller supply than for several weeks. Trade slow, and late prices ruled. Ewes made 44s to 52s; gimmers 50s to 55s; and lambs, 34s to 44s each.

Dorchester, Saturday.—Moderately good deliveries both of fat and store stock, excepting sheep, were on offer at both Messrs. Duke's and Messrs. Symonds and Sampson's sales at to-day's cattle market, the only effect of the fair on the previous day being the absence of a few of those who usually attend the market. The stores included many really good milch beasts, those from the Isle of Purbeck finding favour with buyers at from £17 5s to about £21 10s each, and other £13 to £16 15s make an equally ready sale, milk being still badly wanted in many parts. Grazing cattle in at all forward condition met a fairly good inquiry at from £20 to £26 per pair, but distinctly plain cattle made less money; stirks ranged from £9 to £11 each, and yearlings from £5 to £8 5s. Fat beef, which included some splendid vale-grazed heifers and steers, ruled fairly firm at 11s to 11s 6d per score for the ripest, but secondary qualities must be quoted at 9s 6d to 10s 6d. Mutton, for the little offering, sold at unchanged rates.

Dublin, Thursday.—Finished cattle were again in good demand at late quotations. The large number of secondary and inferior descriptions on offer helped to retard business for these classes, and lesser prices had to be accepted in order to accomplish sales. The large increase in sheep had a quieting effect on trade, all classes making less money and many lots remaining unsold. Cattle—Live weight (best), 29s to 31s per cwt; exceptional for choice Angus crosses, 33s. 6d per cwt; inferior qualities, 25s per cwt. Mutton (dead weight), 6½d to 7½d per lb.—Ganly, Sons and Co.

Edinburgh, Wednesday.—Larger supplies, dull trade. Sheep: Half-bred lambs to 31s 6d; Cheviot Dinmonts to 34s; Cheviot ewes, 22s to 27s. Cattle: Black Polled bullocks, £12 10s to £13 10s; coloured, £11 to £15; stirks, £9 to £11 5s; horned bullocks, £12 5s to £15 15s. Cows: Readier demand; Shorthorns to £28; Irish to £21 10s; Ayr-hires to £19.

Glasgow, Wednesday.—Large show of cattle, and for prime quality a fair demand was experienced. Secondary classes were cheaper owing to the sluggish state of trade generally. Top 62s to 65s; secondary, 55s to 58s per cwt. A fair number of sheep were penned, and for prime hogs and wethers a good steady trade was given. Other classes were hard to sell and were cheaper. Ewes only met a fair inquiry. Best mutton, 8¾d to 9¼d; secondary, 7¾d to 8¼d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves: A very large supply of cows and calves, which met an excellent trade. Store cattle: A large supply of store cattle of good quality, for which there was a good demand.

Hereford, Wednesday.—Fair supply of beef, but no alteration in trade. Best quality beef and bullock not more than 6½d to 6¾d per lb, cow beef 5s. Small supply of calves; trade fairly good; veal 7d. Short supply of sheep; good demand for best wethers at 8d to 8½d; fat ewes, 6d to 7d. Lambs, both fat and store, met with a brisk trade; fat 8d to 8½d; stores made 38s to 39s each. Pigs were a large supply, with slight recovery on the trade. Porkers made 6d, bacons 5½d to 6d. Old stores met with a fair demand; small stores very slow. Poor trade in store cattle.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report an average supply of fat cattle. The best yard-fed animals made up to 9s per stone, grass cattle were slow and prices weak. Over 300 grazing steers were penned, more than half of which were North Country steers in good condition and of first-class quality. There were rather more buyers present, and a better clearance was effected without any improvement in price. Roan Westmoreland calves, about 10 months old, £4 17s 6d to £5 10s; North Country steers, from 14 to 16 months, £6 15s to £8 2s 6d; 18 months to two years, £8 15s to £11; polled Irish, £10 15s to £9 7s 6d; Shorthorn heifers, two years old, in calf, £13 10s to £13. Irish calves, £6 to £5 10s each.

Leicester, Saturday.—Large consignments of home-bred stock, fair attendance, and prices firm. Choice milch cows, £21 to £24 10s; good lots, £17 to £19; inferior, £14 to £15; Irish £13 to £15 10s; Welsh cattle, £9 to £15; young stock, £5 to £7 10s; heifers, £8 to £11 10s; and calves, 20 to 40s each. Sheep sold freely at 48s to 55s for breeding ewes, lamb hoggs 20s to 39s each.

Lincoln, Friday.—A fair supply of horned stock, and a slow demand. Young beasts, £8 to £10; strong ditto, £12 to £15; milch cows, £17 to £22, drape ewes, 35s to 40s; gimmers, 50s to 55s; and lambs, 30s to 44s per head.

Lynn, Tuesday.—Fat beasts were in average supply, and trade was not so firm as last week, making from 7s to 7s 6d per stone. Stores were in larger supply, and with a slow trade made from £6 to £17 each. A small show offat sheep experienced late rates, and made from 9s to 10s per stone. Stores about 45s to 50s each. Store lambs 35s to 44s each.

Manchester, Friday.—Beef: First-class, 5d; second-class, 4d to 4½d; third-class, 3d to 3½d per lb. Mutton: First-class, 7¾d; second class, 6¾d to 7¼d; third-class, 5¾d to 6¼d. Veal: First-class, 6½d; second-class, 5½d to 6d; third-class, 4½d to 5d per lb. Bacon pigs: First-class, 5¼d; second-class, 4¼d to 4¾d; third-class, 3½d to 3¾d. Porket pigs: First-class, 7d; second-class, 6½d to 6¾d; third-class, 6d to 6¼d per lb

Newcastle, Tuesday.—Trade was very similar to last week with prices unaltered. Quotations:—Prime heifers, 7s 3d to 7s 6d; second class, 6s 9d to 7s; prime steers, 7s to 7s 3d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Sheep and lambs were a slightly smaller supply, and trade was very similar to last week, but choice sheep improved ½d. Quotations:—Prime shearling sheep, 8½d to 8¾d; strong heavy, 8d to 8¼d; choice lambs, 8¾d to 9d; second class, 8½d to 8¾d; ewes, 6d to 6¾d; rams, 5d to 6d per lb. Calves were smaller supply, and trade in veal was rather firmer, although prices did not improve, quotations running from 5½d to 7½d.

Newport, Wednesday.—Plentiful supply of cattle, sheep, and lambs. Moderate supply of calves and pigs. Large attendance of buyers and good trade all round. Best beef, 6½d to 9d; seconds, 6d; cows, 4¾d to 5½d; best wether mutton, 8½d to 8¾d; ewes, 6½d to 7d; lambs, 9½d; calves, 7d; porker pigs, 10s 3d to 10s 9d per score.

Nottingham, Saturday.—Shorter supply of stock, which met with a rather slower trade. Best in-calf cows made £18 to £21; heifers, £15 to £17 10s. and calves to 45s. Numbers—214 beasts and 72 calves.

Preston, Wednesday.—Good samples of cattle, but trade was slow, with a general weakening in prices. Choice local heifers, 6½d; best Irish heifers, 6d; prime young cows and bulls, 5¾d; secondary cows and bulls, 5d; choice lambs, 8¾d; coarse ditto, 8½d; hoggs, 8d to 8½d; ewes, 6½d; coarse and heavy tups and ewes, 5½d to 6d; calves, 6¾d per lb.

Retford, Saturday. — Bullocks and milch beasts of good quality found customers without difficulty at £18 to £21 each, and secondary, £14 to £17. Only a slow trade for two-year-olds at £10 to £12; yearlings, £6 to £8; and calves 35s to 45s per head.

Romford, Wednesday.—Average supply of fat beasts, trade about the same. Best, 4s 2d to 4s 4d; middlings, 4s to 4s 2d per stone. Calves in short supply, trade a little better, at 5s 2d to 5s 4d per stone. Sheep in larger supply, trade slow. Best small, 5s 8d to 6s; larger, 5s 6d to 5s 8d per stone. Ewes in average supply, trade slow, at 4s 2d to 4s 4d per stone. A few store beasts on offer, very slow demand. Average supply of milch cows, trade good. Pigs in small supply, trade about the same. Small porkers, 3s 10d to 4s; large hogs, 2s 8d to 3s per stone.

Sheffield, Tuesday.—An average attendance and a fair supply of beasts, good milch cows making £20 to £22: secondary lots, £15 to £16; steers and heifers, £11 to £12 10s.

Shrewsbury, Tuesday.—Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d to 9¾d per lb; ewes, 8d per lb; lamb, 9¾d per lb; veal, 8d to 8¾d per lb; porket pigs, 10s per score; bacons, 9s 3d to 9s 6d per score.

Stockton, Wednesday.—A larger show of the best cattle, which met with a slow trade at 7s to 7s 6d per stone, whilst rougher kinds made 6s to 6s 6d per stone. Lambs and young sheep made 8½d per lb, ewes 6½d, and tups 6d. The pig trade was very dragging, small porkers making 7s 6d per stone, mediums, 6s 9d to 7s, and sows 6s to 6s 3d per stone.

Thame, Tuesday.—There was again a capital entry of stock, but buyers were in shorter attendance than is usual at this time of year. Beef was a dragging trade throughout, a great many cattle coming to hand not ripe enough, although the best quality beef made slightly more money. Sheep were a decidedly better trade, making higher prices than for some time past. Veal in demand. Fat pigs easier.

Truro, Wednesday.—Attendance very good, business fairly brisk. Fat bullocks, 54s to 58s; barreners and store bullocks, 40s to 45s per cwt; cows and calves, £11 to £15 each; rearing calves, 20s to 37s 6d; ewes, 40s to 45s; wethers, 7d per lb; ewes, 5½d to 6d; lambs, 7½d; pigs, 5s 6d to 42s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, (carcasses) 4½d to 5d.

Wolverhampton, Wednesday.—Trade slow all round; supply large. Beef, 5d to 6½d per lb; a few best, 6¾d; mutton, 6½d to 9d per lb; veal, 6d to 7½d per lb.

Worksop, Wednesday.—Moderate supply of stock, and trade fairly good. Best beef, 7s to 7s 6d; secondary 6s 6d to 7s per stone. Best Southdown wethers and cross-breds to 8¾d; ewes, 6d to 7d per lb.

York, Thursday.—Trade in all departments showed a marked improvement, and good prices were realised. The numbers were exceptionally good for the time of year, and prices ruled much about the same as last week—£18 for three-year-olds, and £14 for two-year-olds of good quality. Prices for sheep showed an improvement. North-country ewes made up to 60s for the best qualities, others making up to 55s; North-country lambs averaged 33s, and Cheviot ewes ranged from 24s to 30s. Other breeds showed a similar improvement, 38s to 30s being given for twice-crossed lambs; secondary sorts running 4s to 5s less. Masham ewes made 48s; lambs, 28s; and South-country ewes 40s to 45s each.

CHEESE.

Glasgow, Wednesday.—Arrivals of home cheese were light, owing to the harvest operations not being completed. The trade was very small, with prices unchanged. Cheddars, 60s to 64s; Dunlops, 50s to 62s; Canadian cheese slow, and price 62s to 63s per cwt.

Highbridge, Tuesday.—A good attendance of buyers, a general advance in prices, and all cleared. Best Caerphilly dairies realised up to 59s 6d per cwt.; secondary dairies, 56s to 57s 6d; and other dairies, 51s to 53s. A few inferior lots failed to reach 45s. Cheddars, 60s to 63s; truckles, 57s to 63s 6d; doubles, 51s to 54s.

Newport, Wednesday.—There was a good attendance of buyers, and a brisk demand. Quotations:—Caerphillies, 46s to 54s per cwt; fancy dairies, 56s to 58s; Derbys, 63s to 66s; truckles, 60s to 65s; Cheddars, 62s to 63s.

DAIRY PRODUCE.

London, Friday.—Butter.—The temperature is gradually partaking of a wintry character, and the rainfall continues much above the average. The demand for Australian and New Zealand butter continues very good, especially for new season's Australian, which, when "choicest" makes 120s to 122s per cwt., while cold stored New Zealand brings 110s to 116s, fresh arrivals 116s to 120s. The arrivals during the week consists of 3,123 boxes in the *Ormuz* from Australia, and 3,300 in the *Athenic* from New Zealand. Shipments this week from Australia comprise 12,500 boxes in the *Orotavia*, and 11,000 in the *Surrey*. Cheese.—The market is very quiet and cables from Canada are coming easier, but spot prices remain firm at last week's prices.

POULTRY AND GAME.

Smithfield, Saturday.—Fair supplies were in poor request. Prices:—Cock turkeys, 9½d per lb.; hen turkeys, 4s 6d to 5s 6d each; pheasants, 6s to 7s; young grouse, 6s 6d to 7s; old, 3s to 3s 6d; young partridges, 4s to 4s 6d; old, 1s 9d to 2s per brace; geese, 4s 6d to 6s; country ducks, 2s 3d to 3s; wild ducks, 1s 6d to 1s 9d; Surrey fowls, 3s to 3s 6d; Sussex fowls, 2s 9d to 3s 3d: Lincolnshire fowls, 2s to 2s 9d; Essex fowls, 2s to 2s 6d; Irish fowls, 1s 8d to 2s 3d: quails, 8d to 1s; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 2s 6d to 3s; Scottish hares, 1s 4d to 1s 6d; tame rabbits, 1s 3d to 1s 6d; wild rabbits, 6d to 10d; live hens, 1s 4d to 1s 6d each Australian rabbits, 5s to 6s 9d per dozen.

NORTH COUNTRY FARMERS IN CONFERENCE.

Earl Carrington and Small Holdings.

Three years ago, as the result of a concerted movement on the part of the three largest agricultural associations in the north eastern counties —the Darlington Farmers' Protection Association, the Northumberland and Durham Dairy Farmers' Association, and the Newcastle Farmers' Club—the North-Eastern Agricultural Federation was formed at a very large and representative gathering at Darlington, and the third annual conference was held at Northallerton, Yorkshire, on Friday. Practically all the associations working in the interests of agriculture from Newcastle and Hexham on the north to Selby and Wethorby in the south are affiliated to the federation, which has now become firmly established and promises to make itself felt in the district. The conference is a "movable feast." The federation was launched in Darlington, last year's conference was held at Newcastle, and for two years Northallerton was selected. The president was Mr. J O Trotter, a member of the North Riding County Council, and a prominent tenant farmer, and with him on the platform were Lord Carrington. Sir Henry Beresford-Peirse, Bart., Mr. F. Dyke Acland, M.P., Mr. Herbert Samuel, M.P., Colonel Godman, C.B , Mr. John Hutton (chairman of the North Riding County Council), the Hon. A. G. Orde-Pow'ett, Professor Gilchrist (of the Armstrong College), and the presidents and secretaries of the various associations affiliated to the federation.

The work accomplished by the executive committee during the year was set out in detail in the annual report, from which it appeared that special attention had been paid to rural education, tuberculosis, and the Municipal Milk Depôts Bill.

It was agreed that the next conference be held at Hexham, and that Mr. Angus (president of the Hexham Tenant Farmers' Federation) be the president.

In extending a cordial welcome to Lord Carrington, the president said they appreciated very much the kindness of the president of the Board of Agriculture in attending the conference two years in succession. The aim of the federation was to try and safeguard the interests of owner, occupier, and labourer, and therefore they thought that they deserved the support of all concerned.

The Milk and Meat Supply.

The first resolution was moved by Mr. C. Marshall, of the Northumberland and Durham Tenant Farmers' Association, and it read "That sectional legislation promoted by local authorities which touches the interests of farmers be opposed, and that the Government be requested to deal with the milk and meat supply on national and uniform bases at the earliest possible date." They objected, he said, to certain legislation because it was confusing. They had one town or city getting legislation to do certain things, and they had another getting legislation to do the same things in different ways, with the result that the farmer who happened to be in the area between hardly knew what to do. He was inclined to think that greater control over the meat and milk supply of the country was desirable, but he did not go so far as to say every man who had a fad should be allowed to promote legislation in the interests of any particular town—it should be in the interests of the general public, of whom the farmers were a very important part. The control of the meat and milk supply should be in the hands of a Government department. The curious thing was that the towns where the inspection was most severe had the highest death-rates. Very rightly medical officers of health insisted on as much cleanliness, air space, and purity of water supply as possible, but the moment a town began to talk about a municipal milk supply they at once looked to the sewage farm as the source from whence they could get it. At Nottingham, on one occasion, he went over the sewage farms and saw the cows eating the sludge grass and wading ankle deep among the sewage, and that milk was being taken back by the municipal authorities into Nottingham and distributed to the hospitals, the gaol, and other public places.

In seconding the proposal Mr. T. B Bainbridge, of the Stockton Chamber of Agriculture, said he considered they should adopt largely the same measures to get rid of tuberculosis in cattle that they did to get rid of consumption in the human being, and that was to provide them with a pure, healthy atmosphere to breathe in. He was told only last week by the secretary of a northern butchers' association that as many bullocks and heifers were rejected with tuberculosis as cows. That he thought was due to the unhealthy conditions under which calves were reared on many farms.

Mr. Sandler, of the Cheshire Dairy Farmers' Association, urged Lord Carrington to institute the fullest possible inquiries before he began to legislate or assist in legislating on that most important question.

Professor Gilchrist said his experience was that where a herd of cows were reared in the open from their youth and given plenty of pure fresh air, there was no tuberculosis.

Earl Carrington replied on the discussion, and said that the Government were convinced that early legislation on uniform lines was absolutely necessary. The position at the present moment was that the Local Government Board were formulating their proposals for legislation which would be discussed with his lordship's deputation before a Bill was introduced, and they hoped that legislation would be introduced and carried next year. It seemed to him that the Government Bill ought to conform to two principles—viz., first it must contain full and adequate provisions to safeguard the purity of the milk when delivered to the consumer, and secondly the restrictions imposed should be only those which were really essential to carry out the first object.

Allotments and Small Holdings.

In introducing this question, Mr. J. W. Wilkinson, of the Hexham Farmers' Protection Association, moved:—"That whilst giving general approval to the system of allotments and small holdings, this federation strongly objects to any additional charge being placed upon local rates through the provision of the same, and to any farmer being dispossessed of his land without ample compensation." They had not, he said, a general objection to small holdings, but the small holders already existing in the country were working under bad conditions. He doubted the competence of county councils to deal with agriculture. With regard to Durham and Northumberland, how could they expect checkweighmen to deal with matters affecting the land? If they were to make small holdings successful they would have to get home produce conveyed quickly and cheaply, instead of which English trains of agricultural produce were often at present shunted into sidings to let trains of foreign produce pass.

Mr. W. Parlour, of the Darlington Chamber of Agriculture, seconded the proposal, and urged that provision should have been made for local bodies to confer with landlords, for by that means land that was required might be got on more reasonable terms than it was procured by compulsion. They welcomed the small holder, but if they were to have the best land in the best districts, and if their rents were to be paid by the county councils out of the rates, then he could speak for the farmers present, and say they did not want them.

Earl Carrington observed that the fears of an increased charge on the rates, or the wanton eviction of sitting tenants were altogether unwarranted. The county councils who had provided pravided small holdings under the Act of 1892 had in no single case found it necessary to impose any charge on the rates, and they believed that the new Act had very seriously diminished any such possibility. His lordship then quoted at length from the Act in support of his contention, and pointed out that if any charge should fall upon the rates, it was limited to a penny in the £. With regard to the protection of the sitting tenant, he thought they might be sure that the Government, which, in the teeth of much opposition passed the Land Tenure Act last year, giving compensation for unreasonable evictions, would not do anything at variance with the principles they then professed. The provisions made by the Government seemed to afford ample protection to the farmer, and, moreover, it must be assumed that the county councils and the Board would act as reasonable human beings. It was probable that sufficient land would be readily obtainable without any undue disturbance of existing tenants, as land was constantly available owing to the death or voluntary removal of tenants. The two Commissioners who had been appointed under the Act were men who had a lifelong experience of estate management and farming, and had been singularly successful in obtaining the confidence of farmers in the districts where they had worked, and he had no hesitation in saying that neither they nor the Board over which he presided would fail to safeguard in every possible way the interests of sitting tenants who were farming their land well The Commissioners would certainly not be employed to manufacture an artificial demand for small holdings, and they had no intention of taking land away from good farmers to give it to men from the towns who had no agricultural experience.

Land Taxation.

The third and last subject was the taxation of agricultural land, and this was introduced by Major Hedley, of the Newcastle Farmers' Club. The resolution read:—"That agricultural land should be relieved from a large portion of the burthen of local taxation, a burthen which is out of all proportion to the benefits derived by it from the huge and rapidly-expanding outlay on sanitation, education, poor, police, roads, and other local purposes." The speaker contended that the produce of local taxation was not to any large extent applied for the needs of rural districts, nor was it spent under the control of the rural taxpayer. The roads were being rapidly taken from them, or the use of them seriously restricted by motors cars or wagons, which enabled the town tradesman to starve out the village shopkeepers. What could be expected from a legislature whose discussion of the new Agricultural Holdings Acts, with a few notable exceptions, was beneath contempt, and for crass ignorance of the difficulties farmers have to contend with was monumental. Last year Lord Carrington asked them to tell him in plain English what they wanted. He hoped there was no vagueness in their resolution on local taxation. In conclusion he would like to give them a few words of advice if they wanted relief from the unjust incidence and application from local taxation they must fight for it. They had object lessons each session of Parliament. The Irish Party were alternately feared or cajoled, the Nonconformists were a power in the land, the teetotaller must be considered, and, above all, the Labour-Socialists were making themselves heard. It was for them as farmers to go and do likewise. So long as they were Radicals, Liberals, or Conservatives, so long would they be but mere atoms in parties who had other matters to attend to than their wrongs.

Mr. J. T. Wilson, Stockton-on-Tees Chamber of Agriculture, seconded the proposal, and, in supporting, Mr. R. C. Pearce, of the Darlington Chamber of Agriculture, said he desired to draw Lord Carrington's attention to the state they were in at present in the north country owing to the very backward state of the harvest.

Earl Carrington said that last year, when replying on the same subject, he told them that the Government were pledged to deal with the question which they regarded as of the first importance. To that declaration he adhered, and he could add that the first step had been taken by the Government to deal with the question. In his Budget speech this year Mr. Asquith said that he proposed as from next year to abolish altogether the present system by which imperial taxes, such as the local taxation licences, the beer and spirits duty, and the probate duty were paid to the local taxation account, instead of going into the Imperial Exchequer. Mr. Asquith proposed in their place to pay to the local authorities in aid of rates a sum from the Consolidated Fund equal to what they at present received from the assigned revenues, and his object in making this change was "to clear the ground for a future resettlement on equitable terms of the whole relation between the central authority and the local authorities. The Government further proposed next year to introduce a Bill to simplify the present system of valuation, which was a necessary preliminary of any reform of local taxation, and they intended to include in that Bill provisions designed to obtain a larger contribution towards the rates from land in the neighbourhood of towns which was at present assessed at very much less than its real value. He thought that almost all of those who had studied the question were agreed that agricultural land bore an undue proportion of local rates, whether estimated by ability to pay or benefits received, and it was very desirable that concrete instances should be given to put before the public to show how large a proportion of the profits of agriculture went in local rates.

The usual votes of thanks concluded the proceedings.

A Norfolk farmer was on Monday fined £4 2 (including costs) by the Tenningham magistrates for contravening the Swine Fever Order by allowing his diseased pigs to stray on to an adjoining farm.

RECEIVED TOO LATE FOR CLASSIFICATION.

CHIPPENHAM AGRICULTURAL ASSOCIATION.

THE Annual Show of Cattle, Horses, Poultry, etc., in connection with this Association, will be held at Chippenham on the 28th and 29th November, entries closing on the 15th November.

For Schedules, apply to—
C. J. Hibbard, Chippenham.

GUARANTEED CURE FOR FOOT ROT.—Best in the World. Cure in seven days. Sold in pots, 3s. 6d.—W. A. Padfield, New Barn, Appledram, Chichester.

SACKS. Sound, clean, once used, 280 lbs., 6½d.; 224 lbs., 5½ d.; 140 lb., 3d. each, carriage paid. Special Pig Meal, 12s. 240 lb., send for sample.—G. T. Murray, Green Lane, Stoneycroft, Liverpool.

Printed and Published by the Proprietors, at the Offices, 8, Wellington Street, Strand, London, W.C.—October 28, 1907.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The total rainfall of the ten months ended October 31 was 4·41 in.; almost an ideal. But the distribution was extremely uneven, as the following return will show. October was not ungenial as a month despite the very frequent heavy showers. The last few days were favourable to field work and November finds farmers extremely busy :—

1907.	Rain (inches)	Sun (hours)	Warmth (degrees)
January	1·01	40	39·0
February	1·02	55	42·0
March	·81	152	48·0
April	3·10	105	48·0
May	2·50	151	51·0
June	2·30	180	54·0
July	1·80	162	59·6
August	1·90	160	57·5
September	·90	130	59·0
October	3·51	90	53·0

Autumn sowings of wheat on the Continent are of importance as giving us some clue to what production will be in 1908. It is clear that France, Germany, Italy, and Spain are likely to keep up to full figures, great efforts having been made to sow wheat. On the other hand the area under wheat in Austria-Hungary, Roumania, Russia, and Poland cannot now be up to that of last year, and it is only in the last two regions that spring sowings have a chance of making up the deficiency.

The wheat gradient is not steep; all quotations continue well on the right side of 30s :—

Salisbury	37s.	4d. per qr.
Chichester	34s.	0d. ,,
Range	3s.	4d. per qr.

Barley is selling well in Kent, but prices are low in the north :—

Canterbury	31s.	0d. per qr.
Bridlington	25s.	2d. ,,
Range	5s.	10d. per qr.

Oats show much uniformity of value; there are no very cheap markets and no very dear ones :—

Mark Lane	19s.	9d. per qr.
Fakenham	17s.	7d. ,,
Range	2s.	2d. per qr.

Sales of wheat at the statute markets since harvest have been :—

This season ... 583,000 qr. at 32s. 10d. per qr.
Last ,, ... 638,000 ,, 26s. 1d. ,,

The advance is therefore 6s. 9d. on the year.

Sales of barley have similarly been :—

This season ... 659,000 qr. at 25s. 5d. per qr.
Last ,, ... 1,146,000 ,, 24s. 8d. ,,

The barley price has not been satisfactory, but is now amending.

Sales of oats have been :—

This season ... 370,000 qr. at 17s. 10d. per qr.
Last season .. 306,000 qr. at 16s. 5d. ,,

The advance of 1s. 5d., in spite of increased supplies, witnesses to an exceedingly good demand.

The imports of the United Kingdom last week were :—

Wheat, 575,000 qr. : a good supply.
Flour, 91,600 sks. . a moderate supp'y.
Barley, 235,000 qr. : a good supply.
Oats, 98,000 qr. . rather less than usual.
Maize, 278,000 qr. : heavy arrivals.

Supplies of breadstuffs since harvest have been as follows :—

Wheat	3,873,000 qr.
Flour	765,000 ,,
Breadstuffs	4,638,000 ,,
Last season	4,542,000 ,,

We are now deriving our breadstuffs, where imported, from foreign regions in the following proportions :—

North America	42 per cent.
South America	20 ,,
New World : Total	62 ,,
Russia	11 ,,
India	13 ,,
Australasia	7 ,,
Various	7 ,,
Old World : Total	38 ,,

Another and suggestive division is as follows :—

British Empire :	
Canada	12 ,,
India	13 ,,
Australasia	7 ,,
Empire : Total	32 ,,
Foreign Powers :	
U.S.A.	30 ,,
Russia	11 ,,
Argentine	20 ,,
Various	7 ,,
Foreigners ; Total	68 ,,

The 7 per cent. of "various sources" includes Turkey, Bulgaria, Russia, and Chili, but the latter is now hardly a shipper, home requirements having overtaned production. Egypt, from being a wheat exporter, has become an importer, and Cape Colony is also now dependent to some degree upon imports.

We endeavoured last week to enable readers to compare prices on the uniform level of the ton. In contrast to this wholesale quantity we now offer a comparison of mean values per cental, or "true hundredweight" of 100 lb.

	per cental s.	d.
Top-price flour	13	9
Indian linseed	11	6
Household flour	11	3
No. Californian wheat	9	0
Russian winter wheat	8	10
Argentine wheat	8	8
No. 2 Red winter wheat	8	6
Beet sugar	8	3
English wheat	8	0
Best middlings	7	2
English barley	7	0
Russian oats	6	4
Russian barley	6	3
English oats	6	1
German barley	6	0
Odessa round maize	5	11
Mixed American maize	5	10
Yellow Argentine maize	5	8
Asia Minor dari	5	5
Argentine sorghum	5	3
Locust beans	4	11
Rice meal	4	10

Of course the prices have to be somewhat roughly averaged, but the comparisons are none the less significant. We should say that rice meal, locust beans, and dari were all decidedly worth buying, and that English oats are the next best thing going. The price of maize is almost certain to fall 2d. to 3d. per cental when the big new American crop gets into motion, and it will therefore be wise to pursue a hand-to-month policy in buying for the next seven or eight weeks.

We notice that autumn trade in farm seeds is now passing at 60s. to 80s. per cwt. for English red cloverseed; at 75s. to 85s. for Alsyke; at 60s. to 66s. for Provence lucerne; at 10s. to 15s. for ribgrass; at 22s. to 28s. for Timothy; and at 54s. to 62s. for New Zealand cocksfoot. The price of ryegrass varies greatly, and is governed mainly by the weight per bushel; anything over 29 lb. fetches about 30s, but light perennial grass, say, 18 lb. to the bushel, is obtainable at 18s. Very roughly speaking, therefore, the price is 1s. per lb. Coriander is quoted at 15s. to 16s. per cwt.

The supplies on passage on November 1 were as follows :—Wheat, 1,718,000 qr.; flour, 270,000 sacks; barley, 780,000 qr.; oats 160,000 qr.; maize, 950,000 qr.; linseed, 160,000 qr.; rapeseed, 23,000 qr.; and cottonseed, 44,000 tons. The wheat was thus divided :—

Californian	210,000 qr.
American	305,000 ,,
Argentina	105,000 ,,
New World	620,000 ,,
Russian	125,000 qr.
Indian	583,000 ,,
Australasian	370,000 ,,
Turkish	20,000 ,,
Persian	10,000 ,,
Old World	1,108,000 ,,

The "Westward tide of Empire" does not set so strongly as it once did in the wheat trade, and the older regions are now producing nearly two-thirds of the supply. The barley on passage is inclusive of 410,000 qr. from the Euxine, the maize of 400,000 qr. of round corn. All the cotton-seed is Egyptian.

America last week shipped 400,000 qr. of wheat, 167,000 sacks of flour, and 106,000 qr. of maize. Total shipments of barley for October were 190,000 qr., of which 14,000 qr. were from the Pacific seaboard.

Argentina last week shipped 88,000 qr. of wheat, 114,000 qr. of maize, and 19,000 qr. of linseed, but oats are apparently played out pending the reaping of a new crop in January.

Russia shipped 315,000 qr. of wheat, 386,000 qr. of barley, 72,000 qr. of oats, and 122,000 qr. of maize; on the whole, Russia is a free shipper just now.

Roumania sent off 128,000 qr. of wheat, 105,000 qr. of barley, 17,000 qr. of oats, and 16,000 qr. of maize, while 146,000 qr. of wheat were shipped from India and Persia, and 26,000 qr. of wheat from Australia and New Zealand.

LONDON HAY TRADE.

Saturday.—There is hardly such a shortage in arrivals as last week, but the supplies are still on a very moderate scale, the demand shows a slight falling off, and the feeling seems to be of a weakening nature; prices, however, are about unchanged. Although the London trade is inclined to be a trifle easier, values in the country are very firm, and farmers are not disposed to give way in price; in fact, they are now actually asking more money for stuff in stacks than a few weeks ago. No doubt as they have and are making more money of their corn than for years past, they are in more of a position than usual to hold their hays for a better market.

Of the present arrivals the bulk consists of middling and inferior qualities which are very difficult of sale, prime sorts which come along very sparingly continue, and a very firm trade at full prices, and strange to say there is a momentary shortage of very rough qualities of all kinds. It seems this season, when almost everything has been got in a more or less bad condition, that senders are not troubling much about sorting out best from seconds when cutting out at stacks, but are forwarding to market just as the hay is bound out. Straw comes along in a fair supply, and is a quiet trade at previous rates.

Prices ruling are about as follows :—English Best hays, 70s to 75s per ton; good hays, 62s 6d to 67s 6d per ton; plain hays, 57s 6d to 60s per ton; best clovers, 85s to 87s 6d per ton; good clovers, 80s to 82s 6d per ton; inferior clovers, 72s 6d to 77s 6d per ton; best mixtures, 82s 6d to 85s per ton; good mixtures, 75s to 80s per ton; plain mixtures, 67s 6d to 72s 6d per ton; seconds hays, clovers, and mixtures, 45s to 60s per ton; wheat straw, 26s to 27s per load; barley straw, 26s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign : Canadian mixture, none; first quality Dutch hay, 60s to 62s 6d per ton; second quality Dutch hay, 55s per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

POULTRY AND GAME.

Smithfield, Saturday.—Good supplies in moderate request. Cock turkeys, 9d per lb.; hen turkeys, 4s to 5s 6d geese, 4s 6d to 6s; country ducks, 2s 6d to 3s 3d; wild ducks, 1s 6d to 2s; Surrey fowls, 3s to 3s 6d; Sussex fowls, 2s 9d to 3s 3d; Lincolnshire fowls, 2s to 2s 9d; Essex fowls, 2s to 2s 6d; Irish fowls, 1s 8d to 2s 3d; quails, 8d to 1s; feathered pigeons, 8d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 2s 6d to 3s; Scottish hares, 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 6d to 9d; live hens, 1s 6d to 1s 9d each; Australian rabbits 5s to 6s 9d per dozen; pheasants, 4s 6d to 5s 6d; young grouse, 6s to 7s; old, 2s 9d; young partridges, 4s 6d to 5s; old, 1s 9d to 2s per brace.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fairly good supply and steady demand. Quotations for English produce :—Grapes, 8d to 3s 6d; peaches, 3s to 12s per dozen; apples, 2s to 6s per half bushel; cranberries, 9s to 10s 6d per case; pears (Pitmaston Duchesse), 1s 9d to 2s 6d; cobnuts (Kent), 4s to 4s 6d per 12 lb; walnuts (Grenoble), 6s 6d to 8s per bag; chestnuts (Redan), 8s to 15s per bag; green figs, 9d to 2s per dozen; celery, 7s 6d to 12s 6d per dozen rolls; cabbages, 3s to 4s 6d; cauliflowers, 4s to 6s per tally; onions, 4s 6d to 5s 6d per cwt; horseradish, 10s to 15s per dozen bundles; parsley, 1s 6d to 2s.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet, at about late rates. Whites quoted at 39s to 42s; reds at 38s to 41s. Foreign sellers maintain late prices, but demand limited. No. 1 Northern Manitoba, ex ship, quoted at 45s 6d; No. 2 at 44s 6d; choice white Karachi at 42s 6d; reds at 41s 9d.; Australian, landed, at 45s; No. 1 hard Manitoba at 46s 9d; South Russians at 43s to 46s 6d. Flour firm, but quiet. Hungarians quoted at 39s; Kansas patents at 31s to 32s; Iron Dukes at 28s 6d to 29s. Maize dull, unchanged. Odessa, ex ship, held at 27s 3d; landed at 28s; Danubian and Galatz-Foxanian, landed, 28s 3d; River Plate, landed, at 28s. Barley easier and very slow sale, especially for Persian to arrive. Azoff-Black Sea and Odessa-Nicolaieff, ex ship, held at 25s to 25s 3d; Persian, ex ship, 22s 9d to 23s 3d, as to position. Oats slow, unchanged. South Russians (38 lb) held at 19s to 19s 3d; La Plata at 19s; Danubian, 18s to 18s 6d.

Mark Lane, Friday.—Wheat: English dull, easier tendency: whites quoted 39s to 42s; reds at 38s to 41s. Foreign slow, and offered at 3d to 6d decline; No. 1 Northern Manitoba, ex ship, held at 44s 6d to 45s; No. 2 at 44s; choice white Karachi at 40s 6d to 41s; No. 1 Durum at 40s; South Russian, landed, at 43s to 46s; Persian, 40s to 43s 6d. Flour steadily held, but inactive; Iron Dukes held at 28s 6d to 29s; Hungarian at 39s; Kansas Patents at 31s to 32s. Maize dull, and 3d easier for all kinds; Odessa, ex ship, held at 27s; Danubian and Galatz-Foxanian, landed, at 27s 9d. Barley slow, and 3d to 6d easier; Azoff-Black Sea and Odessa-Nicolaieff, ex ship, held at 24s 6d to 24s 9d; Persian, at 22s 9d. to 23s Oats slow, easier tendency; South Russian, 38 lb, held at 18s 9d to 19s 3d; Danubian, 18s; River Plate, 19s.

COUNTRY.

Appleby, Saturday. — There was no grain offering. White oats (horse corn), are worth 19s to 22s 6d per 26 stones.

Ashford, Tuesday. — Business was rather quieter, and there were few sales of wheat, millers holding off for the present. Nothing was quoted above 38s, except a small lot of seed which made 40s. Quotations:—Wheat, 36s to 38s; English barley, 31s to 33s; secondary, 27s to 29s; foreign barley, 26s to 27s; oats, 19s to 22s; Mazagan beans, 28s to 30s; tick beans, 33s to 35s; new peas, 32s to 33s; maize, 30s to 31s.

Banbury, Thursday.—Wheat, white (new), 35s to 36s per qr; ditto red (new) 35s to 36s 6d per qr; barley, 28s to 34s per qr; beans (new), 30s to 32s 6d per qr; oats, 19s to 22s per qr; peas, 30s to 34s per qr.

Berwick, Saturday. — Larger attendance. More grain on offer. Barley of all kinds met with a good demand. Fine oats continue to make full prices; secondary and weathered sorts rather easier. Barley, 24s 6d to 33s; oats, 23s to 28s 6d.

Brighton, Thursday. — Small attendance. Wheat in less supply. Trade slow and prices unchanged for dry parcels. New white wheat, 38s to 40s; new red ditto, 37s to 39s; barley, 29s to 35s; grinding ditto, 28s to 29s; oats, English, 18s 6d to 22s; peas, 32s to 33s; beans, 33s to 34s.

Bury St. Edmunds, Wednesday.—Wheat in average supply; trade quiet, at about last week's quotations; Reds or whites, dry, 38s to 38s 6d; ditto, damp, 36s to 37s per qr; revets, 36s to 37s 6d per qr. Barley in good supply, with a steady demand and a considerable business doing, at 31s to 34s for fair malting runs, and 35s to 37s for fine parcels. Oats firm at last week's advance. Maize, 29s to 29s 6d per qr, delivered. Other feeding corns firm at last week's prices.

Cambridge, Saturday. — Wheat trade has been inanimate and lost a clear 1s per qr on the week. At this market on Saturday there was only a moderate supply of wheat, making 37s to 37s 6d on rail. There were only a few buyers. Oats sparsely offering; white made up to 20s 6d, winter £1. Fair supply of beans, 32s to 33s per 38 stone on rail, according to condition.

Canterbury, Saturday.—Valuhs of both wheat and barley are lower, the drop in the case of the latter ranging from 1s to 2s per qr for medium-grade samples. Most of the business in barley was transacted at between 29s 6d and 32s. Millers were buying wheats of 63 lb weight at 38s, delivered in, but in a few cases 37s 6d was paid for this weight to be fetched from the farm. Seed qualities, 40s per qr. Oats prices are fairly steady, 42 lb white oats making 20s 6d, 43 lb 21s, and 45 lb 22s per qr. Grey peas unchanged, at from 31s to 32s; and tick beans, 31s 6d to 33s per qr.

Carlisle, Saturday.—Very small show of oats in our market to-day at fully 1s per qr advance on week. New oats, 20s to 23s per 336 lb; old oats, 25s to 27s per 336 lb. Big show of pocket samples of new oats of inferior quality made 19s per qr. Wheats for seed sold at 42s per qr.—Thomas Robinson.

Chester, Saturday.—The decline this week in foreign grain has been reflected to some extent in English grain, and only occasional lots realise the full prices quoted. Indian corn is 6d per sack lower owing to heavy arrivals. Quotations: Wheat, white and red, 5s 3d to 5s 6d per 75 lb; grinding barley, 4s to 4s 3d per 64 lb; oats, new, 2s 9d to 3s; old, 3s 1d to 3s 6d per 46 lb; Indian corn, old, 14s 9d to 15s; round corn, 14s 3d to 15s 6d per 240 lb.

Chichester, Wednesday.—A small attendance; fair quantity on offer, and firm trade. New white wheat, 38s to 40s; new red ditto, 38s to 40s; barley, 29s to 37s; grinding ditto, 23s 6d to 25s; oats, English, 18s 6d to 24s 6d; rye, 27s to 29s; peas, 31s to 32s; beans, 32s to 33s; tares, 5s 6d to 6s 6d; maize, 26s 6d to 27s 6d; flour, 31s to 33s.

Colchester, Saturday. — Wheat in buyers' favour; average supply. Barley steady. Oats unchahged—Colin Taylor, King and Co, Ltd.

Coventry, Friday.—There was only an average attendance. Wheats were in fairly good supply, and the tendency was in favour of buyers. Spring corn was in fair demand. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per per 352 lb; new, 21s to 23s 6d; beans, 13s to 13s 9d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Derby, Friday.—Wheat in moderate supply; trade dull, with a lower tendency. Barley firmer and without change. Oats fully as dear. Quotations:—Wheat, 37s to 38s; red, 35s to 37s; barley, malting, 29s to 32s; grinding, 25s to 27s; beans, new, 35s to 36s; oats, old, 24s to 26s; new, 21s to 22s.

Devizes, Thursday.—Wheat a slow sale, and less money had to be accepted. Barley also the turn in favour of the buyer. Oats, on the other hand, were very firm, and commanded fully late rates. Best old wheat, 21s to 22s; best new wheat, 19s to 20s; secondary, 16s to 18s; malting barley, 30s to 36s; grinding barley, 27s to 29s; winter barley, 26s to 30s 6d; old oats, 22s to 24s 6d; winter oats, 18s to 19s 6d; white Garton oats (330lb), 19s to 20s; black Tartar oats, (320 lb), 19s to 20s; rye, 27s to 30s; beans, 17s to 19s; fine flour, 32s to 34s; extra fine, 35s to 39s.

Doncaster, Saturday. — Good attendance. The weather during the past week has been against threshing, and there was a short supply of English wheat. Trade ruled slow at a decrease of 3d to 6d per load of three bushels. Prices from 14s to 14s 6d per load. Foreign wheat slow at a reduction of 6d to 9d per qr. Better show of barley. Common sorts slightly easier, but fine samples fully maintained late rates, and made 33s 6d to 34s per qr. Small supply of oats. Prices firm. Old beans in good request at 6d per qr advance. Maize 6d per qr less.

Dorchester, Saturday.—With more favourable weather some part of the week samples came a little more freely to hand at to-day's corn market, at which, with a fine day, there was also an improved attendance. But business was anything but fast; would-be buyers held aloof except where concessions were made, which were by no means general, most farmers holding their wheat back in anticipation of a still further advance to justify; in fact, dealers declined to buy except on their own terms, which generally represented lower terms of from 3d to 6d under those recently ruling; foreign being more affected by the easier tone prevailing than home-grown wheats. Barley for feeding remained practically unchanged; good malting parcels, which are very scarce, brought extreme rates. No alteration to note in maize; but oats rather favoured buyers. Beans and peas sold at full prices. Flour trade a little less active than of late.

Dublin, Friday.—Foreign wheat easier and quiet. Maize slow and 3d easier. Irish wheat unchanged at 19s 6d to 22s. Oats, prime firmly held, white 11s 6d to 13s; blacks, 11s to 12s. Barley, choice held for extreme rates, malting, 15s to 16s. Flour in fair consumptive demand at unchanged rates. Oatmeal 20s dearer. Indian meal unaltered.

Exeter, Friday. — Fairly good attendance, trade slow; English wheat weaker; foreign unchanged; barley 6d cheaper; maize unchanged; oats firm; flour very quiet. Quotations:—English wheat, 4s 1½d to 4s 6d; English barley, 3s 6d to 4s 6d; superfine flour, 30s to 33s; fines, 29s to 31s.

Glasgow, Wednesday.—There was a good attendance at to-day's market. Wheat quiet and practically unaltered on the week. Flour the turn easier to 6d per sack. Maize dull. Corn quiet. Oats steady, and for any good lots offering, full prices are being paid. Barley firmer. Beans steadily held. Pease, none offering. Bran and thirds firm. Oatmeal steady.—Gibson and Clark.

Glasgow, Friday.—Wheat steady but easier. Flour quiet and unaltered. Maize and corn 3d per boll dearer since Wednesday. Other articles firm.

Gloucester, Saturday.—English wheat in better supply, and 1s per qr lower. Foreign wheat dull, and 3d easier: Plates, 43s to 44s; Russian, 42s 9d to 43s 6d. Plate maize 6d cheaper at 27s 9d; Bessarabian, 3d down, at 27s 9d. Grinding barley 3d lower, at 25s 6d. Oats unchanged: Black, 19s 6d to 21s 6d; white, 21s to 22s 6d per qr.

Grantham, Saturday.—Fair supply of corn, and the attendance was large. Wheat was fully 1s per qr down on the week, and the same applies to barley of inferior quality, though best samples maintained their value. Wheat, 35s to 37s; barley, 26s to 34s; oats, 19s to 21s; beans, 30s to 32s; and blue peas, up to 75s

Hereford, Wednesday.—Very dull trade. English wheats against sellers, 4s 6d being about the best obtainable for good reds. Barleys 6d per qr lower. Oats firm, in quieter demand. Maize 6d per qr easier. Beans unchanged.

Ipswich, Tuesday.—Moderate supply of wheat; trade slow at last week's rates:—Reds, 39s per 504 lb. Moderate supply of barley; trade firm, at from 30s to 32s for runs, and up to 34s for finer sorts. Oats firm, at late rates. Maize rather easier. Beans and peas firm.

Leeds, Friday.—There was little doing in either English or foreign wheats, although prices were easier than on Tuesday. Flour was less active at barley late rates. Maize was dull, 27s being top price for Plate, American, and Russian. Beans, peas, oats, and barley, both feeding and malting, were unchanged.

Leicester, Saturday.—Good average attendance, with smaller supplies of home-grown wheats, and the samples came to hand in variable condition. Trade quiet. Red wheat, 33s to 38s per 36 stones; white wheats, 36s to 39s per 36 stones. Fine bright samples of barley were in fair demand at 29s to 32s per 32 stones; fine oats, 19s to 22s per 24 stones.

Lincoln, Friday.—Large attendance of farmers and factors, but moderate supply of English wheat, which sold slowly at last week's prices, or about 38s per qr on line. Foreign wheat quiet and in favour of buyers. Malting barleys met with a good demand at last week's full prices. Oats and beans very firm at unaltered rates. Maize slightly cheaper.

Maidstone, Thursday.—General quietude in the trade. To press sales of wheat 1s per qr less than recently; but owners of that grain do not press sales, but prefer to await a rally, which is quite expected. The natural pause from recent excitement is observable in other grain, and less cost for each description, if sellers are eager to quit.

Manchester, Thursday.—English wheat 6d and occasionally 1s per qr down on the week. Foreign in slow demand at about last week's rates. Flour easy, and quotations unchanged. Indian corn 1½d to 1d lower on the week, with dull trade. Foreign barley was a shade easier, but not quotably lower; English 1s per qr dearer. English oats in fair demand at 1½d to 1d higher; foreign unchanged. English beans 1s per qr higher. Peas were in sellers' favour. Bran and offals scarce, and late rates maintained.

Newark, Wednesday. — A fair attendance. Moderate supply of samples showing; trade slow at last week's prices. Quotations:—White and red wheat, 37s to 38s; malting barley, 29s to 32s; grinding ditto, 27s to 28s; white oats, 20s to 21s; black, 19s 6d to 20s 6d; old beans, 35s to 36s; ditto, new, 31s to 32s per qr.

Newcastle-on-Tyne. Saturday.—A quiet trade for wheat at our to-day's market, prices in favour of the buyer. A fair demand for maize at last week's full prices for mixed American. Plate and European, however, favoured buyers. Beans scarce and dearer. Oats keeps firm, and a good demand for fine dry qualities, parcels in soft condition, however, neglected. Local malting barley making 29s to 30s. with a fair demand.—Joseph Pollard and Co.

Newport, Wednesday. —Moderate trade: prices ruled comparatively high, and were practically the same as last week.

Nottingham, Saturday.—Wheat, fair supply; trade ruled slow at previous rates. Barley, small show, and 1s higher. Oats 6d dearer. Beans firm.—Robt. Hubble.

Northampton, Saturday.—The drop in prices continues, despite small supplies. Oats and barley, however, remained unchanged. New wheat, 35s to 37s; barley, 26s to 32s; old white oats, 24s to 26s; new white oats, 18s 6d to 21s; old beans, 34s to 36s; new beans, 31s to 33s; peas, 33s to 35s; flour, 32s to 36s.

Norwich, Saturday.—The supply of wheat on Saturday was considerably larger than has been the case lately, but farmers were most unwilling sellers at much reduction. Values might be quoted at 36s 6d to 37s per qr delivered, this being 1s per

qr cheaper on the week. Barley was in small supply, and prices ranged from 14s to 16s 6d per coomb. Maize was 6d to 7d per qr cheaper. Grinding barley was scarce at 6d per qr less money. Linseed and cotton cakes were very firm, although the demand was not brisk.

Oxford, Saturday.—The supplies of wheat were on a small scale, and last week's prices are repeated. Barley freely offering, and slightly in buyers' favour.

Peterborough, Saturday.—Only a moderate supply of wheat at market, trade being quiet at 6d to 1s less money. Oats in small supply and rather dearer. Barley firm at late rates. Wheat, 36s 6d to 37s 6d; barley, 29s to 34s; oats, 19s to 21s.—THOMAS HILL AND SON.

Plymouth, Thursday.—The Plymouth market was quiet to-day at last week's rates.—ORLANDO DAVIS AND CO.

Preston, Saturday.—There was but a meagre attendance, and demand was only moderate for farmers' wheat and other grain, with quotations not nearly so good as last Saturday. Flour unchanged. Quotations:—Wheat, white, new, 15s 6d to 16s per windle of 220 lb; ditto red, 15s to 15s 6d; oats, old, 3s 7d to 3s 8d per bushel; ditto new, 2s 11d to 3s 1d; beans, 16s 6d to 17s per windle of 220 lb.

Reading, Saturday.—There was a fair attendance, but trade was dull. Prices:—Wheat, 36s to 40s; barley, malting, 28s to 38s; grinding, 26s to 30s; oats (scarce and dear), 19s to 23s; peas, 32s to 34s; beans, new, 30s to 34s; old, 36s to 40s.

Retford, Saturday.—Wheat was easier, and 6d per qr lower on the week, making 37s 6d to 38s. There was a good demand for malting barley at fully late rates, the best selling at 30s to 32s; medium 29s; and grinding, 27s 6d to 28s per qr. Maize maintained its value, and was quoted at 29s delivered at Retford; new English beans, 30s to 31s; old ditto, 35s; black oats, 19s; white ditto, 20s; old oats, 25s per qr.

Ripon, Thursday.—Business was fairly active, whilst prices showed little change. A good show of samples. Prices:—New wheat, 37s to 38s; foreign ditto, 40s to 45s; grinding barley, 27s to 28s; malting ditto, 28s to 32s; new oats, 19s to 21s; old ditto, 26s; round maize, 29s; flat ditto, 32s per qr.

Sheffield, Tuesday.—Influenced to some extent by the financial situation in America and unsettled markets there, the prices of wheat and maize have been irregular during the past week, but are now steady and firm at about 1s per qr from the highest. Beans, oats, and barley 6d per qr dearer. Peas firm at top prices. Offals firm and unchanged. Quotations:—Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, black, 24s to 25s; ditto white, 24s 6d to 25s; ditto new, 21s 6d to 22s per 336 lb; peas, grinding, 36s to 36s 6d; ditto blue, new, 75s to 90s per 504 lb; beans, English, 36s 6d to 37s per 532 lb; barley, grinding, 28s to 30s; ditto malting, 28s to 32s per 448 lb; Indian corn, small, 30s to 30s 6d; ditto Plate, 29s 6d to 30s; ditto flat, 31s 6d to 32s per 480 lb.

Shrewsbury, Saturday.—Wheat, 15s 9d to 16s per 225 lb; old oats, 16s to 17s per 225 lb; new oats, 12s 6d to 14s per 225 lb; barley, 18s to 20s per 280 lb.

Stamford, Friday.—Large attendance, and a fairly brisk inquiry. Wheats made 37s to 37s 6d, delivered in; barleys of good grinding quality commanded 26s to 27s 6d, malting parcels selling at 31s 6d to 34s per qr; white oats, 20s to 22s; and black ditto, 18s to 20s per qr.

Stockton, Wednesday.—There was a fair show of local wheat, which made up to 39s per qr. The foreign wheat trade was quiet owing to the financial position in America, and showed a reduction of 6d to 9d per qr on the week. Oats 3d to 6d per qr dearer. Maize 6d lower. A fair show of malting barley, best qualities making 1s per qr dearer, and common qualities bad to sell.

Warwick, Saturday.—Wheat trade very bad, though a fair quantity offering. Peas making 13s 6d per bag. Very little trade passing.

Winchester, Saturday.—English and foreign wheat quiet and rather easier. Barley 6d and maize 3d cheaper. Oats scarce and dearer. Flour a fair trade at late rates.—FEAR, COLEBROOK AND CO., LTD.

Wisbech, Saturday.—A fair attendance at market. Wheat in short supply, 37s per 504 lb. Barley, very little offering, 29s to 31s per 448 lb. Oats dearer, 20s to 21s per 336 lb.—JAMES FLETCHER.

Wolverhampton, Wednesday.—Small attendance, the business passing was quiet. Quotations: English oats, new, 12s 6d; old, 15s per 196 lb; English wheat, 16s per 215 lb; English beans, new, 13s 6d; old, 14s 6d per 196 lb.

Worksop, Wednesday.—Good attendance and small show of grain, farmers being unable to thrash. Wheat was a trifle easier. White wheat, 37s to 38s; red ditto, 35s 6d to 37s; best malting barley, 30s to 31s 6d; secondary, 27s 6d to 28s 6d; grinding ditto, 27s to 28s; old white oats, 25s 6d to 27s 6d; new ditto, 19s 6d to 20s; old black oats, 25s to 26s; new ditto 18s 6d to 21s; maize, 28s to 29s per qr.

Yeovil, Friday.—Wheat was a slow trade at from 6d to 1s per qr less money. Barley also favoured buyers, grinding being 6d cheaper. Oats firm at last week's full rates. Maize, round, down 3d. Best quality home-grown wheat made 38s to 39s per qr; secondary, 32s to 36s 6d; grinding barley, foreign, 25s 6d; malting, 30s to 35s; grinding, home grown, 27s to 29s; winter barley, 26s to 30s; old oats, 22s to 24s 6d; winter oats, 18s to 19s 6d; white gartons, 19s to 20s; black Tartars, 19s 6d to 20s 6d; Irish black, 19s; beans, 35s to 38s; rye, 27s to 30s; maize, round, 28s 3d; vetches, 5s 6d to 6s 6d per bushel. Not much doing in flour, but for immediate delivery values were somewhat easier, fines selling at from 31s 6d to 32s per sack. The demand for offals and meals continues good at firm prices.

York, Saturday.—There was very little wheat on offer, farmers having been unable to thresh on account of the wet weather. Prices were 6d to 1s lower on the week. White wheat, 37s to 38s; red and mixed, 36s to 37s per qr of 36 stones. Malting barley without change; fine, 30s to 32s; good, 28s to 30s; ordinary, 26s to 28s per qr of 32 stones. Oats firm and scarce; white Tartary, 19s to 20s; black ditto, 20s to 21s; Garton oats, 20s to 21s per qr of 24 stones; rye, 28s to 29s per qr; old beans, 36s to 37s per qr of 36 stones.

FOREIGN.

Hamburg, Saturday.—The weather continues favourable for field work. Market quiet, but prices not materially lower except for feeding barley, considerable quantities of which have arrived, and the low state of water in our rivers prevents a quick disposal. Fine German wheat continues scarce at 38s 6d to 39s 9d. Soft lots are selling at 35s to 37s per 504 lb, duty deducted. American hard winter, No. 2 is held at 39s 9d; red winter No. 2 at 39s 6d, Maccaroni No. 1 at 38s 6d, River Plate and February-March, 39s 9d per 480 lb c.i.f. Hamburg. Rye quiet, 9/10/15 South Russian, afloat, is offering at 34s 9d to 35s per 480 lb c.i.f. Hamburg. Malting barley firm in value. Holstein and Mecklenburg is selling at 36s to 39s; Oderbruck and Silesian at 37s to 41s; Bohemian and and Slovakian at 36s to 40s, excluding duty; Danish at 31s to 43s per 448 lb.; 60/61 kg. South Russian barley on the spot is offering at 22s 6d to 23s 3d; November shipment at 24s 6d per 400 lb, c.i.f. Hamburg white Holstein and Pomeranian oats are selling at 19s 6d to 19s 9d per 336 lb, f.o.b. Mixed American maize is held 27s 6d, Odessa at 26s 6d, River Plate 26s 6d per 480 lb, c.i.f. Hamburg.—JOHN TATLOCK.

FEEDING STUFFS.

Liverpool, Friday.—Nitrate of soda is without change. As yet the autumn deliveries of potassic and phosphatic fertilisers are on a small scale, which may be ascribed to a certain extent to the late harvest; as November is usually a busy month for top dressing grass and corn, doubtless during the next few weeks there will be much activity, and it would be to the interests of users not to overlook the fact that during the height of the season delays in deliveries of basic slag not infrequently occur through pressure of orders at the producing centres, and occasionally the imports of kainit are somewhat interfered with by frosts in Germany. There is an improvement, though slight, in the consumptive demand for feeding stuffs. Oilcakes are very firm at late rates, and as regards American dried cotton cakes there is very little procurable. Rice meal is easier in all positions, but buyers' and sellers' idea of values are too wide apart to result in business. Feeding treacle meets a fair consumptive demand.

—H. JONES LANGAR AND CO.

Mark Lane, Monday.—Linseed Cake: In spite of the recent advance values are still lower than at the same period last year, and the farmers are beginning to realise that cake is by far the cheapest article on the market, which is causing an increased consumptive demand, with the probability of a higher range in values in the near future. Russian offer at a relatively low figure. East India seed pures may be bought at late rates. Fine seedy Calcuttas command full prices. London made continue in moderate request. Cotton Cake.—Egyptian remain fairly plentiful on spot, but with a good country inquiry quotations are firmly held up, while English make full prices. Decorticated.—London made pures find a ready sale; American brands dull and unchanged. Rape Cakes.—Nominal. East India and Ravison unaltered. Maize Germ Meal.—Some recent arrivals of White African have found buyers at £7 2s 6d to £7 5s, but English makes are obtainable at late values. Maize Gluten Meal moves off freely. Rice Meal.—Landed lots of Rangoon are available in limited quantity at last week's prices, but for early arrival there are sellers at slightly less money. Locust Beans are without alteration. Dried Brewers' Grains are scarce and dear. Nitrate of soda is quiet.

CHEESE.

Glasgow, Wednesday.—Arrivals of home cheese were smaller, with a quiet trade, buyers having supplied their wants at Kilmarnock Cheese Show. Prices remain firm but unchanged. Quotations:—Cheddars, 62s to 66s; Dunlops, 60s to 63s per cwt.; October made Canadians are inclined to ease. Price 62s to 62s 6d; demand slow.

Newport, Wednesday.—There was a good attendance of buyers, and a fair demand. Quotations:—Caerphillies, 48s to 58s per cwt; fancy dairies, 57s to 59s; Derbys, 61s to 66s; truckles, 62s to 65s; Cheddars, 60s to 64s; doubles, 61s.

HOPS.

Worcester, Saturday.—Only a few growers at market to day, those who have not sold preferring to wait till prices are better. Trade was slow except for the best coloured hops which are scarce. Business has been rather interfered with by the bad weather this last week. Brewers have bought sparingly so far, and there will be a considerable trade to be done before stocks are completed. Only 558 pockets have been weighed this week, making 16,198 to date.—CHARLES FARAM AND CO.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 P.M.

The market to-day was weaker for all sorts of wheat, the buying element having for the time being satisfied its needs while fresh supplies continue freely to be poured in. Depression is not, however, likely to last very long, for the supplies on passage, out of which December wants will have very largely to be met, are 35 per cent. below the average.

The price of common feeding barley fell 6d, but good malting was quite as dear as formerly, and even ordinary brewing types remained in steady request. Maize tended to go decidedly lower, but may rally between now and the American new crop arrivals in January. Beans, peas, rye, and canaryseed were held for rather more money, but foreign oats were 6d more to sell, and English, with large offers, were not very easy to dispose of at October full quotations.

BRITISH GRAIN *Off Stands*).

November 4.

CLOSE OF THE MARKET.

THE MARKET CLOSED RATHER WORSE THAN IT OPENED, AS WITH THE FURTHER RISE IN THE BANK RATE WAS ONLY TO BE EXPECTED. THERE WAS A LARGE BUSINESS DONE IN BARLEY OUTSIDE THE REGULAR MARKET.

THE FLOUR TRADE.

MARK LANE, Monday, 3 P.M.

The demand for flour is not so good as it was a week ago, though bread has been put up a halfpenny from the close of October at many of the chief shops. Town household flour to-day was reduced 6d. per sack, and country flour was also lower; but these modifications did not affect American, which was steady, or Hungarian and Belgian, which, if anything, were dearer on the week.

The very high prices making for any sort of meal are a great trouble to farmers and stockowners, and also are prejudicial to the poultry interest. Millers, however, are well satisfied, and speak with increased respect of the "by-products" of the mill. There is a great scarcity of Californian and Australian flour, and both Russia and Argentina have withdrawn from the flour market.

THE BALTIC.

Cargo arrivals on sale off coast from January 1 to October 31 were 247 wheat, 10 barley, 18 maize, and 16 linseed, against 241 wheat, 4 barley, 5 maize, and 29 linseed in the like period of last year. Speculation therefore haa been more active for cereals, less active for oilseeds, on a comparison of the two periods of ten months.

The cargo trade on the 1st was weaker from October, and it is clear that the supply has for the moment outrun the demand, the sales on the 1st and 2nd included wheat: Victorian at 43s. 6d. per 480 lb., Russian Winter at 45s. per 492 lb., Russian Spring at 44s. per 492 lb., Hard Taganrog at 43s. per 492 lb., Californian at 42s. 6d. per 500 lb., Argentine at 42s. 9d. per 480 lb., and No. 1 Durum at 37s. 9d. per 480 lb. Maize: Argentine at 26s. 6d. per 480 lb., Galatz at 28s. 3d. per 480 lb., American at 27s. 3d. per 480 lb., and Odessa 27s. per 480 lb. Barley: Kustenidje at 27s. 6d. per 416 lb., Persian at 22s. per 400 lb., Russian at 24s. 3d. per 400 lb., and Cyprian 26s. per 400 lb. Oats: Konigsberg at 18s. 3d. per 320 lb., and Russian at 17s. per 304 lb.

Operators in cargoes of Argentine produce, especially wheat and maize, will be interested to note that Mr. Russell Smith, who is now in London, announces that he has arranged to retire from the business of inspection of grain in the Argentine Republic, and to transfer the same to Mr. E. Gigy O'Farrell, as from December 31, 1907.

Mr. O'Farrell, who has been his general manager for the last six years, will continue the above business thereafter for his own account and in his own name.

Mr. Russell Smith proposes to settle in London, and to continue his connection with the inspection of grain in the Argentine Republic in so far as acting in an advisory capacity, and will shortly open an office for the purpose of answering inquiries.

Monday, 1 P.M.

State of Trade.

There is an anxiety to unload at the profits which October's closing prices showed that is defeating its own aim and making those prices impossible to get. This desire to realise gains in cash has been precipitated by the increased stringency of the money market in London and very notably, of course, in New York.

Business Done.

Wheat.—Argentine, 40s per 480 lb, February shipment, new crop; Californian, 42s 6d per 500 lb, prompt shipment; White Karachi, 44s per 492 lb, prompt shipment; Red Karachi, 43s per 492 lb, prompt shipment; No. Durum, 37s 9d per 480 lb, prompt shipment; No. 2 Northern Manitoba, 41s 9d per 480 lb, prompt shipment; Australian, 43s 6d per 480 lb, February shipment, new crop; Russian Winter, 45s 3d per 492 lb, arrived.

Barley.—Azof, 26s per 400 lb, November shipment; Persian, 22s per 400 lb, November shipment; Morocco, 25s 6d per 400 lb, November shipment; Tunisian, 31s per 448 lb, November shipment; Smyrna, 33s per 448 lb, November shipment; Anatolian best, 36s per 448 lb, November shipment; Anatolian ordinary, 32s per 448 lb, November shipment; French fine, 35s 6d per 448 lb, November shipment.

Oats.—South Russian, 17s 6d per 304 lb, November shipment; Black Irish, 18s 9d per 304 lb, November shipment; Argentine, 16s 9d per 304 lb, February shipment, new crop; New Zealand, 24s per 384 lb, prompt shipment.

Maize.—American, 25s 6d per 480 lb, January shipment, new crop; American, 25s 3d per 480 lb, February shipment, new crop.

GRAIN AND FLOUR FACTORS REPORTS.

Offals.—Bran in good demand, and very firm, prices tending upward.—Greenhill Bros. (Belfast).

Flour.—The trade during the past few days has not been quite so active. There is no material change to report in prices, though the tone of the market has been somewhat easier than of late.—Greenhill Bros. (Belfast).

Flour.—With weaker American markets sales of flour are few and far between. Grain.—American corn is more plentiful, and value is 1s per boll lower on the week. Round maize weak. Beans dull. Pease finished. Oilcake in better demand. Good oats maintain their price. Mill stuffs quiet. Winter wheat patents, 31s to 31s 6d per 280 lb; spring wheat patents, 32s 6d to 33s 6d per 280 lb; American corn, 16s 6d to 16s 9d per 280 lb; round corn, 16s to 16s 3d per 280 lb; grinding beans, 18s 10½d to 19s per 280 lb; broad bran, 117s 6d to £6 per ton; medium bran, 112s 6d per ton; fine thirds, 140s to 142s 6d per ton; common thirds, 115s to 117s 6d per ton; American oilcake, 152s 6d to 155s per ton.—McKinnon and McDonald

Flour. — Trade to-day has been quiet at about 6d. decline on the week.—T. S. Medill and Sons, Ltd.

Milling offals.—Everything remains very scarce and in good demand, and full prices are still obtainable.—John Bawcomb and Co.

TERM MARKET.

Speculation has has taken a bearish turn, the American money crisis and the rise in the English bank rate being alleged as the reasons. Latest futures are as follows:—

Red Winter Whea,	8s. 3d.	per cental,	Nov. and Dec delivery
,, ,,	8s. 4d.	,,	Jan. and Feb. delivery.

,, ,,	5s. 8d.	,,	Jan.	,,

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations: Hay, £3 5s to £3 15s per ton; straw, no quotations.

Derby, Friday.—Clover, best old, 90s to 100s; new, 80s to 90s; hay, best old, 90s to 100s; new, 80s to 90s; seconds, 65s to 70s; straw—wheat, 60s to 70s; pressed, 50s to 60s; chop, 55s to 65s; peat moss, 35s to 40s.

Hereford, Wednesday.—Hay and straw very depressed, and disappointing trade without quotable change in figures.

Lancaster, Saturday.—Meadow hay, 6d; clover, 7d; wheat straw, 3½d to 4d; oat straw, 4d per stone.

Lincoln, Friday.—Best hay made 60s, and secondary 50s to 55s; best seeds, 55s to 60s, and inferior 50s; straw, 30s per ton on the ground.

Nottingham, Wednesday.—Large supplies which met with a bad trade. Quotations:—Inferior to good hay, 40s to 60s; prime ditto, 60s to 80s; inferior to good clover, 45s to 65s; prime ditto, 75s to 85s; wheat straw, 45s to 55s; old hay, 90s to 100s; old seeds, 90s to 100s per ton.

Sheffield, Tuesday.—Moderate supply, and a quiet trade. Choice old seeds, £4 15s to £5 5s; meadow hay, £4 5s to £4 10s; straw, £2 10s to £3 per ton.

Whitechapel, Saturday.—Limited arrivals were in good request, prices being steady:—Best clover, 84s to 95s; inferior ditto, 72s to 80s; specially-picked hay, 85s; good ditto, 68s to 78s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 28s to 33s per load.

POTATOES

Berwick, Saturday.—The potato market is now very dull. Disease is appearing in the crops. Prices made to 80s per ton.

Borough, Saturday.—Good arrivals experienced, and fair demand. Epicures, 70s to 80s; Blacklands, 80s; best silts, 90s to 100s; British Queens, 80s to 90s; Llewellyns, 90s to 100s per ton; French and Dutch, 3s 6d per bag.

Goole, Wednesday—Busy market, and a fair supply. Best King Edwards made 11s to 11s 3d; Dates, 10s to 10s 3d; and Imperators, 9s 6d to 10s.

Lancaster, Saturday. — Potatoes, 9d per stone.

Manchester, Saturday. — Potatoes: Yorkshire, 11s 6d to 12s 6d; Cheshire, 9s to 10s; Lincoln, 11s 6d to 12s 6d per 18 st; Irish, 5s per cwt.

Spitalfields, Saturday.—Fair arrivals experienced fair support. Epicures, 75s to 80s; Blacklands, 80s to 85s; Up-to-dates, 85s to 95s; British Queens, 90s to 100s per ton. French, 3s 6d; Dutch, 3s 6d per bag.

Stockton, Wednesday.—Potatoes £4 10s to £4 15s per ton.

York, Saturday.—A moderate supply met with a steady trade at prices ranging from 80s to 85s per ton.

TO-DAY'S MARKETS.

CATTLE.

Metropolitan Market, Islington.

	Monday, Nov. 4, 1907. British.	Total.	Monday, Nov. 5, 1906.
Beasts	1,230	1,230	1,600
Sheep and Lambs	4,460	4,460	5,230
Calves	10	10	10
Pigs	—	—	—
Milch Cows	40	40	50

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 6	3 4	4 8
Sheep	4 8	5 4	6 2
Lambs	—	6 0	6 8
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 20; Eastern Counties, 36; Midland, Home, and Western Counties, 1,000; Devon, 20; Ireland, 154.

We note to-day a decrease of 90 in the number of beasts offered for sale compared with Monday last. Trade for both prime and second quality English cattle ruled of a slow and dragging nature throughout the day; however, last week's values governed most transactions. A few Cross-bred Scotch made our top quotation, whilst Devons ruled slightly lower in value. The arrivals from Ireland consisted of 66 Dublins, 48 Waterfords, and 20 Stores (two-year-old heifers), these were quoted at from £9 10s. to £10 per head. Irish fat beasts met with very little inquiry, late rates, however, were maintained. Fat butchering cows and bulls were also slow of sale at last Monday's prices. A clearance will not be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s d	Monday, Nov. 5, 1906. s d
Scotch Cross-breds	4 6 to 4 8	4 8 to 4 10
Devons	4 4 to 4 6	4 4 to 4 6
Herefords	4 4 to 4 6	4 4 to 4 6
Norfolks	— —	— —
Runts	4 2 to 4 4	4 2 to 4 4
Lincolns	3 10 to 4 0	3 8 to 3 10
Irish	4 0 to 4 2	4 0 to 4 2
Canadian	— —	— —
Fat cows	3 4 ex 3 6	3 4 ex 3 8

There was an increase of 150 in the number of sheep and lambs penned compared with Monday last. For both wethers and ewes salesmen experienced a somewhat disappointing trade; however, not sufficiently so to warrant our quoting a general decline. Scotch sheep were in larger numbers, and met with more inquiry; consequently these ruled firm in regard to value, whilst Irish descriptions met with very little demand, sellers being willing to accept 2d. per 8 lb. less to effect sales. The few lambs on offer cleared at late currencies. The supply included 300 Scotch, 971 Irish, and 220 from the Eastern Counties. There is very little prospect of a clearance being made.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	Monday, Nov. 5, 1906. s. d.
8 st. Scotch	6 0 to 6 2	—
7½ to 8 st Downs	5 10 to 6 0	6 0 to 6 2
9 st. Downs	5 8 to 5 10	5 10 to 6 0
10 st Halfbreds	5 4 to 5 6	5 8 to 5 10
10 st Yorkshires	—	—
12 st Lincolns	—	—
10 st Irish	5 4 to 5 6	5 4 to 5 6
10 st Down Ewes	4 0 to 4 2	4 2 to 4 4
11 st Halfbred ditto	3 10 to 4 0	4 0 to 4 2
5 st Down Lambs	6 6 to 6 8	—
6 st Halfbred ditto	—	—

Calf trade nominal. No pigs on the market.

London (Central), Monday.—Trade dull for moderate offerings. Beef, English, 3s 4d to 3s 8d; Scotch, 3s 10d to 4s 6d; American, 3s 2d to 3s 8d: refrigerated hindquarters, 3s 8d to 4s 4d. Mutton, English wethers, 4s 2d to 4s 8d; ewes, 3s to 3s 6d. Lambs, 4s 8d to 5s; Scotch tegs wethers, 4s 8d to 5s; ewes, 3s to 3s 6d. Veal, 3s 4d to 4s 8d. Pork, 3s 4d to 4s per stone.

FOREIGN.

Deptford, Monday.—To-day's supply compared with Monday last showed an increase of 335 head, and consisted of 350 States, 209 Western cattle, and 256 Canadian Ranchers; these latter were of inferior quality, consequeutly ruled lower in regard to value. Trade for all descriptions was of a slow nature at a decline in value. The best States on offer were quoted at from 3s 10d to 4s; seconds, 3s 8d to 3s 10d; Westerns, 3s to 3s 8d; and Canadian Ranchers 3s to 3s 2d per 8 lb (offal given in). On Saturday 1,926 beasts from the United States, and 181 Canadian Ranchers were offered for sale. These latter met with no inquiry, consequently no prices can be given. The former met with a very slow trade; however, a slight advance in value was noticeable. The best States on offer were quoted from 4s to 4s 2d ex 4s 3d; seconds, 3s 10d to 4s per 8 lb (offal given in).

OIL SEEDS.

Mark Lane, November 4. Linseed is steady in price, though not in brisk demand. For Indian Rapeseed 1s. to 2s advance is made. Cottonseed on the other hand is 5s. per ton cheaper, the large arrivals from Egypt being too much for the market.

Linseed. per 416 lb.	s. s
Calcutta	47 to 48

Russian	42 to 44

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 2,853 bales, and from foreign ports, 13,682 bales. There was a quiet demand for bacon throughout last week, and prices generally were reduced some 2s to 4s. Quotations ranged:—Irish, 58s to 66s up to 54s; Danish 58s to 59s up to 63s; Canadian, 59s to 60s. Butter: Butter was a firm market. French, 112s to 122s; Danish, 128s to 130s; Russian, 90s to 116s; Irish, 96s to 124s; Victorian, 96s to 124s; New South Wales, 96s to 122s; Queensland, 96s to 118s; New Zealand, 112s to 124s. Lard.—Lard was a steady market. Irish, 50s to 58s; Danish, 52s to 54s; American, 46s 6d to 48s.

HOPS.

Borough, Monday.—There is a little more general inquiry for all classes, the rates now ruling for good sound medium hops are tempting some consumers to buy what they require for copper purposes.—W. H. and H. Le May.

Canterbury, Saturday.—There is again rather more inquiry for East and Mid-Kent hops. Values remain unchanged.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: With an increased demand and supplies being short, prices have ruled higher during the week. Business has been done at 19s to 21s ale, and porter 3s per ton less on rail, London. Prices are now firmer. Dried Grains.—Prices continue firm with an upward tendency, due to the higher prices of wet grains and the colder weather, 106s 3d and 101s 3d per ton are being asked for ale and mixed, respectively, in buyers' bags ex factory. Best Java Molasses.—Concrete, 70 per cent. sugar, a very handy feed in baskets, 80s per ton, and kiln dried sea-damaged wheat from 22s 6d per qr, on rail, London and elsewhere.—Hamlyn and Co., 37 and 38, Mark Lane.

SEEDS.

Mark Lane, Monday.—Good general business passing. Rape firm. Mustard unchanged. Rye scarce and higher. Winter tare quiet. Seed wheats still moving: prices firm. Peas steady but small supplies. In clovers, more movement in whites and Alsikes. Lively business in reds and trefoils; prices higher. In grasses, Perennials and Italians more steadily.—John Picard and Co.

Seven Years Grain Averages.

(OFFICIAL.)

Wheat	28s. 10d. per 480 lb.
Barley	25s. 4d. per 400 lb.
Oats	18s. 11d. per 312 lb.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market during the week, with a rather larger supply mostly consisting of consignments from the Midland, Home, and Western Counties, trade opened and continued of a slow and dragging nature; as usual, all sales of fat cattle were confined to Monday. A few were held over in the market lairs for Thursday, but met with no demand. Our top quotation on Monday was commanded by the Devon breed, these being in fair average supply; other grades, though slow of sale, were quoted at late currencies. The Irish arrivals consisted of 65 Dublins and 65 Waterfords, to which also the foregoing remark applies: No store cattle were included in the consignments from this country. For fat butchering cows and bulls on both market days there was a limited demand from both town and country buyers. Last week's prices, however, governed all transactions.

At the Foreign Cattle Market, Deptford, markets were held on Monday and Saturday, trade on both days ruling of a slow nature, with a downward tendency in value. Saturday's prices were firmer, better quality cattle being offered for sale. The total number on offer at both markets was 3,977, as against 4,970 during the previous week, consisting of 1,390 British (increase 100) and 2,587 foreign (decrease 1903), these latter comprising 2,406 from the United States and 181 Canadian. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 6d. to 4s. 8d.; 90 to 95 stone Herefords, 4s. 4d. ex 4s. 6d.; 95 stone Runts, 4s. 2d. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 4s. to 4s. 2d.; 90 stone States, 4s. to 4s. 2d.; 90 stone fat cows, 3s. 4d. ex 3s. 6d.

The sheep trade for both wethers and ewes as usual of late was confined to the Islington market, and opened on Monday of a slightly firmer nature, although not sufficient to warrant our quoting any advance in value. Both Scotch and Irish descriptions shared in the brisker trade, notwithstanding the fact that the latter were in larger supply, late rates governed all transactions. On Thursday all sales were based on Monday's values, with a dull trade. The few lambs that were offered for sale cleared early in the day. The total number penned was 4,370, as against 4,560 during the preceding week, showing a decrease of 190. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 6s. to 6s. 2d.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Irish, 5s. 6d. to 5s. 8d.; 10 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone halfbreds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s. to 4s. 2d.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Calves numbered twenty and pigs ten. Trade for the latter not worth noting. The best on offer of the former were quoted at from 4s. 10d. to 5s. per 8 lb.

Trade in the West.

Despite the continuous rains, which were badly wanted in many parts, though scarcely in the torrential character we have been experiencing, the store stock trade has suffered but little, and once the rains abate we expect much greater activity in grazing cattle than has prevailed of late, though many buyers are already securing, where they can get the class of animal they want, their grazing cattle for wintering, although this is somewhat early in the season for doing so. But, excepting for the somewhat prolonged spell of wet weather, the conditions are fairly favourable for the purchaser, and speculators are by no means slow to avail themselves when the opportunity presents. The best class of graziers are no doubt being kept in reserve for later sales, but still some very fair bullocks are already to be met with both in Devons and Shorthorns, with occasionally a few good cross breds, some of which are in quite as fresh condition as those generally to be met with three weeks or a month later on owing to the abundance of keep there has been almost everywhere, as the result of a peculiarly favourable autumn, after one of the most exceptional summers of recent years. With plenty on the look out for this particular class of stock—particularly all the better class grades of barreners, in which condition is a greater essential than breed—prices, after the recent slump, have taken a slightly favourable turn for all really fresh-condition cattle of promise, the best making £24 to £30 per pair, and others, with a much more restricted demand, from £14 to £16 for old cows (which have gone back much in value) up to from £17 to £23 for secondary grades of heifers. But *the* business of the season just at present is the milch beast trade, which has never been so good for years as it is now, and of which there is every likelihood of a continuance whilst the demand for milk is so abnormally large as it is to-day, as the outcome of growing habits of temperance all over the country. A good many of the best milchers have been changing hands during the past week at from £18 up to £23, and even £24 apiece for the heaviest class of milchers, whilst more ordinary runs sell from £15 to £17 10s.; there being likewise a market for distinctly plain cows at from £15 down to as low as £10 or £11. In-calves are equally saleable at from £10 to £15 or £16 apiece. Stirks attract considerable attention from £9 to £10 or £11 apiece, and heifers from £5 to £7. The sheep trade, despite its being the "fag end" of the season, is exceptionally strong, the year closing with sheep and lambs from 4s. up to 9s. or 10s. a head dearer than this time last year; in fact, flock-masters generally recognise this as a record season for uniformly high prices not only for keeping sheep, but equally so for the butcher. Some Dorset horns sold in West Dorset as recently as Monday by Messrs. Ensor made 77s., and lambs to 62s. apiece.

Coming to fat stock, we may report the trade as fairly buoyant all round. True, prices may not be quite up to the level of those recently prevailing, still there is very little which the seller can find *bonâ fide* fault with. Where the quality is right these outside values are to be depended upon, it being only on secondary grades on which a drop is to be quoted. The choicest steers and heifers still realise 11s. to 12s. per score (or from £18 up to £25 each), whilst the more ordinary grades ranging in value from £14 to £17 (mostly for cows and bulls) must be quoted at 9s., for very coarse weights up to 10s. or 10s. 6d. for medium qualities. Fat sheep, especially the best class of tegs and wethers (which are none too plentiful), meet a very firm trade at from 8½d. to 9½d. per lb. (or from 48s. to 65s. apiece); but ewes, old sheep more particularly, scarcely maintain their value. Best lamb sells up to 10d., and seconds 9d. to 9½d. Small weights in pigs firm up to 10s. 6d. per score; heavier, 9s. to 9s. 6d.

Trade in Scotland.

The number of fat cattle this week has been rather under an average, and the general quality only moderate. A much better demand has been experienced, and prices on an average have advanced quite 20s. per head. Rather more fat cows on offer, and they also met a slightly improved demand. Fat sheep and lambs have been shown in rather smaller numbers. Trade as nearly as possible without change, with the exception of ewes, which being rather less plentiful made 1s. a head more. Fat calves and pigs selling at very full prices. There was a large and good show of store cattle. Owing to the exceedingly bad weather, and the immense amount of grain still lying out in the country buyers acted with caution, and to effect sales a reduction of 10s. per head had to be taken, while rough cattle are almost entirely neglected. Store sheep and lambs again a large show, but nearly all of a very indifferent class. Trade exceedingly dull, and prices suffered a reduction of fully 1s. per head, with a large number of the secondary descriptions left over. Milch cows a small show, and they met a dear trade. Quotations:—Top price of cattle per live cwt., 39s.; current, 34s. to 36s. 6d.; mutton, 6d. to fully 9d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland

Dublin market last Thursday was not so well supplied with stock as some of the markets lately, there being a big decline in both cattle and sheep, a decline of over 700 in cattle and 2,500 in sheep, the numbers being cattle, 4,402, and sheep 5,384. There was a very good attendance of both home and cross-Channel buyers, but the considerable falling off in supplies made a sounder and better selling market. Trade was good in the cattle market for the better class of bullocks and heifers at firm values. Fancy lots made from 31s. to 32s. per cwt. (live weight), and a lot of nice bullocks were sold by hand for 28s. per cwt. Beasts valued below this price were not much wanted, but towards the close of the market, were pretty well taken by buyers. Business with England and Scotland was much restricted owing to the heavy arrivals of frozen meat during the week. Over 150,000 cwt. were imported last week as against about 80,000 cwt. in the corresponding week of last year. Of course, such a vast quantity of extra meat must have a bad effect on home markets. Choice heavy-weight bullocks and heifers changed hands freely at late rates, but there was a prevailing depression on secondary beef and half-meated beasts, owing chiefly to the fact that English buyers are buying less and less of this sort each week now. A large English buyer said that he had bought fully 130 beasts less this week than in the corresponding week of 1906. However, a very good all-round clearance was made. The dead-weight prices were as follows:—

Best heifer and ox beef, 50s. to 53s. up to 56s. per cwt. for beasts of extra quality; good second-class beef, 46s. to 50s., and inferior beef from 42s. to 45s. per cwt.

The short supply of mutton greatly helped that market. Home buyers had some difficulty in securing a sufficiency of mutton suitable for their trade. Hoggets for shipping to Liverpool, Manchester for market were wanted, and sold well at prices slightly in favour of the seller. The London trade was only nominal, there being little or no trade just at present. Best wether mutton was worth from 7d. to 7½d. per lb.; ewe mutton, 6d. to 6½d., and inferior mutton sold at from 5d. to 5½d. per lb. Large heavy hoggets made from 46s. to 58s. each, according to size, and small to middling hoggets brought from 36s. to 44s. each. Some lambs were offered for sale: large fat ones sold at from 34s. to 44s. each, and small to medium at from 24s. to 30s. each.

A moderate supply of dairy cows were offered for sale. Values were slightly firmer and demand good. Prime milch cows sold at from £17 to £21, and other sorts at from £9 to £16, according to quality, &c. Not much doing in store cattle just now.

Dublin pig market was well supplied. Trade was of a dragging nature, and prices declined 2s. to 3s. per cwt. as compared with last day's market. Prospects for the future rather gloomy. Best light weight pigs, 46s. to 48s. per cwt; heavy pigs, 34s. to 42s. per cwt.

LONDON.

Central Market, Friday.—Good supplies, and a very quiet trade. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 8d; Deptford and Liverpool killed, 3s 2d to 3s 8d; refrigerated hindquarters, best, 4s to 4s 4d; ditto seconds, 3s 8d to 3s 10d; ditto forequarters, 2s 4d to 2s 8d; inferior beef, 2s 2d to 2s 8d; mutton, Scotch wethers, 4s 8d to 5s; ditto tegs, 4s 8d to 5s; ditto ewes, 3s to 3s 6d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s to 3s 6d; Dutch sheep, 3s 10d to 4s 6d; English lamb, 4s 8d to 5s; veal, 3s 8d to 4s 8d; English pork, 3s 6d to 4s; Dutch ditto, 3s 6d to 3s 10d per 8 lb.

Islington, Thursday.—To-day's supply of beasts consisted almost entirely of fat butchering cows and bulls, for which trade ruled slow, at Monday's values. A few fat beasts left over from Monday were offered, but met with no inquiry. Top prices paid per 8 lb.:—Fat cows, 3s 4d; extreme, 3s 6d; fat bulls, 2s 6d to 3s. A decrease of 10 in number penned in sheep market compared with Thursday last. Sheep trade ruled slow for both wethers and ewes, though no decline in value is noticeable. The few lambs offered met with no demand. Best pens made per 8 lb, as follows:—7½ to 8 stone Down sheep, 5s 10d to 6s; 9 stone ditto, 5s 8d to 5s 10d; 10 stone ditto, 5s 6d to 5s 8d; 10 stone half-breds, 5s 4d to 5s 6d; 10 stone Down ewes, 4s to 4s 2d. Calf trade not worth noting. Quotations per 8 lb, sinking the offal:—Beasts, 2s 6d to 3s 6d; sheep, 4s to 6s.

COUNTRY.

Ashford, Tuesday.—Fair trade for beef, at 4s 4d to 4s 8d for best beasts, and 4s to 4s 4d for secondary. Mutton sold rather better. Small Downs made up to 6s; small Kents, up to 5s 10d; and large Kents, up to 5s 4d. Veal rather cheaper.

Roasting pigs sold well up to 4s, but larger hogs were neglected.

Aylesbury, Wednesday.—There was a very large consignment of beasts, numbering 200 head. Trade was slow, only choice quality animals changing hands. Nearly 500 sheep were penned, and the demand was hardly so brisk as the previous week, although a clearance was effected. Buyers were in small attendance. Wethers made up to 67s; ewes, 50s; tegs, 45s 6d; heifers, £20 17s 6d; and bullocks, £20 12s 6d.

Berwick, Saturday.—The supply of cattle was good. Calves, £5 10s to £6 10s; heifers, £15; stirks, £8 10s to £11 15s; two-year-olds, £11 10s to £14; three-year-olds, £13 15s to £15 10s; Shorthorn bulls, £12 10s; cows, £20.

Birmingham, Thursday.—Fair supply of pigs; small supply of beasts and sheep; trade slow. Quotations:—Beef, 5d to 6½d per lb; mutton, 6½d to 8½d per lb; bacon pigs, 9s to 9s 2d per score; cutting pigs, 9s 3d to 9s 9d per score; sows, 7s 6d per score.

Bristol, Thursday.—Fat cattle were numerous but in little request, and business was dull, last week's values being scarcely maintained. Sheep, also, were plentiful, but trade was quiet. Down wethers being reduced to 8½d. Pigs, as usual, were scarce, and quotations unchanged.

Calne, Friday.—Prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s 0d per score, 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s 0d. Pigs outside these limits at their value.—C. AND T. HARRIS AND CO., LTD.

Canterbury, Saturday.—The sheep trade is nearly over for the season, but there were a few lots offered. Useful ewe made from 42s to 49s, and rough sheep from 22s to 32s. A few pens of rough lambs made from 13s to 19s per head. A useful lot of Irish stock found customers, mostly late in the day. Useful yearlings were quoted from £6 5s to £7 15s, and finest up to £10; two-year-olds, £10 to £13. One very fine lot of Shorthorn steers averaged £15. Rather more demand for horned stock, but not a fast trade.

Chester, Thursday.—Good supplies of cattle, with a numerous attendance of buyers. The inquiry for store stock was poor, but dairy cattle met a brisk trade, the supply being short of the requirements of the market. Scotch and Irish horned sheep realised last week's rates. Quotations:—Milch cows, £16 to £23; calving cows, £15 to £20; barrens, £10 to £13; heifers, £9 to £14; bullocks, £8 to £14; stirks, £5 to £9 each.

Colchester, Saturday.—There was a short supply of mutton, which sold at 6s 4d per stone of 8 lb. Grass beef was plentiful, but no stall-fed beasts were on offer. Beef averaged 4s 6d per stone. Pork was plentiful, but little in demand, selling at 8s per score.

Derby, Tuesday.—A fair supply. Beasts coarse and half furnished were not in demand; beasts, 5½d to 6½d; calves, 7½d to 8d; sheep, 7½d to 9d.

Doncaster, Saturday.—Small supply of milch beasts, but a large supply of bullocks. Milch beasts were dearer, and made up to £23; bullocks £12 to £17; heifers and drapes, £10 to £15; stirks, £8 to £10; young stores, £7 to £8 each. Moderate supply of sheep and trade rather slow, but prices firm. Shearlings, 45s to 52s; lambs, 34s to 40s each.

Dorchester, Saturday.—By no means excessive supplies came to hand at Messrs. T. Ensor and Son's repository sale to-day, but there was a good attendance of buyers. Milch beasts were again a good deal sought after, especially animals of good repute as deep milchers, which commanded a ready sale at from £17 10s up to about £21 apiece, and the more ordinary grades from £14 up to £17 (principally for cows). Good class grazing cattle were a trifle better sale than of late, at from £20 to £26 per pair, at which the bulk were sold, plainer bullocks a quieter sale at from £17 up to £19 10s. Young stock found a steady consumptive demand, the abundant keep in the pastures operating as a strong inducement to speculators to acquire anything at all useful. Fat bullocks remained a fairly firm trade at recent values, all the riper grades selling freely at 11s to 11s 6d per score for the best weights, and seconds from 10s to 10s 6d; rough course animals, 9s to 9s 6d. Mutton, which is as scarce as ever at the week-end market, may be quoted 7½d to 8½d.

Dublin, Thursday.—The demand for best cattle was well sustained at firmer prices, and all other sorts easier sold. Best suitable sheep of light and medium weights in request at late rates, heavy qualities not so easily placed. Cattle—Live weight (best), 29s to 31s per cwt; cross-bred Angus, 32s to 33s per cwt; secondary qualities, 26s to 28s per cwt. Mutton (dead weight), 6½d to 7½d per lb; extreme, 7¾d per lb.—GANLY, SONS, AND CO.

Edinburgh, Wednesday.—Market report says trade continued dull, but supplies plentiful. Half-bred lambs to 33s; cross lambs to 26s; Cheviot ewes, 23s; Cheviot sheep to 33s; polled cattle to £14 5s.; stirks, to £11 11s. Cows: Best Shorthorns to £25; secondary to £21; Ayrshires to £19 10s.

Exeter, Friday.—Small supply of fat beasts. Best steers and maiden heifers maintained late prices, 11s to 11s 3d; cows, 10s; very bad sale. Large market of sheep, but not generally of good quality; small lambs, 9d; hogs, 8½d; large size wethers, 8d; extra supply of fat ewes from 6d to 6½d; lambs for turnips, 32s to 36s. Several lots of the Bridgwater class sheep sold at 42s to 44s; calves, 7d.

Glasgow, Wednesday.—An average show of cattle, and, prime quality being scarce, made fairly good prices. Secondary classes met with a rather quiet demand. Top 62s to 64s; secondary, 54s to 57s per cwt. A fairly good number of sheep were penned, and for prime hoggs and wethers a sharper inquiry was made at firmer prices. Ewes were also in demand. Best mutton, 8½d to 9d; secondary, 7¾d to 8d per lb.

Hereford, Wednesday.—A large supply of beef met with a dragging trade, best quality bullock and heifer not making more than 6d to 6½d, cow beef 4½d to 5d. Calves a very slow trade, veal realising only 6d. Sheep in small supply, and very few of good quality. Wether mutton made 8d; ewe, 6½d to 7d. Lambs in short supply; fat ones, 8d per lb. Porkers, large supply, fetched 5½d to 6d, and bacons about same figure. Store pigs dear. Store cattle were a large supply, but experienced a dull trade.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report: Fat cattle showed a falling off in numbers owing to shorter supplies of Midland Counties cattle; yard-fed animals were sharply competed for, and all well-finished medium weights made 9s per stone. Grazing cattle were well represented, including several consignments of Cumberland and Westmorland steers in good condition and first-class quality. There were more buyers present, and a good clearance was effected at late rates. Two-year-old Shorthorns, £13 7s 6d to £12 10s; 18 months, £11 to £8 15s; 16 to 12 months, £8 10s to £5 10s; Westmoreland calves from 10 to 8 months, £6 to £4 17s 6d; Polled Irish in good condition, £12 7s 6d to £10 10s. Several cows and heifers were penned; the best were wanted, and made good prices up to £21 10s, but secondary sorts were dull and cheap. Fat sheep were short and dear, the best hoggets making high prices. Grazing lambs sold freely at from 47s to 38s.

Leicester, Saturday.—Good supplies of store stock in good condition; fair attendance of buyers. Choice milch cows, £20 to £22; good lots, £17 to £19; secondary, £14 to £16; heifers, £9 to £12; Irish bullocks, £13 to £15 Welsh cattle, £9 to £13 10s; young stock, £6 to £8; calves, 20s to 35s per head. Sheep sold freely at firm rates.

Lincoln, Friday.—A small consignment of horned stock, and fair trade. Yearling beasts, £8 to £9; strong ditto, £14 to £16; milch cows, £17 to £23 each. Lambs sold at 36s to 44s each.

Lynn, Tuesday.—Average supply, with trade at about late rates, from 7s to 7s 9d per stone. A large supply of stores met last week's rates from £6 to £18 each. Fat sheep were in average supply, and experienced a firm trade, making from 9s to 10s per stone. Stores from 45s to 50s each. Store lambs realised from 35s to 45s each.

Manchester, Friday.—Beef: First-class, 5d; second-class, 4d to 4½d; third-class, 3d to 3½d per lb. Mutton: Firsts, Cheviots, Scotch, 7¾d; others, 7½d; seconds, 6½d to 7d; thirds, 5½d to 6d. Veal: Firsts, 6½d; seconds, 5½d to 6d; thirds 4½d to 5d. per lb. Bacon pigs: Firsts, 5½d; seconds, 4½d to 4¾d; thirds, 3½d to 3¾d. Porket pigs: Firsts, 6¾d; seconds, 6½d to 6¾d; thirds, 5¾d to 6d per lb

Newcastle, Tuesday.—Trade for cattle was very similar to last week, with prices unaltered. Quotations:—Prime heifers, 7s 3d to 7s 6d; second class, 6s 9d to 7s; prime steers, 7s to 7s 3d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Trade was firm for sheep, but prices for choice shearling sheep were down ½d. Quotations:—Choice shearling sheep, 8½d to 8¾d; strong heavy, 8d to 8½d; choice lambs, 8¾d to 9d; second class, 8½d to 8¾d; ewes, 6d to 6¾d; rams, 5d to 6d per lb. Trade in veal was very quiet at 6d to 7½d per lb.

Newport, Wednesday.—There was a moderate supply of cattle, sheep, lambs and pigs, but calves were somewhat scarce. Large attendance of buyers and better trade all round. The quotations were:—Best beef, 6½d; seconds, 6d; cows, 4¾d to 5½d; best wether mutton, 8½d; ewes, 6½d to 7d; lambs, 9½d; calves, 7d; porker pigs, 10s 3d to 10s 9d per score.

Norwich, Saturday.—Average show of fat cattle. Good beasts sold well at 8s per 14 lb stone, but other qualities met a slower trade at from 7s to 7s 3d. Fat cows made 6s 6d. A good show of sheep, but prices were slightly lower, the best making up to 9½d per lb; large mutton, 8¾d to 9d; ewes, 6½d. Very small show of pigs, but the quality was good and trade improved, porkers making 7s per stone; baconers, 6s 3d to 6s 6d; and sows, 5s 6d. A large show of store cattle, consisting principally of big animals of good quality; trade ruled slower, the best lots of two and three-year-old mixed making from £14 10s to £17 10s; yearlings, £8 10s to £10 10s; and younger sorts, £4 to £6 10s per head. Rearing calves were of poor quality and not so dear, prices being from 20s to 45s. Small show of store sheep; demand slow, hoggets making from 35s to 50s per head. No ewes on offer.

Nottingham, Saturday.—Good show of milch beasts, which met with a good trade, especially best milch cows, which made £19 to £23. In-calf heifers realised £15 to £19 10s. A fair show of store beasts, with trade rather improved. Strong heifers and steers, £11 to £15, and younger beasts £6 to £10. Calves realised 25s to 50s. Official returns:—266 beasts, 94 calves.

Preston, Wednesday.—The supplies were rather small, but quality was good. Late rates, especially for sheep, were barely maintained, except for choice qualities. Quotations:—Choice Irish and local fed heifers, 6½d; secondary ditto, 5½d; choice young cows and bulls, 5¾d; inferior ditto, 5d to 5½d; choice lambs, 8¾d; hoggs, 8½d; heavy and coarse hoggs, 8d; choice ewes, 6d; heavy ewes and tups, 5½d; calves, 6½d per lb.

Retford, Saturday.—The trade for store stock was slow, and barely last Saturday's currencies were realised. Milch cows, £15 to £20; calves, 35s to 45s each.

Romford, Wednesday.—Average supply of fat beasts, trade slow. Best beasts, 4s 2d to 4s 4d; middlings, 4s to 4s 2d per stone. Calves in short supply; prices a little better at 5s 2d to 5s 4d per stone. Sheep in short supply; trade about the same. Best small sheep, 5s 8d to 6s; larger sheep, 5s 6d to 5s 8d per stone. Ewes an average supply; trade slow at 4s 2d to 4s 4d per stone. A few store beasts on offer; slow demand. Large supply of milch cows; trade bad. Pigs in average supply; prices about the same. Small porkers, 3s 8d to 4s; large hoggs, 2s 8d to 3s per stone.

Sheffield, Tuesday.—Good milch beasts scarcer than last week. The best sold at £19 to £22; younger lots, £14 to £15 10s.

Shrewsbury, Tuesday.—Usual supplies and attendance of buyers; trade good. Quotations:—Beef, 6d to 6¾d per lb; mutton (wether), 9d to 9½d per lb; ewes, 8d to 8½d per lb; lamb, 9½d per lb; veal, 8d to 8½d per lb; porket pigs, 10s to 10s 6d per score; bacons, 9s 6d to 10s per score.

Stockton, Wednesday.—An average show of the best cattle, which met with a slow trade at 7s to 7s 6d per stone, whilst rougher kinds made 6s to 6s 6d. Young sheep realised 8½d per lb, ewes 6½d, and tups 6d. The pig trade was very dragging, small porkers selling at 7s 6d; mediums, 7s; sows, 6s 3d to 6s 6d; and rough sows, 5s 9d.

Truro, Wednesday.—Attendance fair and business fair. Fat bullocks, 54s to 58s per cwt; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £15 each; rearing calves, 20s to 35s; ewes, 40s to 45s; wethers, 7d per lb; ewes, 5½d to 6d; lambs, 7d; large and small pigs and suckers, 5s 6d to 36s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4¾d to 5d.

Wolverhampton, Wednesday.—Trade moderate; fair supply all round. Quotations:—Beef, 5d to 6½d per lb; a few, 6¾d; mutton, 6½d to 9d per lb: veal, 6d to 7½d per lb.

Worksop, Wednesday.—Small supply of stock, with trade brisk, beef being about 3d. per stone dearer. Best beef, 7s 3d to 7s 9d; secondary qualities, 6s 9d to 7s per stone. Best Southdown and cross-breds up to 9d; ewes, 6d per lb. Store lambs, 25s to 32s each.

York, Thursday.—There was only a light show of Irish cattle at this, the last of the extra markets. Very few English stores on offer. Several sales were effected, but the drenching rain militated against the trade, which was otherwise good, quite late rates being obtained. Best three-year-olds made up to £15 10s, two-year-olds up to £12, but the general run for smaller animals was £7 to £11, according to size and quality. A few good newly calven cows made high prices, as much as £22 being paid in one case. A very poor trade for sheep, of which there was a small show. All classes of sheep fell fully 1s per head on the week, shearling sheep making 35s to 45s, twice-crossed lambs 30s to 38s, Masham ewes 48s; and Masham lambs, 27s each

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £13 to £13 10s; ditto wethers,

£12 10s to £13; Kent fleeces, £12 5s to £12 10s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £12 to £12 10s. Colonial—per lb.—Vic., scoured super., 2s 3d to 2s 4d; scoured, good, 2s to 2s 2d; scoured, average, 1s 10½d to 1s 11½d; greasy, average to fair, 1s 2½d to 1s 3½d; N.S.W., scoured, average, 1s 10½d to 1s 11½d; greasy, average, 1s 1d. to 1s 2d; S. Aus., greasy, average, 11d to 1s; N.Z., scoured, average, 1s 11d to 2s; greasy, average, 1s to 1s 1d; Cape, scoured, super., 1s 10d to 1s 11d; fleece, average, 9½d to 10½d; greasy, average, 8½d to 9½d; Natal, scoured, 1s 6d to 1s 7d; greasy average, 8½d to 9d. Crossbreds — grs.—Vic., good to super., 1s 3½d to 1s 4½d; New Zealand fine, 1s 3d to 1s 4d; medium, 1s to 1s 1d; coarse, 10d to 11d.

Canterbury, Saturday.—Growers still decline to accept less than 1s for Kent fleeces, and there is little business doing. Other quotations are lamb wool 7d, half-breds 11d, Downs 13d to 14d per lb.

Glasgow and Leith.—The Scotch wool trade during October has been moderately active. At the Leith sales held on the 15th and 16th ult., half-breds and crosses ruled rather in buyers' favour, but the selection was below the average. Stocks of this class are now well reduced. Cheviots, during the month, have experienced a better demand, and a considerable quantity has exchanged hands at firm prices. Blackfaced has been dealt in to some extent, both for the home trade and for shipment. The month closes with a quiet feeling with prices unchanged.—J. and W. Greig.

Halifax, Saturday.—There is a quiet tendency about the market for wool, and reports as to home-grown descriptions are a little conflicting. While holders are quoting full rates, some concessions have lately been obtained in certain Yorkshire, Lincoln, and Notts classes of wool.

CORN STATISTICS

Imports of Foreign and Colonial Corn.

Statement of the quantities of Foreign and Colonial Corn Imported into the United Kingdom in the week ended Saturday, November 2, 1907:—

Wheat	1,615,700 cwts.
Wheat-flour	446,6 0 ,,
Barley	861,900 ,,
Oats	270,200 ,,
Maize	1,127,600 ,,

And in the corresponding weeks of previous years, viz.:—

Speaking on "Electric Plant Culture" at the annual meeting of the Women's Agricultural and Horticultural International Union last week, Mr. W. Thwaite, C.E., said that experiments in energising plants by electric currents drawn from the atmosphere had resulted in an increased weight of 37 to 40 per cent. with strawberries, of 40·7 per cent. and upwards with oats, and 90·5 per cent. and upwards with rye.

The half-yearly fair for the sale of horses and cattle at Morpeth was held on Monday. The most powerful draughts were only few in number, and high prices were asked, running up to £60, and for some others £50, which was about the average figure That sum was also asked for Hunters and light road horses. Other draughts ranged from £28 to £40, and from £15 to £23. Iceland ponies were to be had for from £8 to £10. About 100 head of cattle were offered in the cattle market. Stirks made up to £8 10s, two-year old heifers to £11, and bullocks to £13 10s.

The Farmers' Club.—The annual general meeting of the Farmers' Club has been fixed to take place as usual during the week of the Smithfield Cattle Show, and will be held at the Whitehall Rooms, Hotel Metropole, S.W., on Monday, December 9, at 6 p.m., when Mr. Alfred Mansell, of Shrewsbury, will read a paper entitled "The Value of Live Stock on the Farm." The annual dinner will be held, in conjunction with the Central Chamber of Agriculture, on Tuesday, December 10, at the Criterion Restaurant, Piccadilly, W.

RECEIVED TOO LATE FOR CLASSIFICATION.

MONEY, FRED, Silk Willoughby, Sleaford. Flock 323; established over a century. Four Rams from this flock fetched over £1,300 in the Argentine, February, 1903, one making £700, the record for a single Ram in Buenos Ayres. Rams for sale. Inspection invited.

Printed and Published by the Proprietors, at the Offices, 8, Wellington Street, Strand, London, W.C.—November 4, 1907.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Ideal weather for field work has marked the first nine days of November, and arrears are being overhauled with all possible speed. The early sown wheat looks exceedingly strong and healthy; unhappily there is very little of it. The talk about sowing nursery wheat may be left until 1908 is here; if we have a mild period from now to Christmas the area needed will have been put under autumn types. The threshings of 1907 wheat continue to give good results to the acre, but there is more bran than usual on milling, and this will mean less flour. The serious deficiency in the area sown to wheat this autumn in Austria-Hungary, Servia Roumania, and Bulgaria is attracting notice, but we do not see why efforts should not be made there as here to overtake arrears. These districts have not Russia's trouble of frost, which on the first of the month had already reached the Sea of Azoff, and probably at the present moment makes ploughing out of the question all over the Empire. Australia has a good rainfall at last, but the rains come too late to make the wheat harvest anything like a good one.

London averages in shillings for the ten completed months of 1907 are as follows:—

	Wheat.	Barley.	Oats.
January	27·4	24·1	18 2
February	27 8	24 5	18 6
March	28 1	23 7	18·11
April	27 7	23·11	19·10
May	30·5	24 11	21·2
June	32·0	25·6	21 4
July	33·5	26·7	21 4
August	33·2	26 9	20·5
September	32 9	25 7	18·8
October	35·11	27·8	19·6
Net advance	8 7	3·7	1·4

The advance all along the line is what is most encouraging to the operator, and the wheat price now ruling in London will stimulate endeavours to send wheat up to town. We hope the railway companies will help both by more moderate rates and by additional facilities for prompt delivery to purchasers. Millers in October were sometimes forced to buy foreign wheat ex ship because they could not secure delivery of English wheat at the railway stations.

The estimated reserves of foreign wheat on November 1 in the United Kingdom were as follows:—

Stocks, October 1	2,218,000 qr.
October supplies	3,222,000 ,,
	5,440 000 ,,
October wants	2,790,000 ,,
Stocks, November 1	2,650,000 ,,

The October supplies of breadstuffs were thus made up:—

British wheat	955 000 qr.
Foreign wheat	1,883,000 ,,
British flour	384,000 ,,
Total	3,222,000 ,,

The total for October, 1906, was 2,388,000 qr., thus made up:—

British wheat	771,000 qr.
Foreign ,,	1,191,000 ,,
,, flour	426,000 ,,
Total	2,388,000 ,,

It is exceedingly note worthy that the rise of 6s. 6d. to 9s. 9d. per sack on flour on the twelvemonth has not prevented a falling off in the receipts from abroad. The British miller is more than holding his own.

Some extremely remarkable flour prices are presented by the October returns:—

	London.	Paris.
	s. d.	s. d.
October, 1907	32 0	32 0
,, 1906	22 6	31 0
Rise	9 6	1 0

The 10s. per sack duty on foreign flour which is imported into France does not seem to have raised the price at all. We have before this called attention to the remarkable figures of London and Paris, which confute with astonishing impartiality now the English free trader, and now the Tariff Reformer. In 1906, out of 10s duty, the Frenchmen apparently paid 8s 6d., the foreigner only 1s. 6d., but in 1907 the foreigner appears to be bearing the whole of the duty.

London and Paris wheat averages thus compare:—

Paris	40s. 4d	per qr.
London	36s. 9d.	,,
Difference	3s. 7d.	per qr.

The duty is thus apparently divided:—

Paid by the foreigner	8s. 8d. per qr.
,, Frenchmen	3s. 7d. ,,
Total duty	12s. 3d. per qr.

The sales of British produce at the 186 statute markets since harvest have been:—

Wheat	668,000 qr.	at 33s. 2d. per qr.
Barley	835,000 ,,	25s. 8d. ,,
Oats	416,000 ,,	17s. 11d. ,,

Wheat imports last week were 377,000 qr., and the imports of flour were 177,000 sacks. Of spring corn the imports were: maize, 264,000 qr.; barley, 242,000 qr.; and oats, 100,000 qr.

The wheat gradient is as follows:—

Chichester	37s. 1d. per qr.
Reading	35s. 1d. ,,
Range	2s. 0d. ,,

This is a good deal less of a variation than usual.

The gradient for barley is:—

Chichester	31s. 6d. per qr.
Doncaster	26s. 8d. ,,
Range	4s. 10d. ,,

For oats the gradient is:—

Mark Lane	19s. 10d.
Cambridge	18s. 6d.
Range	1s. 4d.

Barley averages 30s. 5d. in London, but no markets exceed 20s. for oats, though 19s 8d. at Ipswich, 19s. 5d. at Reading, and 19s. 7d. a Chichester are, with the London average of 19s. 10d., encouraging approximations to the level sovereign.

London sales of breadstuffs since the new cereal year show that October trade was heavy, and an increase on September in all five sections. The present November quietude is natural, though the very high bank rate is producing some trouble by forcing holders who are short of capital to press grain on an unwilling and temporarily congested market:—

	September.	October.
Wheat, qr.	342,000	480,000
Barley ,,	126,000	148,000
Oats ,,	133,000	350,000
Maize ,,	172,000	180,000
Flour, sacks	199,000	292,000

The supplies of wheat on passage on 9th inst. were as follows:—

Californian	265,000 qr.
American	300,000 ,,
Argentina	110,000 ,,
Russian	110,000 ,,
Indian	567,000 ,,
Australasian	385,000 ,,
Various	50,000 ,,
Total	1,787.000 ,,

The quantity of flour on passage is 264,000 sacks.

Expectations of spring corn, &c., as compared with a month ago, are as follows:—

Barley, 68,000 qr.; or 100,000 qr. decrease.
Oats, 125,000 qr.; or 35.000 qr. decrease.
Maize, 93,000 qr.; or 30,000 qr. increase.
Linseed, 126,000 qr.; or 19,000 qr. decrease.
Rapeseed, 28,000 qr.; or 5,000 qr. increase.
Cottonseed, 46,000 tons; or 2,008 tons increase.
Rice, 19,000 tons; or 6,000 tons decrease.

The above figures are encouraging to spot holders of rice and oats, but point to lower prices in December for maize and feeding barley, cottonseed, and probably rapeseed. The linseed total afloat is small, and by itself would point to an advance before 1907 was out, but the formidable offers of both cottonseed and rapeseed in December appear likely to check any upward tendency. Oil has fallen in price 5s. per ton on the week.

Last week's shipments from America were very good of wheat but small of spring corn, quantities being wheat, 434,000 qr.; maize, 6,000 qr.; and flour, 152,000 sacks. No barley or oats were exported. Argentina shipped 131,000 qr. of maize, but only 24,000 qr. of wheat. The Argentina shipments of linseed and oats were insignificent.

Old World efforts were rather considerable, and may thus be summarised:—

Qrs.	Wheat.	Barley.	Oats.	Maize.
Russia	310,000	367,000	52 000	66,000
Roumania	104,000	45,000	10,000	56,000
India	146,000	10,000	—	—
Australia	10,000	—	—	—
Turkey	15,000	15,000	5,000	30,000
Persia	—	20,000	—	—
Total	593,000	457,000	67,000	52,000

LONDON HAY TRADE.

Saturday.—The hay trade during the past week has presented a much quieter appearance; supplies have been much larger, with values of clovers and mixtures the turn lower, and hay about unchanged. Prices in country are still maintained at a much higher figure than their London parity, although now and again we hear of holders who are more amenable to current values. So far this season the hay trade has gone quite contrary to all expectations; with the large crop, one of over average, it was anticipated that long before now prices would have gone down to a very low level, instead of which they are actually higher than at harvest time. Doubtless having made much better prices of their corn, farmers have been in more of a position to hold their stacks than in other seasons; and another factor in the London trade maintaining prices is that for the last two or three months supplies of foreign have dropped away considerably, shipments just now not being much more than a third of last year, this also helping to keep values of home grown stuffs up to their present level.

Prices ruling are about as follows:—English Best hays, 70s to 75s per ton; good hays, 62s 6d to 67s 6d per ton; plain hays, 60s per ton; best clovers, 85s per ton; good clovers, 80s to 82s 6d per ton; inferior clovers, 72s 6d to 77s 6d per ton; best mixtures, 82s 6d per ton; good mixtures, 75s to 80s per ton; plain mixtures, 67s 6d to 72s 6d per ton; seconds hays, clovers, and mixtures, 50s to 60s per ton; wheat straw, 25s to 27s per load; barley straw, 26s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 60s to 62s 6d per ton; second quality Dutch hay, 55s per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

POTATOES.

Borough, Saturday.—Fair supplies were brought forward, which met a slow demand. Blacklands, 80s; Up to-Dates, 90s to 100s; Llewellyns, 90s per ton; French and Dutch, 3s 6d per bag.

Berwick, Saturday.—Trade was very dull at prices to 75s per ton.

Carlisle, Saturday.—The potato market was well supplied, and a steady demand was experienced at 7d to 8d per stone.

Doncaster, Saturday.—Short supply, and a fair trade. Prices were higher, and from 10s to 11s per load of 18 stones.

Goole, Wednesday—Fair supply, and a good attendance of farmers. Imperators are selling at 9s to 9s 3d, Up to Dates 10s, and King Edwards 10s 3d to 10s 6d per load. Prices are easier than those of last week, on account of the heavy arrivals of foreign potatoes.

Malton, Saturday.—Increased supplies, but prices are firm at £4 5s to £4 10s per ton wholesale, and £3 17s to £4 unpicked; retail, 8½d to 9½d per stone.

Manchester, Saturday.—Potatoes: Yorkshire, 11s 6d to 12s 6d; Cheshire, 9s to 10s; Lincoln, 11s 6d to 12s 6d per 18 st; Irish, 5s per cwt.

Preston, Saturday.—Potatoes made 8s 6d to 9s per load of 240 lb.

Retford, Saturday.—Short supply, and home-grown lots made 8s. and other varieties 6s 6d to 7s per load.

Spitalfields, Saturday.—Trade proved quiet, and arrivals of foreign were heavy, English, however, being in restricted supply. Blacklands, 75s to 80s; Llewellyns, 85s to 90s; Up to-Dates, 95s to 100s per ton; French, 3s 6d to 3s 9d; Dutch, 3s 6d per bag.

York, Saturday.—More potatoes on offer, German and foreign supplies having come to hand. Trade was quiet at slightly lower rates, best Sands making from 75s to 80s per ton.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet. Whites quoted at 37s to 41s; reds at 36s 6d to 39s 6d. Foreign steady, at about late rates, but demand limited. No. 1 Northern, ex ship, held at 44s 3d to 45s 6d; landed at 45s; No. 2, ex ship, at 43s 6d to 43s 9d; No. 1 hard Manitoba, landed, at 45s 9d; No. 1 Durum, ex ship, at 39s 6d; choice white Karach at 39s 9d. Flour steady, quiet. Hungarians held at 37s 6d to 38s 6d; Kansas patents at 31s to 31s 6d. Maize rather steadier, but quiet. Odessa, ex ship, quoted at 25s 3d; landed at 26s 6d. Barley slow. Azoff-Black Sea and Odessa-Nicolaieff, ex ship, held at 23s 6d to 23s 9d; Persian, ex ship, 22s. Oats slow, easier tendency. La Plata held at 18s 9d to 19s; South Russians (38 lb) at 18s 6d; Danubian, 18s to 18s 3d.

Mark Lane, Friday.—Wheat: English dull, easier tendency; whites quoted 36s to 40s; reds at 35s 6d to 38s 6d. Foreign in poor demand and fully 6d lower than Wednesday. No. 1 Northern Manitoba, ex ship, quoted at 43s to 43s 6d, as to position; choice white Karachi at 38s 6d; No. 2 Northern Manitoba at 42s 6d; No. 1 Durum at 38s 6d. Flour dull, easier tendency. Kansas Patents held at 31s; Iron Dukes, 27s to 28s. Maize dull, prices tending in buyers' favour. Odessa, ex ship, quoted at 25s 6d; landed, at 26s; River Plate, landed, at 26s 6d. Barley dull, and 3d easier. Odessa-Nicolaieff and Azoff-Black Sea, ex ship, quoted at 23s 3d; landed at 23s 6d. Oats slow, and 3d to 6d easier. South Russian, 38 lb, quoted at 18s 3d to 18s 6d; La Plata landed at 18s 6d.

COUNTRY.

Appleby, Saturday.—White oats (horse corn), worth about 19s to 22s per 26 stones.

Ashford, Tuesday.—Trade was not so good as last week, though the attendance was normal. Wheats were quoted 1s lower, best samples not exceeding 38s; flour dull but not reduced. Quotations:—Wheat, 36s to 38s; best English barley, 31s to 33s; secondary, 27s to 29s; foreign barley, 26s to 27s; Mazagan beans, 28s to 30s; tick beans, 33s to 35s; maize, 30s to 31s; oats, 19s to 22s per qr.

Banbury, Thursday.—Wheat, white (new), 36s to 37s per qr; wheat, red (new) 36s to 37s per qr; barley, 27s to 32s per qr; beans (new), 30s to 32s 6d per qr; oats, 19s to 22s per qr; peas, 29s to 34s per qr.

Berwick, Saturday. — Average attendance. Barley continues to meet a firm trade for all qualities. Finest oats unchanged; secondary oats cheaper. Barley, 25s to 33s; oats, 18s to 28s per qr.

Birmingham, Thursday.—There was a good attendance at the market, but trade was decidedly slow. Foreign wheats were from 1s to 1s 6d per qr lower on the week, and English 6d per bag easier, Bessarabian maize was 6d down, and Galatz-Foxanian 9d. Grinding barley was also 9d per qr. lower. English oats made 20s 6d to 21s per 312 lb. black winters 21s delivered. Beans, 13s 3d per 196 lb.

Brighton, Thursday. — Small attendance. Oats, 6d cheaper. Grinding barley 9d cheaper. Wheat 1s per qr. cheaper, with a good supply and quiet trade. New white wheat, 35s to 37s; new red ditto, 36s to 38s; barley, 28s to 34s; grinding ditto, 26s to 28s; oats, English, 18s to 21s; peas, 32s to 33s; beans, 33s to 34s.

Bury St. Edmunds, Wednesday.—Wheat, with a moderate supply, was a quiet trade, at 6d per qr less money. Reds or whites, 36s to 37s; revets, 36s to 37s per qr. Barley in average supply. Trade steady, with a fair business passing at 31s to 33s 6d for fair malting, and 34s to 35s 6d for fine parcels. Oats and grinding barley firm. Maize 6d per qr lower at 28s 3d per qr delivered.

Carlisle, Saturday.—Small supply of oats in our market to-day owing to half year term; good demand at, several fine hand samples made up to 24s per 336 lb; inferior oats, 21s to 23s per 336 lb; new oats at 26s per 24 stones.—Thomas Robinson.

Cambridge, Saturday.—The price of wheat has declined a further 2s during the week. The recent damp has affected the condition. At this market to-day there was a moderate supply of wheat, which made up to 36s per 504 lb into the mill. Spring corn in small supply. Barley, beans, and oats a turn easier.

Canterbury, Saturday.—Millers are holding off, and business for wheat has to be done at from about 35s to 37s, a decline of from 3s to 3s 6d per qr on recent top prices. Oats are fairly steady, 38 lb blacks selling at 19s, and 44 lb whites up to 21s 6d. A quiet trade for malting barley, but best qualities are fairly steady at from 29s to 32s 6d; feeding qualities, 27s to 28s, the latter for 56 lb weight. Grey peas remain at from 31s to 32s; tick beans make up to 33s; and tares from 5s to 5s 6d per bushel.

Chester, Saturday.—There has been a further reduction in prices of foreign wheat and maize since last market, and English grain is suffering in consequence. Both English wheat and oats are 1d to 2d per bushel lower. Barley firm; maize about 3d per sack down. Offals scarce and firm. Quotations:—Wheat, white and red, 5s 2d to 5s 4d per 75 lb; grinding barley, new, 4s to 4s 3d per 64 lb; oats, new, 2s 9d to 3s; old, 3s 1d to 3s 6d per 46 lb; Indian corn, old, 14s 6d to 15s per 240 lb; round corn, old, 14s 3d to 15s 6d per 240 lb.

Chichester, Wednesday.—There was a reduction of 1s on wheat and 2s on grinding barley and maize. A good attendance and fair trade. New white wheat, 37s to 38s 6d; new red ditto, 37s 6d to 38s 6d; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s; peas, 34s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday. — Wheat full, 1s; lower on week. Oats and malting barley unchahged—Colin Taylor, King and Co, Ltd.

Coventry, Friday. — Wheats offered more freely, and trade ruled quiet at fully 1s per qr under last week. Barley met a slow demand. Oats scarcely so high. Beans in dry condition maintained recent quotations, damp samples being neglected and lower. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per per 352 lb; new, 21s to 23s 6d; beans, 13s to 13s 9d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Derby, Friday.—Wheat in moderate supply; and trade dull, without any change in prices. Quotations:—Wheat, 37s to 38s; red, 35s to 37s; barley, malting, 29s to 32s; grinding, 25s to 27s; beans, old, 39s; new, 35s to 36s; oats, old 24s to 25; new, 21s to 22s.

Devizes, Thursday.—There was again only a moderate supply. Prices continue to fall, and to-day wheat and barley must be quoted 1s per qr lower. Oats, on the other hand, made late rates. Best old wheat, 21s to 22s; best new wheat, 18s 6d to 19s 6d; secondary, 16s to 18s; malting barley, 29s to 34s; grinding barley, 26s to 28s; old oats, 22s to 24s 6d; winter oats, 18s to 19s 6d; white Garton oats 320 lb), 19s to 20s; black Tartar oats (320 lb), 19s to 20s; rye, 27s to 30s; beans, 17s to 19s; fine flour, 31s to 32s; extra fine, 33s to 35s; vetches, 5s 6d to 6s 6d.

Dorchester, Saturday.—Much more favourable weather throughout the week proved helpful in enabling farmers to get on with their threshing, and consequently samples were more plentiful, but torrential rain in the morning, coupled with unpleasant weather for the greater part of the day, kept many away from the exchange. Business was by no means brisk in any department, and whilst many wanted outside values for new wheat factors declined to buy unless very considerable concessions were made, these extending from 6d to 1s per qr on home grown, and about the same on foreign, but no great amount of business followed. Barley was also back 6d per qr for feeding kinds, but good malting parcels, where they were to be met with, realised fully late rates; ordinary runs not much wanted. Oats and maize were both easier, but beans and peas were firmly held. Flour trade inactive at lower rates.

Exeter, Friday.—Small attendance; trade slow. English wheat unchanged. Flour easier. Barley and maize 3d to 6d cheaper. Oats firm. English wheat, 4s 3d to 4s 6d; English barley, 3s 6d to 4s; superfine flour, 31s to 33s; fine, 29s to 31s.

Glasgow, Friday.—Wheat in sympathy with cables from the other side, is the turn lower. Flour, practically little or nothing doing. Maize and corn quiet, and pressed for sale, with prices 1½d down for the former, and 3d for the latter. Barley steady. Oats nominally unchanged.

Gloucester, Saturday.—English wheat, 1s to 1s 6d lower, at 35s to 36s for reds, and 36s to 37s for white. Foreign wheat about 1s 6d cheaper; Plates, 41s 6d to 42s 6d; Russians, 41s to 42s. Plate maize 9d cheaper at 27s; Bessarabian, 6d down, at 27s 3d. Grinding barley 3d lower, at 25s 3d. Oats 6d cheaper.

Grantham, Saturday.—A better show of corn, though some of it was very much out of condition. Wheat, 30s to 36s; barley, 25s to 33s; oats, 19s to 21s; beans, 27s to 32s; and blue peas up to 75s per qr.

Hereford, Wednesday.—Wheats were difficult to sell, unless at a reduction of from 2d to 3d per bushel since last week. Barleys were a turn in favour of buyers. Oats met with very little demand, the tendency of values being lower. Maize was 6d per qr lower. Beans steady.

Ipswich, Tuesday.—Moderate supply of wheat; trade quiet at about late rates:—Reds, 38s to 39s; whites to 40s per 504 lb. Fair supply of barley; trade for all descriptions steady; prices unaltered. Finer samples, 33s to 35s; runs, 30s to 36s. Oats quiet. Maize 1s per qr cheaper. Beans and peas quiet.

Leeds, Friday.—The lowering tendency of wheat prices continued, English undergoing a further decline of 3d to 6d, and foreign about the same. Holders of flour also found a slow sale, and were willing to do business in medium qualities at 1s per sack reduction. Maize was easier, Plate, Odessa, and American closing at barely 26s. Beans, peas, oats, and barley were steady.

Leicester, Saturday.—Good average attendanceof buyers and dealers, with small supplies of home-grown wheats, threshing having been practically suspended. Trade flat. White wheats, 35s to 39s per 36 stones; red wheat, 33s to 36s per 36 stones; fine bright malting barley, 29s to 32s per 32 stones; beans firm; fine oats, 19s to 24s per 24 stones.

Lincoln, Friday.—Good attendance, and a large supply of English wheat, which experienced a dragging trade at 1s per qr less money than last week, making 36s per qr on rails. Large show of barley, and fair inquiry; malting barley, 28s to 36s.; ditto grinding, 26s to 28s per qr; oats unchanged; beans, out of condition, 30s to 31s per qr. Maize 6d to 1s per qr easier on the week.

Manchester, Thursday.—English wheat 1s to 1s 6d per qr lower on the week, and foreign generally 2d per cental lower. Trade ruled dull. Maize was 2d per cental lower, and flour 1s per sack lower. Oats unchanged. English barley 3d to 6d dearer, but foreign ruled quiet. Bran and offals nominal. The higher Bank Rate checked business.

Newark, Wednesday.—A moderate attendance. The samples shown were in poor condition; prices again easier. White and red wheat, 36s to 37s; malting barley, 29s to 31s; grinding barley, 26s to 28s; white oats, 20s to 20s 6d; black oats, 19s to 20s; old beans, 35s to 36s; new beans, 30s to 31s per qr.

Newcastle-on-Tyne, Saturday.—A quiet trade at our to-day's market prevailed for wheat, and to effect sales 1s to 1s 6d per 504 lb less had to be accepted. American maize steady at last Saturday's prices, River Plate favouring buyers. A fair demand for fine oats at 6d per qr advance, common sorts unaltered. Beans remain firm; prices in the favour of sellers. A steady demand for fine barleys at fully last Saturday's prices.—Joseph Pollard and Co.

Newport, Wednesday.—Trade was quiet, and prices were unaltered from last week.

Northampton, Saturday.—Improved attendance at the exchange, but all grains were generally on a decline in price as well as quality, wheat being 2s per qr lower on the week, whilst flour showed a decrease of 1s. New wheat, 34s to 35s 6d; barley, 26s to 32s; old white oats, 24s to 26s; new white oats, 18s 6d to 21s; old beans, 34s to 36s; new beans, 31s to 33s; peas, 33s to 35s; flour, 31s to 35s.

Norwich, Saturday.—The crisis in the American money market caused a depression in the wheat trade, and buyers were scarce. A few transactions took place at a reduction of 1s 6d per qr; values, 35s delvered. Among feeding stuffs, maize and barley were reduced 6d to 9d per qr. Linseed and cotton cakes still remained firm at a slow trade. There was a good supply of barley, but trade was quiet; prices ranged from 29s to 36s per qr.

Nottingham, Saturday.—Wheat in small supply, but prices receded 1s per qr. Best samples of barley held for full rates. Inferior lots a shade easier. Oats but few offering, and values maintained. Beans firm.—Robt. Hubble.

Peterborough, Saturday.—A fair supply of wheat at market to-day, for which trade was very quiet at from 1s to 1s 6d less money. Barley quiet at late rates. Oats small supply, and keep very firm. Wheat, 35s to 36s; barley, 28s to 34s; oats, 19s to 21s.—Thomas Hill and Son.

Plymouth, Thursday. There was a very good attendance on our market here to-day, but trade slow. Wheat was from 6d to 1s down on the week. Maize and barley 6d per qr easier. Oats remain firm, but in quieter demand. The flour trade was a little less active than of late.—Orlando Davis and Co

Preston, Saturday.—The market was fairly well attended, but there was not much grain offering from farmers. Oats made last Saturday's full prices, but wheat was 6d to 1s per windle cheaper, with poor demand. Quotations:—Wheat, white, new, per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel, 3s 8d to 3s 9d; ditto new, 3s 1d to 3s 2d; beans, per windle of 220 lb., 16s 6d to 17s.

Reading, Saturday. — The attendance was hardly up to the average, and trade was again on the dull side, the prices which governed the transactions of the previous Saturday being quoted. The following may be quoted as representative:—

Wheat, 34s to 39s; malting barley, 27s to 36s; grinding, 25s to 30s; oats, 18s to 22s 6d; beans, 34s to 37s; peas, 31s to 33s

Retford, Saturday.—A fair attendance, and an average supply of grain. Wheat 6d to 1s easier on the week at 35s to 36s per qr. Malting barley rather a slow sale, except for the best sorts, which were worth 31s to 32s: secondary lots, 28s to 30s: and samples slightly heated or damp, 26s to 27s per qr. Grain for feeding purposes about as usual. Maize quoted 29s; old English beans, 35s to 36s; new ditto, 28s to 30s; black oats, 19s to 19s 6d; white ditto, 20s to 20s 6d per qr.

Ripon, Thursday.—A good attendance of farmers, and a fair show of samples, but business was slow. Round maize shows a downward tendency. Prices:—New wheat, 37s to 38s; foreign ditto, 46s to 48s; grinding barley, 27s to 28s; malting ditto, 28s to 32s; new oats, 19s to 21s; old oat, 26s; round maize, 29s; flat ditto, 32s per qr.

Sheffield, Tuesday.—With buyers falling off the trade has quietened down, and to-day there was a small business passing at much the same prices as last week. Wheat slightly easier than a week ago, but with a steadier feeling. Maize 6d per qr lower on the week. Beans, peas, oats, and barley sold at prices favouring sellers, and showed an upward tendency. Quotations:—Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, black, 24s to 25s; ditto white, 24s 6d to 25s; ditto new, 21s 6d to 22s per 336 lb; peas, grinding, 36s to 36s 6d: ditto blue, new, 75s to 90s per 504 lb; beans, English, 36s 6d to 37s per 532 lb; barley, grinding, 28s to 30s; ditto malting, 28s to 32s per 448 lb; Indian corn, small, 28s to 26s 6d; ditto Plate, 28s to 28s 6d; ditto flat, 31s to 32s 6d per 480 lb.

Shrewsbury, Saturday.—Quotations: Wheat, 15s to 15s 6d; old oats, 16s to 17s per 225 lb; new oats, 12s 6d to 14s; barley, 18s to 20s per 280 lb.

Tunbridge Wells, Friday. — New white wheat, 39s to 39s 6d; new red ditto, 38s to 38s 6d; barley, 33s to 36s; grinding ditto, 24s to 25s; oats, English, 21s to 23s; rye, 28s to 29s; peas, 34s to 36s; beans, 34s to 36s; tares, 40s to 48s; maize, 28s to 39s.

Warwick, Saturday.—Very little grain of all kinds on offer. Trade very flat, and prices depreciating accordingly. Wheat 12s 6d per bag; barley, 26s to 32s per qr; beans, 12s per bag. All feeding stuffs easier.

Winchester, Saturday.—English and foreign wheat dull, 1s to 2s cheaper. Barley 6d. Maize 9d easier. Oats unaltered. Flour quiet trade, 1s lower rates.—FEAR, COLEBROOK AND CO., LTD.

Wisbech. Saturday.—A small supply of wheat at market. Reds, 36s to 36s 6d per 504 lb Barley, 28s 6d to 31s per 448 lb Oats, 19s 6d to 20s 6d per 336 lb.. —JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a good attendance, and brisk business was recorded, but prices were unaltered.

Worksop, Wednesday. — Good attendance with fair show of wheat Wheat sold at a shade under last week's rates, and trade for barley and oats was slow. White wheat, 37s 6d to 38s 6d; red ditto, 36s 6d to 37s 6d; best barley, 31s to 33s; secondary barley, 29s to 31s; grinding barley, 27s to 28s; white oats, 19s to 21s; black oats, 18s to 20s; maize, 28s 6d to 30s; old beans, 40s to 41s, new beans, 35s to 37s per qr.

Yeovil, Friday.—Wheat and barley were both down a further 1s. Oats maintained late rates, but maize sold at 6d per qr less money. Home-grown wheat of best quality, 37s 6d to 38s 6d per qr: secondary, 32s to 36s; malting barley, 29s to 34s: secondary, 24s to 26s; grinding, foreign, 25s; old oats, 22s to 24s 6d; winter oats, 18s to 19s 6d; black Tartary, 19s 6d to 21s; white gartons, 19s to 20s; Irish black, 19s; round maize, 28s; rye, 27s to 30s; beans, 35s to 38s; vetches, 5s 6d to 6s 6d per bushel. Flour prices easier. For immediate delivery 31s 6d per sack accepted for fines. Meals and offals continue a good market at firm rates

York, Saturday.—Very little wheat offering, and dry samples sold slowly at a reduction of 1s per qr. Most of the samples fell short of condition. Fine white, 37s to 38s; red and mixed, 36s to 37s per qr. of 36 stones Any but the best qualities of barley were lower in price; fine, 30s to 32s; good, 28s to 30s; feeding, 26s to 28s per qr of 32 stones. Oats scarce and firm, and from 20s to 22s per qr of 24 stones. Rye, about 29s, and old beans 30s per qr of 36 stones.

FEEDING STUFFS.

Liverpool, Friday. — Nitrate of soda is £11 3s. 9d to £11 5s. per ton on the spot. The late harvest and wet weather has delayed farm work, but as soon as climatic conditions are favourable it will stimulate the demand for autumn fertilisers. There is a slight improvement in the demand for basic slag and other phosphates, and there are inquiries for kainit the last few days. In feeding stuffs there is a very trade slow, and this can be ascribed to the wonderful grass season, especially in Ireland, and the mild open weather so far enabling farmers to use only sparingly of artificial foodstuffs, values of which at the present time rule fairly high in most instances. In American decorticated cotton-cake there is practically no stock on this market or likely to be until the new season's arrivals in December, meantime these buyers are diverting their orders to English make Rice meal values are too high to lead to much business, and the tendency is to decline. Feeding treacle is moderately cheap and meets a fair demand from consumers.

—H. JONES LANGAR AND CO.

Mark Lane, Monday.—Linseed Cake: The recent advance in prices has caused a lull in the demand, buyers being content to fill their immediate requirements, and with holders anxious to realise their profits, quotations are barely as strong. Russian remain by far the best value, East India and Calcuttas unchanged. London made remain in moderate request. Cotton Cake.—Egyptian offer rather more freely, and with only a poor inquiry values are, is anything, the turn easier, with English selling quietly. Decorticated.—London made pures find a ready sale at 5s. per ton advance, with American unchanged. Rape Cakes.—Nominal. Maize Germ Meal.—A limited quantity of White African meal is available, and English makes are to be had on slightly lower terms. Maize Gluten Meal meets a good export trade. Rice Meal.—Landed lots of Rangoon command last week's full prices, but there are sellers of steamer parcels afloat at less money. Locust Beans are without change Dried Brewers' Grains are scarce and dear. Nitrate of soda is unaltered.

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £13 to £13 10s; ditto wethers, £12 10s to £13; Kent fleeces, £12 5s to £12 10s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £12 to £12 10s. Colonial—per lb.—Vic., scoured super., 2s 3d to 2s 4d; scoured, good, 2s to 2s 2d; scoured, average, 1s 10½d to 1s 11½d; greasy, average to fair, 1s 2½d to 1s 3½d; N.S.W., scoured, average, 1s 10½d to 1s 11½d; greasy, average, 1s 1d. to 1s 2d; S. Aus., greasy, average, 11d to 1s; N.Z., scoured, average, 1s 11d to 2s; greasy, average, 1s to 1s 1d; Cape, scoured, super., 1s 10d to 1s 11d; fleece, average, 9½d to 10½d; greasy, average, 8½d to 9½d; Natal, scoured, 1s 6d to 1s 7d; greasy average, 8½d to 9d. Cross-breds—grs.—Vic., good to super., 1s 3½d to 1s 4½d; New Zealand fine, 1s 3d to 1s 4d; medium, 1s to 1s 1d; coarse, 10d to 11d.

Canterbury, Saturday. — Little business doing. Market still very firm, but staplers' offers do not exceed 11d for Kent fleeces, and 7d per lb for lamb wool.

Halifax, Saturday.—Business at rather low ebb; with exceptions, prices generally upheld. As to yarns, little doing for export, but spinners have no lack of business; price of raw material has become a serious factor in botany trade. Looms well employed, but export trade to America drooping.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Good supply and steady demand. Quotations for English produce: Apples, 4s to 10s 6d per bushel; peaches, 3s to 12s per dozen; grapes, 8d to 3s 6d; green figs, 9d to 3s per dozen; cranberries, 9s to 10s 6d per case; medlals, 3s to 3s 6d per crate; cobnuts, 4s to 4s 6d per 12 lb; chestnuts (Redan), 7s 6d to 12s 6d; walnuts (Grenoble), 6s to 7s 6d per bag; tomatoes, 4s to 5s; horseradish, 10s to 15s; sprue, 8s to 10s per dozen bundles; celery, 7s 6d to 12s 6d per dozen rolls; cucumbers, 3s to 4s per dozen; cauliflowers, 4s 6d to 8s 6d; cabbage, 3s 6d to 6s per tally; onions, 4s 6d to 5s 6d per cwt; parsley, 1s 6d to 2s; beetroots, 1s 6d per dozen bunches; shallots, 3s to 6s per bushel; sprouts, 2s to 3s per bushel; turnips, 1s 6d to 2s 6d per dozen bunches; potatoes, 75s to 100s per ton.

POULTRY AND GAME.

Smithfield, Saturday.—Supplies were plentiful, and a fair demand prevailed Quotations:—Fowls: Yorkshire, 2s 6d to 3s; Boston, 2s to 2s 9d; Essex, 2s 9d to 3s 3d; Surrey, 3s 6d to 3s 9d; Sussex, 2s 9d to 3s 3d; Welsh, 2s to 2s 3d; Irish, 1s 6d to 1s 9d: turkeys (hen), 4s 6d to 5s 6d; geese, 4s 9d to 5s 6d; country ducks, 2s 6d to 3s; Aylesbury ducklings, 2s 6d to 3s 3d; quails, 7d to 10d: Bordeaux pigeons, 10d to 1s 1d; feathered ditto 7d to 9d; wild rabbits, 6d to 9d; tame ditto, 1s 3d to 1s 6d each: Australian rabbits, 6s 3d to 8s per dozen; pheasants, 3s 9d to 4s; young partridges, 4s to 5s; old ditto, 1s 8d; young grouse, 4s to 5s; old ditto, 2s 6d: English hares, 2s to 2s 9d: Scottish hares, 1s 4d to 1s 6d: leverets, 1s 6d to 1s 9d: wild ducks, 1s 6d to 1s 9d; pintail, 1s 2d to 1s 4d: widgeon, 10d to 1s 1d; teal, 8d to 10d; woodcock, 1s 8d to 2s 3d; snipe, 6d to 9d; golden plover, 8d to 10d; black 5d to 6d each.

CHEESE.

Glasgow, Wednesday.—The arrivals of home cheese were smaller. There was a moderate trade. Prices were practically unchanged Cheddars, 62s to 65s per cwt., extra fancy 66s: Dunlops, 60s to 63s; Canadian slow, with September made cheese 63s. October made 61s

Highbridge, Tuesday. — A good attendance of buyers, a brisk sale, and all cleared Best Caerphilly dairies realised up to 57s per cwt. secondary dairies, 54s to 56s: and other dairies, 50s to 53s 6d. A few inferior lots failed to reach 44s. Cheddars, 58s to 61s; truckles, 57s 6d to 62s; doubles, 52s to 54s.

Newport, Wednesday.—There was a good demand and average attendances. Quotations:—Caerphillies, 46s to 54s per cwt: fancy dairies, 56s to 58s; Derbys, 61s to —s; truckles, 64s to 66s; Cheddars, 61s to 65s

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 P.M.

English wheat to-day was 1s. lower to sell, but there was no pressure to dispose of grain Foreign wheat was very irregular, Russian, Roumanian, and Australian not cheaper, Californian Walla Walla and Blue Stem scarcely cheaper, Durum 2s. cheaper, Red Winter 1s. 6d., and American Spring 1s. cheaper. Indian was a most unsettled market, some selling at 2s. decline, others comparatively firm. Maize has declined 8 full 1s. since November came in. Oats made full prices for English, Scotch, and New Zealand, but declined at least 6d for German, Russian, and Turkish.

The barley market was active at full prices for English, Californian, and Anatolian For Russian and Persian less money, however, was accepted. The price of beans, peas, and locust beans was fully supported, and dari was a little dearer. Haricots and lentils in good supply, and the turn lower. Linseed oil (naked) declined to £22 2s. 6d. per ton, a fall of 17s. 6d. on the week. This promises, we hope, cheaper linseed cake, which would be, indeed, a boon to farmers at the present time.

THE FLOUR TRADE.

MARK LANE, Monday, 3 P.M.

Best London flour is 1s. cheaper on the week, while Town Whites, Town Households, No. 2, and whole meal are all obtainable at a reduction. The country flour arrivals have been above the average, and have told heavily against value. All freight sorts may be quoted 1s. lower to sell from the 4th inst., but they are held more steadily on the whole than are the London and country sorts, which compete severely with each other.

Bran, pollard, and middlings remain dear, but the market is not quite so difficult for buyers as it was a week ago. Large arrivals of rice, flour, meal, and bran are reported, and are offered at a slight reduction in order to effect a prompt clearance.

CLOSE OF THE MARKET.

THE MARKET CLOSED AT THE DECLINE IN PRICES ABOVE GIVEN. A LITTLE INCREASE IN RETAIL BUSINESS IS INDUCED BY THE SHARPER WEATHER.

THE BALTIC.

A "fire" injured the telephone apparatus and temporarily put the lift out of action at this Club the other day. The affair was trivial, and very few members knew anything about it until they saw a placard of "Alarming Fire in St. Mary Axe." The Club, it may be mentioned, has a well of its own on the premises and could, if necessary, be deluged in a few minutes. The need for further cold water to be thrown upon its proceedings has not, however, been perceived by members of the Club who have been altogether quite sufficiently damped and depressed by the 7 per cent. Bank rate and the consequent desire of many holders to turn their grain into cash. The sales of the week show lower prices ruling for almost articles except Dari rice and pulse. The following are among the cargo sales recorded. Wheat: Argentine 38s. 6d. per 480 lb., Blue Stem 42s. per 500 lb., South Australian 43s. 3d. per 480 lb., White Karachi 42s. 6d. per 492 lb., Red Karachi 42s. per 492 lb., Manitoba No. 1 Northern 39s. 6d. per 480 lb., and No. 2 Hard Winter 37s. 3d. per 480 lb. Maize: Argentine 27s. 6d. per 480 lb., Odessa 26s. per 480 lb., and American 25s. 9d. per 480 lb. Barley: Kustenidje 26s. per 416 lb., and Azoff 25s. 6d. per 400 lb. Oats: Petersburg 17s. 3d. per 304 lb, and Konigsberg 18s. 6d. per 320 lb. Beans: Asia Minor 32s 9d. per 480 lb. Linseed: Argentine 40s. 6d. per 416 lb.

The London Corn Trade Association officials inform us that the following standards may now be inspected:—Gal. Fox, maize, Danube maize, Bessarabian maize, Danube Cinq. maize, Red Danube Cinq. maize, Odessa maize, Novorossisk maize, barley from Taganrog, barley from Nicolaieff, barley from Novorossisk, barley from Cherson, barley from Temruik, barley from Odessa, barley from Marianople, barley from Ghenighesk, all August shipment; barley from Theodosia, August shipment; barley from Kertch, August shipment; Persian barley, July shipment; barley from Casablanca, July-August shipment; barley from Mazagan, June-July shipment; barley from Saffi; July-August shipment; barley from Oram, July-August shipment; barley from Tunis, August shipment; barley from Algiers, August shipment.

Monday, 1 P.M.

State of Trade.

Russian, Californian, and Australian wheat cargoes are firm, but American and Indian are lower. Maize is against holders, irrespective of type. Barley has ceased to decline for feeding sorts, and malting is extremely scarce. Oats are 3d. lower from Saturday. Linseed cargoes are 6d. cheaper from Saturday, but Cottonseed is steady at last week's concession, and there is a fair sale for small cargoes or "parcels" of Sesame and Poppyseed.

Business Done.

Wheat.—Durum, 35s 9d per 480 lb, on passage; Red Karachi, 38s 3d per 492 lb, on passage; Red Karachi, 38s per 492 lb, arrived; Red Karachi, 39s 6d per 492 lb, January shipment; White Karachi, 40s 3d per 492 lb, January shipment; Argentine, 37s per 480 lb, February shipment, new crop; Russian Best Winter, 45s 6d per 492 lb, on passage; Russian Odessa Ghirka, 43s 6d per 492 lb, on passage; Walla Walla, 41s 3d per 500 lb, on passage; Californian, 41s 9d per 500 lb, on passage.

Maize.—Argentine, 25s 6d per 480 lb, arrived; American, 25s 3d per 480 lb, January shipmen (new crop).

Barley.—Californian, 38s per 448 lb, prompt shipment; French, 37s per 448 lb, prompt shipment; Anatolian, 33s per 448 lb, prompt shipment; Orzoida, 32s per 448 lb, prompt shipment; Tunisian, 32s per 448 lb, prompt shipment; Cyprian, 26s per 400 lb, prompt shipment; Russian, 25s per 400 lb, prompt shipment; Persian, 22s 9d per 400 lb, prompt shipment.

Oats.—Turkish, 17s per 304 lb, prompt shipment; North German, 19s per 320 lb, prompt shipment

Linseed.—Calcutta, 45s 6d per 410 lb, arrived; Duluth, 44s 6d per 416 lb, prompt shipment.

Rapeseed —Ferozepore, 54s 6d per 416 lb, March shipment; Jamba, 45s per 416 lb, prompt shipment.

Sesame, Indian, 62s 9d per 384 lb, prompt shipment.

Poppyseed, Indian, 60s per 377 lb, April shipment, new crop.

Cottonseed, Egyptian, 7s per cwt, on passage.

TERM MARKET.

Speculation is inert, but delivery can be obtained of wheat and maize at the following prices per cental (100 lb).

SEEDS.

Mark Lane, Monday.—The phenomenal rise in the Bank Rate seems to have checked business for the moment. Rape is firm. Mustard unchanged. Peas a steady business. Rye scarce. Winter tare quiet. In clovers, whites and Alsikes firm; reds and trefoils rising. In grasses good business passing. Prices very firm for Italians and Perennials.—John Pickard and Co.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations: Hay, £3 to £3 15s per ton; straw, no quotations.

Derby, Friday.—Clover, best old, 90s to 100s; new, 80s to 90s; hay, best old, 90s to 100s; new, 80s to 90s; seconds, 65s to 70s; straw—wheat, 60s to 70s; pressed, 50s to 60s; chop, 55s to 65s; peat moss, 35s to 40s.

Hereford, Wednesday. — A dull trade. Quotations:—Hay, 50s to 55s per ton (in stack); straw, 25s to 30s (in bulk).

Lancaster, Saturday.—Meadow hay, 6d; clover, 7d; wheat straw, 3½d to 4d; oat straw, 4d per stone.

Leeds, Tuesday. — A good selling trade is passing in the warehouses for hay and straw at the following firm and unchanged quotations:—Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—A good supply and moderate demand. Best hay and seeds, 55s to 60s; ditto secondary, 45s to 50s per ton on the ground; straw, 30s per ton at the stack.

Manchester, Friday. — Hay, 5d to 5½d; clover, 5d to 6½d; clover, Lincoln, 7d; straw, wheat, 2½d to 2¾d; oat, 2¾d to 3¼d per stone.

Nottingham, Wednesday.—Large supplies which met with a slow trade Quotations:—Inferior to good hay, 40s to 60s; prime ditto, 70s to 80s; inferior to good clover, 40s to 60s; prime ditto, 75s to 85s; wheat straw, 45s to 50s; swede turnips, 19s to 20s; old hay, 95s to 100s; old seeds, 95s to 100s per ton.

Sheffield, Tuesday. — Moderate supplies. Seeds, choice, £4 5s to £4 15s; meadow hay, £3 15s to £4 5s; straw, £2 10s to £3; turnips, 22s; ditto, common, 20s per ton.

Whitechapel, Saturday.—Small arrivals met a good demand at late prices: Best clover, 84s to 95s; inferior ditto, 72s to 80s; specially-picked hay, 85s; good ditto, 68s to 78s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 28s to 33s per load.

BUTTER.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: With a good trade, prices show a further advance during the week. Business has been done at 21s to 22s 6d ale, and porter 3s per ton less, on rail, London. Present slack brewings may cause a further advance. Dried Grains.—Prices continue firm with an upward tendency, due to the higher prices of wet grains and the colder weather, prices, 110s and 105s for ale and mixed respectively, free on rail London, bags, 6d each. Best Java Molasses.—Concrete, 70 per cent. sugar, in baskets, 85s per ton, and kiln dried sea-damaged wheat from 22s 6d per qr, on rail, London and elsewhere.—Hamlyn and Co.

TO-DAY'S MARKETS.

CATTLE.

Metropolitan Market, Islington.

	Monday, Nov. 11, 1907. British.	Total.	Monday, Nov. 12, 1906.
Beasts	1,190	1,190	1,390
Sheep and Lambs	3,840	3,840	4,660
Calves	10	10	20
Pigs	—	—	—
Milch Cows	30	30	40

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 6	3 4	4 8
Sheep	4 8	5 4	6 2
Lambs	—	6 0	6 8
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 10; Eastern Counties, 36; Midland, Home, and Western Counties, 1,024; Devon, 20; Ireland, 100.

We note to-day a decrease of 40 in the number of beasts offered for sale compared with Monday last, the majority of which arrived from the Midland Counties and Ireland. Our top quotation was reached by a few cross-bred Scotch cattle. For both prime and second quality English beasts trade ruled of a slow nature, but steady in regard to value. The Irish consignment consisted of 61 Dublins, and 39 Waterfords, the latter meeting with more inquiry at an advance on last week's currencies. Fat butchering cows and bulls again met with a limited demand at late rates. A clearance will be made in this part of the market to day.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s d	s d	Monday, Nov. 12, 1906. s d	s d
Scotch Cross-breds	4 6 to 4 8	...	4 10 to 5 0	
Devons	4 4 to 4 6	...	4 4 to 4 6	
Herefords	4 4 to 4 6	...	4 4 to 4 6	
Norfolks	— —	...	— —	
Ruots	4 2 to 4 4	...	4 0 to 4 4	
Lincolns	3 10 to 4 0	...	3 8 to 3 10	
Irish	4 0 to 4 2	...	3 10 to 4 2	
Canadian	— —	...	— —	
Fat cows	3 4 ex 3 6	...	2 10 to 3 6	

There was a decrease of 620 in the number of sheep and lambs penned compared with Monday last. For all grades of English wethers and ewes trade ruled of a slow nature, all sales being based on last Monday's currencies Scotch descriptions numbered precisely the same, and experienced no alteration in regard to value, whilst Irish sheep were 2d. per 8 lb. higher for anything small and choice. A few lambs were disposed of at late rates. The supply included 300 Scotch, 770 Irish, and 312 from the Eastern Counties. A clearance is expected to be made.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	s. d.	Monday, Nov. 12, 1906. s. d.	s. d.
8 st. Scotch	6 0 to 6	2	6 2 to 6	4
7½ to 8 st Downs	5 10 to 6	0	6 2 to 6	4
9 st. Downs	5 8 to 5	10	5 10 to 6	0
10 st Halfbreds	5 4 to 5	6	5 8 to 5	10
10 st Yorkshires	—		—	
12 st Lincolns	—		—	
10 st Irish	5 4 to 5	6	5 2 to 5	4
10 st Down Ewes	4 0 to 4	2	4 2 to 4	4
11 st Halfbred ditto	3 10 to 4	0	4 0 to 4	2
5 st Down Lambs	6 6 to 6	8	—	
6 st Halfbred ditto	—		—	

Calf trade not worth noting or quoting. No pigs on the market.

St. Ives (Hunts) Monday.—Beasts, 829; sheep, 433; pigs, 468; horses 41. Fat and store cattle a fair trade; fat and store sheep sharp trade; fat and store pigs fair; milch cows a fair show and in good demand. Prices: Beef, 7s to 7s 9d; mutton, 8s 2d to 11s 1d; pork, 6s 3d to7s; milch cows, £14 to £23.

FOREIGN.

Deptford, Monday.—To-day's supply showed a decrease of 72 head, and consisted of 230 from the United States, 105 Westerns, 108 Canadians, and 300 Canadian ranch cattle. Trade ruled of a firm and steady nature both in regard to tone and value. The best States on offer were quoted at from 4s 3d to 4s 4d; seconds, 4s to 4s 2d; Westerns, 3s 8d to 3s 10d; seconds, 3s 6d to 3s 8d; Canadian fat cattle, 3s 11d to 4s 1d; seconds 3s 8d to 3s 10d; Ranchers, 3s 2d to 3s 4d per 8 lb (offal given in). On Saturday 1,271 beasts from the United States, and 353 from Canadian (118 of which were ranch cattle) were offered for sale. Trade rule of a firm and steady nature at an advance in value. Best States on offer made from 4s 2d to 4s 4d; seconds, 4s to 4s 2d; Canadians, 3s 11d to 4s 1d; seconds, 3s 7d to 3s 9d. The Canadian ranch cattle were not sold. Besides the above 500 States and 600 Canadians were withheld from sale.

Liverpool, Monday.—There was a smaller supply of cattle and demand slow, best prices generally unchanged. Small increase in number of sheep on offer, and trade slow with last week's advance difficult to sustain, tendency being to Easter. Prices:—Beef, 6¾d to 4½d; mutton, 9d to 6d per lb. At market 1,388 cattle and 5,472 sheep. Christmas market will be held Monday, December 16.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—Trade is quiet, and prices are barely as firm, though there are no signs of weakening on the part of home crushers. Foreign makes offer sparingly.

Cotton Cake.—A fair business doing in Egyptian-made, and the one or two recent heavy arrivals have been worked off considerately. London-made are without change.

Linseed —Owing principally to the monetary situation and favourable reports from the Plate the market eased at about 1s. per qr. during the past week.

Linseed Cakes.	£ s. d.	Per ton. £ s. d.

—Robt. & John Hewetson.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 3,013 bales, and from foreign ports, 15,096 bales. At the general reduction in prices on Friday there was a steadier tone in the market. Quotations ranged:—Irish, 56s to 58s up to 61s; Danish, 54s to 57s up to 61s; Canadian, 56s to 58s. Butter: The butter market was quiet. French, 108s to 110s; Danish, 124s to 126s; Russian, 90s to 114s; Irish, 97s to 121s; Victorian, 94s to 122s; New South Wales, 94s to 122s; Queensland, 90s to 120s; New Zealand, 112s to 122s. Lard.—Lard was a steady market. Irish, 50s to 58s; Danish, 51s to 53s; American, 46s 6d to 47s 9d.

GRAIN AND FLOUR FACTORS' REPORTS.

Offals.—Bran continues in fair demand; no change to report in prices.—Greenhill Bros. (Belfast).

Flour.—Not much doing; demand slow. Prices generally, as compared with last week, 6d to 1s per sack in buyers' favour.—Greenhill Bros. (Belfast).

Flour.—Markets are so unsettled that the business doing is extremely limited. Grain.—Round and flat corn in poor demand at prices in buyers' favour. Beans the turn lower. No pease here. Oilcake quiet. Oats of inferior quality very plentiful and difficult to sell. Oatmeal 6d lower. Mill stuffs in lessened demand, but unchanged in price. Winter wheat patents, 30s 6d to 31s per 280 lb; spring wheat patents, 32s 6d to 33s per 280 lb; American corn, 16s 3d to 16s 4½d per 280 lb; round corn, 15s 10½d to 16s per 280 lb; grinding beans, 18s 9d to 19s per 280 lb; broad bran, 117s 6d to £6 per ton; medium bran, 112s 6d per ton; common thirds, 115s to 117s 6d per ton; fine thirds, 140s to 142s 6d per ton; American oilcake, 150s to 152s 6d per ton.—McKinnon and McDonald (Glasgow).

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market on Monday there was a slight decrease in the number of beasts on offer, consisting chiefly of consignments from the Midland, Home, and Western Counties, with a few Scotch and Devons, the former of which commanded our top quotations, whilst the latter experienced a fall in value. All other grades of both prime and second quality fat beasts met with a slow trade, but salesmen were able to maintain late rates in most cases. The Irish arrivals consisted of 66 Dublins, 48 Waterfords, and 20 store cattle (two-year-old heifers), which were quoted at from £9 10s. to £10 per head, but met with little inquiry. The former were also difficult to vend; however, no lower rates are quotable. All sales of fat butchering cows and bulls were governed by late currencies. On Thursday, with a short number of beasts on offer, trade was very dull, but no alteration in value can be recorded.

At the Foreign Cattle Market, Deptford, on all three market days, a fair average number of cattle were offered for sale, some of which were of rather inferior quality, trade throughout the week ruled of a slow nature at a decline in value. The total number on offer at both markets was 3,939, as against 3,977 during the preceding week, consisting of 1,300 British (decrease 90) and 2,639 foreign (decrease 64), comprising 1,821 from the United States, 209 Western, and 609 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Scotch cross-breds, 4s. 6d. to 4s. 8d.; 90 to 95 stone Herefords, 4s. 4d. ex 4s. 6d.; 95 stone Runts, 4s. 2d. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 4s. to 4s. 2d.; 90 stone States, 3s. 10d. to 4s.; 95 stone Canadians, 3s. 7d. to 3s. 9d.; ranchers, 3s. to 3s. 2d.; Western, 3s. 6d. to 3s. 8d.; 90 stone fat cows, 3s. 4d. ex 3s. 6d.

The sheep trade, as usual of late, was confined to the Islington market, and opened on Monday of an extremely slow nature, both for wethers and ewes; however, late rates governed most transactions. Scotch descriptions sold well, late values being easy to maintain, whilst Irish were difficult to vend, even at a decline of 2d. per 8 lb. A few lambs were offered for sale on Monday and cleared early in the day. On Thursday all sales were based on Monday's prices. The total number penned at both markets was 4,490, as against 4,370 during the previous week, showing an increase of 120. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 6s. to 6s. 2d.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Irish, 5s. 4d. to 5s. 6d.; 10 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone halfbreds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s. to 4s. 2d.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Only 15 calves on the market; trade nominal. No pigs on offer.

Trade in the West.

Only very moderate deliveries of any kind of stores have come to hand at the leading centres since our last report, due, no doubt, to the fact that keep being again very plentiful stockowners are keeping supplies back, especially of graziers, to feed down pastures which otherwise could not be turned to profitable account. Another thing is that the barrener season has scarcely yet begun, although where anything at all suitable for wintering has been available buyers have by no means been slow to seize the opportunity. In these cases young cattle of good promise have brought exceedingly good prices, and we must quote bullocks of this class — whether Devons, shorthorns or cross-breds — as showing an advance of from £1 to £2 a head on prices recently current, which is generally considered satisfactory in view of the prices recently ruling for beef. The present mild weather, coupled with the absence of frost to any serious extent, is no doubt a factor largely influencing present purchases, as there is still a superabundance of feed on most farms for all outlying stock, which is only necessary to be supplemented by a few roots for stock kept for dairying purposes solely. There has been no falling off during the week in the demand for milch beasts, the supply of which still continues altogether inadequate. As regards prices, sellers still continue to get the best of all transactions, more especially in the case of heifers in their prime as milchers, these bringing £17 up to £23 and £24 apiece for anything out of the common and at all suitable for town milk walks, in many of which the "weeding-out" process is still in operation, indifferent milchers being replaced by others of the best possible type. There is likewise a good inquiry for the plainer class of dairy stock, which sell readily from £16 10s. down to £13 or £14, and some for even less; in fact, the present is one of the very best periods we ever remember for milch beasts, taken all through; and, while the consumption of milk continues to grow as it does there seems very little prospect of anything at all suitable for dairy purposes becoming even in the slightest degree cheaper—at least, that is the view of all who claim to have any practical knowledge of the subject.

The sheep sales for the season, with one or two unimportant exceptions, are now practically at an end, and 1907 will undoubtedly long stand out as a record one in many respects, not only as regards the abnormal demand, but still more so—largely the result of the shortage of sheep in the country—for the exceptionally high prices which have ruled, and for which there is no parallel in recent years. A still more remarkable feature is to be found in the fact that the season closed with a much firmer tone and even better prices for culled sheep than were realised at the beginning of the season for full drafts—the pick of the flock. A general run for very plain ewes at present is from 45s. to 58s.; Chilver lambs, 42s. to 55s.; wether lambs, 38s. up to 57s. for high condition lots; couples, 63s. to 70s.

There is nothing very noteworthy to record concerning the market for fat stock, the general conditions of which are characterised by uniform steadiness as regards demand, whilst in regard to prices we must quote all the bettermost qualities as quite holding their own, whilst secondary grades slighly favour the buyer, though this is hardly to an extent to justify quoting a lower currency. The most noticeable feature is an absence of that robustness which often characterises operations in the fat stock market, this applying alike to beef and mutton. Amongst the beef now coming out is to be found a few Devons, Shorthorns, and Norfolks of really good finish, for the best of which sellers are making 11s. to 12s. per score, with a fairly quick sale at the price; but the ordinary runs of cows are slower of sale at 10s. to 10s. 6d. for the best grades, and 9s. to 9s. 6d. for anything distinctly rough. Veal, which is none too plentiful, is a good steady trade at 8½d. to 9d. per lb., nothing but plain calves selling for less money. Mutton just now includes some exceptionally good tegs and wethers of nice finish, which sell up to 9d. per lb. and over; ewes must be quoted at 7d. to 8d; sucking lamb sells well up to 10d., and heavy young mutton at 9d. to 9½d. Pigs steady trade at prices rather favouring buyers.

Trade in Scotland.

The number of fat cattle on offer has been just about an average, and the quality slightly improved. An active trade has been experienced, and prices on an average 15s. per head higher. A small supply of fat cows also met a slightly better market. Sheep and lambs have been shown in fair numbers. These have met a good inquiry at a rise of from 1s. to nearly 2s. per head. Fat calves very dear, while pigs just maintain previous prices. There was a much smaller supply of store sheep on offer, principally of a very secondary class. A clearance was effected without any quotable change in prices. "Hallow Fair" being next week the supply of store cattle was much smaller. There was a fair demand, and although trade was slow, a good clearance was effected at prices just the turn higher. Milch cows a small show, and very dear. Quotations:—Top price of cattle per live cwt., 40s.; current, 35s. to 37s.; mutton, 6d. to quite 9½d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland

There was a large attendance of home and cross-Channel buyers in the Dublin market on Tuesday last, and the offerings of both cattle and sheep were better than at the market of the previous week. However, the number of stock shown were not up to the usual average at this time of the year. A tolerably healthy tone pervaded the beef market, and choice stock more than maintained the prices got last week. Good medium and second-grade descriptions of beasts also held their own well, but coarse and lean cattle were hard to dispose of. The top price for choice cattle was about from 31s. to 32s. per cwt. (live weight). The dead weight price of best beef ranged from 50s. to 53s., and 54s. to 55s. per cwt. for very choice, 46s. to 50s. for second quality, and from 42s. to 45s. per cwt. The highest price (£22 5s each) was got by Messrs. Duffy, Mangan, and Butler, for a lot of very fine bullocks which were bought by an English buyer. They were fed at Ratsath, co. Meath, by Mr. M'Cabe.

There was a slow sale in the mutton market, especially in the heavy and coarse classes. Choice handy weight sheep about maintained their price, hoggets sold very disappointingly. Big shipments of Irelandand Dutch sheepto England pretty well spoiled the Irish trade. Horned sheep were largely in evidence in Dublin market, but did not sell well. Prime wether mutton was sold at from 7d. to 7½d. per lb, ewe mutton at from 6d. to 6½d.; and inferior sheep at from 5d. upward per lb. Heavy hoggets sold at from 46s. to 56s. each, and small to medium ditto at from 34s. to 44s. each. Not many lambs on sale, as the season is now over. Best fat lambs made from 34s. to 44s. each; other sorts from 24s. to 30s., according to size and quality.

Veal calves were a poor lot, and did not attract much attention. A few choice calves made from 7½d. to 8½d. per lb.; other calves were sold from 4½d. per lb. upwards.

There was a tolerably big supply in the pig market on Thursday, and English buyers were more numerous than at the market held that day week. In the early hours trade was more encouraging than the previous market day, but, unfortunately, the stir fell away as the day wore on, and buying became very slumpy, and a drop of from 1s. to 2s. per cwt. took place, and later on was 2s. to 3s. worse on the day. The local demand was very slow and cautious, and both pork butchers and curers were very slow in their purchases. Best light-weight pigs made 46s. to 47s. 6d. per cwt., heavy pigs from 44s. to 46s., and coarse pigs from 40s. to 42s. per cwt. The local markets do not give much encouragement to feeders at present.

The dairy cow supply was fully equal to the demand, and trade was slow as compared with late markets. First-class milch cows, however, sold fairly well bringing from £16 to £20 each. Mr. Gavan Low had a large sale, the catalogue containing over 1,200 head. They sold well considering the state of the cattle market at present.

LONDON.

Central Market, Friday — Fair supplies and trade slow, but prices fairly firm for best meat. English beef, 3s 4d to 3s 7d; Scotch sides, 3s 10d to 4s; shorts, 4s 4d to 4s 8d; Deptford and Liverpool killed, 3s 2d to 3s 7d; refrigerated hindquarters, best, 4s to 4s 4d; ditto, seconds, 3s 8d to 3s 10d; ditto, forequarters, 2s 2d to 2s 6d; inferior beef, 2s 2d to 2s 8d; mutton, Scotch wethers, 5s; ditto, tegs, 5s; ditto, ewes, 3s 2d to 3s 6d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 2d to 3s 6d; Dutch sheep, 4s to 4s 4d; English lamb, 4s 8d to 5s; veal, 3s 8d to 4s 8d; English pork, 3s 8d to 4s 4d; Dutch ditto, 3s 8d to 4s 2d per 8 lb.

Islington, Thursday.—To day's supply of beasts consisted entirely of fat cows, bulls, and and rough cattle from South-Western counties, for which a very slow trade was experienced. Top values per 8 lb:—3s 4d, extreme 3s 6d; fat bulls, 2s 6d to 3s. A decrease of 30 in the number penned in sheep market compared with Thursday last. Both wethers and ewes met a very limited demand, sellers, however, were not willing to accept any decline on late rates. Best pens made per 8 lb as follows:—7½ to 8 stone Downs, 5s 10d to 6s; 9 stone ditto, 5s 8d to 5s 10d; 10 stone ditto, 5s 6d to 5s 8d; 10 stone half-breds, 5s 4d to 5s 6d; 10 stone Down ewes, 4s to 4s 2d. Calf trade not worth noting. Quotations per 8 lb, sinking the offal:—Beasts, 2s 6d to 3s 6d; sheep, 4s to 6s.

COUNTRY.

Ashford, Tuesday.—Beef sold slowly at late rates, the best and heifers making up to 4s 8d, and secondary 4s to 4s 2d. Mutton rather sparingly offered, and full prices given; small Downs up to 6s; neat Kents to 5s 10d; barrens to 4s per stone. Veal: Good demand and dearer, 5s to 5s 8d. Roasting pigs dearer, best making 4s to 4s 2d.

Aylesbury, Wednesday.—Good supplies of stock come to hand consisting of 435 fat sheep and 480 fat beasts. Trade was slow in both departments, and prices ruled in favour of buyers. Ripe bullocks and heifers met a fair inquiry, but for secondary sorts there was practically no competition. Wethers realised up to 50s 6d; ewes, 40s; tegs, 44s 6d; heifers, £18 2s 6d; and bullocks, £23 10s.

Bath, Wednesday.—There was a moderate attendance, and the supply of sheep was good. Fat cows, £16 10s to £20; fat heifers, £14 10s to £19 5s; fat calves, 40s to 81s; fat tegs, 46s 6d to 69s; fat ewes, 40s to 43s.

Berwick, Saturday.—Attendance of farmers and buyers fair, and a steady trade. Calves, £5 10s to £6 15s; heifers, £7 to £10 10s; stirks, £9 to £12; two-year-olds, £12 to £13 15s; three-year-olds, £13 to £14 15s

Birmingham, Thursday.—Good supply of pigs; small supply of beasts and sheep; trade slow. Beef, 5d to 6½d per lb; Herefords, 6½d per lb; mutton, 6d to 8½d per lb; bacon pigs, 8s 9d to 8s 10d per score; cutting pigs, 9s to 9s 6d per score; sows, 7s per score.

Bristol, Thursday.—Beef was plentiful, but demand limited, and trade slow at last week's prices. Mutton and lamb were offered in moderate quantity, and a fair amount of business passed at recent quotations. Pigs were not numerous, and value of porkers declined 9d. to 10s per score.

Canterbury, Saturday.—There was a fair offering of horned stock to-day; average yearling bullocks were sold at from £7 to £8, and good two-year-old heifers, £8 5s to £10 15s. There was a fair but not particularly fast demand. Good toothed ewes were making from 31s to 36s 6d, and rougher lots from 22s to 30s; lambs, 25s 6d to 35s; wether tegs, from 33s to 45s 6d per head.

Carlisle, Saturday.—Small attendance of buyers, and a slow trade. Wintering heifers, £6 to £8 10s; better descriptions, to £10 10s; stall-feeding cattle, £12 10s to £14 10s; polled bullocks, £5 to £6 10s; and better descriptions to £12 10s each.

Chester, Thursday.—A good supply of stock, with fair attendance of dealers. Store stock was in limited demand, but dairy cattle again met a brisk trade, the supply still being short of market requirements. Quotations:—Milch cows, £16 to £23; calvers, £15 to £20; barrens, £10 to £13; heifers, £9 to £14; bullocks, £8 to £14, and stirks, £6 to £9 each.

Chichester, Wednesday.—Trade for fat sheep was steady at about late rates, There was a very good trade for working lambs, but three-parts fat lambs were easier. For well finished cattle there was plenty of inquiry at firm values, but half-fat cattle and rough cows met a very dragging sale. Good fresh-colved cows and heifers fully maintained late rates, but there was very little demand for inferior animals. Quotations:—Devon steers, 4s 6d to 4s 10d; Shorthorn steers, 4s 2d to 4s 6d; Southdown tegs, 6s 6d to 6s 8d; West Country tegs, 6s 2d to 6s 6d; West Down ewes, 4s 4d to 4s 8d; Southdown ewes, 4s 6d to 5s; fat calves, 5s to 5s 6d; porkers, 3s 10d to 4s 4d.

Colchester, Saturday.—Beef sold at 4s 6d, and mutton 6s per stone of 8lb. Pork was cheaper, selling at 7s 6d per score.

Derby, Tuesday.—A good attendance. Prices of best beasts unchanged. Sheep h d a higher tendency. Beasts, 5½d to 6½d; calves, 7½d; sheep, 7½d to 9d.

Doncaster, Saturday. — Large supply of cattle, but the bulk were Irish stores. A good attendance of buyers, and a moderate trade, but prices unchanged, though firm. Milch beasts, £17 to £23; bullocks, £12 to £17; heifers and drapes, £12 to £16; stirks, £9 to £11; young stock, £7 to £9 each. Sheep trade slower, the supply being less and prices a little easier. Ewes, 44s to 53s; lambs, 40s to 46s each.

Dorchester, Saturday.—Very good deliveries of stock, more particularly of fat and store cattle, were made at to-day's market both at Messrs. Duke's and also at Messrs. Symonds and Sampson's sales, at each of which were many useful milch beasts and graziers, as well as fat bullocks. The weather was scarcely of a character to stimulate business, but all the more useful descriptions sold readily at extremely good prices, especially milch beasts, which ranged from £17 10s up to about £21, for the more serviceable grades, which were in eager request; plainer grades (mostly cows) sold from £13 up to £17; in-calvers, £10 to £15 10. Young barreners in fresh condition made £22 to £26 per pair, and others £16 to £21. Fat beasts, of which there were some rare steers and heifers on offer, sold readily from £16 10s to about £22 each (or 11s to 11s 6d per score), seconds, principally cows, ranging from 9s 6d to 10s 6d. Mutton trade slow at late values, anything of good finish, either in the way of tegs or wethers, being still quoted at 8½d to 9d, and ewes 7d to 8d.

Dublin, Thursday.—Firmer trade for best cattle, all other sorts easier sold, and a fair clearance effected. Choice suitable sheep for home and export purposes made last week's prices. Ewes and heavy qualities a weaker trade, and not so easily placed. Horneys neglected. Cattle—Live weight (best), 29s to 31s per cwt; cross-bred Angus, 32s to 33s per cwt; secondary qualities, 26s to 28s per cwt. Mutton (dead weight), 6½d to 7½d per lb; extreme, 7¾d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday.—Fair trade but very small supplies. Sheep: Cheviot Dinmonts to 28s; Cheviot ewes to 28s 6d; half-bred sheep to 41s; half-bred ewes to 30s; half-bred lambs to 26s; Cheviot lambs to 27s. Polled cattle to £14; horned cattle to £13; stirks, to £10 10s. Cows: Shorthorns to £26; Irish to £19 10s: Ayrshires to £18 18s.

Exeter, Friday.—Small supply of fat beasts. Best quality steers and maiden heifers, 11s to 11s 3d per score; cows, 10s; some unsold. Immense supply of sheep of all kinds; small size wethers, 9d per lb; large size, 8½d; old wethers, 8d; good supply of ewes, but poor demand, general price, 6½d, nearly all sold. Still a large number of lambs for turnips, sold from 34s to 36s each. Calves, 7d per lb.

Glasgow, Wednesday.—Fewer cattle marketed, and demand experienced for prime handy quality was firm, prices realised being higher. Secondary classes also met sharper inquiry. Top, 63s to 65s; secondary, 56s to 58s per cwt. Smaller numbers of sheep penned. Young sheep were scarce, consequently sold dear. Wethers of quality met active demand. Prime ewes scarce and dear. Best mutton, 9d to 9½d; secondary, 8d to 8½d per lb.

Gloucester, Saturday. — Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves: There was a large supply of cows and calves, which met an excellent trade, some of the prices being £23 15s, £23 10s, £23, £22 10s, £22 5s, £22, £21 15s, &c. Store cattle: Again a good supply of store cattle, with trade quite as good as last week.

Hereford, Wednesday.—There were nearly half as many cattle brought as were wanted, and with the exception of some prime bullocks under the hammer which made 6½d per lb, there was no beef higher than 6d. Calves were a short supply, and had a quiet trade; veal about 6d. The sheep trade also was not quite so firm, quality varying very much. Wethers and tegs made hardly 8d, fat ewes 6½d. Pigs were down in price all round. Little stores plentiful and cheap.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report an average supply of fat cattle, the best yard-fed animals realising 9s per stone. A large show of grazing cattle consisting of North country Shorthorns, Polled Irish, Cumberland heifers and Blue Greys. Buyers were well represented, and a fair selling trade was experienced at rather lower prices, but a good clearance was effected. North country heifers suitable for breeding made from £12 7s 6d to £8 15s; Shorthorn steers, 20 months old, £12 to £10 10s; 18 to 16 months, £10 to £7 10s; yearlings, £7 5s to £6 2s 6d; Westmoreland calves, £4 to £6; Polled Scots, £10 10s. Good cows and heifers were in demand up to £23, but secondary sorts were dull. Fat sheep sold freely, good hoggets being scarce and dear. Grazing sheep in fair request, half-bred lambs to 45s, Suffolks to 42s. Fat swine dearer.

Leicester, Saturday.—Smaller consignments of home-bred stock. Trade ruled quiet. Choice milch cows, £20 to £22; good lots, £18 to £19; secondary, £14 to £16; heifers, £9 to £17; Shorthorn bullocks, £10 to £13 10s; Welsh cattle, £10 to £14; young stock, £5 to £7; and calves, 20s to 38s each. Sheep sold freely at 50s to 54s for ewes, and 28s to 34s for hoggs.

Lincoln, Friday.—A fair consignment of horned stock, and a ready trade. Young beasts, £9 to £12; strong ditto, £14 to £18; milch cows, £17 to £23 each. The sheep pens were poorly filled, and business ruled brisk. Young ewes, 34s to 40s; lambs, 34s to 44s each.

Lynn, Tuesday.—A rather smaller show of fat beasts than last week, and trade at late rates, 7s to 7s 9d per stone; stores were an average supply, and met slow trade, making from £6 to £18 each. Small show of fat sheep experienced a slow trade, and fetched late rates, 9s to 10s per stone, and some made 10s 6d. A few stores 45s to 50s, store lambs 35s each.

Manchester, Friday.—Beef: First-class, 5d; second-class, 4d to 4½d; third-class, 3d to 3½d per lb. Mutton: Firsts, 7¾d; seconds, 6¾d to 7¼d; thirds, 5¾d to 6¼d. Veal: Firsts, 6¾d; seconds, 5¾d to 6¼d; thirds, 4¾d to 5¼d per lb. Bacon pigs: Firsts, 5d; seconds, 4d to 4½d; thirds, 3d to 3½d. Porket pigs: Firsts, 6¾d; seconds, 6½d to 6½d; thirds, 5¾d to 6d per lb

Newcastle, Tuesday.—The supply of cattle was very good, and trade was a shade firmer, but prices were not quotably altered. Quotations:—Prime heifers, 7s 3d to 7s 6d; second class, 6s 9d to 7s; prime steers, 7s to 7s 3d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Sheep and lambs were a slightly smaller supply, but trade was a shade firmer at an advance of ½d for choice qualities. Quotations:—Choice young sheep, 8½d to 9d; strong heavy, 8d to 8½d; choice hoggs, 8¾d to 9d; second class, 8½d to 8¾d; ewes, 6d to 6¾d; rams, 5d to 6d per lb. Calves were a small supply. Veal was rather firmer at ½d advance, bringing 5½d to 7¾d per lb.

Newport, Wednesday.—Plentiful supply of cattle. Short supply of sheep, lambs, and calves. Large attendance and good trade. The quotations were:—Best beef, 6½d; seconds, 6d; cows, 4¾d to 5d; best wether mutton, 8½d to 8¾d; ewes, 7d; lambs, 9½d; calves, 7½d; porker pigs, 10s 3d to 10s 9d per score; baconers, 9s.

Norwich, Saturday.—Fat cattle were shown in larger numbers, and for all the best stall-fed beasts there was a good trade at 8s per stone; grass-fed cattle made 7s 9d, while secondary qualities made better prices than last week, 7s to 7s 6d. A small show of sheep, and trade was about the same as last week; some hoggets made 9½d per lb, but the general run was for from 9d to 9¼d; no secondary or inferior sorts on offer. Pigs were a good show; baconers were lower at 6s to 6s 3d per stone, while porkers made from 6s 6d and sows 5s 3d. There were 1,000 fewer store cattle exposed; trade was slower. The best two and three-year-olds made from £14 10s to £17; yearlings, £8 to £10 10s; and younger cattle £5 to £7. Rearing calves were dearer, prices ranging from 20s to 60s per head. Sheep were a small show; trade was slow and dear, prices ranging from 31s to 50s. Pigs were a good show, and trade was unchanged at from 10s to 25s per head. Numbers in open market: Cattle, 4,956; sheep, 760.

Nottingham, Saturday.—Good supply of stock, trade fairly brisk. In-calf cows, £18 to £23 each; in-calf heifers £14 to £18 10s; and calves, 25s to 55s. Official returns:—283 beasts and 63 calves.

Preston, Wednesday.—The show of stock was smaller than last week, but was of fairly good quality, and prices were a trifle firmer in all departments. Quotations:—Choice heifers made up to 6½d; secondary, 6d; choice cows and bulls, 5¾d; secondary, 4¾d to 5d; choice lambs, 9d; secondary, 8d to 8½d; choice hoggs, 8¾d; young ewes, 6¾d; heavy tups and ewes, 5½d to 6d; calves, 7d per lb.

Retford, Saturday.—Store stock about an average supply, and with a full attendance. A fair amount of business done at the previous Saturday's currencies. Milch cows made £15 to £20; two-year-old steers and heifers, £10 to £12; yearlings, £6 to £8; and calves, 35s to 45s each.

Romford, Wednesday.—About an average supply of fat beasts; trade about the same. Best animals, 4s 2d to 4s 4d; middlings, 4s to 4s 2d per stone. Calves in shorter supply and dear, at 5s 2d to 5s 4d per stone. Sheep in short supply; trade better. Best small sheep, 6s to 6s 4d; larger sheep, 5s 8d to 5s 10d per stone. Ewes in short supply; prices a little better at 4s 2d to 4s 4d per stone. A few store beasts on offer; very slow demand. Good supply of milch cows; trade fair. Pigs in larger supply; average trade. Small porkers, 3s 8d to 4s; large hogs, 3s 4d to 3s 8d per stone.

Sheffield, Tuesday.—Good milch cows scarce, and making £20 to £23. Young stock and secondary qualities made £15 to £17 10s.

Shrewsbury, Tuesday.—Quotations:—Good supply of store cattle, which met a good demand. Cows with calves a brisk trade; highest price £26 5s. Beef, 6d to 6½d per lb; mutton (wether), 9d to 9½d per lb; ewes, 7½d to 8d per lb; lamb, 9d to 9½d per lb; veal, 7½d to 8d per lb; porket pigs, 9s 6d to 9s 9d per score; bacons, 8s 9d to 9s per score.

Stockton, Wednesday.—An average show of the best cattle, which made 7s to 7s 6d per stone, whilst rougher kinds made 6s to 6s 6d per stone. Lambs and young sheep sold at 8½d per lb; ewes at 6½d to 7d; and tups 6d per lb. Small porkers sold 7s 6d per stone; mediums, 6s 9d to 7s; and sows 6s to 6s 3d.

Thame, Tuesday.—A capital supply of cattle, and the quality was again fully up to the high standard this market is renowned for. There was a large attendance of buyers, and trade was brisk throughout, although we do not think the cattle realised any higher prices than the previous week, a practical clearance being effected. Sheep

still continue to come to market in very short numbers, and are selling remarkably well. Messrs Bond and Burrows' sale comprised 95 fat beasts, 102 fat sheep, 81 fat and weaning calves, 180 bacon hogs, porkers, and store pigs. Fat oxen made from £17 to £21 5s; fat heifers, £15 to £19 2s 6d; fat wethers, 55s to 62s; fat ewes, 45s to 58s; fat calves, £3 to £4; Devon weaning cow calves, 30s to 68s; bull calves, 10s to 40s; bacon hogs, £3 5s to £3 5s; fat sows, to £7 7s; porkers, 34s to 56s; store pigs, 10s to 25s.

Truro, Wednesday.—Attendance fairly good, business fairly brisk. Fat bullocks, 50s to 56s per cwt; barreners and store bullocks, 40s to 45s; cows and calves, £11 to £15 each; rearing calves, 20s to 35s; wethers, 7d per lb; ewes, 5½d to 6d; lambs, 7d; pigs, 5s to 40s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4¾d to 5d.

Wolverhampton, Wednesday.—Trade slow; supply fair. Quotations:—Beef, 5d to 6¼d per lb; mutton, 6½d to 9d per lb; veal, 6½d to 8d per lb.

Worksop, Wednesday.—Small show of stock. Beef met a very poor trade, making 7s per stone best qualities, a drop of 9d per stone on last week; best shearlings, wethers, and cross-breds, 9d per lb. Ewes were a bad trade, making no more than 6d per lb.

Yeovil, Friday.—Milking animals were in request, and sold well, best quality heifers and calves making from £18 10s to £20 5s; secondary, £13 5s to £17 10s; cows and calves, £17 15s to £21; secondary, £12 to £16 10s; grazing steers, £8 10s to £11; three-year-old in calf heifers, £10 10s to £12 15s; barreners, £8 10s to £13 15s.

York, Thursday.—The supply of both English and Irish store cattle was largely in excess of the demand, and trade was slow and dragging. Some of the best three year olds made up to £16, two-year-olds £10 to £12, stirks £7 to £9. A very small show of calving and milch cows, for which there was a very good demand, some of the best making up to £22 10s, the general run of prices being from £16 to £19. A good show of all classes of sheep, but an extremely slow trade, and lambs, which formed the bulk of the supply, were fully 3s per head down on the week. North-country ewes, owing to the lateness of the season, met with a very bad trade at 40s to 46. A few Cheviot ewes were on offer, and made up to 24s. The best Masham shearlings made up to 48s, others 42s to 45s; Masham ewes, 42s to 46s; best three-parts bred lambs to 42s, others 30s to 36s; Masham lambs 20s to 24s. About 300 North-country lambs were on offer, and met with a very slow trade up to 35s each.

CORN STATISTICS

Imports of Foreign and Colonial Corn.

Statement of the quantities of Foreign and Colonial Corn Imported into the United Kingdom in the week ended Saturday, November 9, 1907:—

Wheat	1,298,700 cwts.
Wheat-flour	324,200 ,,
Barley	626,700 ,,
Oats	369,200 ,,
Maize	1,239,500 ,,

And in the corresponding weeks of previous years, viz.:—

	1906. Cwts.	1905. Cwts.	1904. Cwts.	1903. Cwts.
Wheat ..	1,239,000	1,558,700	2,332,400	1,747,300
Wheat-flour	304,100	259,600	193,800	443,325
Barley ...	660.300	459,400	509,900	827,080
Oats ...	285,700	129,700	219,200	514,860
Maize ...	941,500	547,400	824,800	1,482,270

Weekly London Averages.

An account of the Quantities and Prices of British Corn bought on the London Market and in the area within five miles from the Royal Exchange during the week ending Tuesday, November 5, 1907:—

	Imp. Quar.	Bus.	Total Amount. £	s.	d.	Av. Price per qr. £	s.	d.
Wheat ..	2,336	4 ...	4,294	7	0 ...	1	16	9
Barley ...	2,474	0 ...	3,761	12	3 ...	1	10	5
Oats	1,214	6 ...	1,204	6	6 ...	0	19	10

Five Years' Comparative Averages.

(OFFICIAL.)

Comparative statement of grain sales and prices at the Statute markets for the week ending November 9, and for the corresponding week in each of the years from 1903 to 1906:—

	WHEAT. Qrs.	s.	d.	BARLEY. Qrs.	s.	d.	OATS. Qrs.	s.	d.
1903	43,045	26	6	172,879	24	6	23,074	15	9
1904	43,740	30	3	204,446	24	6	32,320	15	11
1905	78,276	28	3	209,509	24	10	28,346	17	4
1906	63,764	26	6	205,560	24	8	27,982	17	1
1907	77,721	35	10	221,857	27	8	39,849	18	10

Seven Years' Tithe Rent Charges.

,, 1906	68	12	1
,, 1905	69	12	0
,, 1904	69	19	6
,, 1903	69	7	5
,, 1902	67	3	9
1901	66	10	9

HOPS.

Canterbury, Saturday.—Several sales of good-class hops have taken place during the present week, and the general tone of the market shows little improvement. Business is chiefly confined to the best hops, and prices for these remain very firm. Not much inquiry for copper hops.

Worcester, Saturday.—There is no alternation to report. As before, few farmers at market, and hops with fine colour sold readily. There was also a steady trade for good yellow hops; 1906's are selling better, but are scarce; 765 pockets passed the public scales this week, making 16,963 to date.—Charles Faram and Co.

The annual general meeting and dinner of the Lincolnshire Farmers' Union will be held on Friday, January 31, when Earl Carrington has promised to be present.

Representation having been made to the West Suffolk County Council that there was a demand for small holdings and allotments in Mildenhall, a meeting was called for the purpose of holding an inquiry with a view to ascertaining the nature and extent of the demand, and the possibility of acquiring land. All persons interested were invited, and there was a large attendance. At the conclusion of the proceedings, the clerk announced that he had been through the applications made, both personally and by letter, and the applicants numbered 105, and he estimated the acreage required would be approximately 482.

Alnwick Hirings.—The annual hirings for single servants in the Alnwick district was held at Alnwick on the 2nd inst., and although this was the first hiring in the neighbourhood the attendance was most disappointing. The demand was principally for women workers, and many farmers were not suited at the close of the hiring. Where engagements were effected women got from £6 to £8, girls to £6, lads from £5 to £8, and men from £7 to £12 for the half year.

The Chester farmers and butchers' dispute was settled on Tuesday evening, the parties arriving at an amicable basis of agreement in regard to the butchers' demand that all beasts bought by them at local sales shall be guaranteed against tuberculosis. It was decided to promote a joint insurance guarantee fund, the seller and the purchaser each to pay as premium to the auctioneer 9d. per head on bullocks and heifers sold, and 1s. 6d. per head on cows sold. Out of the fund thus provided will be met the loss occasioned by seizure of any beast subsequently found to be affected by tuberculosis.

ADVERTISEMENTS RECEIVED TOO LATE FOR CLASSIFICATION.

SHREWSBURY, FRIDAY NEXT, NOVEMBER 15.
Not 22nd, as previously arranged.
1,250 STORE CATTLE (all breeds and ages),
300 STORE SHEEP.
Sale at 11.30.
Apply for Catalogues to the Auctioneer, who acts solely as Agent.
William Everall,
Auctioneer, Shrewsbury.

RASPBERRY CANES.—Superlatives and Hornets, 3s. 6d 100, 30s. 1,000, true to name, the two finest raspberries grown. Whinham's Industry Gooseberry Trees, two years old, 10s. 100.—Fred Joyce, Somersham, Huntingdonshire.

SEED WHEAT.—Carter's Standup White and Webb's New Standard Red, two of the best yielding Wheats in cultivation, 20s. 18 stone on rail.—H. G. Walne, Kettlebargh Hall, Wickham Market, Suffolk.

PEDIGREE HERD OF LARGE BLACK PIGS

The Property of H. J. CLARKE,
THE SLADE, ROUGHLEY, SUTTON COLDFIELD.

This herd has been bred from the choicest prize-winning strains. None but the best sires have been used since its commencement, and the high quality of the young stock evidences the close attention that has been devoted to its development. The points successfully aimed at have been lean flesh, size, constitution and true type. Inspection of the herd at any time by appointment is invited.

PRIZES WON:

1st, Royal Cornwall, 1905; 1st, Launceston; 3rd, Bath and West, 1905; 2nd, Wadebridge; Reserve, West Midland Show; Shrewsbury, 1906.

YOUNG BOARS & SOWS FOR SALE AT MODERATE PRICES.

Export orders carefully executed and all arrangements made for shipment and insurance.

Full particulars of the Stock now for Sale on application to

H. J. CLARKE, THE SLADE, ROUGHLEY, SUTTON COLDFIELD.

Printed and Published by the Proprietors, at the Office, 3, Wellington Street, Strand, London, W.C.—November 11, 1907.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather has been all that farmers could desire for the prosecution of field work, and the dryer air has also been helpful to the condition of market samples. The exchanges are steadier from a week ago, and the sowings of wheat, if frost does not become too hard for the land to be sown, should be above the average. It is clear that October, with its extremely heavy rainfall, saw hardly any wheat in the soil west of Oxford, but the East Anglian farmer was not particularly inconvenienced, and planting of October-sown fields are now up in Kent and Surrey, the regular lines of keen green being very encouraging, and showing that the plant has germinated both uniformly and well. The French farmers have had perfect weather since November 1, and are working with might and main to overtake arrears; but October, 1907, was the wettest on record in France, 7 in. being recorded in the north and west, and 15 in. falling in the south. Russia and Roumania are now under frost, and the wheat sowings are believed to be as much as 20 per cent. less than usual. Austria-Hungary is said to have reduced its wheat sowings, and the only regions where full autumn sowings have been accomplished seem to be Italy and Spain.

The Canadian export surplus of wheat is thus estimated, the figures for 1905-6 and 1906-7 being those of actual quantities shipped. This deficiency of 2,150,000 qr. on storing wheat will inconvenience millers.

1907-8	3,000,000 qr.
1906-7	5,150,000 ,,
1905-6	5,750,000 ,,

Another Colony which in 1908 will not be able to play up to 1907 standard is Australia, to which a very competent authority assigns the following surpluses of wheat:—

1908	1,500,000 qr.
1907	4,000,000 ,,
1906	4,000,000 ,,

The 1906 figures are fully ascertained; those of 1907 are based on the ascertained exports of ten completed months.

The trade in maize seems steadily on the increase. The total shipments for the year ended October 31 show an advance on previous seasons, for which in turn the advance had been remarkably progressive and sustained:—

Nov. 1, 1906—Oct. 31, 1907			28,125,000 qr.
,, 1905—	,,	1906	26,600,000 ,,
,, 1904—	,,	1905	24,575,000 ,,
,, 1903—	,,	1904	31,165,000 ,,

These figures, useful as they are, would not be of much practical service but for the figures supplied by *Beerbohm's List*, which gives the weekly average shipments from all foreign countries, *for British ports*, for the four seasons. These weekly averages are:—

1906-7	235,000 qr.
1905-6	200,000 ,,
1904-5	205,000 ,,
1903-4	200,000 ,,

Last week's imports of 290,000 qr., judged by this standard, were 55,000 qr. in excess of what was wanted, but ordinary reckonings have put the weekly wants at 200,000 qr. only, the total of four years ago.

American maize yields per acre are thus given in the official report of the 12th inst., telegraphic resumés of which are to hand:—

1907	26·0	bushels per acre.
1906	30·2	,,
1905	29·0	,,
1904	26·8	,,
1903	25·5	,,
1902	26·8	,,
1901	21·0	,,

The average is about 26 bushels, but this year the area under cultivation is very large, so that a merely average yield per acre represents a total crop of 319,000,000 qr. This is a good deal beyond the mean produce of the first seven years.

The yield of potatoes in the United States of America for 1907 is called at 292,427,000 bushels, against 303,298,000 bushels last year, and that of buckwheat at 12,911,000 bushels, against 13,688,000 bushels last year. The yields of wheat, barley, oats, and rye had been the subject of earlier official reports, with the gist of which we have made our readers familiar as they appeared.

Summarising the whole harvest year in the United States we have two average crops, wheat and maize; three crops slightly under average, potatoes, rye, and buckwheat; and two crops seriously deficient, barley and oats. No white crop in America this year exceeded an average.

The wheat gradient last week was slight, the chief markets clinging closely to 36s. as a mean level.

Chichester	36s. 9d.	per qr.
Lincoln	34s. 11d.	,,
Range	1s. 10d.	,,

Barley fetches a good price in East Kent, Berkshire, and parts of Somerset, where malting quality is attained, but is cheaper in the regions where feeding types predominate.

Canterbury	31s. 4d.	per qr.
Norwich	27s. 6d.	,,
Range	3s. 10d.	,,

Oats are nowhere fetching a clear sovereign as an average, but no great depression is recorded anywhere. In Kent a good deal of inferior stuff appears to be reaching the markets just now, but this is exceptional to the general experience.

Reading	19s. 10d.	per qr.
Canterbury	16s. 7d.	,,
Range	3s. 3d.	,,

English rye is 1s. cheaper on the week, the supply at 30s. being adequate, and buyers therefore having no longer occasion to pay the 31s. of October.

The sales of British wheat at the statute markets since harvest have been as follows:—

This season	746,000 qr.	at 33s. 5d.	per qr.
Last ,,	766,000 ,,	26s. 2d.	,,

The sales last week were heavy for the time of year.

The sales of British barley at the statute markets have for the period since September 1 been:—

This season	1,057,000 qr.	at 25s. 11d.	per qr.
Last ,,	1,581,000 ,,	24s. 8d.	,,

Business is now fairly brisk, and some effort is being made to overtake arrears.

The sales of British oats have been heavy:—

This season	456,000 qr.	at 18s. 1d.	per qr.
Last ,,	338,000 ,,	16s. 5d.	,,

The imports of the United Kingdom last week were:—

Wheat, 304,000 qr.; moderate.
Flour, 129,700 qr.; fair.
Barley, 176,000 qr.; large.
Oats, 137,000 qr.; good.
Maize, 290,000 qr.; considerable.

The supplies on passage on the 16th inst. included 1,829,000 qr. of wheat thus divided:—

Californian	325,000 qr.
American	385,000 ,,
Russian	90,000 ,,
Indian	527,000 ,,
Argentine	105,000 ,,
Australasian	357,000 ,,
Various	40,000 ,,
Total	1,829,000 ,,

This is 691,000 qr. below the average, and shows that prices, though a good deal higher on the year, are not high enough to cause any rush to ship. Flour on passage is returned at 222,000 sacks, or 28,000 sacks below the average.

Expectations of barley are thus divided:—

Russian feeding	300,000 qr.
Californian brewing	210,000 ,,
American feeding	20,000 ,,
Asiatic brewing	90,000 ,,
,, feeding	40,000 ,,
Total	660,000 qr.

Of oats 179,000 qr. are on passage.

Of maize the expectations are:—

Round corn	230,000 qr.
Yellow ,,	220,000 ,,
Flat ,,	280,000 ,,
Total	790,000 ,,

Other expectations are 98,000 qr. of linseed, 25,000 qr. of rapeseed, 6,000 qr. of poppyseed, 4,000 qr. of sesame, 45,000 tons of cottonseed, and 17,560 tons of rice.

The shipments of America last week were good of wheat but small of all other articles. The items were:—Wheat, 410,000 qr.; barley, 48,000 qr.; maize, 44,000 qr.; and flour 108,000 sk. Of the barley 40,000 qr. were Californian and Oregon.

The shipments of Argentina are at their lowest in November, but last week 14,000 qr. of wheat and 1,000 qr. of maize, 10,000 qr. of linseed and 9,000 qr. of oats were shipped.

The Russian shipments continue liberal of wheat and very large of barley, but of oats they are below the average. Last week's totals were:—Wheat 324,000 qr., barley 401,000 qr., oats 103,000 qr., and maize 40,000 qr. Roumania supplemented the efforts of her gigantic neighbour by shipping 90,000 qr. of wheat 80,000 qr. of barley, and 108,000 qr. of maize, but is unable to ship oats.

India shipped 114,000 qr. of wheat and 11,000 qr. of linseed, while 10,000 qr. of wheat were exported by Australia and 15,000 tons of cottonseed by Egypt.

LONDON HAY TRADE.

Saturday.—Much larger supplies are to hand during the past week, and the trade on the whole has been of a quieter and slower character. It is noticeable that a large proportion of the present arrivals are now consisting of best clovers and mixtures, and, in consequence, prices of these qualities again show a lower tendency. Best hays, although not coming along so plentifully, are also a very quiet trade at about previous rates.

Strange to say there is now almost a shortage of plain hays and mixtures the kinds which are used so extensively by the different London 'bus companies and large consumers, the demand for these qualities has been very keen among contractors, who are finding their wants difficult to fulfil. The dearth of this class of stuff reflects itself in the inquiry for foreign hay, and we hear that importers of Dutch hay have at last this season been able to effect a few sales which show a margin of profit, but other kinds of foreign hay meet with poor support, and are a very dull trade at previous nominal values. Straw is coming along in fair supply, and finds a quiet trade at about previous rates.

Prices ruling are about as follows:—English Best hays, 70s to 72s 6d per ton; good hays, 62s 6d to 67s 6d per ton; plain hays, 60s to 62s 6d per ton; best clovers, 82s 6d per ton; good clovers, 77s 6d to 80s per ton; inferior clovers, 72s 6d to 75s 6d per ton; best mixtures, 80s to 82s 6d per ton; good mixtures, 75s to 77s 6d per ton; plain mixtures, 67s 6d to 72s 6d per ton; seconds hays, clovers, and mixtures, 50s to 60s per ton; wheat straw, 25s to 27s per load; barley straw, 25s to 27s per load; oat straw, 25s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 61s to 62s 6d per ton; second quality Dutch hay, 57s 6d per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

THE BALTIC.

Saturday, 2 p.m.

The wheat cargo trade was weak on the 12th, 13th, and 14th, but regained steadiness on the 15th, and was quietly firm to-day. Sales included fine Russian winter at 45s. 6d. per 492 lb., Odessa-Ghurka at 43s 6d. per 492 lb., Argentine at 39s. 9d. per 480 lb., Northern Manitoba, at 42s. per 480 lb., No. 1 Durum at 36s. 3d. per 480 lb., and Australian at 43s. 6d. per 480 lb.

The maize cargo is quoted at 27s. 3d. per 480 lb. for Argentine, 26s. per 480 lb. for Roumanian, and 26s. 9d. per 480 lb. for American. Spot values for the three chief sorts of maize are pretty much the same, but the cargo trade for future supply varies according to the amount of each specific kind, which appears to be practically available.

Barley cargoes are limited, so far as the open market is concerned, to feeding quality, as anything that reaches brewing standard is hardly offered. The sales have included Persian at 22s. per 400 lb.; South Russian at 2s. 3d. per 400 lb.; Kustendje at 26s. 3d. per 416 lb. Other cargo sales have comprised Karachi grain at 32s. per 504; Smyrna beans at 22s. 9d. per 480 lb.; and White Libau (Baltic) oats at 17s. 3d. per 304 lb. The London Corn Trade Association's secretary announces that the following standards of August shipments have been made up:—

Wheat.—Choice White Kurrachee (crop 1907); Soft Red Kurrachee (crop 1907).

Barley, Gram, and Dari.—Kurrachee.

The East Indian wheat rejections of this Association under Rule No. 4 of the Association East Indian Wheat Contracts are as follows, viz., *via* Canal:—

Crop 1907.—Choice White Karachi, 39s. 6d.; Soft Red Karachi, 39s. 3d. per qr. of 492 lb.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet, at about late rates. Whites quoted at 36s to 39s; reds at 36s to 39s. Foreign firmly held, at 6d to 9d advance, but not active. No. 1 Northern, ex ship, held at 43s 6d to 43s 9d; No. 2, at 42s 6d; No. 1 Durum, at 37s 6d to 38s; choice white Karachi at 38s 6d to 38s 9d; Australian, landed, at 46s. Flour steady, quiet. Hungarians held at 38s 6d to 40s; Kansas patents, 30s to 30s 6d; Iron Dukes at 27s to 27s 6d. Maize firm, but quiet. River Plate, ex ship, held at 25s 6d; landed at 26s; white Natal, landed, at 27s; Odessa, ex ship, at 25s 6d; landed at 26s. Barley rather steadier, but quiet. Azoff-Black Sea and Odessa-Nicolaieff, ex ship, held at 23s 6d; landed at 24s. Oats steady, unchanged. River Plate quoted at 18s 9d; South Russian, 17s 9d to 18s 3d; Danubian, 17s 9d to 18s.

Mark Lane, Friday.—Wheat, English firm, unchanged. Whites quoted at 36s 6d to 40s 6d; reds at 36s to 39s. Foreign firm, and American held at 9d to 1s advance. No. 1 Northern Manitoba, ex ship, quoted at 44s 6d; No. 2 at 43s 6d to 44s; choice white Karachi at 39s 3d; No. 1 Durum at 38s 6d to 39s. Flour firm, but quiet. Iron Dukes quoted at 27s 6d to 28s; Hungarians, 39s to 40s 6d; Kansas Patents at 30s 6d to 31s. Maize firm and rather dearer. La Plata, ex ship, held at 25s 9d; landed, at 26s 3d; Odessa, landed, at 26s 9d. Barley rather firmer. Odessa-Nicolaieff ex ship, held at 23s 9d; landed at 24s 3d; Persian, ex ship, at 22s to 22s 3d. Oats steadier, but inactive. River Plate held at 18s 6d. to 18s 9d; South Russian, 17s 9d to 18s 3d; Archangel, 19s to 19s 6d

COUNTRY.

Appleby, Saturday.—White oats (horse corn), worth about 19s to 22s per 26 stones.

Ashford, Tuesday.—Business was very slow, millers holding off, and few sales of wheat taking place; those which did showed a decline of 2s a quarter. Barley and oats dull, at late rates; beans cheaper; flour 1s a sack down. Quotations:—Wheat, 34s to 36s; best malting barley, 31s to 33s; tick beans, 32s to 34s; Mazagans, 28s to 30s; maize, 30s to 31s; oats, 18s to 22s per qr; flour, whites, 36s; second, 33s; scaling, 31s per sack.

Banbury, Thursday.—Wheat, white (new), 35s to 36s per qr; wheat, red (new) 35s to 36s per qr; barley, 27s to 32s per qr; beans (new), 30s to 31s 6d per qr; oats, 17s 6d to 22s per qr; peas, 30s to 34s per qr.

Berwick, Saturday.—Good attendance, with larger supplies of grain. Fine barleys in good demand, and rather dearer; medium qualities firm; inferior sorts met a slow sale at less money. Fine oats sold at late rates; other sorts dull and lower. Barley, 22s to 33s 6d; oats, 18s to 23s per qr.

Birmingham, Thursday.—There was a large attendance, and a good trade was done at the full prices of last week, both for English and foreign wheats, which are again on the upward grade. Both Bessarabian and Galatz-Foxanian maize were on offer at 26s 6d per 480 lb at Sharpness, being 9d and 6d per qr respectively under last week's figures. Grinding barley remained at 25s per 400 lb at Sharpness. Oats were 6d lower and beans unchanged at 13s 3d per 196 lb.

Brighton, Thursday.—Quiet trade at about last week's price. Wheat in fair supply; slow trade and prices unchanged. New white wheat, 35s to 37s; new red ditto, 36s to 38s; barley, 28s to 35s; grinding ditto, 26s to 27s; oats, English, 18s 6d to 21s; peas, 33s to 34s; beans, 33s to 34s.

Bristol, Thursday.—There was a good attendance to day's market. English wheat is making 35s 6d to 36s, being a slight advance on the week. Foreign wheat has improved 9d to 1s from the lowest point. Maize dull, 6d lower. Barley easier, owing to heavy arrivals. Oats firm and unaltered. Flour, after three weeks' quietness, is in better demand.—Grace Bros.

Bury St. Edmunds, Wednesday.—Wheat in small supply, trade firm at last week's reduction. Reds or whites, in fair milling condition, 35s 6d to 36s 6d per qr. Barley in average supply. The demand continues to be active, and prices for all sorts are maintained at 31s to 33s for fair malting, and 33s 6d to 36s for fine malting samples. Beans rather better at 32s 6d to 33s 6d per qr. Peas steady, at 32s to 33s 6d per qr. Maize quiet, at 28s per qr, and oats firm at 19s 6d to 22s per qr.

Cambridge, Saturday.—There was only a fair supply of wheat, which sold readily at 1s advance, the price being 36s per 504 lb, on rail. Barley unchanged. A rather better supply of oats, making up to £1.

Canterbury, Saturday.—Trade rather slower than usual, especially for barleys, but prices remain at the reduction of a week ago. Wheat, in fair supply, made 35s for 62 lb lots and 36s 6d for 64 lb, fetched from the farm; seed wheat up to 40s. Really choice barleys are difficult to find; best malting qualities are quoted from 28s to 32s and grinding from 27s to 28s. Oats sold fairly well, 40 lb whites making 20s, 43 lb blacks 21s 6d, and 44 lb samples 22s. Grey peas, 31s to 32s; blue peas, 62s 6d; tick beans, 31s 6d to 33s; and mazagans, 29s to 30s per qr. Tares are quoted at from 5s to 5s 6d per bushel.

Chester, Saturday.—There was little change in prices since last market. Wheat was in fair demand, without advancing. Beans and barley quiet. Maize unaltered from last week, round favouring buyers. Quotations:—Wheat, new white and red, 5s 2d to 5s 4d per 75 lb; grinding barley, new, 4s to 4s 3d per 64 lb; oats, new, 2s 8d to 3s; old, 3s 1d to 3s 6d per 46 lb; Indian corn, old, 14s 6d to 15s per 240 lb; round corn, 14s 3d to 15s 6d per 240 lb.

Chichester, Wednesday.—Wheat, of which there was little on offer, was 1s 6d cheaper than last week. A small attendance and not very brisk. New white wheat, 36s to 37s; new red ditto, 36s to 37s; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s; peas, 31s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday. — Wheat steady at 6d advance, small supply. Oats quiet, unchanged. —Colin Taylor, King and Co., Ltd.

Coventry, Friday. — There was about at average attendance. The supply of wheat was not large, and trade was firm at last week's extreme prices. Barley offered more freely, and prices were slightly in buyers' favour except for very prime samples, which were scarce. Oats maintained their recent quotations. Beans not much inquired for. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per 352 lb; new, 21s to 23s 6d; beans, old, 13s 6d to 14s; new, 12s 3d to 13s 3d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Devizes, Thursday.—There was a moderate supply. Wheat maintained last week's price, but barley was 1s and oats 6d per qr lower. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s 6d; winter oats, 18s to 19s 6d; white Garton oats (320 lb), 18s 6d to 19s 6d; black Tartar oats (320 lb), 19s 6d to 20s 6d; rye, 27s to 30s; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 35s; vetches, 5s 6d to 6s 6d.

Derby, Friday.—Little or no white wheat; prices as last week, but a better tone on the advices from Liverpool. Wheat, red, 34s to 35s; oats, 20s to 21s 6d; barley, grinding, 28s to 29s; malting, 30s to 33s; beans, old, 40s; new, 30s to 37s per qr.

Doncaster, Saturday.—Moderate supply of English wheat; both English and foreign were unchanged, with a slow sale. Barley was more plentiful, and fine samples made fully last week's prices, but secondary qualities were neglected at a reduction of 6d to 1s per qr, prices for the best being from 28s to 32s 6d per qr. Oats quiet, and unaltered. Maize advanced 3d per qr.

Dorchester, Saturday.—With finer though much colder weather to-day, there was a better attendance and a larger offer of grain, the past week having on the whole been favourable for threshing operations. Factors, however, showed no disposition to operate except to cover hand-to-mouth requirements, and as many held out for higher prices for their wheat than buyers felt inclined to give, the business done was on a very limited scale, and prices showed a considerable decline as compared with recent currencies, generally 1s per qr on the week if not more. Colder weather, however, made holders more hopeful, though many incline to the belief that, once the American crisis is surmounted, and stocks which are now locked up get released, lower values will rule, not only for wheat, but for other articles as well. Barley made less money, both for feeding and malting, the only exception being in the case of very choice malting samples, which, from their scarcity, command extreme prices, and are likely to do so. Maize generally is inactive, with a slightly downward tendency; and the same may be said of oats, which are back 3d to 6d. Beans and peas still continue firm at full prices. Flour trade inactive at drooping currencies.

Dublin, Friday.—Foreign wheat was dearer, and maize was quiet at unchanged rates. There was a fair inquiry for barley at 15s 6d to 16s, extreme prices being asked for prime samples. Black oats were quoted at 10s 6d to 12s 6d, and whites at 10s 5d to 13s. Choice lots very firmly held. Oatmeal was dearer, but Indian meal remained unchanged. Bran and pollard was very firm.

Exeter, Friday.—Good attendance; better trade. English wheat firm; foreign shade dearer. Barley and maize 3d to 6d cheaper. Oats unchanged. Flour quiet. Quotations:—English wheat, 4s 4½d; English barley, 3s 6d to 4s 6d; superfine flour, 31s to 33s; fines, 29s to 31.

Glasgow, Wednesday. — Attendance was moderate at to-day's market. Wheat irregular in price, but steady. Flour a slow sale at late rates. Maize and corn still pressed for sale, and prices are 3d to 4½d per boll easier for both. Barley firmly held for foreign, but home qualities irregular in quality and price. Oats meet with a small demand; foreign qualities unchanged at late rates, but, owing to so many inferior lots of local oats coming into the market, home qualities are the turn easier. Beans and pease unchanged. Bran and thirds steady at last week's quotations. Oatmeal steady, but quiet.—Gibson and Clark.

Glasgow, Friday.—Wheat steady at 3d per boll advance. Flour quiet and nominally unchanged. Maize and corn quiet, and pressed for sale on spot. Oats quiet and favouring buyers. Barley steady. Beans a shade easier. Other articles held at Wednesday's prices.

Gloucester, Saturday. — English wheat in moderate supply, prices unchanged: Reds 35s to 36s; whites, 36s to 37s per qr. Foreign wheat dull and occasionally 6d dearer: Plates, 42s to 43s 6d; Russians, 42s 9d to 43s 6d. Plate maize 9d down at 26s 3d; flat 6d lower at 27s 6d; Bessarabian 9d cheaper at 26s 6d. Barley 6d down at 24s 9d. Oats 6d cheaper.

Grantham, Saturday.—A fair supply of grain, and a good inquiry. Wheat, 34s to 36s; barley (1s lower), 26s to 33s; oats, 19s to 21s; beans, 26s to 32s; blue peas up to 80s per qr.

Hereford, Wednesday.—A moderate supply of English wheats, which were reluctantly dealt in by buyers at 4s 3d to 4s 6d. Barleys were also moderately offered, but met with but little inquiry. On the week values appear about 1s per qr lower. Oats plentiful, but not much demand, and a decline of about 2d per bushel since last week. Beans firm. Maize about 6d per qr lower than last week.

Ipswich, Tuesday.—Moderate supply of wheat; trade quiet; good condition lots, 35s to 36s per 504 lb. Good supply of barley, but a quiet trade; samples in request at from 33s to 35s; medium runs, 25s to 31s. Oats slow and rather easier. Maize 6d per qr cheaper. Beans 6d per qr cheaper. Peas firm, and fully as dear.

Leeds, Friday.—With larger arrival of English wheat and prices lower at the principal Yorkshire market during the week, Tuesday's closing quotations were with difficulty maintained. Foreign wheat was steady, except Indian and American, which favoured buyers. Lower and medium runs of flour were the turn easier. Plate, American, and Odessa maize closed at 26s. Both feeding and malting barley, English and foreign, were firmer. Oats were 3d cheaper, but beans and peas remained unchanged.

Leicester, Saturday.—Good attendance of buyers and dealers, with small supplies of home-grown wheats, which came to hand in variable condition. Trade steady for good samples, secondary flat. Red wheat, 33s to 37s; white wheats, 34s to 38s per 36 stones; fine malting, 29s to 32s per 32 stones; beans firm; good oats, 19s to 21s per 24 stones.

Lincoln, Friday.—Only a small show of English wheat, which sold at last week's full prices, quotations being from 36s to 37s per qr, according to condition; foreign firmer than a week ago. Large supply of barley, prices being a trifle easier. Oats a slow trade at barely late rates. Maize a little dearer.

Maidstone, Thursday. — Business at the market to day was not brisk, as, while owners of wheat will not give way, the millers want a reduction. For best samples a firm trade at former cost, as the depression of a few days has passed over; 6d per qr for choice lots over last Tuesday realised. Barley is slightly cheaper, also maize and oats, but the decline is trifling.

Manchester, Thursday.—English wheat in better demand at about last week's prices. Foreign wheat about 2d per cental dearer on the week, and demand slow. Flour unchanged. Indian corn about ½d per cental lower. English barley unchanged, and foreign rather lower. Oats showed little change. Bran and offals continue scarce.

Newark, Wednesday.—A good attendance; trade slow. Prices again easier. White and red wheat, 35s 6d to 36s 6d; malting barley, 29s to 31s; grinding barley, 27s to 28s; white oats, 19s 6d to 21s; black oats, 19s to 20s; old beans, 35s to 36s; new beans, 30s to 32s per qr.

Newcastle-on-Tyne, Saturday.—A very quiet demand for all classes of grain at our market to-day. Wheat, to make rates, 1s. per qr reduction on the week had to be accepted. Oats remain steady for fine qualities; common sorts, however, neglected. Maize steady at late rates. Beans slightly in buyers' favour. No peas

on offer. A steady demand for malting barleys at fully last week's quotations.—Joseph Pollard and Co.

Newport, Wednesday.—Trade was quiet, the market being affected by the American financial position. Not much business doing, but a tendency to firmer prices all round.

Northampton, Saturday.—There was a good attendance and wheat was firmer at 1s more, whilst trade in barley, oats, and beans was very slack. Flour was not in much demand at 6d less than last week. Prices: Wheat, 35s to 36s; barley, 26s to 32s; white oats, 18s to 21s; black oats, 18s to 20s; beans, 30s to 32s; flour, 31s 6d to 35s 6d.

Norwich, Saturday.—There was an exceedingly small supply of wheat at this market. Prices were somewhat better than the previous week, dry wheats selling at 36s per qr. delivered. The supply of barley was slightly smaller, but prices were a little easier.

Nottingham, Saturday.—Small show of wheat at 6d more money, making 35s. to 36s. Oats easier, making 19s to 21s. Barley prices in favour of the buyer, making 27s to 32s.—Robt. Hubble.

Oxford, Saturday.—Wheat in better demand at about late rates. Barley in buyers' favour to the extent of 1s, and freely offered thereat.

Peterborough, Saturday.—Not a large supply at market to-day, wheat being a little firmer than last Saturday. Barley very quiet and a shade easier. Oats firm at late rates. Wheat, 35s to 36s; barley, 28s to 34s.; oats, 19s to 21s.—Thomas Hill and Son.

Plymouth, Thursday.—There was a very good attendance on our market here to-day. Wheat sellers are asking more money, but buyers do not respond. Feeding stuffs very quiet; demand nominally last week's rates. Flour, only a little business doing.—Orlando Davis and Co

Preston, Saturday.—There was a fairly good attendance, prices being nominally unchanged. Quotations:—Wheat, white, new, per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel, 3s 8d to 3s 9d; ditto new, 3s 1d to 3s 2d; beans, per windle of 220 lb, 16s 6d to 17s.

Reading, Saturday.—The attendance was up to the average, but business was again rather on the quiet side. Wheat was in fairly good supply, and sold at 33s to 38s, whilst malting barley realised from 27s to 35s, and grinding 24s to 29s. Oats were again firm, and sold at 18s to 22s, whilst beans fetched from 33s to 36s, and peas 31s to 33s.

Retford, Saturday.—An average supply, but demand limited, 35s 6d to 36s 6d per qr. A fair trade for malting barley at fully late rates, the best making 30s to 32s; secondary 28s to 30s; and grinding, 27s to 28s per qr. Oats were lower, black making 18s to 19s; white ditto, 19s to 20s: and old oats, 25s. New English beans, 30s., and old ditto, 36s to 36s 6d per qr.

Ripon, Thursday. — Good attendance of farmers, and business easier. Wheat and barley show a reduction in price on the week. New wheat, 36s to 37s; wheat, foreign, 46s to 48s; barley, grinding, 26s to 27s; barley, malting, 28s to 32s; new oats, 19s to 21s; old oats, 26s; maize, round, 28s; flat ditto, 32s per qr.

Sheffield, Tuesday.—There is an improved tone in the market, and prices are experiencing a slight rally from the depression of last week. Foreign wheats quoted 3d to 6d per qr dearer. English unchanged from last week's prices. Maize 3d per qr higher towards the close of the market. Beans, oats, and barley unchanged at varying prices according to condition. Quotations:—Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, black, 24s to 25s; ditto white, 24s 6d to 25s; ditto new, 21s 6d to 22s per 336 lb; peas, grinding, 36s to 36s 6d; ditto blue, new, 75s to 90s per 504 lb; beans, English, 36s 6d to 37s per 532 lb; barley, grinding, 28s to 30s; ditto malting, 28s to 32s per 448 lb; Indian corn, small, 27s 9d to 28s; ditto Plate, 27s 9d to 28s 3d; ditto flat, 30s to 36s 6d per 480 lb.

Shrewsbury, Saturday.—Quotations: Wheat, 15s to 16s per 225 lb; oats, 16s 6d to 17s per 225 lb; new 12s to 14s per 225 lb; barley, 18s to 20s per 280 lb.

Stamford, Friday.—The attendance was not quite so large as usual, but a fair trade was done. Wheat made 35s to 36s; oats, 19s to 20s; beans, 28s 6d to 30s; peas unchanged. Few samples of barley were offered; best malting, 30s to 32s; ditto grinding, 25s to 26s 6d per qr.

Stockton, Wednesday.—Local wheat was down and made 36s to 37s per qr. Foreign wheat quiet, and 6d to 1s lower on the week. Oats and maize steady. Grinding barley made 25s to 28s per qr, common malting barley 28s to 30s. and best malting barley 30s to 32s per qr.

Tunbridge Wells, Friday. — New white wheat, 37s to 38s; new red ditto, 36s to 36s 6d; barley, 36s to 37s; grinding ditto, 26s to 27s; oats, English, 19s to 22s; rye, 31s to 32s; peas, 34s to 35s; beans, 34s to 36s; tares, 40s to 48s; maize, 28s to 29s.

Warwick, Saturday.—Very small attendance, and little offering. Trade very depressed and values easing. Wheat, 12s to 13s per bag; barley, 27s upwards per qr; oats, 21s per nine score. Feeding stuffs easier.

Winchester, Saturday.—English and foreign wheat about 1s dearer on the week. Barley, oats, and maize unchanged. Flour a steady trade at 6d higher rates.—Fear, Colebrook and Co., Ltd.

Wisbech, Saturday.—A fair attendance at market, but few samples offering. Wheat sold at 36s to 36s 6d per 504 lb. Barley, 28s to 31s per 448 lb. Oats, 19s 6d to 20s 6d per 336 lb.—James Fletcher.

Worksop, Wednesday. — Poor attendance, and a fair show of grain, with late rates practically unaltered, wheat excepted, being down about 1s per qr. White wheat, 37s to 38s; red ditto, 36s to 37s; best barley, 31s to 33s; secondary barley, 29s to 31s; grinding barley, 27s to 28s; white oats, 19s to 21s; black oats, 18s to 20s; maize, 28s 6d to 30s; old beans, 40s to 41s, new beans, 35s to 37s per qr.

Yeovil, Friday.—Fair amount of business. Wheat favoured sellers, but barley and oats showed a decline of 1s and 6d per qr respectively. Best quality home-grown wheat made from 36s to 38s per qr; secondary, from 32s 6d to 35s; foreign wheat in better inquiry at late rates. Barley, malting, 29s to 33s; grinding (home-grown), 26s to 28s; ditto, foreign, 25s; winter oats, 18s 6d to 19s 6d; white (Garton) oats, 18s 6d to 19s 6d; black Tartar oats, 18s 6d to 19s 6d; Irish black oats, 18s 18s 9d.; rye, 27s to 30s; beans, 35s to 36s; vetches, 6s to 7s 6d per bushel. For prompt delivery flour is selling at from 31s to 31s 6d for fines, and at this price a fair trade is passing. Meals and offals continue a good market at remunerative rates.

York, Saturday.—Wheat was in rather better condition, and sold firmly at last week's prices. Fine white, 37s to 38s; red and mixed, 36s to 37s per qr. of 36 stones. Malting barley slow, and sometimes rather cheaper, especially for inferior sorts; fine, 30s to 32s; good, 28s to 30s; other sorts, 26s to 28s per qr of 32 stones. Oats firm, and from 20s to 22s per qr of 24 stones. Rye, 28s to 29s per qr of 36 stones; old beans, 1s. per stone.

FEEDING STUFFS.

Liverpool, Friday.—Nitrate of soda slightly easier since last report. Improved climatic conditions enable farm work to be pushed forward—sadly in arrears in most districts—and good drying winds would be much appreciated by agriculturists. There is a decided improvement in the demand for autumn top-dressing this week, and it is to the interest of users not to delay their purchases to avoid delays in deliveries, which invariably take place this month in basic slag. There is no change in superphosphate prices, but higher values prevail for other phosphates, and likewise kainit. Feeding stuffs continue very slow of sale, yet on the whole values are upheld. For feeding treacle there is a fair demand, and prices are reasonable. The market is bare of American decorticated cottoncakes and English makes command £8 to £8 5s., whilst semi-decorticated is procurable at £7 per ton—a comparatively very moderate price.

—H. Jones Langar and Co.

Mark Lane, Monday.—Linseed Cake: The continued open weather is no doubt primarily the cause of the small consumptive demand, and with almost a total absence of any speculative inquiry, values are with difficulty maintained, Russian remain best value. East India seed pures and Calcuttas unaltered. London made pures meet a dull sale. Cotton Cake.—A fair quantity of Egyptian is available in warehouse, and with a further steamer parcel nearly due the market is barely as strong, with English unchanged. Decorticated.—London made pures find free buyers, with American quoted unchanged. Rape Cakes do not offer. Maize Germ Meal.—A limited quantity of White African meal is obtainable, but English makes offer rather more freely. Maize Gluten Meal is in good request. Rice Meal.—Landed lots of Rangoon are firmly held, while some second-hand steamer parcels afloat may be bought at late rates. Locust Beans are attractively offered. Dried Brewers' Grains remain scarce and dear. Nitrate of soda is without alteration.

WOOL.

London, Saturday.—English—per pk. of 240 lb —Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £12 10s to £13; ditto wethers, £12 to £12 1s; Kent fleeces, £12 0s to £12 5s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £11 10s to £12. Colonial—per lb.—Vic., scoured super., 2s 3d to 2s 4d; scoured, good, 2s to 2s 2d; scoured, average, 1s 10½d to 1s 11½d; greasy, average to fair, 1s 2½d to 1s 3½d; N.S.W., scoured, average, 1s 10½d to 1s 11½d; greasy, average, 1s 1d. to 1s 2d; S. Aus., greasy, average, 11d to 1s; N.Z., scoured, average, 1s 11d to 2s; greasy, average, 1s to 1s 1d; Cape, scoured, super., 1s 10d to 1s 11d; fleece, average, 9½d to 10½d; greasy, average, 8½d to 9½d; Natal, scoured, 1s 6d to 1s 7d; greasy average, 8½d to 9d. Crossbreds—grs.—Vic., good to super., 1s 3½d to 1s 4½d; New Zealand fine, 1s 3d to 1s 4d; medium, 1s to 1s 1d; coarse, 10d to 11d.

Canterbury, Saturday. — Kent fleeces remain at 11d per lb, with lamb wool at 7d.

Halifax, Saturday.—Business here is a little flatter, and transactions in wool are of very moderate extent, as there is some anticipation, owing to the position in Australia and New Zealand, of prices somewhat declining. English and Irish wools are very quiet,

HOPS.

Canterbury, Saturday.—A fair business has been done in the big growths, but the general trade is slow; £5 per cwt has been refused for a good parcel of East Kent hops, and a sale of Mid-Kent goldings at £5 10s per cwt is reported.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 P.M.

There was an improved inquiry to-day for English wheat, and the depression of the first half of the month appears already to have passed. Foreign wheat was held for 1s. and under on the lowest prices accepted on the 11th, but sales were slow and values somewhat unsettled.

For English malting barley of good quality there was an eager inquiry, and demand was above the average for any sort which was of serviceable brewing grade. Prices ranged from 31s. to 38s. or thereabouts.

Feeding barley was dull but very steady. Russia ships largely, but the grain is held by the purchasers with great tenacity. Californian brewing barley is 2s. dearer on the fortnight, and Anatolian is also decidedly on the up-grade. Malt tends to rise in price, and oats to-day are dull for foreign, steady for English.

Maize was a quiet trade. Farmers and other buyers will not purchase freely till the large new crop of American is in evidence.

Various sales included Portuguese locust beans at 110s. per ton. English mustard seed at 10s. per bushel, and Coriander at 15s. per cwt. Beans, peas, and tares were unchanged in value.

BRITISH GRAIN (*Off Stands*).

November 18.

THE FLOUR TRADE.

MARK LANE, Monday, 3 P.M.

The prices made for flour are not quite so high as a week ago, and are decidely lower on the fortnight, but the business doing is larger and the trade more confident.

Country sorts are very much in evidence, and while over 30s. is paid for the mixture recommended by those, or that well-known East Anglian firm and called their "patent," the ordinary roller whites are obtainable at 28s. 6d. to 29s., and stone-made flour for 1s. less than the flour that has been put between the modern rollers.

American forward quotations come 6d dearer, but this does not prevent a little spot concession being made in certain types which had previously been held too high.

Hungarian is rather dearer on the week, and good prices are also obtainable for Belgian.

Bran, middlings, and pollard are firm; barley meal at 8s per cwt is in request, and maize germ meal is fetching £6 10s per ton cash.

CLOSE OF THE MARKET.

THE WRETCHED WEATHER AFFECTED THE ATTENDANCE, A GOOD MANY OPERATORS FAILING TO PUT IN AN APPEARANCE. THE LIGHT WAS VERY BAD, AND THE OLD FASHIONED YELLOW GAS FLAMES GIVE A FALSE VIEW OF THE COLOUR OF SAMPLES. CONSIDERING ALL THINGS THE MARKET WAS NOT DULL

THE BALTIC.

Monday, 1 P.M.

State of Trade.

Wheat and barley cargoes are not quite so easy of sale as they were at the close of last week. A good steady trade at currencies is doing in cargoes of maize and oilseeds.

Business Done.

Wheat.—White Karachi, 41s 9d per 492 lb, prompt shipment; Red Karachi, 41s 3d per 492 lb, prompt shipment; Argentine, 39s 3d per 480 lb, February shipment; Californian, 42s 6d per 500 lb, prompt shipment; Blue Stem, 42s 9d per 500 lb, prompt shipment; Australian, 43s 6d per 480 lb, on passage; Duluth, 41s 3d per 480 lb, January shipment; No. 2 Hard Winter, 38s 6d per 480 lb, December shipment.

Maize.—Argentine, 27s per 480 lb, December shipment; American, 26 6d per 480 lb, on passage; American 25s 6d per 480 lb, January shipment; Odessa, 27s per 480 lb, on passage.

Barley.—Novorossisk, 25s 6d per 480 lb, on on passage; Temriuk, 25s 3d per 400 lb, on passage.

Oats.—Salonica, 17s per 304 lb, December shipment; New Zealand, 25s per 384 lb, December shipment.

Canaryseed.—Turkish, 36s 6d per 464 lb, September shipment.

Linseed.—Calcutta, 45s 9d per 410 lb, September shipment; Argetine, 41s 3d per 410 lb, September shipment.

Cottonseed, Egyptian, £6 17s 6d per 2,240 lb, September shipment.

GRAIN AND FLOUR FACTORS' REPORTS.

Offals.—Demand for bran fairly good; prices remain unchanged.—Greenhill Bros. (Belfast).

Flour.—After the recent period of quietness the market is again advancing, and prices are mostly 6d per sack higher than last week.—Greenhill Bros. (Belfast).

Flour.—Business is of a very retail character, although early in the week there was more inclination to buy, but to-day with lower wheat markets buyers hold off. Grain.—The demand for round and flat corn continues inactive at drooping prices. Beans in poor demand. Fine oats bring full prices, but poor qualities are difficult to sell. Oatmeal rather lower. Oilcake dull. Mill stuffs, unchanged but quiet. Winter wheat patents, 30s 6d to 31s per 280 lb; spring wheat patents, 32s 6d to 33s per 280 lb; American corn, 16s to 16s 1½d per 280 lb; round corn, 15s 6d to 15s 7½d per 280 lb; grinding beans, 18s 9d to 19s per 280 lb; broad bran, 117s 6d to £6 per ton; medium bran, 112s 6d per ton; common thirds, 115s to 117s 6d per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 150s to 152s 6d per ton.—McKinnon and McDonald (Glasgow).

Milling offals.—The trade remains firm, with prices unchanged from last week.—John Bawcomb and Co.

Arrivals of wheat the past week have been liberal. The trade is steady, and prices are 1s to 1s 6d per qr higher than last Monday. Flour 6d to 1s per sack higher. Maize 3d to 6d, and barley 3d per qr dearer. Oats firm, prices unchanged.—Coventry, Sheppard, and Co.

Flour.—Notwithstanding the firmness in the wheat market, buyers show very little disposition to trade in flour. Offers are not plentiful, and prices must be written a shade higher on the week.—T. S. Medill and Sons, Ltd.

TERM MARKET.

The tone on the speculative market is more hopeful from a week ago. The following are the latest offers accepted:—

Red Winter Wheat, No. 2,
8s. 2d. per cental, December delivery
,, ,, 8s. 3d. ,, January delivery.
,, ,, 8s 4d. ,, February delivery

Maize—
Mixed American, 5s. 9d. ,, Dec. ,,
,, ,, 5s. 6d. ,, Jan. ,,
,, ,, 5s. 5d. ,, Feb. ,,

Maize—
Argentine yellow 5s. 5d. ,, Dec. ,,

No offers of La Plata for 1908 delivery.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: Prices remain about the same with an easy tendency. Business has been done during the week at 22s ale, and porter 3s per ton less on rail London. Slack brewings will cause prices to be firmer. Dried Grains.—Prices continue firm with a steady tendency at 110s per ton for ale and 105s for mixed, bags 6d. each. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton, and kiln dried sea damaged wheat from 22s per qr, on rail, London and elsewhere.—Hamlyn and Co.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by PEPITA

THE NEWEST FASHIONS.

In many of the newest gowns the long slope of the shoulder has disappeared to give place to a long, close sleeve, which reaches well down over the hand. This sleeve is furnished with a small puff just at the top, and the effect is narrow and high-shouldered in comparison with the wide, sloping Japanese modes. This is, perhaps, the most important note among the various changes the autumn has ushered in.

* * *

Just at this season, when dressmakers vie with each other in turning out original designs, the greatest care should be exercised, and the sensible woman should pause a little for consideration, that she may choose correctly for herself amidst the great diversity and variety of modes that are offered. The question of personality should never be forgotten, for it is common-sense to be eclectic in matters of dress as well as in other things. Too many rush pell-mell into a fashion which, in many cases, is entirely unsuitable; and it is thus we see the absurd travesties on a style which, if used with discretion, has real beauty and value in itself. This season, however, there is enough variety in the modes to provide artistically for everyone.

* * *

With the English woman, the tailor suit occupies a place of great importance; and it is here one is less apt to make mistakes of selection than in gowns of another character. The main thing is to keep to the simpler styles, where one cannot go far wrong, for most simple tailor suits are good. The short, pleated tailor skirt of last spring bids fair to continue its vogue, though it is to be hoped a more becoming length will be adopted than the very short models of a few months ago. The proper length for a walking suit is from two-and-a-half to three inches from the ground, while some of the spring skirts were all of two or three inches shorter than this.

* * *

Tucks and folds hold their own, too, though there may be observed some change both in the width of the tuck or fold, and in its position. On some of the models I have just seen there is a hem of not more than three inches, while the bottom of the lowest tuck falls directly above this hem. This tuck may be six or seven inches in width; and the second tuck, of the same width, is placed so high upon the skirt as to give the effect of a short pleated tunic. Folds and tucks play an important part in the gowns of a different sort—the long gowns; and here again, the distinguishing feature is the width of the tuck, which quite exceeds anything seen before. Of course this is one of the modes that must be used with the utmost discretion, both in the long gowns and the short tailor suits.

* * *

Jacket styles to two-piece suits are so numerous as to defy enumeration, though one of the most sensible is the plain little well-tailored affair of long or short hip-length, well supplied with masculine pockets, little "patch" or inset. These jackets are rarely quite tight-fitting, the smartest being quite easy at the waist line, a style becoming to all figures, whether stout or slender. The quaint little short-waisted coat of uncertain cut is becoming to youthful figures, and, as it has the advantage of being novel and very feminine, it is likely to prove an autumn and winter favourite. A number of striped materials are again seen in tailor suits as well as in other kinds of gowns, though, of course, the tones are darker than those exploited in the spring and summer.

* * *

An interesting feature of many of the new gowns is the clever manner in which a striped material is cut and employed to effective advantage. The skirt of such a striped gown will often be trimmed with three false tucks, these cut on the bias and so placed as to gain a variety and effect; the middle tuck with its lines running diagonally to the right, the other two with their stripes running to the left. Again, a gown of striped material may have a circular skirt with a cleverly cut front panel, the sides and panel being cut different ways of the goods, and this arrangement will be repeated in some manner in the bodice, with an effect that, in the ensemble, is charming.

AN ARTISTIC HAT.

* * *

A pretty little striped house gown I have recently seen had a white ground with narrow black stripes. The skirt was made with many bias flounces edged with black around the hem. The elbow sleeves were composed of several ruffles also treated with the black edge, while the square opening of the yoke was finished in the same way. The gown was intended for a tall woman, and it was most effective.

* * *

Some entirely new hats have put in an appearance, together with some models that reproduce the absurdities of the past few months, with their extravagant brims and their excessive trimming. One of the newest shapes is the "Huguenot," with a high crown and a rather narrow brim. Most of the hats are over-trimmed, some being topped with enormous bows of ribbon or velvet, and others being crowded with plumes of a most elegant and expensive variety. Again, birds and wings are seen, but always to an exaggerated extent; some hats having as many as six large-sized wings starting from a chou in front and overhanging both crown and brim. The hat with the wide brim turned up shapely in front, is also seen; and, usually, this hat has its brim smartly faced with black moire, silk, or satin in a coming way.

* * *

The charming and artistic hat shown in the sketch is a Paris model. The hat is of cinnamon brown velvet, trimmed with pheasants tail feathers and autumn leaves.

Removing Spots and Stains.

Grease or oil stains may be readily removed from wall paper, painted walls, or floors by covering with a paste made of pipe clay, borax, and cold water; and from carpets or rugs by applying powdered borax. Spots made by food, greasy in their character, should be washed out immediately with warm borax water. Blood stains require cold water and a little soaking before rubbing out.

Ink spots require prompt treatment, for, if allowed to dry, they are difficult to remove. Fresh ink, if wiped up as dry as possible, and then covered with a mixture of borax and salt, will leave no stain on carpets, floors, or upon garments upon which it has been spilled. Iron rust and mildew are well-known annoyances with bed and table linens, and require special attention at the hands of the laundress before being put in the tub. A paste made of citric acid, French chalk, powdered borax, and cold water, spread over the spots and dried in the sun, will usually be found effective. If the first application fail, it should be repeated.

The brown stains on baking dishes and porcelain lining of cooking utensils are best taken off with muriatic acid, but should be well rinsed with borax water to prevent injurious action on the surface. White spots on polished tables made by hot dishes will readily yield to an application of sweet oil. Fruit stains on table cloths, napkins, or wearing apparel should always be removed before putting in the wash, as hot water and soap will set them, so that it will be impossible to take them out. White articles may be wetted in acids with excellent results, but coloured fabrics require more care to prevent discolouring. If held over a basin, and very hot water, to which powdered borax is added, is poured over the spots, they will come out without fading or injuring the most delicate colours.

Troublesome coal dirt spots in winter, and dust spots in summer, often disfigure woollen gowns, and, if washed out with soap, leave an ugly stain. To remove them, first cover with French chalk, then brush off, and rinse in a little tepid borax water, and hang in the shade. When dry, the spots will have entirely disappeared.

Longhead: "Madam, I wish to draw your attention to the sad case of a poor family. The father is too old to work, the mother is bedridden, and the five little children are crying for bread. To cap all, the poor little creatures are about to be turned out into the street, unless someone pays their arrears of rent, amounting to £5."

Mrs. Kindheart: "How terrible! Here is the money for the rent. By the way, may I ask who you are?"

Longhead (as he disappears): "Certainly, madam; I am the landlord."

GARDENING IN NOVEMBER.—Second Paper.

When closing my last article on gardening in November, I promised to refer to the cultivation of the chrysanthemum, and hope that readers have given the matter their consideration and prepared their pots.

The most useful and best pots to use for single cuttings are those 2½ inches in diameter, They should be scrupulously clean, both inside and out, if old pots are used; if new, then the best plan is to stand them in water for a night.

The dirty pot should be condemned, as it is unpleasant to handle, besides being unsightly and against the young plants when the day arrives to transfer to a larger size. The young roots are sure to penetrate the soil, and reach the interior of the potsides, and will be found on examination to have adhered, and may have to be torn away, or the pot smashed to enable the ball of soil to be released. I make it a point to choose the most finished pots with a nice smooth surface. Smaller pots, even than the one mentioned, may be utilised for cuttings, and I think it is generally admitted that the smaller the pot the better it is made.

The season most usually agreed upon as the safest for taking cuttings is about the end of December. Some very successful growers will extend the time and continue to take their cuttings as late as the end of January. I have had no experience in this very late operation, as I certainly favour the middle of December. The flowering growth of the old plants should be shortened, as soon as possible after the blooms are over, to about 4 in., and removed to a cool house or a place which is quite free from frost, but plenty of air and light should be allowed.

It is advisable to encourage the young shoots to come along, so that healthy and strong cuttings may be obtained. I always take my cuttings, as soon as they are sufficiently advanced, direct from the base as low down as possible, as they are stronger and take root much quicker. Of course, good cuttings may be had from stems, but they do not, as a rule, make such vigorous plants as those got from the base. It is important to see that cuttings obtained from stems do not throw out buds during propagation. Cut them off if they do.

Stem cuttings should be obtained with a keen knife just below a joint. The length of them should not exceed 4 in. Some varieties of this popular flower throw up a goodly number of shoots from the base, and amateurs are apt to take advantage of them all if the plants happen to be of some very special favourite colour. This is entirely wrong, and it is much better to reduce them in favour of the strongest, and secure a few good plants. It is much better to have strong, healthy stuff that will give you pleasure to feed than to cultivate half-starved, weakly, drooping stock. I do not recommend the stem cuttings to anyone. A sweet sandy soil should be used, but this is not always available, and almost any soil with leaf loam and some clean, sharp sand will suffice. The parts mostly used are two parts leaf-soil, two of loam, and one of sand. Rub it well through the hands in order to mix the proportions. When placing the cutting in the soil, press it moderately firm, give a good watering and very little more will be required till rooted. The cuttings should be placed in a cool greenhouse, or a frame upon ash bottom.

Amateurs cannot do better than attend some of the large chrysanthemum shows held at this time of the year, and take note of the best special varieties. There are a number of nurserymen who would be willing to book orders for plants or cuttings. The latter are ready for potting, and have been carefully selected and prepared from any selections made at the shows. The cost is about one-half the sum charged for rooted plants, and they may be had from growers as late as the end of February. In the event of our own cuttings being a failure, this is a means by which our stock may be replenished, and the cost is well worth the outlay, as no greenhouse should be without this floral display. I understand there are many new varieties this year on exhibition.

I have already given some information in a recent article regarding the treatment of bulbs. My readers may be interested in the accompanying photograph which shows a lily grown under careful treatment. This is the Lilium Lancifolium (Speciosum). This very graceful and highly perfumed lily is quite hardy, and may be grown by any amateur in a good loam. Peat is preferable for pot culture. Sandy peat, well mixed, will generally produce the best plant. It is not, however, absolutely essential to obtain peat in order to ensure success, as very fine specimens have been cultivated in a nice light soil, such as would be used for the growing of geraniums, fuchsias, and other similar plants. When planting the bulb it is advisable to place it in the soil about 2 in. below the surface, and from time to time transfer to larger pots. The roots should be very carefully covered when finally potted, as they come from the base of the stem at the crown of the bulb, and these are the main support of the flowers we look forward to.

A watchful eye must be kept on the plants, as it is important to be careful not to re-pot after the flowering buds make their appearance. It is scarcely necessary to mention this fact, but I do so in order that it will not be overlooked. Give plenty of water during growing and flowering season, but moderately afterwards. This plant is easily managed, and does not need a high temperature. It is a most useful plant as the flowers are fine for decoration in either conservatories, greenhouse, or the drawing-room. For pot culture

LILIUM SPECIOSUM.

this lily and Lilium Auratum are strongly recommended. They vary in colour, flower freely, and are very fragrant.

G. W. Thomson-Price.

Care of Lamps.

The light of oil lamps is so much softer and less injurious for the eyes than flickering gas, or even electricity, that it really should be used instead of these in all nurseries and children's rooms, and the only drawback about lamps is that they require such careful tending to keep them in a safe and bright condition. But given a conscientious nurse or a mistress who undertakes their management herself, all will be well. One very necessary thing in lamps is that the oil reservoir be kept scrupulously clean inside. No oil is so pure that it does not leave a sediment, and if this sediment be allowed to accumulate the succeeding oil fails to burn brightly.

Lamp reservoirs should be washed out once a week with hot water and pearl-ash and be allowed to thoroughly drain and dry before new oil be added. The burner should also be frequently cleaned once a day, in fact- and every orifice should be thoroughly cleaned out. The wick should be wiped at the top with a piece of soft rag to remove the charred edges, and if it should be found to burn rather cloudily it may be necessary to remove it next morning and soak it for an hour or two in vinegar and water. It should be quite dry before being again placed in the burner.

COOKERY.

Rice in Varied Forms.

A competent authority says that to gain the best results rice must be thoroughly washed, and the grains rubbed between the hands to get rid of the floury coating, in order that the rice may not stick together when cooked.

Into a deep saucepan, two-thirds full of salted, boiling water, put the washed and drained rice, gradually, so as not to stop the boiling, and let it cook for twenty minutes undisturbed. Put a colander over another saucepan, turn the rice into it, cover the colander, and leave the saucepan by the fire. In this way the rice will both drain and steam. Three things must be remembered: The water must be boiling, the rice must not be disturbed during the cooking, and it must be thoroughly drained.

The Japanese use a cooking pot with a close-fitting cover, and put in just water enough to keep the rice from sticking. They steam it over a moderate fire till nearly done, then take off the cover to let the steam and moisture escape.

To cook rice as it is done in India, to be eaten as a vegetable with meat: Take half a pound of washed rice and boil it in one quart of milk until tender, chop one clove of garlic fine, add it to the cooked rice with one tablespoonful of onion, one teaspoonful of parsley, and three of green pepper, all finely chopped, two tablespoonsful of Parmesan cheese, two beaten eggs, and a small cup of milk. Thoroughly mix these ingredients with the rice before turning the whole into a buttered baking dish, put some bits of butter over the top, place the dish in the oven, and bake until the top is a nice rich brown.

For a breakfast cereal, or to be eaten as a plain dessert with cream and sugar or sauce: Wash one cup of rice, and put it into a saucepan or kettle that has a tightly-fitted cover; add one cup of milk, two cups of water, and a saltspoonful of salt. Cover the vessel and put at the side of the fire, where the rice cannot burn, but will simmer until it is tender and all the liquid has been absorbed by the rice. This is richer and more nourishing than when cooked with water alone. When raisins are desired with boiled rice, add a cupful to the rice when preparing it to put over the fire.

Baked Rice.—Put one small cup of washed rice in one quart of milk, half a teaspoonful of salt, a dash of pepper, and a little chopped parsley, if it is liked. Butter a pudding dish and put in the rice and milk, drop a few bits of butter over the milk and place the dish in a slow oven and bake two hours. If it browns too fast cover the dish until nearly done. Serve very hot with a meat course.

Parched Rice.—This is nice with broiled meats. Boil the rice in water and drain it well. Put it on a dish, and when it is cold, separate the grains carefully with a fork. Put into a spider enough butter to cover the bottom of it when melted. When the butter is hot, put in a little of the rice at a time, cook it a delicate brown, tossing it lightly with a fork, so as not to break the grains. Drain on brown paper at the mouth of the oven, heap it in the centre of a small dish, sprinkle a little chopped parsley on the top and serve.

Coral Rice.—Put into a saucepan one and one-half cups of stock, one cup of stewing and strained tomatoes, and one cup of washed rice, cover and cook for thirty minutes. Take off the cover, set the pan at the back of the stove, to let the moisture escape, for twenty minutes. Heap the rice in a mound in the middle of a hot dish, and put broiled chops around it, or put meats in the centre, and mould the rice for a border.

Rice Omelet.—Mix one tablespoonful of butter with one of flour and cook them over the fire until smooth; then stir in two-thirds of a cup of milk, and set one side until cold, before adding half a cup of boiled rice and the beaten yolks of four eggs. The last thing stir in lightly the beaten whites of the eggs and turn the mixture into a buttered dish. Stand the dish in a pan of hot water and bake fifteen minutes. This omelet must be seved as soon as it is taken from the oven. Serve with a sauce made by beating the whites of three eggs stiff; add to them one cup of powdered sugar, and just before sending to the table, stir in the juice from two oranges and half a lemon.

Rice Balls with Fried Chicken.—Stir into cold boiled rice a little melted butter and some milk until you have a thick paste; add some salt and a little chopped parsley; blend together with a beaten egg. Roll these into balls with the palms of the hands. Fry the balls in hot fat. Place them around the edge of the dish on which the chicken has been arranged, and alternate each ball with a slice of crisp bacon.

KNITTED DERBY COAT.

Fashions in knitted jackets change almost as readily as in other garments for feminine wear, and along the same lines. The pony coat of cloth or fur has its prototype in the knitted Derby or Norfolk coat, and the effect is so satisfactory that the bloused jersey is practically retired, for the present at least. There is a smart, outdoor look to the jacket that the blouse never possessed, and that characteristic, at least, will appeal to many. The Derby coat illustrated is, in a simple stitch, readily followed. The double ribbing makes it shape in to the figure at the waist-line without the necessity for narrowing in the knitting, an arrangement that is calculated to give a more satisfactory garment. A knitted

PATTERN THAT RESEMBLES PLEATING.

jacket has stretching qualities not possessed by those made of cloth, and if a definite waist-line is made in the knitting, it necessitates careful measuring in the making and equal care in the adjustment when worn, to avoid the danger of a "short-waisted" effect in the back. The detailed illustration of the jacket, spread out to show the shape, before the under-arm seams are joined or the border added, will be found useful as a model for reference in shaping, no matter what "stitch pattern" may be employed. The outline of the armhole is particularly good, preserving a straight line across the shoulder, like that of a well-tailored coat, as may be seen in the illustration of the completed jacket. No. 4 bone needles were used, and in moderately tight knitting, 7 stitches make an inch. In calculating the number of stitches required, multiply the bust measure by the number of stitches to the inch, and give a trifle over one-third of these stitches to the back. The absolute number cast on must be decided by the number of stitches in each group of the "pattern" of the knitting, and if there is, as in this coat, a pattern enclosed between stripes of ribbing, both sides must be finished alike, necessitating the use of only a portion of the "pattern" at one side.

This coat was made for size 42 bust, and

PATTERN STITCH USED IN KNITTING DERBY COAT.

it will be a simple matter to calculate for a smaller size. The materials required are 1½ lbs. of yarn, 1 pair No. 4 bone knitting needles, 1 medium-size crochet hook, 6 pearl buttons, and 2 yards of ribbon for facing the fronts and the straps that fasten across the front. The coat is begun at the lower edge of the back, and 116 stitches are cast on.

First row: K. 2, p. 2, k. 2, p. 4 to end of needle, finishing with k. 2, p. 2, k. 2.

Second row: P. 2, k. 2, p. 2, k. 4 to end of needle, finishing with p. 2, k. 2, p. 2.

Third row: Repeat first row.

Fourth row: Repeat second row.

Fifth row: Repeat first row.

Sixth row: K. 2, * p. 2, k. 8. * Repeat from star to star to end of needle, finishing with p. 2. k. 2.

Seventh row: P. 2, * k. 2, p. 8. Repeat from star to star to end of row, finishing with k. 2, p. 2.

Eighth row: Repeat sixth row.

Ninth row: Repeat seventh row.

Tenth row: Repeat sixth row. This completes the pattern.

Knit until the back is 17 inches deep, then bind off six stitches at each end of the needle for the under-part of the armhole. Now make the curve by decreasing 1 stitch in every other row, on both ends of the needle, until 4 more stitches are decreased on each side. There are now 96 stitches on the needle; knit until the back is 24 inches long, then divide into three equal parts for the neck and the shoulders. Slip the first 32 stitches on a thread to hold them until ready to knit them. Bind off the next 32 for the neck and continue knitting for the left shoulder on the last 32 stitches. Continue the pattern and add, at the neck side, 1 stitch on every other row until there have been added 32 stitches. When 25 stitches have been added, begin to increase at the arm size at the armhole side, adding 1 stitch on every other row until 16 stitches have been added. There are now 80 stitches on the needle; knit until the front under-arm seam is the same length as that of the back, then on the next row (beginning at the front edge) knit the first 68 stitches, leave the remaining 12 on the left-hand needle, turn and knit back to the front. The next row leave 4 more stitches unknitted,

KNITTED DERBY COAT.

making 16 on the left-hand needle; turn and knit back. Repeat five times, leaving 4 stitches unknitted each time, then bind off. The edge will have a becoming "dip" line toward the front. Take up the 32 stitches at the right shoulder and knit to correspond with the left side.

For the sleeve, cast on 20 stitches; add 3 stitches at each end of the needle on every other row until there are 119 stitches. Knit on these for 3 inches, then decrease 1 stitch at each end of the needle every time the "pattern" is reversed, until the seam is 10 inches long; bind off.

For the pocket, cast on 32 stitches; knit the "pattern" for 4 inches and bind off. For the strap, cast on 2 stitches, knit the pattern (beginning in the middle of the block), increase 1 stitch at beginning of every row until there are 8 stitches; this omits one row of the ribbing at each side. Make strap 6 blocks long, decreasing to a point at the end to correspond with the beginning. Make a buttonhole at one end by binding off 4 stitches in the second block, then casting them on again on the return row.

Overhand the seams of the jacket and sleeves. Work 9 rows of single crochet around the coat, widening at the corners at the neck edge and bottom of the front, to preserve the outline and make a sharp turn. Work 9 rows of single crochet on each sleeve; 4 rows across each pocket-piece and two rows around each strap. Sew on the pockets and sew in the sleeves, placing the sleeve seam 1 inch in front of the under-arm seam and arranging the fulness across the top. Underface the front edges and the straps with ribbon, cut the buttonholes in the ribbon and work, knitted edge and ribbon together, with buttonhole twist. Sew each strap on with a button, and sew buttons on the opposite side of the front. A detail of the pattern stitch is illustrated.

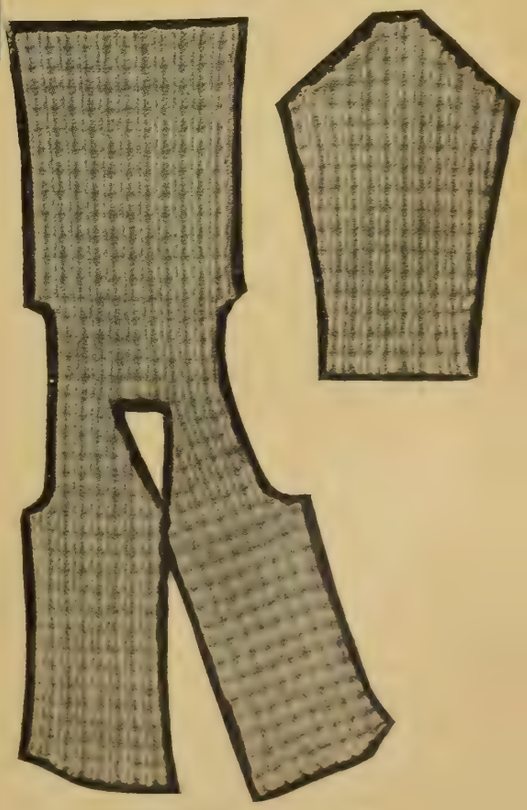
The last illustration is a pattern that has the effect of pleats or fluting. It is composed of blocks that are each 8 rows deep and 9 stitches wide, and divided across diagonally by purling and knitting in the following manner:—

First row: P. 8. k. 1; repeat to end of row.

Second row: P. 2, k. 7; repeat to end of row.

Third row: P. 6, k. 3; repeat.

Fourth row: P. 4, k. 5; repeat.



Fifth row: P. 4, k. 5; repeat.

Sixth row: P. 6, k. 3; repeat.

Seventh row: P. 2, k. 7; repeat.

Eighth row: P. 8, k. 4; repeat.

To knit the Derby coat in this stitch, 117 stitches should be cast on for the back, as that number is divisible by 9, the number of stitches in the pattern and widen the fronts to 81 stitches instead of 80.

SHAPE OF COAT AND SLEEVE.

ROUND ABOUT NOTES.

Miss Grace Jean Crocker, the clever American humourist gave an entertaining recital at the Steinway Hall on the 11th inst., and a crowded audience evidenced a keen appreciation of her admirable rendering of several humourous pieces including "The Christening," "Dat Weddin' o' Mandy Stubbiefields," and some recitations of child-life. Her dramatic power was shown in her exposition of "All the World's a Stage," and the pathetic poem by James W. Riley, "'Mongst the Hills of Somerset." Mr. Denis O'Sullivan gave several Irish songs in excellent style.

* * *

A novel game of draughts was recently played in Rangoon, one of the players being a local expert. In place of the usual black and white draughtsmen, the novice used rupees and the champion used sovereigns, the understanding being that the draughts captured on either side should be the property of the captor.

* * *

Miss Kerstin Hisselgren has been appointed by the Swedish Government sanitary inspector in Stockholm. This is a new departure. Miss Hisselgren was sent to England by the Government and the Frederika Bremer Association of Women to study hygiene and public health. She took the course of scientific hygiene at Bedford College for Women.

"PEPIT."

The Virtues of Distilled Water.

It is a matter of regret that the virtues of distilled water are not more widely known. Persons living in country districts are content, through want of knowledge of the superior merits of distilled water, to drink water teeming with impurities and laden with mineral matter of an objectionable kind.

Well water is frequently not only impure, but of an exceedingly hard nature, and when this is the case, it is exceedingly injurious, especially for persons in whom there is any tendency to dyspepsia, rheumatism, gout, kidney trouble, or liver complaints. Dr. de Lacey Evans says:—"The combinations of lime held in solution in the water we drink, when taken into the stomach, are soon distributed throughout the system and deposited in all the tissues, exactly as they are precipitated and form incrustations on the bottoms of kettles in which water is boiled. The result is general induration, partial, and often in some organs and tissues complete, ossification. The bones become brittle, the joints and muscles stiff and rheumatic, gravel and stones form in the bladder, the kidneys, liver, heart, nerves and brain become indurated and sluggish in their action; all the bodily functions are impaired."

It is also now known that many diseases, notably, typhoid fever, cholera, dysentery, and similar affections, are frequently originated by drinking impure water. Whenever there is reason to believe that the drinking-water of any district is not perfectly pure, distilled water should be substituted for it.

The Medical Congress of Brussels passed the following resolution:—"Waters that are hard or contain mineral matters form with the chyle an abnormal medium for hematosis (formation of blood), and they fatigue the kidneys, whose duty is to eliminate them unceasingly, and they incrust the articulations."

The powerful solvent properties of distilled water are well known. As carbonate of lime exists in nearly all drinking water, the careful distillation eliminates this harmful element. As a beverage, distilled water is rapidly absorbed into the blood; it keeps soluble those salts already in the blood and facilitates their excretion, thus preventing their undue deposit. The daily use of distilled water is, after middle life, one of the most important means of preventing secretions and the derangement of health.

Filtering water or boiling it are processes which are almost useless. Filters remove nothing but sedimentary matter, and frequently become so impregnated with germs that they are a source of danger rather than of purification.

The process of boiling may kill the germs of a particular disease, yet, in reality, it renders the water more impure than it was before, because by the very death of these germs, dead matter is allowed to remain in the water, which it pollutes by putrification.

The only practical method of obtaining absolutely pure water is by distillation. This has long been agreed by the best authorities. Many difficulties have, however, stood in the way of the general adoption of this process for domestic purposes. Ordinary stills are laboratory appliances, requiring skill to work. They are also costly, and a licence must be paid to Government to be allowed to use them. Distilled water can generally be bought in cities from the chemists, but at a high price—as much as 1s. per gallon. The water so produced is quite as flat and unpalatable a beverage as boiled water. Only an overpowering sense of duty or fear will lead to its constant use. In the country it is usually very difficult to procure at all.

These objections have been removed by an invention which has now come into extensive use where distilled water is a necessity. It is almost automatic in action, and produces distilled aërated water in such quantities and so cheaply that it can be freely used, not only for drinking, but for toilet purposes, and there is no finer cosmetic for the complexion. It will prevent untimely wrinkles and keep the skin smooth and soft as velvet. The use of distilled water greatly improves the flavour of tea, coffee, and other beverages.

The action of the still is exceedingly simple and almost automatic. All the attention it requires is to keep the upper reservoir supplied with water and to draw off the distilled water from time to time. Any ordinary servant or child can work it. Complete instructions for use are sent with each still, which is securely packed in a neat wooden case. Placed on the kitchen range the still takes little more room than a kettle, and a regular supply of hot water can always be obtained from it. The cost of the distilled water while on a range is inappreciable, but if a gas fire or oil stove be used, the cost will be from 1d. to 1½d. per gallon. As the still lasts for years, with ordinary care, it will be seen that it will pay for itself many times over if the ordinary price of distilled water be taken as a basis.

The accompanying sketch shows the interior mechanism of the still. It is obtainable for two guineas from Mdme. Gilbert, 186, Regent Street, London, W.C. Its construction makes it impracticable for it to be used for the distillation of spirits. It is consequently exempt from the necessity of paying a licence to the authorities.

POTATOES

Borough, Saturday. — A good quantity marketed experienced quiet support. Blacklands, 75s to 80s; Up-to-Dates, 90s to 100s; Royal kidneys, 80 to 90s per ton; French, 3s 3d to 3s 6d; Dutch, 3s to 3s 6d; German, 3s 6d to 4s per bag.

Berwick, Saturday.—Prices are falling owing to the large arivals of foreign potatoes, and the ruling price was 75s per ton.

Carlisle, Saturday.—Large supply, and a fair trade at 7d to 8d per stone.

Doncaster, Saturday.—Plenty of potatoes on offer and a fair inquiry. Prices, which were slightly easier, ruled from 9s to 10s 6d per load of 18 stones.

Goole, Wednesday—A large supply. Imperators, 9s, Up-to-Dates, 9s 6d; and King Edwards, 10s per load. Heavy arrival of German Up-to-dates caused prices to have a downward tendency.

Lancaster, Saturday.—Potatoes 9d to 10d per stone.

Manchester, Saturday. — Potatoes: Yorkshire, 11s 6d to 12s 6d; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per 18 st; Irish, 5s; German, 4s 6d to 5s per cwt.

Malton, Saturday. —The wholesale potatoe trade was less firm in tone at about 78s to 86s per ton, and 8d per stone retail.

Preston, Saturday.—Potatoes, 8s 6d to 9s 6d per load of 240 lb.

Retford, Saturday.—Good supplies. Home-grown lots made 8s, and other varieties 7s to 7s 6d per load.

Spitalfields, Saturday.—A slow demand prevailed for the heavier deliveries. Blacklands, 80s to 85s; Up-to-Dates, 90s to 100s; Royal Kidneys, 85s to 90s; Scotch grey soil, 90 to 95s per ton. German, 4s; Dutch, 3s 3d to 3s 6d; French, 3s 6d per bag.

Worksop, Wednesday.—Fair supply, which were firm at late rates. Best samples made 9s to 10s per load of 18 stones.

York, Saturday.—A fairly large supply of potatoes, the imports of foreigners having greatly eased the market. Trade was quiet, prices ranging from 72s 6d to 80s per ton.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 3,455 bales, and from foreign ports, 15,566 bales. There was a steady but slow market for bacon throughout the week. Prices ranged:—Irish, 56s to 58s up to 61s; Danish, 54s to 57s up to 61s; Canadian, 56s to 56s up to 58s. Butter: Butter was a quiet market. French, 108s to 118s; Danish, 121s to 123s; Russian, 88s to 114s; Irish, 96s to 122s; Victorian, 90s to 120s; New South Wales, 94s to 118s; Queensland, 90s to 116s; New Zealand, 11s 0 to 118s. Lard.—Lard was a steady market. Irish, 50s to 58s; Danish, 49s to 54s; American, 46s 6d to 47s 9d.

TO-DAY'S MARKETS.

Calves	10	10	20
Pigs	—	—	—
Milch Cows	40	40	50

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 6	3 4	4 6
Sheep	4 10	5 6	6 4
Lambs	—	6 0	6 8
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £23, ex £24.

British arrivals include as follows:—Scotland, 29; Eastern Counties, 42; Midland, Home, and Western Counties, 1,221; Devon, 20; Ireland, 158.

We note to-day an increase of 280 head compared with Monday last, the majority of the supply being drawn from the Midland Counties and Ireland. For all descriptions of English a very slow trade prevailed, the over-stocked state of Dead Meat Market being partly accountable for this; however, late values governed most transactions. A few Scotch cross-breds were offered for sale, and were quoted at 2d. per 8 lb. lower than on Monday last. The arrivals from Ireland consisted of 93 Dublins (amongst which were a few Black Polled beasts), and 65 Waterfords, the former making 2d. per 8 lb. more money. Fat cows met with slightly more inquiry and showed an upward tendency, whilst fat bulls made late rates. A clearance will not be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s. d.	Monday, Nov. 19, 1906. s. d.
Scotch Cross-breds	4 4 to 4 6	— to —
Devons	— to —	4 4 to 4 6
Herefords	4 4 to 4 6	4 4 to 4 6
Norfolks	— —	— —
Runts	4 2 to 4 4	4 2 to 4 4
Lincolns	3 10 to 4 0	3 8 to 3 10
Irish	4 0 to 4 2	3 10 to 4 0
Black Polled Dublins	4 2 to 4 4	— —
Fat cows	3 4 to 3 6	3 4 to 3 6

There was an increase of 550 in the number penned in the sheep market compared with Monday last. For all grades of English sheep trade, though of a slow nature owing to the bad weather, ruled firmer in regard to value. There was a large supply of both Scotch and Irish descriptions, the former meeting with a good demand at 2d. per 8 lb. more money, whilst all sales of the latter were governed by last Monday's prices. The few lambs on offer cleared early at late values. The supply included 400 Scotch, 800 Irish, and 2,328 from the Midland Counties. There is very little prospect of a clearance being effected to-day.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	s. d.	Monday, Nov. 19, 1906. s. d.	s. d.
8 st. Scotch	6 2 to 6 4	6 2 to 6 4		
7½ to 8 st Down Tegs	6 2 to 6 5	5 6 2 to 6 4		
9 st. Down Tegs	6 0 to 6 2	5 10 to 6 0		
10 st Halfbreds	5 6 to 5 8	5 6 to 5 8		
10 st Yorkshires	—	—		
12 st Lincolns	—	—		
10 st Irish	5 2 to 5 4	5 2 to 5 4		
10 st Down Ewes	4 2 to 4 4	4 2 to 4 4		
11 st Halfbred ditto	4 0 to 4 2	4 0 to 4 2		
5 st Down Lambs	6 6 to 6 8	—		
6 st Halfbred ditto	—	—		

Calf trade not worth noting or quoting. No pigs on the market

London (Central), Monday.—Trade slow; supplies moderate. Beef, English, 3s 4d to 3s 8d; Scotch, 3s 10d to 4s 8d; American, 3s to 3s 6d; refrigerated hindquarters, 3s 8d to 4s 4d. Mutton, English wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 8d. Scotch tegs and wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 8d. Veal, 3s 8d to 5s. Pork, 3s 8d to 4s 4d per stone.

FOREIGN.

Deptford, Monday.—To-day's supply, compared with Monday last, showed an increase of 196 head, and consisted of 314 from the United States and 625 from Canada (325 of which were ranch cattle). Trade taken as a whole was of a slow nature, both in regard to tone and value, the former, viz., States cattle being of an inferior quality. The best on offer were quoted at from 4s to 4s 2d; Canadians, 3s 8½d to 3s 10½d; ditto Ranchers, 3s 4d to 3s 6d. Besides the above 300 States and Canadian cattle were withheld from sale.

Liverpool, Monday.—Supply of stock practically unaltered. Demand good for cattle and prices better for all descriptions. Sheep trade of firmer tone for all classes; finished medium weights about 2s dearer; strong and rough sorts also in sellers' favour. Prices:—Beef, 6¼d to 4¼d; mutton, 9d to 9½d per lb. At market 1,334 cattle and 5,472 sheep.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—Demand is exceedingly slow, especially considering time of year; price, however, continuing to keep firm for both home and foreign made.

Cotton Cake.—Egyptians are offered somewhat freely, and prices have eased for those and London makes.

Decorticated Cotton Cake and Meal.—Cake is a little scarce on spot, and meal meets with as slow sale.

Linseed markets keep firm, and the feeding sorts find a ready demand.

Linseed Cakes.	£ s. d.	Per ton. £ s. d.
English Linseed Cake, ex mill	7 17 6 to 8	0 0
Calcutta Linseed Cake, ex quay	7 15 0	—

Russian	42 to 44

HOPS.

Borough, Monday.—There is little or nothing fresh to report on this market. The passing trade is limited to consumptive orders at nominal rates current.—W. H. and H. Le May.

Worcester, Saturday.—Trade continues about the same—that is, there is a steady demand for all classes of hops at late rates, but fine hops are the most saleable and hard to find. Only a sprinkling of growers at market to-day, those who have not sold preferring to wait in hope of better prices. Only 117 pockets weighed this week, making 17,030 to date.—Charles Faram and Co.

SEEDS.

Mark Lane, Monday.—There is more movement in the market. Rape firm. Mustard unchanged. Rye firm, but scarce. Peas move freely, but supplies still limited. In clovers, more business in whites and Alsikes, prices firm. Trefoils and reds: Good business in English seeds at rising prices. In grasses, Perennials and Italians selling freely; prices unchanged.—John Pickard and Co.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market on Monday trade for fat beasts of both prime and second quality, notwithstanding a smaller supply, opened of a slow nature, and continued so throughout the day; however, best beasts upheld the previous week's values, whilst middling quality cattle ruled slightly easier. A few cross-bred Scotch made our top quotations, and were soon disposed of. The arrivals from Ireland were smaller, and consisted of 61 Dublins and 39 Waterfords (no store cattle being included); trade for the latter ruled firmer, in some cases sellers being able to make an advance in values. We again have to note a very limited inquiry from both town and country buyers for fat butchering cows and bulls; however, sellers were not willing to accept any further decline. On Thursday a slightly larger number of beasts were offered for sale, the supply consisting entirely of fat cows, bulls, and rough cattle, all sales of which were governed by late currencies.

At the Foreign Cattle Market, Deptford, with a fair average supply of both States and Canadians, trade ruled of a firm and steady nature, prices becoming firmer as the week advanced. Only two markets were held during the week, viz., Monday and Saturday. The total number of beasts on offer at both markets was 3,699, as against 3,939 during the preceding week, consisting of 1,270 British (decrease 30) and 2,429 foreign (decrease 210). The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Scotch cross-breds, 4s. 6d. to 4s. 8d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. 2d. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 4s. to 4s. 2d.; 90 stone States, 4s. 2d. to 4s. 4d.; 90 stone Western States, 3s. 8d. to 3s. 10d.; 95 stone Canadians, 3s. 11d. to 4s. 1d.; ranchers, 3s. 2d to 3s. 4d.

The sheep trade at Islington was confined to Monday, and opened of a slow nature, but steady in regard to value for both wethers and ewes. Scotch descriptions ruled firmer, but not sufficient to warrant our quoting any higher rates, whilst Irish sheep, on the other hand, for anything small and choice made an advance of 2d per 8 lb. in value. A few met with buyers at late currencies. No sheep were offered for sale at Deptford. The total number on offer was 3,840, as against 4,490 during the preceding week, showing a decrease of 650. The following were the top rates obtained per 8 lb. (sinking the offal):—7½ to 8 stone Downs, 5s. 10d. to 6s.; 8 stone Scotch, 6s. to 6s. 2d.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Irish, 5s. 4d. to 5s. 6d.; 10 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone half-breds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 4s. to 4s. 2d.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Only 15 calves on offer, trade for which ruled of a slow nature the best being quoted at from 4s. 10d. to 5s. per 8lb. (offal given in).

Trade in the West.

Cattle are once again able to move about on the land without the discomfort of being ankle-deep in mud and slush, and sheep at the same time with dry fleeces—to which they have been strangers for some weeks—and, as there is abundance of keep everywhere, which the few slight frosts we have had have in no way seriously affected, stock generally are thriving pretty well. There is, however, scarcely so good a demand for grazing beasts at the present moment as we have found in some previous years. In proof of this we may quote £30 as an outside figure for the best young graziers, a more general range being from £24 to £28 10s.; plainer sorts and cows, which are by no means as easy to dispose of, selling from as low as £11 up to £22 or £23; stirk heifers bringing from £8 to £11 per head for the more serviceable classes. Milch beasts continued to meet as ready a sale as they have been doing all along, and, despite the large numbers that have been bought up in the district, many more are still wanted. Good deep-milking heifers sold readily from £18 to £23 10s., and plainer grades £15 to £17. Cows to be depended upon for their milk are also very dear for the best, some of which sell up to £18 for especially good milchers, though a more average price is from £13 or £14 to £17, those selling at lower rates being of little further use for dairy purposes. The demand for milk, however, seems as difficult to meet as ever, and whilst this continues to be so every reliable milcher brought to market can be relied upon to bring its owner a good return. And precisely the same is the case with in-calvers, those calving down speedily selling from £14 to £16, and others of later date from £10 up to £13 or so. As regards store sheep values have in no respect undergone the slightest modification—rather the reverse. Extraordinarily high prices are being realised at the closing fairs for the few sheep yet remaining to be disposed of, and where we find ewes still making from 46s. up to 71s. apiece at this time of the year, where, as a rule, only the refuse of the farm is being offered—chilver lambs to 56s., wether lambs to 52s., and couples from 65s. to 70s. for singles, and to 110s. for doubles—it must be admitted that a better season for sheep has seldom, if ever, been known; in fact, it beats all past records.

The fat stock markets have hardly been marked by such satisfactory features all round, there having been a drooping tendency in prices in one or two rather important respects. Good class fat beasts—ripe steers and heifers—must not be included in this category, as the prices of these have been well maintained, the best weights selling up to 12s. per score; but the plainer kinds are distinctly lower in value, without at the same time attracting anything like the demand there is for better class bullocks; second-grade beasts only make 9s. 6d. to 10s. 6d., this being principally for cows. Best steers and heifers may be quoted from £15 (for small heifers) up to £23 10s for weighty steers; fat cows, £13 10s. to £19 10s. for good meaty animals. Fat calves show no decline in value, and whilst the demand continues so greatly in excess of supplies there is very little likelikood of values being appreciably lower. Best calves now sell from £3 10s. up to £7 apiece (generally computed to range from 8½d. to quite 9d. per lb. for the best-finished calves); seconds, which may be quoted from 50s. to 66s. (7½d. to 8d.). In mutton there are some exceptionally well-finished tegs and others coming to market, the best of which are selling from 48s. up to 63s. apiece (or only 9d. per lb.); ewes making 42s. to 54s. (or 7½d. to 8¾d.). Pigs are no dearer than they were, and in some cases we must quote values somewhat easier, especially for coarse weights, which have dropped back to 8s. and even less, baconers making 9s. 6d. to 10s., and choice young porkers up to 10s. 9d. for the neatest weights, and 10s. 6d. for ordinary runs.

Trade in Scotland.

The number of fat cattle on offer was considerably larger, and a better show as to quality. These met a steady trade at prices just the turn higher, but without quotable advance. Secondary cattle met a very dull, dragging trade, and a fall of something like 15s. per head had to be accepted. Sheep and lambs in full average numbers. A good inquiry has been got, and a clearance effected at satisfactory prices. Fat calves exceedingly dear, while pigs were without change. This being "Hallow Fair" week, there was a large supply of store cattle. Buyers were fairly numerous, and a good demand was met at higher prices than those current two weeks ago. An entire clearance was effected, except a few small rough cattle. Store sheep in moderate numbers, and generally of an indifferent class, and they met a slow, dull market. Milch cows a small show, and they met a dear trade. Quotations:—Top price of cattle per live cwt., 39s. 2d; current, 36s. to 38s. 6d.; mutton, 6d. to 9¼d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland

Dublin market on Thursday last had a slightly better supply of stock, and buying was perhaps somewhat better than the last day. Still, however, things were not good, and the bad markets, which have been the rule lately in London, Liverpool, Manchester, and other English towns, are being felt very much over here. The Dublin market was well supplied with beef, there being 4,664 beasts penned. A good number of cattle had been secured at Mullingar Fair, which made buyers less anxious to get more at Dublin. Buying was very slow in the early morning owing to the stiffness of sellers, who were holding out for better terms. Although there were no determined stiffer prices, yet tendencies for first-class cattle were slightly upward. A very fine lot of Aberdeen-Angus crosses were sold to a London buyer at 34s. per cwt. (live weight) by Mr. Gavin Low for Mr. Purdon. Sales generally were more easily effected than the last market. Half-meated and coarse dairy cows hard to dispose of. Best ox and heifer beef sold at from 49s. to very choice lots at 54s. per cwt.; good second-class beef, 43s. to 47s. 6d.; coarse beef at from 38s. to 42s. 6d. per cwt. Medium-weight heifers sold freely at the opening hours of the market, but settled back to worse prices towards the close.

Sheep were a larger market than last day by some hundreds. Heavy ewes were not wanted, and a good number were left over unsold. The continued arrivals of Dutch sheep still continue, and make the sheep dull of sale on this side of the Channel. A large number of heavy ewes in Dublin market were practically neglected. At this cattle market the only class of sheep that changed hands freely was choice Cheviots, which sold freely, and medium weight aged wethers also sold well. Coarse grades of sheep did not clear. Choice wether mutton made from 7d. to 7¾d. per lb. (Cheviots worth 1s. 2d. per lb. more), ewe mutton, choice ewe mutton for 6½d., inferior sheep from 5d. to 6d. per cwt.

Prime veal was scarce and dear, but coarse calves were not looked after and were only worth from 8d. per lb., prime veal was worth 7d. and 8d. per lb.

Milch cows were in moderate supply, and a slow demand; it was found difficult to maintain late rates. First-class cows made from £18 to £20 each; second quality, £10 to £16; and inferior, from £8 upward.

A large sale of store cattle was held by Messrs Wilkinson, and was very successful. The pig market was well attended. Prime bacon sold at 48s. to 50s. for choice light bacon pigs; coarse pigs from 36s. to 40s. per cwt.

LONDON.

Central Market, Friday. — Fair supplies and trade continues very slow. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 4d to 4s 8d; Deptford and Liverpool killed, 3s to 3s 7d; refrigerated hindquarters, best, 4s 2d to 4s 3d; ditto, seconds, 3s 8d to 3s 10d; ditto, forequarters, 2s 4d to 2s 6d; inferior beef, 2s 2d to 2s 8d; mutton, Scotch wethers, 4s 10d to 5s; ditto, tegs, 4s 8d to 5s; ditto, ewes, 3s 4d to 3s 8d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 4d to 3s 8d; Dutch sheep, 4s to 4s 4d; veal, 3s 8d to 5s; English pork, 3s 8d to 4s 4d; Dutch ditto, 3s 8d to 4s 2d per 8 lb.

Islington, Thursday.—To-day's supply of beasts consisted entirely of fat cows and bulls from the South-Western counties, for which trade ruled slow owing to so few buyers being present, but late currencies governed all transactions. Top prices paid per 8 lb.:—Fat cows, 3s 4d; extreme, 3s 6d; fat bulls, 2s 6d to 3s; extreme, 3s 2d. No sheep offered for sale. Calf trade not worth noting.

COUNTRY.

Ashford, Tuesday.—Beef sold slowly at late rates, best making up to 4s 8d. Mutton trade also rather dull; best Down sheep made up to 6s, and small Kents 5s 6d to 5s 10d, with ewes 4s 2d to 4s 10d. Veal sold better, making up to 5s 8d for best calves. Pork a better trade at 3s 4d to 4s.

Aylesbury, Wednesday.—The stock at market comprised 320 fat sheep and 150 very choice quality beasts. There was a slight improvement in the trade in both departments, and practically all were cleared at last week's quotations.

Berwick, Saturday.—The supply numbered 384 cattle, 112 less than the previous week. Attendance of farmers and buyers fair, and a steady trade. Calves, £5 15s to £6 10s; heifers, £7 10s to £10 10s; stirks, £9 10s to £12 10s; two-year-olds, £13 to £14 10s; Shorthorn bulls, £12; cows, £16 to £23.

Birmingham, Thursday. — Fair supply of pigs; small supply of beasts and sheep. Fair trade for pigs; beasts and sheep slow. Quotations:—Beef, 5d to 6¼d per lb; Herefords, 6¼d per lb; mutton, 6d to 8¾d per lb, a few 8¾d per lb; bacon pigs, 9s per score; cutting pigs, 9s 3d to 9s 6d per score; porkets, 10s 3d to 10s 6d per score; sows, 7s to 7s 4d per score.

Bristol, Thursday.—At the market to-day there was an abundant supply of fat cattle, but

the demand was slow and trade quiet, quotations falling to 56s per cwt, and secondary to 53s. Sheep and lambs were offered in smaller numbers than usual, and with moderate demand values hardened, best wethers being quoted at 8½d per lb, prime wethers at 8¼d, heavy wethers at 7¾d, and ewes at 6½d. The supply of pigs was limited, and the price of baconers fell to 8s 6d.

Calne, Friday.—Prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 8s 6d per score; 8 sc. 11 lb to 9 sc. 0 lb., 8s 6d per score; 9 sc. 1 lb to 9 sc. 10 lb, 8s 3d; 9 sc. 11 lb to 10 sc. 10 lb, 8s 0d. Pigs outside these limits at their value.—C. and T. Harris and Co.,

Canterbury, Saturday.—To-day's market was well supplied with Irish horned stock, but trade was not particularly fast. The best yearlings were making from 8 to 10 guineas, with second quality animals at from £6 to £8; two-year-old heifers, £11 10s to £13 10s; and steers up to £15. There were very few sheep on offer.

Carlisle, Saturday.—About 300 Irish cattle were on the Sands. Fair attendance of buyers, and a better trade was experienced. Wintering heifers, £8 10s to £11 10s; stall-feeding ditto to £14 10s; polled bullocks, £8 10s to £11 10s.

Chester, Thursday.—There was a good supply of store and dairy stock, but no sheep or fat cattle were on offer. The demand was good, especially for the best dairy cattle, and trade was satisfactory to sellers. Prices:—Milch cows, £18 to £23; barren cattle, £9 to £10; stirks, £8 to £10, and heifers, £9 to £15.

Derby, Tuesday.—Fair attendance, and prices steady at late rates, with the tendency of anything being towards higher prices. Beasts, 5½d to 6¼d; calves, 7½d; sheep, 7½d to 9d per lb.

Doncaster, Saturday. — Good supply of cattle, which included plenty of Irish stores; but milch beasts were rather scarce and dear. Milch beasts, £17 to £23; bullocks, £12 to £17; heifers and drapes, £11 to £14 10s; stirks, £10 to £11; young stock, £7 to £10 each. Very restricted supply of sheep, but sufficient for all needs, trade being slow at about late prices, which ranged from 40s to 48s each.

Dorchester, Saturday.—Only limited offers of stock were on sale at Messrs. Ensor's repository to-day, and, with a good steady inquiry for all the more serviceable grades of stock, milchers especially, a ready clearance was with very little difficulty effected. Grazing cattle, although there is abundance of keep almost everywhere, was not a fast trade, except for the best, which made very satisfactory prices, ranging from £22 to £26 or £27 per pair for the youngest and freshest condition beasts—those soon coming into beef—plainer kinds meeting a much slower sale at from £16 10s to £21. Milchers were very dear, heifers of highest class being now much sought after at prices ranging from £17 10s to £21 or £22, and plainer kinds from £13 10s up to £17. Young stock brings slightly enhanced values. Fat bullocks ruled firm, with a good consumptive demand at 11s to 12s for really ripe heifers and steers; fat cows less, and all sold at 10s to 10s 6d. Little doing in mutton, but rates keep firm.

Dublin, Thursday.—Finished cattle were in good demand at slightly better rates. Secondary and inferior sorts easier to exchange, but prices show no improvement on late quotations. Choice light weight sheep and suitable hogs for home and export purposes were easier sold. Ewes and heavy wethers showed no advance on late rates. Cattle—Live weight (best), 29s 6d to 31s 6d per cwt; secondary and inferior sorts, 26s to 29s per cwt. Mutton (dead weight), 6½d to 7½d per lb: extreme, 7¾d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday.—Plentiful supplies. Cattle: Steady demand; horned bullocks to £16 15s, polled bullocks to £14 10s, black polled cattle to £13 15s; stirks to £11 15s. Sheep: Quiet inquiry; Cheviot ewes to 31s; lambs, 21s; half-bred lambs to 28s 6d; half-bred ewes to 40s; Cows: Fair demand; Shorthorns to £25 15s; Ayrshire to £20; crosses to £24 10s.

Glasgow, Wednesday.—Fair show of cattle; prime bullocks scarce and sold dear; secondary sort also met healthy inquiry at late quotations. Top, 63s to 65s; secondary, 56s to 58s per cwt. Average numbers of sheep penned, and for prime young sheep a good inquiry was made. Ewes also were in demand at slightly firmer prices. Best mutton, 9d to 9¼d; secondary, 8¼d to 8¾d per lb.

Gloucester, Saturday. — Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves: A large supply with an extremely good trade, the best prices being £24, £23 10s, £23 5s, £23, £22 12s 6d, &c. Store cattle: A large supply of store cattle, with a keen demand for best qualities.

Hereford, Wednesday.—The trade continued slow for beef, of which there was a fair supply, the very choicest quality bullock and heifer making 6d to 6½d, fat cows 5d. Useful store cattle found ready customers. Calves were a small supply, and trade was brisker for fat ones at 6d to 6½d per lb, A small supply of mutton met very firm trade, wethers making 8d, ewes 6d, tegs 8½d. Store lambs few. Trade was fairly firm for a large supply of pigs, porkers 5½d to 6d, nice quality bacons 5½d to 6d.

Leicester, Saturday.—With larger consignments of home-bred store stock and a better attendance of buyers and dealers, trade showed an improvement, although a large number failed to find buyers. Choice milch cows, £20 to £23; good lots, £18 to £19; secondary, £14 to £16; Shorthorn bullocks, £10 10s to £13 10s; Irish cattle, £11 10s to £15; Welsh cattle, £9 to £14; young stock, £5 to £7 10s; and calves, 20s to 40s each.

Lincoln, Friday.—A good consignment of horned stock, and a fair demand. Young beasts, £9 to £11; strong ditto, £13 to £15; milch cows, £17 to £23. Lambs made 36s to 44s each.

Lynn, Tuesday.—An average show of fat beasts met late rates, except for very best stall-fed, which made 8s, others 7s to 8s. Only average show of stores for the annual fair, and trade slow, £6 to £17 each. Small show of fat sheep; average trade. Store sheep, 45s to 48s each. Store lambs realised from 36s to 45s each.

Manchester, Friday. — Beef: Firsts, 5d; seconds, 4d to 4½d; thirds, 3d to 3½d per lb. Mutton: Firsts, Cheviots, Scotch, 7¾d; others, 7½d; seconds, 6¾d to 7d; thirds, 5½d to 6d. Veal: Firsts, 7d; seconds, 6d to 6½d; thirds, 5d to 5½d. Bacon pigs: Firsts, 5d; seconds, 4d to 4¾d; thirds, 3d to 3¾d. Porket pigs: Firsts, 6¾d; seconds, 6½d to 6¾d; thirds, 5¾d to 6d.

Newcastle, Tuesday.—The supply of cattle was rather smaller, but trade firmer for prime heifers and stores, and prices were up 3d, other sorts being steady but unaltered. Quotations:—Prime heifers, 7s 6d to 7s 9d; second class, 6s 9d to 7s; prime steers, 7s to 7s 6d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Sheep were a rather larger supply, with trade firm, but no quotable alteration in price. Quotations:—Choice shearling sheep, 8½d to 9d; strong heavy, 8d to 8½d; choice hoggs, 8¾d to 9d; second class, 8½d to 8¾d; ewes, 6d to 6¾d; rams, 5d to 6d per lb. Trade in veal was firm at ¼d per lb advance, making 5d to 8d per lb.

Newport, Wednesday. — Large supply of cattle, sheep, and lambs. Short supply of calves and pigs. Large attendance of buyers, and good, brisk trade all round. The quotations were:—Best beef, 6d to 6½d; seconds, 5¾d; cows, 4½d to 5d; best wether mutton, 8½d to 8¾d; ewes, 6¾d to 7¼d; lambs, 9½d; calves, 7d; porker pigs, 10s 3d to 10s 9d per score; baconers, 9s 3d.

Norwich, Saturday.—Fat cattle were a small show, and consisted mostly of second-quality animals, which met a slow trade at 6s 9d to 7s 3d; best cattle were no cheaper than last week, and made about 8s per stone of 14 lb. A small supply of sheep, which were dear, hoggets making 9½d, and shearlings 9d to 9½d per lb Trade was a little better for porkers at 6s 9d; baconers remained unchanged at 6s to 6s 3d; and sows made 5s 6d per stone. A much smaller show of store cattle, and quality not so good, but trade was much sharper, and most of the animals were sold. Some mixed lots of two and three-year olds made from £13 to £17; yearlings, £9 to £11; and a few small ones shown made £4 to £6 10s per head. Rearing calves were cheaper, at 25s to 50s each. Not many store sheep on offer, but there was more demand, and they met a fair trade at prices ranging from 42s to 50s. Pigs were a better trade at 12s to 25s each.

Nottingham, Saturday.—Smaller show of milking beasts, and trade brisk. The best cows realised £19 to £23, and in-calf heifers £15 to £19. There was a shorter supply of store stock. These met with a fair trade; strong heifers and steers, £11 to £15, and younger beasts, £6 to £10. Calves, 25s to 45s.

Preston, Wednesday.—The supply of cattle and sheep was below the average both in regard to number and quality. Choice sorts were scarce. Local fed heifers made up to 6½d; secondary ditto and Irish, 6d; prime young cows and bulls, 5½d to 5¾d; coarse ditto, 4½d to 5d; choice lambs and hoggs, 9d; secondary ditto, 8d to 8½d; ewes, 6¾d; secondary ewes, and tups, 5½d to 6½d; calves, 7d to 7½d per lb.

Retford, Saturday.—Not a very large show of store stock. A thin attendance of buyers, and a fair trade at barley late rates. Milch cows made £15 to £20; young stock as before, and calves, 35s to 45s each.

Romford, Wednesday.—Average supply of fat beasts; trade a little better. Best beasts, 4s 6d to 4s 8d; middlings, 4s to 4s 2d per stone. Calves in short supply; prices better, at 5s 2d to 5s 4d per stone. Sheep in short supply; trade rather better. Best small sheep, 6s 2d to 6s 4d; larger sheep, 5s 6d to 5s 8d per stone. Ewes in average supply; trade a little better at 4s 2d to 4s 4d per stone. No store beasts on offer. Fair supply of milch cows; trade rather better. Larger supply of pigs; trade better. Small porkers, 3s 10d to 4s; large hogs, 3s 4d to 3s 6d per stone.

Sheffield, Tuesday.—Small show and little business done. Good milch beasts, £22 to £24; ditto secondary, £15 to £17 10s.

Shrewsbury, Tuesday. — Smaller supply of store cattle, with a very slow trade. Fair show of milking stock. Highest prices for cows with calves was £25 10s. Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d to 9¼d per lb; ewes, 7½d to 8d per lb; lamb, 9d to 10d per lb; veal, 7½d to 8d per lb; porket pigs, 9s 6d to 9s 9d per score; bacons, 8s 9d to 9s per score.

Stockton, Wednesday.—There was about the usual show of best quality cattle, which met with a slow trade at 7s 6d to 7s 9d per stone, prices being firm. Rougher kinds sold at 6s to 6s 6d per stone. Young sheep and lambs made 9d per lb; ewes, 6½d; and tups 6d. There was a reduction of 3d per stone all round in pigs, small porkers making 7s 3d to 7s 6d per stone; mediums, 6s 9d; and sows 5s 9d to 6s.

Thame, Tuesday.—There was again a capital entry of stock, although not quite so large as the previous week. Best beef continues to make a satisfactory price, but unfinished and middling cattle are most unsaleable. Sheep continue scarce and dear. Tegs off the ploughing being in great demand. Messrs. Bond and Burrows' sale comprised 83 fat beasts, 112 fat sheep, 78 fat and weaning calves, and 113 fat and store pigs. Fat oxen made from £16 10s to £20; fat heifers, £14 to £19; fat wethers, 49s to 55s 6d; fat ewes, 40s to 52s 6d; fat calves, £3 to £5; weaning cow calves, 30s to 60s; bull calves, 15s to 43s; bacon hogs, 70s to 99s; porkets, 28s to £5; store pigs, 14s to 22s.

Truro, Wednesday.—Attendance fair, business fairly brisk. Fat bullocks, 53s to 58s per cwt; barreners, 49s to 45s; store bullocks, 40s to 45; cows and calves, £11 to £15; rearing calves, 20s to 40s; wethers, 7d to 7¼d per lb; ewes, 5d to 5¼d; lambs, 7d to 7½d; pigs, 4s 6d to 6s 5s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4¾d to 5d.

Wolverhampton, Wednesday.—Trade fair; supply shorter. Beef, 5d to 6¼d per lb; mutton, 6¼d to 9d per lb; veal, 7d to 8½d per lb.

Worksop, Wednesday.—Small supply of fat stock. Beef to 7s 9d per stone, an advance of 6d per stone; Southdown wether and cross-bred shearlings to 9¼ per lb; ewes, 6½d to 7d per lb.

CHEESE.

Glasgow, Wednesday.—The arrivals of home cheese were small, and trade was limited. Prices are practically unchanged from last week. Cheddars, 62s to 66s per cwt.; Dunlops, 60s to 63s. Demand slow for Canadian; October made cheese 61s per cwt.

Newport, Wednesday.—There was a fair demand and average attendance. Quotations:—Caerphillies, 48s to 56s per cwt; fancy dairies, 57s to 58s; Derbys, 66s to 68s; truckles, 63s to 66s; Cheddars, 61s to 65s.

DAIRY PRODUCE.

London, Friday.—Butter.—The demand for Australian butter has been slow this week, and prices are down from 2s to 3s per cwt. "Choicest" saltless brings 120s, and salted 118s, with an exceptional 120s. Foreign butter feels the dulness in our markets, and the Danish quotation is down 2 kroner, which makes it 2 kroner below the corresponding week of last year. Other varieties are also on the downward tendency. Siberian arrivals are shrinking, and it is reported they will still further diminish in the near future. Cheese.—There has been a slightly better demand this week, although cables are coming easier, arising no doubt from the financial situation on the other side of the Atlantic.

HAY AND STRAW.

Birmingham, Friday.—Small supply of hay. No quotations obtainable.

Hereford, Wednesday. — Very dull trade in hay and straw, without quotable change in value.

Leeds, Tuesday. — Hay and straw in the warehouses moves steadily into consumption and prices are firm all round. Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—Good supply of hay and seeds, and a fair trade. Best hay, 55s to 60s; inferior ditto, 50s to 55s per ton on the ground; straw, 30s per ton at the stack.

Manchester, Friday. — Hay, 5½d; clover, 5d to 6½d; straw, wheat, 2½d to 2¾d; oat, 2¼d to 2½d per stone.

Nottingham, Wednesday.—Large supplies on offer, which met with a slow sale, except for

best qualities. Quotations:—Inferior to good hay, 40s to 60s; prime ditto, 80s to 90s; inferior to good clover, 45s to 60s; prime ditto, 85s to 95s; wheat straw, 45s to 55s; old hay, 90s to 100s; old seeds, 95s to 100s per ton.

Sheffield, Tuesday.—A good supply and a fair trade at late rates. Choice seeds, £4 5s to £4 10s; choice hay, £3 15s to £4 5s; straw, £2 10s to £3.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Good supply and steady demand. Quotations for English produce: Grapes, 8d to 4s; peaches, 3s to 12s per dozen; cranberries, 9s 6d to 11s per case; pears (English Pitmaston), 1s 6d to 3s per dozen; med ars, 3s to 3s 6d per crate; apples, 4s to 12s 6d per bushel; tomatoes, 4s to 4s 6d; chestnuts (Redan), 7s to 12s; walnuts (Grenoble), 6s to 7s 6d; sprouts, 1s 6d to 2s; spinach, 2s to 2s 6d; beetroots, 1s 3d to 1s 6d per bushel; cucumbers, 2s 6d to 4s; endive, 1s to 1s 3d per dozen; celery, 7s 6d to 12s 6d per dozen rolls; horseradish, 10s to 15s; sprue, 8s to 10s per dozen bundles; cabbages, 3s 6d to 5s; cauliflowers, 4s to 6s per tally; onions, 3s 6d to 4s per cwt.; seakale, 9s to 12s per dozen punnets; mushrooms, 6d to 1s per lb: potatoes, 75s to 100s per ton.

POULTRY AND GAME.

Smithfield, Saturday.—Good supplies slow demand. Pheasants, 4s to 5s; young partridges, 4s 6d to 5s; old, 2s; young grouse, 5s to 6s; old, 3s; black game, 3s 6d to 4s per brace; geese, 4s 6d to 5s 6d; country ducks, 2s 6d to 3s 3d; wild ducks, 1s 9d to 2s; Surrey fowls, 3s to 3s 9d; Sussex fowls, 2s 9d to 3s 6d; Lincolnshire fowls, 2s to 3s; Essex fowls, 2s to 2s 6d; Irish fowls, 1s 6d to 2s; quails, 9d to 1s; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 2s 6d to 2s 9d; Scottish hares, 1s 4d to 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 6d to 10d; live hens, 1s 4d to 1s 8d each; Australian rabbits, 5s 6d to 7s per dozen; cock turkeys, 8d per lb; hen turkeys, 3s 6d to 4s 6d each.

CORN STATISTICS

Imports of Foreign and Colonial Corn.

Statement of the quantities of Foreign and Colonial Corn Imported into the United Kingdom in the week ended Saturday, Nov. 16, 1907:—

Wheat	1,801,100 cwts.
Wheat-flour	186,200 ,,
Barley	693,800 ,,
Oats	272,400 ,,
Maize	1,547,700 ,,

And in the corresponding weeks of previous years, viz.:—

	1906. Cwts.	1905. Cwts.	1904. Cwts.	1903. Cwts.
Wheat	2,159,200	1,678,400	2,046,300	2,577,400
Wheat-flour	255,600	407,200	321,300	568,400
Barley	744,000	665,700	472,500	1,082,900
Oats	209,000	386,500	402,700	516,400
Maize	643,800	254,400	446,900	676,600

Weekly London Averages.

An account of the Quantities and Prices of British Corn bought on the London Market and in the area within five miles from the Royal Exchange during the week ending Tuesday, November 12, 1907:—

IN THE TRADE

Printed and Published by the Proprietors, at the Offices, 3, Wellington Street, Strand, London, W.C.—November 18, 1907.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The agricultural position continues to be fairly satisfactory, the ordinary labours of the season proceeding steadily, though the very short days are reduced still further by the mists which are seldom off the fields before ten in the morning and rise once more from the soil not long after four has struck. The farmer, however, will recall the fact that we are now within less than a month of the shortest day.

The publication on Thursday last of the Board of Agriculture crop estimates was an agreeable surprise, as it has hitherto been regarded as expeditious if the figures were available by Smithfield week. The general view taken of the 1907 harvests at St. James's Square is optimistic, and the actual yields in Great Britain are put at the following totals:—

Wheat	6,901,166 qr.
Barley	7,545,066 ,,
Oats	16,800,285 ,,
Beans	1,328,669 ,,
Peas	592,091 ,,

As compared with the average yield per acre, the following surpluses are disclosed:—

Wheat	2·75 bushels over averaged.
Barley	2·12 ,, ,,
Oats	3·75 ,, ,,
Beans	5·00 ,, ,,
Peas	2·34 ,, ,,

If these are the results of a bitter May, a wet June, a cold July, and a broken August, it is clear that the relations between weather and crops hitherto assumed in text books will require considerable revision. The wheat is thick in the skin, and runs to bran rather than flour in all too many instances, while really top-grade malting barley is the greatest of rareties. On the other hand, oats are undoubtedly a very large crop, and of very fair average weight, while beans and peas show very good quality, and rye, considering the character of the summer, is most surprisingly good. It is most difficult to say how far the official views are in excess of fact; we must guard ourselves against misconception over weather influences. A perfectly abominable summer has given both England and France the lowest death-rate for the hot months ever chronicled, and the French Minister of Agriculture assumes the French cereal yields to be above average. At the same time, one is forced to ask oneself, "Can all the world be wrong?" A chilly, damp, and windy summer may give us 10,430,000 tons of hay—that we can very well believe—but can it give us not merely average but superabundant yields of the white and golden crops which are peculiarly the products of the sun? Do other lands whose summers are damp and chilly and cloudy devote themselves to cereals?

The yield of hay is put at about 4 cwt. per acre above the average, but the whole Government idea of a good hay crop will strike many of our readers as extremely moderate. Permanent grass in an ordinary season is credited by the Government with a yield of not quite 24 cwt. to the acre; clover, according to the same authority, should give 29¼ cwt. to the acre. The returns for potatoes, mangolds, swedes, and turnips are not yet available, and will be generally accepted as accurate if not collected until farmers have not only raised the last of the crops in the soil, but also begun to send their potatoes into full sale and put their roots at the disposal of the cattle-feeding side of the farm. The potato crop in Great Britain in an ordinary year averages 6 tons to the acre, swedes and turnips averaging 16 tons, and mangolds 20 tons.

The markets since the 18th have been in a quandary. Of themselves they are fairly strong, but the cloud on general finance lifts very slowly, and the stringency of the money market causes the number of weak holders of imported produce gradually to increase in number. There are a good many firm holders at Mark Lane and the other leading exchanges, but the refusal of Smith and Brown to take a penny less for their corn than when the month was young does not prevent the buyer closing with Jones and Robinson, who are willing to make some reduction now that the month is old. Moreover, the market reporter must needs chronicle the business which is done, and not that which fails to pass.

This needs, however, to be mentioned, otherwise the real position of trade would be misunderstood.

On Thursday the Turkish Government prohibited the export of barley from both the European and Asiatic provinces of that Empire. This will tend to rob us of the very useful steeping and brewing qualities which are produced in that part of Asia Minor familiar to the West mainly as the region of the Seven Churches of Laodicea, Pergamos, and so forth. The Turkish province of Ouchak and the antique part of Smyrna have given these names to the chief supplies of these sorts of barley, but a good deal is shipped from the Sea of Marmora and the historic neighbourhood of Troy. European Turkey produces feeding barley of light weight, and about equal in market value to good Persian.

The New American maize crop is now secured, and probably reaches the high total of 320,000,000 qr. It is damp and needs more time than usual to dry, but the earlier districts bordering on the Gulf of Florida will probably be able to ship 1,000,000 qr. before the middle of January, by which time Charleston, Newport-News, Baltimore, &c., will be in a position to take up the running.

Supplies on passage thus compare with a year ago:—

	1907.	1906
Wheat, qr.	1,776,000	1,755,000
Flour, sks.	222,000	209,000
Barley, qr.	610,000	710,000
Oats, ,,	200,000	390,000
Maize, ,,	862,000	920,000

Wheat shipments last week from the leading export towns were as follows:—

From America	501,000 qr.
,, Argentina	12,000 ,,
,, Russai	310,000 ,,
,, Roumania	90,000 ,,
,, India	20,000 ,,
,, Australia	10,000 ,,
Total	943,000 ,,

To this must be added 128,000 sacks of flour shipped by the United States. Of barley, Russia shipped 401,000 qr., and of oats 108,000 qr., while maize shipments were 100,000 qr. from Roumania, 30,000 qr. from Russia, 80,000 qr. from Argentina, and 109,000 qr. from America.

Some wheat markets are now below 35s., but the majority keep at rather above that level. The week's gradient is:—

Mark Lane	36s 3d. per qr.
Chichester	34s. 4d. ,,
Range	1s. 11d. ,,

The sales of British wheat at the statute markets since harvest have not been very large, but it is, of course, within a very recent recollection that the ingathering was late beyond the average:—

This season	814,000 qr. at	33s. 7d. per qr.
Last ,,	824,000 ,,	26s. 2d. ,,

Barley has a wider range of value:—

Chichester	33s. 9d. per qr.
Peterborough	26s. 10d. ,,
Range	6s. 11d. ,,

Canterbury quoted 31s. 4d. per qr.

Oats had the following range:—

Reading	19s. 10d. per qr.
Cambridge	18s. 5d. ,,
Range	1s. 5d. ,,

These prices for oats are by no means unsatisfactory. Nineteen shillings was exceeded not only at Reading, as above, but also at Mark Lane, Chichester, and Nottingham.

The sales of British barley are much below the average, and even allowing for the late harvest make it a little difficult to credit the Goverment's estimate of the yield. However, we shall see what December, January, and February have to sell, and the sales of last week, compared with those of the previous ten weeks, are on the side of the official figures of yield:—

This season	1,289,000 qr. at	26s. 1d. per qr.
Last ,,	1,748,000 ,,	24s. 9d. ,,

The sales of British oats have been very large, and last week were twice those of an ordinary season. Since September 1 they have been as follows:—

This season	501,000 qr. at	18s. 1d. per qr.
Last ,,	386,000 ,,	16s. 7d. ,,

The imports of the United Kingdom last week were:—

Wheat, 421,000 qr.: a good supply.
Flour, 75,000 sks.: a small arrival.
Barley, 195,000 qr.: a large supply.
Oats, 101,000 qr.: a bare average.
Maize, 362,000 qr.: extremely heavy imports.

Since September 1 imports have been as follows:—

Wheat, 4,975,000 qr.: more than last season.
Flour, 1,300,900 sks.: less ,, ,,
Barley, 2,050,000 qr.: ,, ,, ,,
Oats, 790,000 qr.: ,, ,, ,,
Maize, 2,955,000 qr.: more ,, ,,

Thus wheat and maize have been in large supply; the other three staples in less than usual supply. The figures for barley are good in themselves, but were exceeded in 1906, and in September, October, and November Russian new crop shipments are apt to give us high totals.

Flour, although a little cheaper from a week ago, shows an advance of 8d. to 1s. 3d. per cwt. on the monthly returns of the Board of Trade. Bread has advanced on the month ½d. per lb. at Bolton, Gateshead, Hull, Ipswich, Manchester, Newcastle, Norwich, Dundee, and Dublin. As compared with this time last year the advance on the quartern loaf is 1d. at Bolton, Bristol, Cardiff, Hull, Ipswich, Leeds, Leicester, Manchester, Plymouth, Edinburgh, Glasgow, and Belfast, but does not exceed ½d. in London, or at Birmingham, Derby, Gateshead, Liverpool, Portsmouth, or Aberdeen. These discrepancies in bread prices continue to puzzle the trade, and the Ministers of Trade and Agriculture respectively observe a determined silence concerning them. The mean price of bread for the whole of Great Britain is now 4s. 10d. for ten loaves, as compared with exactly 4s. 2d. for ten loaves at this time last year.

THE BALTIC.

Saturday, 2 p.m.

We are informed that the London Corn Trade Association has placed certain restrictions on the sale of standard samples. This seems a pity. Mr. R. A. Patterson, the president of the association, has addressed the following letter to Messrs. Allatini Bros and Messrs. Dewar and Webb, and wishes its insertion in the Press:—"Dear Sirs,—Referring to the extraordinary and unjustifiable demand made, that, although holding clean bills of lading for parcels of wheat per s.s. *Ryall*, you should pay dead freight on balance of cargo not shipped. I have brought the matter before my executive committee, and am requested to inform you that believing this is a matter of the greatest interest and importance to the whole grain trade, the association is prepared to assist you in fighting the case and resisting this most inequitable claim. Yours truly, R. A. Patterson."

The demand for wheat cargoes is much checked by the Bank rate. Its rise to 7 per cent. did not excite great attention on this exchange as it was expected to come down again very shortly. But this idea seems now abandoned, and increased caution in operating is induced. Sales of the week have, however, included Argentine at 39s. per 480 lb., Azima at 42s. 6d. per 492 lb., Odessa-Ghurka at 41s. 6d. per 492 lb., White Walla at 41s. 6d. per 500 lb., Blue Stem at 42s. 6d. per 500 lb., Australian at 43s. 6d. per 480 lb., No. 1 Northern Duluth 41s. 9d. per 480 lb, White Karachi at 40s. 3d. per 492 lb., and Red Karachi at 39s. 9d. per 492 lb.

Barley cargoes were dull up to Thursday, when the news of Turkey having prohibited exports made holders firmer. Sales have included Persian at 21s. 9d. per 400 lb.; Kustendjé at 27s. per 416 lb.; Russian at 24s. 6d. per 400 lb.; and fine Oregon at 41s. per 448 lb.

Oats made on Friday 17s. 9d. per 304 lb. for February shipment of Argentine new crop. Other cargo sales have been:—Roumanian maize at 26s. per 480 lb.; Calcutta linseed at 45s. 6d. per 410 lb.; yellow Guzerat rapeseed at 61s. 6d. per 316 lb.; Egyptian cottonseed at 7s. per cwt.; rough feeding rice (from Rangoon) at 8s. per cwt.; and locust beans (from Italy) at 107s. 6d. per ton.

HOPS.

Canterbury, Saturday.—Only a moderate business passing, but a little more disposition is shown to purchase at the recent reduction in prices.

Worcester, Saturday.—Trade has been rather better this week in good medium hops in the absence of choicest qualities, which are not forthcoming to any extent. Few growers at market today, and prices were unchanged. 784 pockets passed the public scales this week, making 17,804 to date.—Charles Faram and Co.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet, late rates; whites quoted at 36s 6d to 39s 6d, reds at 36s to 38s 6d. Foreign steadily held at Monday's prices, but demand poor; No. 1 Northern, ex ship, quoted at 44s, No. 2 at 43s 3d to 43s 6d; choice white Karachi at 38s 6d, reds at 38s; Australian landed at 46s; South Russian at 42s to 46s. Flour firm, but quiet; Iron Dukes held at 27s to 28s; Hungarians at 38s 6d to 40s; Kansas patents at 30s 6d to 31s; Maize steady, unchanged; mixed American, ex ship, quoted at 26s 3d to 26s 6d; River Plate, 25s 6d; Odessa at 26s 3d; white Natal, landed, at 27s; Barley rather dearer, but not active; Azoff-Black Sea and Odessa-Nicolaieff, ex ship to arrive, held at 23s 6d; landed at 24s 3d to 24s 6d; Persian, 21s 9d to 22s, ex ship. Oats steady, but not active; La Plata held at 18s 9d; South Russians, 17s 9d to 18s 3d; Archangels, 19s to 19s 6d.

Mark Lane, Friday.—Wheat, English firm, unchanged. Whites quoted at 36s 6d to 40s; reds at 36s to 38s 6d. Foreign firmly held, but demand not active. No. 1 Northern Manitoba, ex ship, held at 44s to 44s 3d; No. 2 at 43s 6d; choice white Karachi at 39s; Australian, landed, at 46s; Persian at 39s 3d to 42s 6d; South Russian at 43s to 46s. Flour steady, but quiet. Hungarian held at 39s to 40s 6d; Iron Dukes at 27s to 28s. Maize firm, but quiet. Odessa, ex ship, quoted at 26s 3d, landed, 26s 6d; Danubian and Galatz-Foxanian, landed, at 26s 3d. Barley steadily held at full rates, but not active. Azoff-Black Sea, ex ship, quoted at 23s 6d, landed at 24s; Persian, ex ship, at 21s 9d to 22s. Oats, slow sale, at about late prices. La Plata quoted at 18s 9d; South Russian, 17s 9d to 18s.

COUNTRY.

Appleby, Saturday. — Very little offering. White oats (horse corn), 20s to 23s 6d per 26 stones.

Ashford, Tuesday. — Good attendance, but quiet trade all round; wheats, contrary to expectation, showing no improvement. Oats and other feeding corn were firm at late rates. Quotations: —Wheat, 34s to 36s; best home-grown barley, 31s to 33s; secondary, 28s to 30s; foreign grinding barley, 26s to 27s; Mazagan beans, 28s to 30s; tick beans, 32s to 34s; maize, 30s to 31s; peas, 32s to 33s; black amber oats, 20s to 22s; grey amber oats, 19s to 21s; white oats, 18s to 22s. per qr.

Banbury, Thursday.—Wheat, white (new), 35s to 36s per qr; wheat, red (new) 35s to 36s per qr; barley, 27s to 31s per qr; beans (new), 29s to 32s per qr; oats, 18s to 22s per qr; peas, 30s to 34s per qr.

Berwick, Saturday.—Larger attendance, with increased supplies of grain. Fine barley in good demand, and maintained last week's prices. Secondary met a dearer trade. Oats slow, except for finest qualities. Barley, 18s 6d to 28s; oats, 21s to 33s 6d per qr.

Birmingham, Thursday.—The attendance at this market was a thin one, and the volume of trade was small. Quotations:—Foreign wheat, No. 1 Manitoba, 44s 6d per 496 lb.; No. 2, 44s at Bristol; Russian, 41s 6d to 42s 3d at Sharpness. English wheat made from 13s to 13s 9d per 186 lb delivered. Oats 20s 6d per 312 lb, and beans 13s 3d per 196 lb delivered. Bessarabian maize was offered at 26s 3d per 480 lb, Galatz-Foxanian at 26s Sharpness. Grinding barley was 9d per qr lower at 24s 3d per 400 lb Sharpness.

Brighton, Thursday.—Small attendance and quiet trade. Wheat in better supply; 6d per qr dearer. New white wheat, 35s to 37s; new red ditto, 35s to 38s; barley, 28s to 35s; grinding ditto, 26s to 27s; oats, English, 18s 6d to 21s; peas, 33s to 34s; beans, 34s to 35s.

Bury St. Edmunds, Wednesday.—Wheat supply below average Trade firm at a slight advance on the week. Reds or whites, 36s to 37s; revets, 35s to 35s 6d per qr. Barley a rather slow trade; the supply was about average, and low-grade samples were hard to sell at last week's prices of 30s to 31s 6d per qr; better sorts were somewhat quiet at 32s to 35s per qr. Feeding corns generally firm at last week's quotations.

Cambridge, Saturday.—Wheat was in small supply, which sold at last week's rates, 36s per 504 lbs on rail near stations. Barley in moderate supply, prices unchanged. Rather larger supply of oats; prices firm, about 20s on rail. Small supply of beans, making from 30s to 32s, according to conditions, some samples being very soft.

Canterbury, Saturday.—Choice barleys about maintain values, but second quality are from 1s to 2s lower, prices ranging from 29s to 32s per qr. Wheat is also a trifle easier, the demand being very slow. Seed wheats still range up to 40s, but for milling purposes 63 lb lots were selling at 35s fetched from the farm, and 64 lb at 35s 6d. Oats about steady, 39 lb blacks making 19s 6d, and 44 lb 21s 6d. Grey peas, 31s to 32s; and tick beans up to 33s per qr.

Carlisle, Saturday.—There was a small show of oats in market to-day, poor quality. Prices from 22s to 24s per 336 lb; several pocket samples oats made from 23s to 24s per 336 lb. Wheat in good condition made 43s per 504 lb. The oats in our district are thrashing in very poor condition as a rule.—Thomas Robinson.

Chester, Saturday.—The market again shows an easier tendency. Mixed maize occasionally 1½d per sack cheaper. Round corn the same as last market day; wheat and oats favoured buyers. Barley and beans quiet. Quotations:— Wheat, white and red, 5s 2d to 5s 4d per 75 lb; grinding barley, 4s to 4s 3d per 64 lb; oats, new, 2s 8d to 3s; old, 3s 1d to 3s 6d per 46 lb; Indian corn, old, 14s 6d to 15s per 240 lb; round corn, 14s 3d to 15s 6d per 240 lb.

Chichester, Wednesday.—A good attendance and fair trade, with no alteration in prices. New white wheat, 36s to 37s; new red ditto, 36s to 37s; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s; peas, 34s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday. — Wheat firm trade, at 37s to 37s 6d, small supply; barley dull, fair supply; oats steady.—Colin Taylor, King and Co., Ltd.

Coventry, Friday.—No alteration in prices. The attendance was only small. Although the supply of wheat was only limited, demand was quiet at rather less money. No special feature in other grain. Fair supply of barley, which sold slowly at barely late rates. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per 352 lb; new, 21s to 23s 6d; beans, old, 13s 3d to 14s; new, 12s 3d to 13s 3d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Derby, Friday.—Wheat in fair supply and prices about the same as last week; spring corn unaltered. Quotations: Wheat, 36s to 37s; red wheat, 35s to 37s; malting barley, 29s to 32s; grinding barley, 25s to 27s; new beans, 35s to 38s; old oats, 24s to 26s; new oats, 21s to 22s.

Devizes, Thursday. — Wheat to-day maintained the full prices of last week, but barley and oats again the turn in favour of buyers. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s; winter oats, 18s to 19s; white Garton oats (330 lb), 18s 6d to 19s 6d; black Tartar oats (320 lb), 18s 6d to 19s 6d; rye, 27s to 30s; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 38s; vetches, 5s 6d to 6s 6d.

Doncaster, Saturday.—Only a moderate supply of English wheat, which was in a variable condition, and though there was a fair trade prices declined 3d per load, whilst foreign only met with a limited sale at a reduction of 6d per qr. Oats in moderate request at 6d per qr less money. Barley slow. Fine samples were unchanged, but secondary sold at a slight reduction.

Dorchester, Saturday.—The corn market was a little better attended to-day than at some recent markets, a fine morning having attracted business men into the town, though later in the day it became very inclement, a heavy hailstorm, accompanied by sleet, giving the first taste of winter. Farmers having been busily engaged with the threshing machine, ample evidence of this was apparent in the largely augmented supplies on offer, the trade for which, however, was very inactive, and late values were only with difficulty maintained, factors rather holding off from speculating and farmers showing but little disposition to make concessions. Foreign, too, was about the same, and we must quote prices as practically unaltered from previous market. Malting barley, where at all suitable, commanded a firm trade at full prices; feeding descriptions the turn lower, as was maize. Beans and peas still held on outside prices. Flour very inactive, but not quotably lower.

Exeter, Friday.—Fairly good attendance; trade slow. English wheat firm and rather dearer. Flour 1s dearer. Barley and maize quiet at a decline of 3d. English oats very firm, other sorts a shade easier. Quotations:—English wheat 4s 4½d to 4s 6d; English barley, 3s 6d to 4s 6d; superfine flour, 32s to 34s; fines, 29s to 32s.

Glasgow, Wednesday.—There was a moderate attendance. Business during the week has been very quiet. Wheat and flour irregular in prices, but if anything the turn easier. Maize and corn, owing to large arrivals and small consumptive demand, prices have receded 3d per boll for the former and 6d per boll for the latter. Oats quiet, and the turn in buyers' favour. Barley irregular in quality and price. Beans 3d per boll cheaper. Peas—none on the spot. Bran steady, but thirds the turn easier. Oatmeal quietly steady. —Gibson and Clark.

Gloucester, Saturday. — English wheat 1d per bushel cheaper: Reds, 34s 6d to 35s 6d; whites, 36s to 36s 6d per qr. Foreign wheat about unchanged: Plates, 42s to 43s; Russians, 41s 6d to 42s. Plate maize unchanged 26s 3d; flat 6d cheaper, 27s; Bessarabian 3d down, 26s 3d. Barley 6d cheaper, 24s 3d. Oats 6d down: Black, 18s 6d to 19s 6d; whites, £1 to £1 1s.

Grantham, Saturday.—Fair supply, and a small attendance. For best samples of wheat up to 36s per qr was paid, common sorts being lower in price A big show of barley, which was quoted at 26s to 32s; oats, 19s to 21s; beans, 28s to 30s; peas to 30s per qr.

Hereford, Wednesday.—English grain of all kinds was more freely offered. Wheats were unchanged on the week at 4s 3d to 4s 6d. Barleys dull, with drooping tendency. Oats fully 1s per qr down since last week Maize 3d per qr lower.

Ipswich, Tuesday.—Moderate supply of wheat; trade steady at fully last week's rates. Reds, 36s to 37s; whites to 38s per 504 lb. Good supply of barley; trade poor; all descriptions steady at late rates. Best, 33s to 35s; runs, 30s to 32s. Oats firm and fully as dear. Maize steady. Beans and peas unaltered.

Leeds, Friday.—Wheat was in fair supply, but the limited demand checked any further advance upon the prices of Tuesday. Foreign wheat was firmly held, but little was doing, buyers anticipating easier prices with the improved crop reports from the Argentine and other foreign centres. Flour was more active, as is usual before the Christmas demand, and late rates were maintained. Maize was steady. Plate, Odessa, and American averaged 26s. Beans, peas, oats, and barley were without change.

Leicester, Saturday.—Good attendance of buyers and dealers, with fair supplies of home-grown wheats, but the condition was variable. Dry samples in fair request; damp sorts flat. Red wheat, 33s to 37s; white wheats, 35s to 39s per 36 stones; malting barley in fair request at 27s to 32s per 32 stones; oats, 19s to 22s per 24 stones.

Lincoln, Friday.—There was a good attendance, but a dragging trade. Wheat was fairly firm at last week's rates. Barley made a good show, but trade was slow at 1s less on the week. Oats were hard to sell at 19s to 20s. Peas were firm at full rates. Beans 6d to 1s less, being out of condition.

Maidstone, Thursday.—If any alteration in cost of grain at the market to-day it was but slight. Owners of wheat quite disinclined to allow any abatement. Millers reticent in buying make the trade slow for that article. Other descriptions of corn could be obtained at some reduction from the previous quotations. The news from America of a financial description, as elsewhere, exercising its influence on Kentish factors. The weather is also responsible to a certain extent, as a gloomy atmosphere and frequent fogs do not induce business activity. Indulgence in hope for a speedy rally has taken possession of not a few minds.

Manchester, Thursday.—English wheat firm and occasionally in sellers' favour. Foreign ruled quiet, but firm. Flour showed little change. Indian corn 1d to 1½d per cental lower on the week generally. Foreign barley has declined 1½d per bushel, and English is also lower. In oats there was little done, and prices were in buyers' favour. English peas firm. Beans unchanged. Bran very firm.

Newark, Wednesday.—A fair attendance; trade slow: prices easy all round. Quotations: White and red wheat, 35s 6d to 36s 6d; malting barley, 29s to 31s; grinding ditto, 27s to 28s; white oats, 20s to 20s 6d; black ditto, 19s to 20s; old beans, 36s to 37s; new ditto, 30s to 32s per qr.

Newcastle-on-Tyne, Saturday.—A very quiet demand for wheat at our market to-day, and to do business 6d per 504 lb less had to be accepted. Maize remains steady at last week's prices. Fine oats are very firm; common sorts, however, are difficult to dispose of at 6d decline. Beans and pease remain firm at late rates. The demand for barley is only slow.—Joseph Pollard and Co.

Newport, Wednesday.—Rather better inquiry; quiet trade at last week's prices.

Northampton, Saturday.—Small attendance and very little wheat or oats showing, but plenty of barley, with which very little trade was done, whilst prices of other cereals remain unchanged. New wheat, 34s to 36s; barley, 25s to 32s; old white oats, 24s to 26s; new white oats, 19s to 21s; old beans, 34s to 36s; new beans, 31s to 33s; peas, 33s to 35s; flour, 31s to 35s.

Norwich, Saturday.—Wheat in small supply, and through scarcity sells at an advance of 6d to 1s per qr. Dry samples make 37s, delivered.

Barley in large supply, without alteration. Foodstuffs very quiet; prices the same as last week.

Nottingham, Saturday. — Wheat, a fair quantity offering, trade slow at late rates; barley, finest samples make full prices; secondary sorts in buyers' favour. Oats, small supply, values unchanged. Beans firm.—Robt. Hubble.

Peterborough, Saturday.—We have again had a small supply at market to-day. Wheat found a quiet trade at prices slightly higher than last week. Oats quiet, but no lower. Barley trade about the same. Wheat, 35s 6d to 36s 6d; barley, 29s to 34s.; oats, 19s to 21s.—Thomas Hill and Son.

Plymouth, Thursday.—There was a very fair attendance on our market here to-day. Wheat firm at late rates. Feeding stuffs very little doing, but 6d lower on week.—Orlando Davis and Co

Preston, Saturday.—Good attendance, though business was not brisk. Quotations:—Wheat, white, new, per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel, 3s 8d to 3s 9d; ditto, new, 3s 1d to 3s 2d; beans, per windle of 220 lb, 16s 6d to 17s.

Reading, Saturday.—There was a fair attendance and a show of briskness about the business transacted. The following prices represented sales effected, and of some parcels held. Wheat, 35s to 40s; barley, 27s to 36s; oats (scarce and very firm), 18s to 23s; beans, new, 30s to 34s; old, 35s to 39s; peas, 31s to 35s; toppings, 10s 6d to 11s; bran, £5 15s to £6 5s per ton; flour very firm at last week's prices.

Retford, Saturday.—Wheat a slow trade, and 6d lower on the week, at 35s to 36s per qr. Poor show of malting barley. The best sold readily at fully late rates of 31s to 33s. Secondary were 1s cheaper at 28s to 29s 6d, and grinding 27s per qr. Oats were on the down grade, black making 18s to 19s; white ditto, 19s to 20s; old oats, 25s, maize, 29s; new English beans, 41s; old ditto, 38s to 40s; peas, 30s per qr.

Ripon, Thursday.—Small supply of grain, business dull. Grinding barley shows a downward tendency. Prices:—New wheat, 36s to 37s; wheat, foreign, 46s to 48s; barley, grinding, 25s to 26s; barley, malting, 28s to 32s; new oats, 19s to 21s; old oats, 26s; maize, round, 28s; flat 32s per qr.

Sheffield, Tuesday.—Trade continues quiet, but prices are steady. Wheat and maize unchanged. Lower class barleys show a slight weakness. Beans, oats, and peas unaltered. Offals scarce, and unchanged in price. Quotations:—Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, black, 24s to 25s; ditto white, 24s 6d to 25s; ditto new, 21s 6d to 22s per 336 lb; peas, grinding, 36s to 36s 6d; ditto blue, new, 75s to 90s per 504 lb; beans, English, 36s 6d to 37s per 532 lb; barley, grinding, 28s to 30s; ditto malting, 28s to 32s per 448 lb; Indian corn, small, 27s 9d to 28s; ditto Plate, 27s 9d to 28s 3d; ditto flat, 30s to 30s 6d per 480 lb.

Shrewsbury, Saturday.—Quotations: Wheat, 15s to 15s 6d per 225 lb; old oats, 16s to 17s per 225 lb; new oats, 12s 6d to 14s; barley, 18s to 20s per 280 lb.

Stamford, Friday. — Average trade among farmers and dealers. Prices practically unchanged. Wheats, 35s to 36s; oats, 19s to 20s; malting barley, 29s to 32s; grinding barley, 25s 6d to 26s 6d; beans, 30s to 31s. Samples came to hand in poor condition. Peas made late prices.

Stockton, Wednesday.—There was a fair quantity of English wheat showing, which made from 36s to 37s per qr. The foreign wheat trade keeps steady with fair demand, at last week's prices. Oats and maize quiet, at unaltered rates. There was fairly good supply of English barley, malting descriptions making 28s 6d to 30s per qr, and inferior qualities, 21s to 25s.

Tunbridge Wells, Friday. — New white wheat, 36s to 37s; new red ditto, 35s to 36s; barley, 36s to 37s; grinding ditto, 26s to 27s; oats, English, 19s to 22s; rye, 31s to 32s; peas, 34s to 35s; beans, 34s to 36s; tares, 40s to 48s; maize, 28s to 29s.

Warwick, Saturday.—Fair attendance; trade still very inactive, and prices depreciating. Small quantity of grain on offer. Barley, 26s upwards per qr; wheat, 12s upwards per bag; oats, 21s per 360 lb; beans, 11s to 12s per bag.

Winchester, Saturday.—English wheat in small supply, last week's prices maintained. Foreign unaltered. Barley 3d cheaper. Maize and oats unchanged. Flour a steady trade at late rates.—Fear, Colebrook and Co., Ltd.

Wisbech, Saturday.—Few samples of grain offering. Dry wheat sold at 36s per 504 lb. Barley, 28s to 31s per 448 lb. Oats, 19s 6d to 20s 6d per 336 lb.—James Fletcher.

Worksop, Wednesday. — Fair attendance, and moderate show of grain, with wheat about 6d per qr lower. White wheat, 36s 6d to 37s 6d; red ditto, 35s 6d to 36s 6d; best malting barley, 31s to 33s; secondary qualities, 29s to 31s; grinding barley, 27s to 28s; white oats, 19s to 21s; black oats, 18s to 20s; maize, 28s 6d to 30s; old beans, 40s to 41s; new beans, 35s to 37s per qr.

Yeovil, Friday.—Foreign wheat was 3d per qr dearer, but maize favoured buyers to a like extent. Best quality English wheat sold at from 36s to 39s per qr, a few lots of old making from 40s to 42s; secondary, 34s 6d to 36s; malting barley, 29s to 31s; secondary, 26s to 28s; grinding barley, 24s 6d to 25s.; oats, winter, 18s 6d to 19s 6d; black Tartar, 18s 6d to 19s 6d; white (Garton), 18s 6d to 19s 6d; Irish black oats, 18s 9d; beans, 33s to 37s 6d; rye, 27s to 30s; maize, round, 26s 6d; ditto flat, 27s 6d; vetches, 5s 6d to 6s 6d per bushel. Flour 6d per sack easier, fine new selling at 31s. Offals and meals firm.

York, Saturday.—There is very little grain on offer, due chiefly to the Martinmas hirings. Dry samples of wheat sell quietly at last week's prices; fine white, 37s to 38s; red and mixed, 36s to 37s per qr. of 36 stones. Good qualities of malting barley maintained late rates, but a large quantity has been spoiled by the wet, and was offering very cheaply; fine malting, 30s to 32s; good, 28s to 30s; ordinary, 26s to 28s; damaged samples down to 20s per qr of 32 stones. Oats steady at 20s to 21s per qr of 24 stones; old beans, 36s; rye, 29s per qr of 36 stones.

FEEDING STUFFS.

Liverpool, Friday.—Nitrate of soda is still quoted on the spot at £11 to £11 2s. 6d. Kainit is slightly inquired for, but there is a good demand for all phosphates—values unchanged. Feeding stuffs are a disappointing trade, and in some instances values rather favour buyers, yet they only purchase sparingly, there being such a large amount of damaged grain, especially in Scotland and Ireland, fit only for feeding purposes. Feeding treacle meets a fair demand, and is reasonable in price.

—H. Jones Langar and Co.

Mark Lane, Monday.—Linseed Cake: The markets during the past week have been poorly attended, with practically no new business of importance passing, and values are barely as strong, more especially by reason of secondhand sellers endeavouring to realise their profits. Russian remain cheaply offered. East India seed pures may be bought at a slight reduction. Fine seedy Calcuttas command most attention. London made meet a dull sale. Cotton Cakes.—Egyptian continue to come along in considerable quantity, and with only a moderate consumptive demand, prices are with difficulty held up, while English and Bombays move off quietly. Decorticated.—London made pures find a ready market, with American brands unchanged. Rape Cakes do not offer. Maize Germ Meal.—Both American and African white meals are offered c.i.f., London, and English makes are fully 5s. per ton cheaper. Maize Gluten Meal is in good request. Rice Meal.—Landed lots of Rangoon make late prices, and there are free buyers of parcels afloat. Locust Beans offer at a relatively low figure. Dried Brewers' Grains are still quoted at a high rate. Nitrate of soda is without change.

POULTRY AND GAME.

Smithfield, Saturday.—Good supplies: fairly good demand. Prices: Pheasants, 4s to 5s; young grouse, 6s; old, 3s; young partridges, 4s 6d to 5s; old, 2s; black game, 3s 6d per brace; geese, 4s 6d to 5s 6d; country ducks, 2s 9d to 3s 3d; wild ducks, 1s 6d to 1s 9d; Surrey fowls, 3s to 3s 9d; Sussex fowls, 2s 9d to 3s 3d; Lincolnshire fowls, 2s to 2s 9d; Essex fowls, 2s to 2s 6d; Irish fowls, 1s 8d to 2s; quails, 1s to 1s 3d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 2s 6d to 3s; leverets, 1s 9d; Scottish hares, 1s 4d to 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 6d to 9d; live hens, 1s 8d to 2s each; cock turkeys, 8½d to 9d per lb; hen turkeys, 3s 6d to 5s each.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Trade fairly brisk, with good supplies on offer Quotations for English produce:—Grapes, 8d to 4s; peaches, 3s to 12s per dozen; medlars, 3s to 3s 6d per crate; lychees, 1s 6d per box; figs, 1s to 4s per dozen; pears (English Pitmaston), 1s 6d to 2s 6d per dozen; ditto (Beurre Hardy), 3s to 4s per half bushel; apples, 4s to 12s 6d per bushel; cranberries, 10s 6d to 12s 6d per case; pineapples, 2s 6d to 4s each; cobnuts, 4s 6d to 5s per 12 lb; walnuts (Grenoble), 6s to 8s per bag; chestnuts (Redon), 7s to 12s per bag; tomatoes, 4s to 5s per 12 lb; sprue, 8s to 9s per dozen bundles; turnips, 1s 6d to 2s 6d; parsley, 1s 3d to 1s 6d; leeks, 1s 6d to 2s per dozen bunches; onions, 3s 6d to 4s per cwt; mushrooms, 10s to 12s 6d per 12 lb; spinach, 1s 6d to 2s; beetroots, 1s 6d; sprouts, 2s to 2s 6d per bushel; cucumbers, 3s to 4s; endive, 1s to 1s 3d; cabbage lettuce, 10d to 1s per dozen; seakale, 10s to 12s per dozen punnets; parsnips, 2s to 2s 6d per bag; horseradish, 10s to 15s per dozen bundles; celery, 7s to 12s 6d per dozen rolls; broccoli (Cornish), 7s to 8s 6d per crate; cauliflowers, 4s to 6s per tally; potatoes, 75s to 100s per ton.

CHEESE.

Glasgow, Wednesday.—The arrivals of home cheese were small. Values were unchanged; Cheddars, 62s to 66s; Dunlops, 60s to 63s. October made Canadian parcels still slow; price 61s.

Highbridge, Tuesday.—A good attendance of buyers, a brisk trade, and all cleared. Best Caerphilly dairies realised up to 57s per cwt; secondary dairies, 54s to 56s 6d; and other dairies, 60s to 53s 6d. A few infeior lots failed to reach 44s. Cheddars, 60s to 64s; truckles, 59s to 64s; doubles, 52s to 56s.

Newport, Wednesday. — Good supply and demand, with average attendance. Quotations:—Caerphillies, 48s to 56s per cwt; fancy dairies 57s to 59s; Derbys, 67s to 68s; truckles, 62s to 65s; Cheddars, 62s to 64s.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 P.M.

There was not a very good attendance to-day, and prices for English wheat were not quite so good as on the 15th. Foreign wheat was difficult to quote at any specific decline, but firms who asked high prices a week ago were to day willing to sell at more average rates. With nothing but macaroni wheat and the poorest quality of Indian and Persian to be had for less than 40s. it is exaggerating matters to write of the market as depressed.

But the scarcity of cash makes holding difficult, and a minority of weak holders can undermine the position rather seriously. Barley was steady, the tendency with large supplies to hand was naturally downward, but the prohibition of exports from Turkey restored the equilibrium. Oats sold very slowly at former quotations. There was not much doing in maize. Beans sold fairly well; they are fully worth their quoted values by comparison with other concentrated feeding stuffs.

THE FLOUR TRADE.

MARK LANE, Monday, 3 P.M.

The price of London top grade to-day was unchanged, but town whites and town households fell 6d. per sack.

Country flour was the turn cheaper, but a fair trade was done wherever bakers' views were met by the seller.

American flour was irregular, but on the whole a little cheaper to buy, especially for all makes from winter wheat.

Hungarian and Belgian high quality grades commanded high prices, but are not in such good request as formerly.

Milling offals were occasionally 7s 6d per ton cheaper on the week, to the gratification of farmers who have stock to fatten. The excessively high prices asked of late, not merely for middlings, but even for bran, have driven the farmer to look far afield for supplies.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH QUIETUDE BUT WITHOUT DEPRESSION.

THE BALTIC.

Monday, 1 P.M.

State of Trade.

Wheat, maize, and oat cargoes all opened 3d lower from Saturday, and cottonseed is also cheaper from then. Holders of barley, linseed, and rapeseed cargoes show steadiness, and peas are rather in request.

Business Done.

Wheat.—White Karachi, 39s 6d per 492 lb, on passage; Red Karachi, 39s 3d per 492 lb,, on passage; Argentine, 39s 3d per 480 lb, on passage; Argentine, 38s 3d per 480 lb., new crop, February shipment; White Walla, 41s 9d per 500 lb, on passage; Australian, 43s 6d per 480 lb, on passage; No. 1 Northern Manitoba, 42s per 480 lb, on passage; No 2 Hard Winter, 37s 9d prompt shipment.

Maize.—Argentine, 26s per 480 lb, prompt shipment; American, 24 6d per 480 lb, new crop, shipment before Jan. 15.

Barley.—Persian, 21s 9d per 400 lb, arrived; Azoff, 24s per 400 lb, arrived; Californian, 40s per 448 lb, December shipment.

Oats.—Konigsberg, 18s 3d per 320 lb., on passage; Danubian, 17s 3d per 304 lb; No. 2 Manitoba, 22s per 320 lb, on passage; Baltic, 17s 6d per 304 lb, arrived.

Peas.—Tasmanian Maple, 34s. per 504 lb, arrived; Canadian White, 7s 10d per cental, on passage

Linseed.—Argetine, 40s per 410 lb, arrived.

Cottonseed, Egyptian, £6 17s 6d per 2,240 lb, arrived.

Sesame.—Bombay, 61s 6d per 384 lb, December shipment.

Poppyseed.—Bombay, 64s per 377 lb., December shipment.

Locust Beans.—Portuguese, 96s per 2,240 lb, Deceember shipment.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—The market is idle, buyers and sellers being quite apart owing to the irregularity of the American wheat markets. Grain.—There is no improvement in the demand for round and flat corn, and there is consequently considerable pressure to sell on spot. Beans dull. There is a demand for fine qualities of Scotch barley and oats, but off grades are very unsaleable. Oatmeal unchanged. Oilcake a slow sale. Mill stuffs.—The turn lower. Winter wheat patents, 30s to 31s per 280 lb; spring wheat patents, 31s 6d to 33s per 280 lb; American corn, 15s 7½d to 15s 9d per 280 lb; round corn, 15s 3d to 15s 6d per 280 lb; grinding beans, 18s 9d to 19s per 280 lb; broad bran, 115s to 117s 6d per ton; medium bran, 110s to 112s 6d per ton; common thirds, 112s 6d to 115s per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 150s to 152s 6d per ton.—McKinnon and McDonald (Glasgow).

We have liberal supplies of wheat, and our market was quiet at about last Monday's prices. Flour is quiet at late rates. Oats and maize are the turn easier, and barley 6d lower on the week. —Coventry, Sheppard, and Co.

Milling offals.—The trade is not quite so good, but prices remain about the same.—John Bawcomb and Co.

OIL SEEDS.

Mark Lane, November 25.—The market for oil-seeds is quiet, and in some instances slightly in favour of buyers. The London arrivals of linseed and cottonseed since the middle of November have exceeded the average.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by PEGITA

THE COLLECTORS' GUIDE.

Dwight's Ware.

By H. W. Lewer.

"Of Dwight's stone ware it would be impossible to speak in terms of too high appreciation. His works possess the charm at once of extreme rarity and absolute originality." Hodgkin.

It was little more than a decade from the time (as Evelyn records in his diary) that "His Majestie King Charles II, came to London after a sad and long exile and calamitous suffering," to the date of the patent granted to John Dwight, in the petition of which to the King he stated "he had discovered the mistery of transparent earthenware, commonly known by the names of porcelaine, or china, and Persian ware; and that he designed to introduce a manufacture of the said wares into our Kingdome of Englande, where they have not hitherto been wrought or made."

To whom the credit of founding the factory at Fulham, with which his name is connected, is a little uncertain, although most ceramic authorities name John Dwight; yet two writers of repute, Joseph Marryat and Albert Jaquemart, seem rather dubious as to his early connection with the pottery, and Jaquemart asks the question, "Is it to the Dutch that we must give the honour of the stone and other wares executed in this place?" We will answer this by another question, "May the pottery not have been financed and under Dwight's advisory control in its early days?"

We know from Dr. Stot's "History of Oxfordshire," published in 1677, "that the ingenious John Dwight, formerly M.A. of Christ Church College, Oxon., hath discovered the mystery of the stone, or Cologne, wares (such as d'Alva bottles, jugs, noggins), made heretofore only in Germany, and by the Dutch brought over to England in great quantities; and hath set up a manufacture of the same."

The fascination of the fictile art must have taken hold of Dwight early in life, and like Dr. Wall, of Worcester, he appears to have interested himself from early days in experimenting with clay and other products for the making of pottery. The history of these experiments has never been recorded, and we find no mention of his connection with pottery till we reach the year 1671, when we find him petitioning for his first patent, which we have already mentioned.

When studying at Oxford he had always an interest for natural science, and Burton, in his "English Earthenware and Stoneware," thinks "that some chance or other turned his attention to the congenial pursuits of the mysteries of China and Cologne ware."

Dwight, on leaving Oxford, was for some years secretary to successive Bishops of Chester, but the date of his resigning this office and going to Fulham is so obscure that much must be left to conjecture. In 1684, John Dwight obtained a renewal of his patent, with the addition of making "opaceous redd and darke coloured porcelaine"; he also produced "a mouse-coloured porcelaine with white specks," and a "blew porcelaine clay."

The British Museum contains a fine specimen of a jug of the so-called "mouse-coloured porcelaine," with marbled bands, and ornaments in relief; the ornamentation taking the form of cranes in flight, and the figure of an Oriental with parasol.

At first the production consisted of grey-beards, jugs, mugs, and butter pots. These were followed by figures, statuettes, busts, etc. The stoneware used for the grey-beards was of an exceedingly hard texture, usually grey in colour, and ornamented with an enamel blue colour, this decoration taking the form of bands, or leaves. The jugs are generally spherical in shape, with a straight neck, raised medallions in the front, often with initials, such as C. R.

The making of this type of jug continued long after the death of Dwight, which occurred in 1703.

Dwight's fame will always largely rest on the statuettes, busts, and figures, which were produced at Fulham. They are finely modelled, well proportioned, and of great artistic excellence. These figures vary in colour from a waxy white to bronze. Our illustration gives a fair representation of a bust, in which may be noted the characteristic modelling of the Fulham factory.

Among the figures which he produced, one of the most pathetic is the recumbent figure of Lydia Dwight, the potter's daughter. Solon, in his "Art of the Old English Potter," referring to this half-length figure, writes "In this beautiful and touching memorial of a beloved child we trace the loving care of the bereaved father in the reproduction of the features, and the minute perfection with which the accessories, such as flowers, are treated."

Many minor vessels were also made, and teapots made of a red ware have been assigned to Fulham of this date. Tea drinking at this

BUST MEDALLION OF SHAKESPEARE.
BY JOHN DWIGHT.

period was just coming into vogue, at a little later date to become most fashionable.

Dwight was evidently familiar with the use of the lathe; also, as Professor Church points out, with the application of small ornaments formed by metal stamps. Several of these stamps, which are made of brass, are now in the British Museum.

In 1866, a walled-up chamber was discovered at Fulham, and in it were found some grey-beards and fragments of stoneware.

Lady Charlotte Schreiber, whose collection of earthenware and porcelain is at South Kensington, had some of the contents given her by Mr. Bailey, the proprietor, in 1870, which included a fine cruche of mottled stoneware, with Bellarmine decoration, bearing the badge of the fleur-de-lys, surmounted by the Royal Crown, and initials C. R. This proves beyond doubt that these cruches, grey-beards, or Bellarmines, were made at the factory, and not imported, as sometimes has been said.

When we consider the total absence of any high form of the fictile art in this country at the time John Dwight was producing not only vessels of fine form and decoration, but statuettes, figures, and groups which "are undoubtedly the most original productions of any English potter," we cannot but wonder at the great perfection to which he had brought the potter's art. Whence came the inspiration, the accurate knowledge, the spirit of the artist? This we know not, and can only say with the historian, Dr. Stot, that "He had so far advanced the art plastic, that 'tis dubious whether any man since Prometheus ever excelled him."

Although with his decease the art lay almost dormant for nearly another century, there is little doubt he planted the seed from which so abundant a harvest was garnered during the latter portion of the eighteenth century.

CAREERS FOR GIRLS.

Black-and-White Work and Fashion Drawing.

By Josephine Bullen.

A few years ago black-and-white work of all kinds held out strong inducements to the artistic girl seeking a career. There were then few workers in this field, and the prizes to be obtained were worth having. Some of the most successful black-and-white artists make £1,000 a year in their profession. And although things are altered now, and competitors swarm thickly in this, as every other sphere, the career still has a great fascination, and it is still possible, with industry and luck, to make an income of from £300 to £700 a year at it.

The work is interesting and full of variety, keeping the artist in touch with the movements of the day. Talent and originality always come to the front in it eventually, if they are combined with push and perseverance, and the other qualities that make for success.

Only, it should be remembered, this particular profession has the drawback of depending upon the taste of the public, and is, therefore, more uncertain than most.

There are several branches of it open to the girl taking it up, some requiring more talent than others, but the training in the main is similar for them all. A thoroughly good foundation in drawing and painting is essential. This may be had at most good schools nowadays, but will in any case need to be supplemented by a course at an art school, either in London or in the provinces. Figure-drawing should receive special attention, as this is necessary in all kinds of black-and-white work; and for book illustrating, costume, landscape, and animal drawing, and composition should also be carefully studied.

This course finished, the student must have instruction in reproduction in her particular medium. Of this she must have a complete mastery, for her success will depend largely upon her quickness in putting her ideas on paper, at any rate, in journalistic work. There are several schools where she can learn this technique of black-and-white work. Many of them make a feature of introducing students' work to editors and publishers, and these introductions are, of course, invaluable to the beginner. They also offer the advantage of an immediate entrance, no preliminary examinations being required from would-be students. It should be understood, at the same time, that the more thorough the previous training has been, the better and quicker will the pupil get through this special course.

As regards the cost of training, it is difficult to speak definitely. The fees at a London "black-and-white" school run from £16 to £20 per annum; at a provincial one from £9 to £10. But, though more expensive, the London school is preferable, for a beginner has much a better chance of getting into touch with editors in town than in the provinces.

It should be mentioned, perhaps, that the actual "method" of black-and-white work can be learned in a short time, if the foregoing art training has been complete.

As for the latter, the sum required varies with the art school chosen, and the length of training needed. Speaking generally, fees at an art school range from six to eighteen guineas a year. These include all branches of drawing and painting and designing, and, in some instances black-and-white work also. One can hardly lay down a hard and fast line as to the length of training required, this depending a good deal on the student's talent and industry.

On the whole, however, the preparation for this career is not to be considered amongst the costliest.

Once trained, the Press artist has to choose which branch of the work she will take up. Book illustration is the highest form of the art, and demands the most talent in those adopting it. It is also, perhaps, the most interesting, giving plenty of scope for the exercise of imagination and originality of ideas. To succeed in it the artist must be thoroughly conversant with figure-drawing from the life, and with historical costumes, furniture, architecture, etc. A special study of history and literature would certainly help to give her work value and individuality. And, of course, she must have a practised knowledge of her medium.

To illustrate books well the artist needs the gift of literary appreciation, and a vivid imagination. She ought to be able to get in touch with the spirit of a book so as to picture its people and scenes in a way convincing to the general reader. The work asks a good deal of her, and not every aspirant should attempt it. But, as I have just said, it surpasses the others in interest, and offers the great advantage of helping an artist to develop her talent instead of stunting it, as the more mechanical kinds of Press work are sometimes held to do.

For this branch the beginner should use her sketch book largely, always keeping on the look-out for figures, groups, picturesque "bits," incidents, and so on, that will come in usefully afterwards.

The payment for book illustration is fair, a set of drawings for a book receiving not less than £5, and as much as the artist's fame and the merit of the work can command. Single designs bring from 2s. 6d. to two guineas each To make a start in it, a beginner should try to get introductions to editors and publishers, and also to authors, for literary people often have their own illustrators, whom they introduce to their publishers.

Another and more lucrative branch of this career is poster and advertisement designing. This is, perhaps, the most promising to take up, for the demand for this kind of illustration continues to grow, and is well paid. There is, in addition—at any rate, in poster designing—ample opportunity for the exercise of artistic skill, as well as for the exhibition of striking ideas. The tendency of the modern poster is to become more and more a thing of beauty, as a comparison (for instance) of some of those lately issued by various railway companies with their old-style ones will show. Boldness, picturesque charm, "impressionism," all have their share in them, for they are not only decorative, but expressive, and allow the artist full utterance of his individuality.

Probably the competitions for posters and advertisements (which are very good openings for the beginner) organised by the *Studio* have much to do with this. Designing the front covers of catalogues, and devising catchy showcards, is another part of this subject, for which training can be had at most schools of design.

In this connection it is possible for a student to take a post with some firm, working only for it. The salary paid her would range from £150 to £450 a year. The advantages of this regular work are obvious; but it has a serious drawback. If, at any time, the firm tires of her style, the artist may find that her work is looked upon by other firms to whom she applies as not sufficiently novel or up-to-date for their requirements. The only way to guard against this catastrophe is to keep always in touch with new ideas and methods, and to try constantly to freshen one's output by change of thought and surroundings.

Fashion drawing is, to most outsiders, quite the most important kind of Press drawing, and although in this career incomes have diminished in proportion as the number of women adopting it has increased, it is still true that the profession offers a better chance of a good income than do most of the others for which the training is equally inexpensive. Only, it exacts enthusiasm, industry, enter[illegible] and cleverness from its followers. Novelty is the great point wanted in fashion drawing. The artist must almost anticipate the changes of fashion; she must be very rapid in sketching, and she must have plenty of physical endurance. At special seasons, when a great many shops and workrooms have to be visited in hasty succession, and hurried drawings made in each, the work becomes a heavy strain.

A fashion artist may either take a staff appointment on a paper at a fixed salary, and be sent by her editor to different functions, shops, places, etc., at his pleasure; or she may work entirely as a free lance. The latter way is, perhaps, less strenuous, but it is also more uncertain.

As to special training, a girl must learn fashion drawing quite satisfactorily in a special school, of which there are many; but, perhaps, her best plan would be to enter herself as a pupil in a successful fashion artist's studio, where she would not only have plenty of practice, but would get a peep behind the scenes, which would prove very useful to her when starting on her own account. The premium in this case would vary from £10 to £100, and it would probably be regained after some time as salary, if the student made good progress.

JOSEPHINE BULLEN.

READY FOR THE PARTY.

IN THE NURSERY.

How to Treat Croup.

One of the most justly dreaded and dreadful complaints to which little children are subject is croup, and it very rarely occurs after seven years old, though there is no rule without an exception. It comes on very rapidly, and a terrible hoarse, short cough or bark announces a sound which no one who has ever heard it is likely to mistake for any other. No time should be lost when the first symptom of croup appears, for a quarter of an hour's delay may cost the child's life. Cold, is always in some way the disposing cause. Sometimes it comes on after a cold has developed, sometimes it is caused by damp, and where there is a slate or a tile off the roof and water drips through the ceiling on to a child's bed a state of things not unusual in stormy weather, where the night nursery is on the top floor croup almost always makes its appearance. Sometimes it causes a spasm of the upper part of the throat, and this is called spasmodic croup, but the true, or membranous croup is too often associated with diphtheria; or, again, what appears to be croup may prove to be the earliest exhibition of inherited asthma. The first thing to be done is to wring a strip of flannel out of hot water, put it round the little neck, and cover with two or three thicknesses of dry flannel. The flannels for croup and sore throat should always be ready in every nursery; indeed, it is well in every family, whether there are children or no, to have a box of coarse flannel ready for emergencies. They are wanted in case of pleurisy and internal inflammation of many kinds. The way to wring a flannel out of hot water is not to put it in sprawling, as a housemaid does the flannel she is cleaning with, and get it out anyhow, but have the scalding water in a tall, narrow jug, fold the flannel in a long roll, dip in first one end, and then the other, and with the hands protected by a pair of washing gloves, to take these two ends, and wring the flannel over a basin, so that most of the water comes out, though most of the heat remains in the flannel. Another plan is to lay the roll on a Turkish towel directly it is taken out of the jug, roll rapidly up, and wring out the superfluous water by holding and twisting the two ends of the towel.

As soon as the hot flannel is applied to the neck, and covered up, put the child into a hot bath, so that the water comes right up to the neck, and keep a can of hot water close by, so as to add a little as the bath cools. The temperature at which one can hold the hand in it comfortably is a very safe rule for the heat of the water, and this should be always ascertained by the mother, for young children sometimes suffer terribly from baths and poultices hot enough to scald them, given by careless and inexperienced nurses.

Keep the child in this warm bath for a quarter of an hour, then take it out, dry rapidly, and wrap in a blanket. Meanwhile, the doctor will naturally have been sent for, as croup is not a complaint for amateur home treatment, though there are cases where a doctor will leave powders for a croupy child, and advise the mother to give them if the symptoms recur, and then if relief is given the attack may stand off.

COOKERY.

Practical Recipes.

BENGALESE HASH.—Cut into slices any cold meat to be used, removing all skin, bone, and fat. Mix a dessertspoonful of mixed mustard with a dessertspoonful of brown sugar, a teaspoonful of salt, and half a teaspoonful of pepper. Chop an onion, and let it cook till tender in a small saucepan, with half a teacupful of ketchup and a third of a gill of vinegar. When the onion is tender, stir in the other mixture (mustard, sugar, etc.), a teacupful of claret and one of stock, and a teaspoonful each of chutney and of red-currant jelly. Thicken with 1 oz. of browned flour. Put in the slices of meat and let them heat in the sauce. Serve very hot.

ROBIN HOOD'S SOUP.—Beat two eggs well. Bring a quart of clear soup to the boil, and strain in the eggs through a strainer. Do not let the soup boil again, or it will curdle.

DRAUGHT GINGERBEER.—For this allow 1 lb. of loaf sugar, 1 oz. of root ginger, and half a lemon to each gallon of water (if lemons are scarce, use a tablespoonful of citric acid and a small teaspoonful of essence of lemon). Slice the lemons and pour the water, boiling, on the above ingredients, let it stand a little to cool, then put in enough yeast to make it work well (about one tablespoonful to each two gallons of liquid), and let it stand for twelve hours at least, after which it should by rights be bottled.

ALMOND FLAVOUR.—Take of the essential oil of almonds, 2 drachms; best spirits of wine, half a pint; simple syrup, 2 lbs. Mix well together, and it is fit for use. Note: Simple syrup is made by boiling together 2 lbs. of lump sugar and one pint of water, clarifying it with the yolk of an egg. When great brightness is desirable, filter the syrup, when cold, through filtering paper.

PICKLE FOR BEEF, PORK, HAMS, AND TONGUES.—Water, 32 quarts; bay salt, 6 lbs.; brown sugar, 2 lbs.; nitre, 2½ ozs.; boil all the ingredients together in a clean pot, skimming off very carefully everything that floats on the surface, and keep boiling for twenty minutes. When cold, pour the liquid over the meat, taking care it well covers it. If the meat be long in the pickle it is necessary, at the expiration of two months, to boil the pickle as before, and add of brown sugar half a pound, salt 2 lbs.

PORTUGUESE METHOD OF DRESSING A LOIN OF PORK.—Steep it during an entire week in red wine (claret is the one they use and prefer), with a strong infusion of garlic and a little spice; then sprinkle it with fine herbs, envelop it in bay leaves, and bake it along with Seville oranges *piquées de giroste*.

THE NEWEST FASHIONS.

This is to be a season of long coats and cloaks, with graceful lines and flowing draperies, and for afternoon and evening alike will these same characteristics predominate. It must be admitted that the new models are almost universally becoming, so that both stout and slender women can take advantage of them. At the same time there is more of subtle intricacy in the apparently simplest design than is realised at first glance, and a stout woman cannot buy rashly a garment that is only suitable for a slender figure, deluded into the belief that these same flowing, loose lines are all that is required to disguise too much avoirdupois.

* * *

Cloaks are more fashionable than last season, but the long coats with loose sleeves are by far the smartest and the most popular. The wide, flowing sleeve, rather a modification of the kimono, is a favourite style, and the exaggeratedly long shoulder seam which forms part of the sleeve has been most cleverly treated, so that the fashion is generally becoming, whereas originally it was a most trying style to the majority of women. There is an immense amount of skill and taste requisite always in the arrangement of the sleeves and shoulders in every coat. The sloping shoulder considered so artistic is one of those attributes of real beauty that cannot easily be made, and in the attempt to secure it there is always danger that an effect of narrowness be given, and that is apt to be extremely unbecoming. But modern dressmaking has attained almost to a science, and while the sleeves must droop down from the shoulder they do not droop too suddenly nor with too much of a slant, but give the desired effect of breadth, while the long flowing sleeves fall down like extra capes over the hands.

* * *

There are no collars on these new coats, the collarless effect having apparently come to stay, and the flat band around the neck and down the front provides an excellent opportunity for the embroidery that is still considered so essential to the finish of every garment. The embroidery must be well done, and if it is of different colour than the material of the coat a much more charming colour scheme can be carried out. Gold and silver embroidery, rich passementerie, excepting when the question of economy must be considered, is very fashionable on long coats and is worked on velvet silk, cloth of gold and a silver cloth; or, if the cloak be of cloth, then a lighter shade is often used in preference to any other material.

* * *

Cloth is a favourite material for coats and cloaks this winter, and the light colours are more popular than the dark; in fact, the dark cloths are not smart enough for the evening, the one exception being black, which, with coloured embroidery, is certainly effective enough for a theatre wrap. Silk—the heavy ribbed quality—satin, and velvet are all materials that are considered smart for evening wraps of all kinds, but cloth is more generally used, and is possible for both simple and elaborate models of wraps. All the different shades and white, in which are included champagne colour, light grey and tan, pale pastel shades of blue, mauve, yellow, and pink, are considered smart, and there is an astonishing variety to be found in the same colour.

* * *

These coats are not long enough to touch the ground, but are long enough to completely cover the gowns over which they are worn; but as many women prefer a rather shorter length of coat, fashion has kindly decreed that there shall be a length that does not reach to the hem of the skirt. While the loose-back model is no longer new, and the semi-fitting coats are the most popular, fashion demands considerable width in the lower part, so that there shall not be any appearance of the garment being tight fitting. It must, to a certain extent, follow the lines of the figure and yet be loose.

* * *

Braiding, embroidery, clasps, buckles and tassels are all to be noticed on the new coats. Persian embroidery as facing, embroidered lace, and the most elaborate braided design are extremely popular, and the combining of different widths of braid provide opportunities for a great variety of effects, while the choice of colouring that is obtainable renders the task of choosing unusual and becoming colours much less difficult than when Fashion simply issues her commands that only certain colours shall be worn, regardless of whether the wearer be blond or brunette, short or tall.

* * *

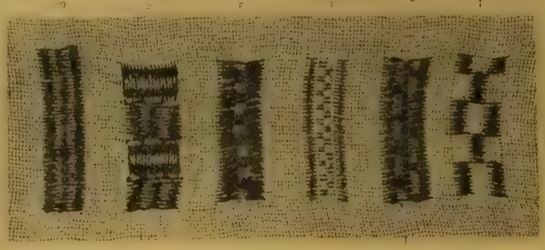
Our sketch this week shows a Paris model tailor-made costume of myrtle-green cloth of very fine quality. The Kimono-sleeved coat is lined with white satin, and a smart lace jabot adds a pretty effect. The hat worn with this costume is of myrtle-green felt trimmed with velvet of the same shade.

A PARIS MODEL COSTUME.

Reticella Embroidery.

Scrim as a foundation for fancy stitching has long held its own in the needlework world, and numerous forms of embroidery have been dedicated to its enrichment. One of the latest is reticella embroidery. Its results are highly gratifying, and at the same time easily obtained, for there are no new stitches to be mastered, no intricate processes to be carried out, no close, sight-destroying application needed to accomplish the work, as it is perfectly simple, and so nearly mechanical that even a tyro in needlework may undertake it without hesitancy.

The working thread required should be of sufficient weight to show up nicely on the scrim background. The mercerised or lustre cottons therefore answer, though silk floss will, of course, give a richer appearance. The work may be carried out in colours, or all white. Scrim is obtainable in white and cream, and if it is considered desirable may be dyed to match any particular shade. For ordinary use the white or cream is most satisfactory, owing to their good laundering qualities.



Curtains, bedspreads, dresser, sideboard, and stand covers, collars, cuffs, belts, aprons, and the like, are decorated with reticella embroidery, and in some instances bands of the embroidery have been inserted in other materials as trimmings. It is possible also to do this work on materials similar to scrim, such as square meshed nets, grenalines, veils, and veilings.

Reticella embroidery has the effect of drawn-work when finished, but no threads are drawn. It is seldom necessary to use a pattern, as the design may readily be followed by occasionally counting the threads. The work is mostly done in the well-known satin stitch, a simple over-and-over stitch to form solid embroidery.

The scrim should be held in frames, for its beauty depends largely on the evenness of the embroidery. After deciding on a design, work over and over a certain number of threads forming the scrim in either direction, two or more threads being covered, owing to the pattern. Draw the working thread rather tightly each time a stitch is taken, so that drawn spaces will appear at either side. Be sure to take all stitches through the meshes only, never splitting the mesh threads.

No. 1 on the samples shown has three rows, each over four-mesh threads. This forms a very simple border, and the rows may be increased to any desired number, or be made wider if preferred.

In the next sample, three rows over six threads are made for a short distance in one direction, alternating with two rows over six threads in the opposite direction. This scheme may be varied to suit the individual worker, and forms an effective border.

SOME OF THE STITCHES IN RETICELLA EMBROIDERY.

No. 3 shows two rows over eight threads, run across the scrim, while at regular intervals connecting rows over three threads appear.

No. 4 is an especially dainty decoration for collars and cuffs. Two rows over three threads are made, leaving six plain threads between. Groups of two stitches over two threads are then worked on this space, zigzag fashion.

Rows of the embroidery are interspersed with alternating French knots at No. 5. Bars of the embroidery may be substituted for the knots if preferred.

No. 6 shows two rows of five threads, with five left plain between, alternating with one row on these central threads.

A great variety of patterns will readily suggest themselves to the interested worker, and the work will prove to be an agreeable pastime as well as a simple method of providing handsome borders for decorative purposes.

Crocheted Bed Socks.

Half a pound 4-ply fleecy wool, and a wooden tricot hook (size No. 1) will be required. Make 50 chain stitches, and afterwards work in ordinary tricot stitch backwards and forwards, until the work measures 12 in. in depth (this will probably be when there are about 28 rows), then fold it in halves, and, without breaking off the wool, join the two edges together with single crochet; finally, take up every loop at one end, draw them tightly together, and fasten off firmly, thus forming a straight bag about 17 in. long. Although there is no particular shape in these night socks, when the feet are inserted they will be found to fit very snugly, and to reach nearly to the knee. They are really a great boon on cold winter's nights, and in certain cases I have known of, they decidedly insured a good night's rest, for I think everyone will admit that it is impossible to sleep well if the feet are cold, and many people have an objection to hot-water bottles, owing to the popular idea that they cause chilblains and tenderness in the feet.

To take out Mildew.

Wet the spots with chloride of lime or with chlorine water, and they will disappear immediately. If the linen has been starched, the spots will require an application daily for two or three days, rinsing out and bleaching in the sunshine after each application.

Established 60 Years.

POTATOES.

Appleby, Saturday.—Moderate supply in the district. Wholesale, 75s to 90s per ton; retail, 9d to 10d per stone.

Berwick, Saturday.—Trade was rather slower, and prices a little easier. Up-to-Dates, 75s to 77s 6d per ton.

Borough, Saturday. — A good quantity experienced a poor demand. Blacklands, 75s; best Up-to-Dates, 90s to 100s; Royal kidneys, 80s; Scottish grey soil, 90s to 100s per ton; French, 3s 3d to 3s 6d; Dutch, 3s to 3s 3d; German, 3s 6d to 3s 9d per bag.

Carlisle, Saturday.—The supplies were small, and met a steady demand at 7d to 8d per stone.

Doncaster, Saturday.—Plenty of potatoes, and a fair demand. Prices easier, at 9s to 10s per load of 18 stones.

Goole, Wednesday—The market was a little asier. Not many samples were shown owing to Martinmas week. Imperators, 9s; Dates, 10s; King Edwards, 10s per load. Not much business was done in foreign potatoes.

Lancaster, Saturday.—Potatoes 9d per stone.

Malton, Saturday. — The wholesale potato trade still keeps firm at 80s to 85s for the best qualities, and 75s to 80s general runs. At the auction sales potatoes 4s 6d to 4s 9d per bag of eight stones for Up-to-Dates of good quality.

Manchester, Saturday. —Potatoes: Yorkshire, 11s 6d to 12s 6d; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per 18 st; Irish, 5s; German, 4s 6d to 5s per cwt.

Preston, Saturday.—Potatoes, 9s to 10s per load of 240 lb.

Retford, Saturday.—Potatoes plentiful. Home-grown lots made 8s 6d to 9s 6d, and other sorts 6s to 7s per load.

Stockton, Wednesday.—Potatoes £4 15s and £5 per ton.

Spitalfields, Saturday. — Deliveries were heavy, and business proceeded slowly. Langworthys, 100s to 110s; Up-to-Dates, 90s to 100s; Blacklands, 80s to 85s; Royal Kidneys, 80s to 90s; Scottish grey soil, 90s to 95s per ton. French, 3s 3d to 3s 6d; Dutch, 3s to 3s 3d; German, 3s 6d per bag.

Whitby, Saturday.—Potatoes, 8d per stone.

Worksop, Wednesday.—Best potatoes 9s to 9s 6d per load of 18 stones.

York, Saturday.—The Martinmas hirings have largely interfered with trade, and there is very little doing. A few sales were effected at late rates—7s 6d to 8s per ton.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Hay made £3 5s to £3 17s 6d per ton; straw no quotation.

Derby, Friday.—Best old clover, 90s to 100s; new, 80s to 90s; best old hay, 90s to 100s; new, 50s to 70s; seconds, 40s to 50s; wheat straw, 60s to 70s; pressed straw, 50s to 60s; chop straw, 55s to 65s; peat moss, 35s to 40s.

Hereford, Wednesday.—A moderate business passing in hay at recent prices. Nothing doing in straw.

Lancaster, Saturday.—Meadow hay, 6d; clover, 7d; oat straw, 4d; wheat straw, 3½d to 4d per stone.

Leeds, Tuesday.—A good business is passing in the warehouses, and the prices of hay and straw are firmly maintained. Quotations:—Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—Good supplies of hay and seeds, with a moderate demand. Best quality made £3, and inferior £2 10s per ton on the ground. Plenty of straw, and business ruled fairly brisk at 30s per ton on the ground.

Manchester, Friday. — Hay, 5d; clover, 5½d to 6½d; straw, oat, 2½d to 3d per stone.

Newcastle, Tuesday, Old land hay, from £3 10s to £4 4s per ton; new land hay, £4 10s to £5 5s; this year's growth, £4 to £4 15s; wheat straw, £1 4s to £1 6s per load; barley straw, £1 2s to £1 3s; oat straw, £1 3s to £1 4s.

Nottingham, Wednesday.—Large supplies on offer, which met with a slow sale. Quotations:—Inferior to good hay, 35s to 55s; prime ditto, 70s to 80s; inferior to good clover, 45s to 65s; prime ditto, 80s to 90s; wheat straw, 45s to 55s; old hay, 90s to 100s; old seeds, 95s to 100s per ton.

Sheffield, Tuesday.—Moderate supplies, with a quiet trade. Choice seeds, £4 5s to £4 15s; choice hay, £3 15s to £4 5s; straw, £2 10s to £3.

Whitechapel, Saturday.—A moderate quantity available met a good demand, prices being steady. Best clover, 84s to 95s; inferior ditto, 72s to 80s; specially-picked hay, 85s; good ditto, 68s to 78s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 28s to 33s per load.

TO-DAY'S MARKETS.

CATTLE.

Metropolitan Market, Islington.

	Monday, Nov. 25, 1907. British.	Total.	Monday, Nov. 26, 1906.
Beasts	1,480	1,480	1,120
Sheep and Lambs	3,450	3,450	5,370
Calves	10	10	20
Pigs	—	—	—
Milch Cows	40	40	50

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 6	3 4	4 6
Sheep	4 10	5 6	6 4
Lambs	—	6 0	6 8
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £23 10s, ex £24.

British arrivals include as follows:—Scotland. 10; Eastern Counties, 79; Midland, Home, and Western Counties, 1,176; Devon, 40; Ireland, 175.

We note to-day an increase of 10 head in the number of beasts offered for sale compared with Monday last, the majority of the supply, as is usually the case at this season of the year, being drawn from the Midland Counties and Ireland. Trade for all grades of English cattle ruled of a slow nature, in the case of Herefords and Runts prices favouring the buyer to the extent of 2d per 8 lb. The Irish consignments consisted to-day of 90 Dublins and 85 Waterfords, amongst the former being a few choice Black Polled cattle, these were easily disposed of, whilst all other grades shared in the general depression. The inquiry for fat cows and bulls was also of a very slow nature at last Monday's values. There is very little prospect of a clearance being effected in this part of the market to-day.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s d	s d	Monday, Nov. 26, 1906. s d	s d
Scotch Cross-breds	—	—	—	—
Devons	4 4 to 4 6		4 10 to 5 0	
Herefords	4 2 to 4 4		4 4 to 4 6	
Norfolks	4 4 to 4 6		4 6 to 4 8	
Runts	4 0 to 4 2		4 2 to 4 4	
Lincolns	3 10 to 4 0		3 8 to 3 10	
Irish	4 2 ex 4 4		4 0 to 4 2	
Canadian	—	—	—	—
Fat cows	3 4 to 3 6		3 4 to 3 6	

There was a decrease of 910 in the number of sheep and lambs penned compared with Monday last. Trade opened and continued throughout the day of a slow and dragging nature; however, sellers were not willing to accept any decline on late values. Scotch sheep were more sought after, whilst Irish, on the other hand, were slow of sale. A few lambs were placed on the market and disposed of in the early morning. The supply included 400 Scotch, 820 Irish, and 835 from the Eastern Counties. Notwithstanding the general depression a clearance is expected to be made.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	s. d.	Monday, Nov. 26, 1906. s. d.	s. d.

6 st Halfbred ditto		—		—

London (Central), Monday.—Trade quiet for fair supplies. Beef, English, 3s 4d to 3s 6d; Scotch, 3s 10d to 4s 6d; American, 3s 2d to 3s 8d: refrigerated hindquarters, 3s 10d to 4s 4d. Mutton, English wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 8d. Scotch tegs and wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 8d. Veal, 3s 8d to 5s. Pork, 3s 8d to 4s 4d per stone.

FOREIGN.

Deptford, Monday.—Beasts, 1,678. To-day's supply, compared with Monday last, showed an increase of 739 head, and consisted of 766 from the United States and 912 from Canada (these on the whole ruled of a fairly steady nature, at an latter consisting entirely of ranch cattle). Trade advance of 2d per 8 lb in value for the former. The best States on offer were quoted at from 4s 3d to 4s 5d; seconds, 4s to 4s 2d; Canadian ranchers, 3s 4d to 3s 6d; seconds, 3s to 3s 2d. On Saturday 517 beasts from the United States, 207 Westerns, and 461 Canadians were offered for sale. Trade ruled of a slow nature, partly due to the fact that the States consignments only consisted of middling quality cattle. Besides the above, 600 Canadian beasts were withheld from sale. The best States on offer were quoted at from 4s 1d to 4s 3½; Westerns, 3s 8d to 3s 10d; Canadian ranchers, 3s 4d to 3s 6d per 8lb (offal given in). 300 Canadian sheep were withheld from sale.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—The mild open weather is no doubt contributing to the somewhat poor demand for the period of the year, London-made continues to find most favour at present values.

Cotton Cake.—Parcels of Egyptian-made are arriving pretty freely, and home makes being plentiful, prices close barely as strong as last week.

Linseed.—A good trade in the qualities for feeding purposes, but with good crop reports from the Plate values tend lower.

Linseed Cakes.	£ s. d.	Per ton. £ s. d.
English Linseed Cake, ex mill	7 17 6	to 8 0 0

—Robt. & John Hewetson.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 3,377 bales, and from foreign ports, 13,808 bales. There was a quiet market for bacon last week, and prices generally were reduced. Quotations ranged:—Irish, 52s to 54s up to 58s; Danish, 51s to 53s up to 57s; Canadian, 50s to 52s up to 54s. Butter: The butter market was steady. French, 104s to 118s; Danish, 121s to 124s; Russian, 88s to 112s; Irish, 96s to 120s; Victorian, 94s to 118s; New South Wales, 94s to 118s; Queensland, 90s to 114s; New Zealand, 110s to 120s; Argentine, 116s to 120s. Lard.—Lard was a slow market. Irish, 48s to 58s; Danish, 50s to 55s; American, 46s to 47s 9d.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: Prices remain about the same with an easy tendency. Business has been done during the week at 21s 6d ale, and porter 3s per ton less on rail London. Slack brewings will cause prices to be firmer. Dried Grains.—Prices continue firm with a steady tendency at 110s per ton for ale and 105s for mixed, bags 6d. each. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton. Kiln dried sea-damaged wheat from 22s per qr, on rail, London and elsewhere.—Hamlyn and Co.

SEEDS.

Mark Lane, Monday.—There is considerable business passing in spring sowing seeds, in spite of the high prices ruling in general. Rape continues firm Mustard unchanged. Rye scarce and firm. Peas moving freely, supplies still limited. In clovers, more movement in Whites and Alsikes, prices unchanged. English reds and Trefoils selling freely, prices tending upwards. In grasses, Perennials and Italians sell readily at rising prices.—John Picard and Co.

HOPS.

Borough, Monday.—The trade continues quiet, the few parcels that are being taken for consumption have changed hands at prices which must be quoted in buyers' favour.—W. H. and H. Le May.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market on the chief day of the week there was an increase in the number of beasts offered for sale. For both prime and second quality trade throughout the day ruled of an extremely slow nature owing to the very inclement weather experienced and the overstocked state of the Dead Meat Market; however, most sales were governed by late values, Scotch descriptions alone being the exception to this remark. The supplies from this country only consisted of a few cross-bred cattle. The majority of the arrivals were consigned from the Midland Counties and Ireland, these latter consisting of 93 Dublins and 65 Waterfords; amongst the former were a few Black-Polled cattle, these making an advance of 2d. per 8 lb. on our top Irish quotation. Fat butchering cows were slow of sale, but inclined to be a little firmer in regard to value, whilst fat bulls met with less inquiry and barely maintained late rates. On Thursday trade was confined to fat butchering cows and bulls, as usual, Monday's prices governing all transactions.

At the Foreign Cattle Market, Deptford, markets were held on Monday and Saturday, the supply on the former day consisting of somewhat inferior cattle as far as States beasts were concerned, consequently low prices prevailed. On the other hand, Canadians ruled firmer. The total number on offer at both markets was 3,664, as against 3,699 during the preceding week, consisting of 1,540 British (increase 270), and 2,124 foreign (decrease 305), these latter comprising 1,038 from the United States and 1,086 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Scotch cross-breds, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. 2d. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 4s. to 4s. 2d.; Black Polled ditto 4s. 2d. to 4s. 4d.; 90 stone States, 4s. to 4s. 2d.; 95 stone Canadians, 3s. 8d. to 3s. 10d.; 95 stone ranchers, 3s. 4d. to 3s. 6d; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade at Islington was again confined to Monday, and, taken as a whole, ruled of a decidedly firmer nature. For all grades of English and Scotch tegs, notwithstanding the latter being in large numbers, an advance in value was both asked for and obtained. Irish descriptions only succeeded in making late values; however, these were fairly well sought after. A few lambs were placed on the market, and found buyers at late currencies. No sheep were offered for sale at Deptford. Total number penned was 4,390, as against 3,840, showing an increase of 550. Best pens made per 8 lb. (sinking the offal):—7½ to 8 stone Down tegs, 6s. 2d. to 6s. 4d.; 8 stone Scotch tegs, 6s. 2d to 6s. 4d.; 9 stone Down tegs, 6s. to 6s. 2d.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone Down tegs, 5s. 10d. to 6s.; 10 stone half-breds, 5s. 6d. to 5s. 8d.; 10 stone Down ewes, 4s. 2d. to 4s. 4d.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Calves numbered 20, trade for which ruled of a slow nature on both market days, the best on offer being quoted at from 4s. 10d. to 5s. per 8lb. (offal given in).

No pigs were placed on the market.

Trade in Scotland.

The number of fat cattle on offer this week has been large, and the general quality decidedly improved. There was a good demand throughout at prices all over the turn higher. Fat cows also a large show, and they met a trade equal to last week. Small supplies of fat sheep on offer, which met a better inquiry at an average rise of 1s. per head, with the exception of ewes, which made less money. Calves dear, while pigs suffered a slight reduction. There was a large and good show of store cattle, for which there was a fair demand, and a good clearance effected at prices similar to those ruling last week. There was a small supply of store sheep, and anything of a good class got readily and well sold. Milch cows a large and good show, and they met a dear market. Quotations:—Top price of cattle per live cwt., 40s.; current, 35s. to 37s. 6d.; mutton, to fully 9¼d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland.

The supply of stock in Dublin Cattle Market on Thursday was large, and the attendance of buyers, both home and cross-Channel, was also on the big side. The number of cattle was 400 over previous Thursday's supply, and sheep were also in excess by nearly 500. Even with this large market there was a good steady demand for all sorts of stock in the early hours. For good cattle a steady demand was maintained nearly all day, but rough cattle were rather hard to get rid of late in the day. Cattle of a good type, which would take some more feeding, sold very freely. The market opened with a strong demand for good heifers and bullocks, and at the start it looked as if prices were going to increase a little, but it was afterwards found impossible to do any better than last day, and towards the close of the day buying got slower and worse than the morning, still a good clearance was accomplished. Prime beef was worth from 53s. to 56s. (for very choice), good medium beef from 47s. to 50s., and other sorts from 44s. to 45s. per cwt. The number of cattle in market was 5,083. The attendance of English buyers was large, and they seemed in a better mood for buying. Dublin buyers had to exert a good deal of energy to secure what meat they required. The unsettled state of markets in America has a good deal of effect on the home markets here. The quantity of beef landed in British ports during the week amounted to only 5,748 cattle and 63,236 quarters, as against 8,411 beasts and 125,710 quarters in the corresponding week for last year.

There was a good inquiry for sheep, shipping hoggets especially, due to the fact that the Irish season is now nearly over. Good aged wethers made 60s. each very frequently, and hoggets also sold well. Cheviots were in demand, as they were scarce and wanted. Sheep of moderate weight were in most demand, very weighty sheep not being wanted by butchers. Ewes and inferior sheep were hard to dispose of. Best wethers sold at from 7d. to 7¾d. per lb.; best ewe mutton, 6d. to 6½d., and coarse qualities of mutton from 5d. to 5½d. per lb. Veal calves in small supply, but good demand for prime. Choice vealers made from 7½d. to 8½d. per lb. Other sorts from 4½d. per lb. upwards.

There was a fair demand in the market for choice dairy cows; the inquiry for first-class springers was better, and values firmer, cross-Channel buyers operating freely at good prices. Coarse cows sold slowly. Prime cows made up to £21 each, but good cows could be got from £16 to £18 each; second grades from £8 10s. to £15 15s. Messrs. Cuffe and Sons and Messrs. Ganly, Sons, and Co. had large and successful sales of store stock.

In the pig market there was a good attendance of home and cross-Channel buyers, but buying was not too good and a bit slumpy. Prices may be said to have been down from 1s. to 2s. per cwt. on best qualities. A clearance difficult to accomplish. Choice light-weight pigs from 48s. to 50s. per cwt.; heavy pigs, 44s. to 48s.; and coarse pigs from 35s. to 40s. per cwt.

LONDON.

Central Market, Thursday.—Fair supplies and trade very slow. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 6d; extreme, 4s 8d; Deptford and Liverpool killed, 3s 3d to 3s 8d; refrigerated hindquarters, best, 4s 2d to 4s 4d; ditto, seconds, 3s 10d to 4s; ditto, forequarters, 2s 4d to 2s 6d; inferior beef, 2s 2d to 2s 8d; mutton, Scotch wethers, 5s; ditto, tegs, 5s; ditto, ewes, 3s 4d to 3s 8d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 4d to 3s 8d; Dutch sheep, 4s to 4s 6d; veal, 3s 8d to 5s; English pork, 3s 8d to 4s 4d; Dutch ditto, 3s 8d to 4s 2d per 8 lb.

Central Market, Friday.—Fair supplies, and trade continues slow, there being very little demand. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 6d; Deptford and Liverpool killed, 3s 2d to 3s 8d; refrigerated hindquarters, best, 4s 2d to 4s 4d; ditto, seconds, 3s 10d to 4s; ditto, forequarters, 2s 6d to 2s 9d; inferior beef, 2s 2d to 2s 8d. Mutton, Scotch wethers, 4s 8d to 4s 10d; ditto tegs, 4s 10d to 5s; ditto ewes, 3s 4d to 3s 8d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 4d to 3s 8d; Dutch sheep, 4s to 4s 4d; veal, 3s 8d to 5s; English pork, 3s 8d to 4s 2d; choice, small, 4s 4d; Dutch ditto, 3s 8d to 4s per 8 lb.

COUNTRY.

Ashford, Tuesday.—Trade not quite so good, though there was a fair attendance. Best beef made up to 4s 8d, and secondary up to 4s 4d. Mutton in poor demand, best Downs making up to 5s 10d, and Kent wethers to 5s 8d. Veal sold well at 5s to 5s 8d, but pork was rather cheaper, the best making 4s.

Aylesbury, Wednesday. — Very moderate supplies of stock were at market, consisting of 250 fat sheep and 150 good quality beasts. In consequence of this shortage trade was rather brisk in both departments, late rates being maintained, fat wethers realising 59s 6d, fat ewes 53s, fat tegs 53s 6d, fat heifers £19, and fat oxen £19 12s 6d per head.

Bath, Wednesday.—There was a large attendance, and the trade was good. Fat steers, £18 15s to £21; fat heifers, £16 5s to £18 5s; fat cows, £15 10s to £17 5s; fat tegs, 52s 6d to 53s; fat wethers, 60s 6d to 62s; fat ewes, 46s to 50s; fat calves, 68s to 90s; weaning calves, 33s to 48s.

Berwick, Saturday.—Attendance rather better, and trade fairly good. Calves, £4 10s to £6; stirks, £8 10s to £11 15s; two-year-olds, £12 10s to £14; three year-olds, £14 10s to £16 15s; cows, £20.

Birmingham, Thursday.—Good supply of pigs; small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Prices:—Beef, 5d to 6½d per lb; mutton, 6½d to 8½d per lb; bacon pigs, 9s per score; cutting pigs, 9s 3d to 9s 6d per score; sows, 7s 2d per score.

Bristol, Thursday.—There was a large supply of beef, but higher prices checked business, and trade was slow at 58s per cwt for best sorts and 54s for secondary. Mutton was plentiful, and in fair demand at about last week's prices. Pork was scarce, and quotations were unaltered.

Calne, Friday.—Present prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s per score; 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s 0d per score Pigs outside these limits at their value.—C. and T. Harris and Co.

Canterbury, Saturday.—Sheep maintained about recent values, a run of 200 wether tegs ranging from 41s 6d to 48s 6d. Store bullocks in slower demand, and the trade is nearly over. Second quality yearlings are quoted at from £6 to £8, and the best up to ten guineas; two-year-old heifers, £11 10s to £13 10s.

Carlisle, Saturday.—A fair number of buyers attended, and a brisk trade was done. Wintering heifers, £7 10s to £12 10s; stall-fed heifers of superior class to £16 10s; polled bullocks, £8 10s to £11 10s; horned bullocks, £9 to £12 each.

Chester, Thursday.—Fair supplies of dairy cattle, and a satisfactory business was done for the best. A few pens of horned sheep were on offer, but trade for store sheep has practically ended for this year. Prices:—Milch cows, £18 to £23; lying-off cows, £15 to £20; barren cattle, £9 to £13; stirks, £6 to £10, and heifers, £9 to £15 each.

Chichester, Wednesday.—There was a good attendance, and trade for both fat and store sheep was firm at about late rates. Good quality fat cattle met a sharp trade, and prices showed a hardening tendency, but store cattle were in more request, and were, with few exceptions, all sold. Quotations:—Prime Devon beasts, 4s 6d to 4s 9d per stone; prime Shorthorn ditto, 4s 3d to 4s 8d; prime Southdown tegs, 6s 6d to 7s; prime West Country ditto, 6s to 6s 9d; fat ewes, 5s to 5s 4d; fat calves, 5s to 5s 6d; fat pigs, 3s 6d to 4s 3d; sucker calves, 15s to 30s per head; store pigs, 8s to 20s per head.

Derby, Tuesday.—A dull day, but a fairly busy market. Prices firm at last week's rates. Beasts, 5½d to 6½d; calves, 7½d; sheep, 7½d to 9d per lb.

Doncaster, Saturday. — Good supply of cattle, especially stores, and a better demand at slightly improved rates. Milch beasts made £18 to £23; bullocks, £13 to £17; heifers £12 to £15; drapes, £11 to £14; stirks, £10 to £12; and young stock, £7 to £10 each. Average supply of sheep, and a moderate demand at late rates. Shearlings fetched 40s to 50s, and lambs, 40s to 45s each.

Dorchester, Saturday.—Both Messrs. Duke and Son and Messrs. Symonds and Sampson had large offers of stock, both fat and store, at to-day's cattle market, but mutton was as scarce as ever. Attention was largely centered in milch beasts, of which there were some rare lots offering both of heifers and cows. A keen competition ruled for everything at all serviceable at from £14 (for plain animals) up to £21 for deep milking heifers. Stirks and yearlings not in much request. Good meaty barreners, of which there was a nice selection offering, sold freely from £22 to £28 per pair, but plainer grades were much slower of sale at

from £16 to £20 or £21. The beef trade, except for the best finished animals, was scarcely as buoyant as it has been, at from £16 to £21 for best animals (or 11s to 11s 6d per score and over); secondary grades (cows, &c), 10s 6d. Fat sheep of nice quality still make 9d per lb and over, only very plain animals selling under this quotation.

Dublin, Thursday.—A sharper demand for choicely-finished bullocks and heifers at improved prices. Secondary and inferior sorts easier to dispose of at late currencies. All classes of sheep, except heavy ewes in better request and easier sold at last week's full prices. Cattle—Live weight (best), 29s 6d to 32s 6d per cwt; secondary and inferior sorts, 26s to 29s per cwt. Mutton (dead weight), 6½d to 7½d per lb; extreme, 7⅝d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday.—Sheep and cattle lighter supplies, fair trade at last week's prices; best bullocks to £15 5s, and smaller kinds to £11 5s. Half-bred lambs made up to 33s; Cheviot dinmonts, 30s; greyfaced lambs, 31s; cross Oxfords, 33s 6d. Very bad trade experienced for cows, few being sold. Irish cows realised £18 10s.

Exeter, Friday.—Large supply of beasts, and quieter demand, best steers and maiden heifers making 11s; cows, 10s; some unsold. Very large supply of sheep, largely made up of lambs for turnip, and which made from 32s to 36s, slower sale at lower prices; wethers sold well at 9d for the best; 8½d second clas, and 8d for old ones; ewes sold at 6½d, with a better demand.

Glasgow, Wednesday.—Large show of cattle, and, for bullocks of really choice quality and finish, a good demand was experienced, other descriptions only met a quiet trade; top, 63s to 65s; secondary, 56s to 58s per cwt. A good supply of sheep market, and for prime hoggs and wethers a sharp inquiry was experienced. Ewes of quality sold well, secondary were slow to sell and cheaper.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves: A very large supply (110) with excellent trade for the best quality, the highest prices being £23 10s, £23 (3), £22 10s, £22 5s, £21 15s, £21 10s, &c. Store cattle: A large supply with fair trade.

Hereford, Wednesday.—A large supply of beef in the market, with slow trade and no improvement in prices. Best quality heifer and bullock beef fetched 6½d to 6¾d; cow, 4½d to 5d. Calves small supply but better trade; nice quality veal made 6½d to 7d. Rearing calves were dearer. Sheep a short supply, but firmer trade; best wethers, 8d to 8½d; ewe mutton, 6d to 7d; fat lambs, 8d to 8½d. Store lambs were dear. A larger supply of porks and bacons; porks, 5½d to 6d; baconers, 5d to 6d. There was a better demand for large stores; small stores went cheap.

Leicester, Saturday.—Good average consignments of home-bred stock. Fair attendance, and trade steady at firm rates. Choice milch cows, £20 to £22; good lots, £17 to £19; secondary, £14 to £16; Shorthorn bullocks, £11 to £14; Irish cattle, £13 to £15; Welsh cattle, £9 to £12 10s; heifers, £9 to £11; young stock, £5 to £7 10s; and calves, 20s to 35s each.

Lincoln, Friday.—Poor supply of horned stock, and a medium trade. Young beasts, £9 to £11; strong ditto, £12 to £15; milch cows, £17 to £23 each. Hogg sheep made 40s each.

Lynn, Tuesday.—An average show of fat beasts met a good trade for the best, which made 8s, others 7s per stone. Stores in small supply, with very slow trade, from £6 to £15 each. Fat sheep in small supply, with average trade up to 10s per stone, smalls 10s 6d; stores, few shown from about 45s to 48s each. Store lambs made from 35s to 45s per head.

Manchester, Friday.—Beef: Firsts, 5½d; seconds, 4d to 4½d; thirds, 3d to 3½d per lb. Mutton: Firsts, Cheviots, Scotch, 7¼d; others, 7½d; seconds, 6½d to 7d; thirds, 5½d to 6d. Veal: Firsts, 7¼d; seconds, 6½d to 6⅞d; thirds, 5½d to 5⅞d. Bacon pigs: Firsts, 5d; seconds, 4d to 4½d; thirds, 3d to 3½d. Porket pigs: Firsts, 6⅛d; seconds, 6d to 6½d; thirds, 5½d to 5⅞d.

Newcastle, Tuesday.—The supply of cattle was a trifle larger than last week, and trade was fair but quiet, only being firm for prime heifers and steers, with prices unaltered. Quotations:—Prime heifers, 7s 6d to 7s 9d; second class, 6s 9d to 7s; prime steers, 7s to 7s 6d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Sheep were a rather smaller supply, and trade was firm, with an advance of ½d for young sheep. Quotations:—Choice young sheep 8½d to 9d; strong heavy, 8d to 8½d; choice hoggs, 8½d to 9d; second class, 8½d to 8⅝d; ewes, 6d to 6¾d; rams, 5d to 6d per lb. Calves were a slightly smaller supply. Trade in veal was fair at ½d advance, making 5½d to 8d per lb.

Newport, Wednesday.—Plentiful supply of cattle and sheep, short supply of lambs, and moderate lot of calves and pigs. There was a large attendance and good trade all round. The quotations were:—Best beef, 6d to 6½d; seconds, 5⅝d; cows, 4½d to 5d; best wether mutton, 8½d; ewes, 7d to 7½d; lambs, 9½d; calves, 7½d; porker pigs, 10s 3d to 10s 9d per score; baconers, 9s to 9s 6d.

Norwich, Saturday. — Smaller show of fat cattle, but of better quality, and an improved trade all round, the best beasts making 8s 3d per 14 lb stone, and nothing lower than 7s. Sheep forward in larger numbers, trade not so fast, prices being 6d per stone lower, the best making from 8½d to 9½d per lb. Average show of pigs, trade slow, baconers making up to 6s 2d and porkers to 6s 6d per stone. Store cattle were forward in about the same numbers as last week, but the quality shows a falling off; the bad weather affected trade, which was slow. Three-year-olds made from £13 to £15 10s; younger beasts from £5 to £10. Sheep consisted of a small show of hoggets, which about maintained last week's prices, a clearance being effected at 42s to 50s each. Pigs were cheaper at 10s to 22s per head, but rearing calves, which were a smaller show, made rather more money.

Nottingham, Saturday. — Smaller supply, with a good trade. Best in-calf cows, £18 to £22; heifers, £16 to £18. Smaller show of stores; strong heifers and steers up to £15, and younger ditto, £7 to £9 10s. Calves made up to 45s each.

Preston, Wednesday. — There was a fair supply of cattle, when a good level of quality was maintained. Prices had a hardening tendency. Good local fed heifers made up to 6½d; inferior, 5d to 6¼d; prime Irish quality, 6¼d; young cows and bulls, 5⅝d; and coarse and inferior, 5d per lb. Prime hoggs and lambs made 9d; heavy and inferior, 8d; prime young ewes and tups, 6¾d; heavy and inferior, 6d; and calves, 7½d per lb.

Retford, Saturday.—Very few store cattle shown. Attendance small, and no change in quotations.

Romford, Wednesday.—About an average supply of fat beasts; trade very slow. Best beasts, 4s 4d to 4s 6d; middlings, 4s to 4s 2d per stone. Calves in short supply; trade a little better at 5s 2d to 5s 4d per stone. Sheep in average supply; prices about the same. Best small sheep, 6s 2d to 6s 4d; larger sheep, 5s 8d to 6s per stone. Ewes in fair supply; trade a little better at 4s 4d to 4s 6d per stone. A few store beasts on offer; slow demand. Good supply of milch cows; trade better. Average supply of pigs, prices about the same. Small porkers, 3s 10d to 4s; large hogs, 3s 4d to 3s 6d per stone.

Sheffield, Tuesday.—A small supply. Good milch beasts scarce and dear, the best qualities making up to £23, second class £16 to £18.

Shrawsbury, Tuesday.—Usual supplies of fat and store cattle. Beef trade a shade better than last week. Quotations:—Beef, 6¼d to 6¾d per lb; mutton (wether), 9d to 9½d per lb; ewes, 7d to 8d per lb; veal, 7½d to 8½d per lb; porket pigs, 9s to 9s 6d per score; bacons, 8s 6d to 9s per score.

Stockton, Wednesday.—An average supply of the best cattle, which, as customers were scarce, met with a slow trade at 7s 6d to 7s 9d per stone, whilst rougher kinds made 6s to 7s. Young sheep and lambs, 9d per lb; ewes, 7d; and tups, 6d. The pig trade was quiet, small porkers making 7s to 7s 6d per stone; mediums, 6s 9d; and sows, 6s.

Thame, Tuesday.—There was a larger entry than usual at this time of year, and it is not for a long time that such a choice lot of cattle have been offered, amongst them were a number of stall-fed beast. Trade for best quality was brisk throughout, choice heifers making up to 4s. 6d. per stone, but unfinished cattle and cows continue difficult to dispose of. Sheep are scarce and dear, very few being disposed of. Good demand for veal. Bacon hogs and porkers changing hands. Messrs. Bond and Burrows' sale comprised 110 fat beasts, 80 fat and weaning calves, and 145 fat and store pigs. Fat oxen made from £17 to £23 15s; fat heifers, £15 to £19 15s; fat ewes, 48s to 60s; fat tegs, 50s to 58s 6d; fat calves, £3 to £5 10s; weaning cow calves, 30s to 56s; bull calves, 15s to 50s; bacon hogs, £3 5s to £4 9s; porkers, 28s to 42s; store pigs, 10s to 21s.

Truro, Wednesday.—Attendance very good; business fairly brisk and good. Fat bullocks, 56s to 60s per cwt; barreners, 40s to 45s; store bullocks, 40s to 45s; cows and calves, £11 to £15 each; rearing calves, 25s to 40s; wethers, 7d. to 7½d per lb; ewes, 5d to 5½d; pigs, 7s 6d to 42s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4⅝d to 5d.

Worksop, Wednesday.—Improved market, with more sheep, but trade not quite so good. Best beef to 7s 6d per stone; secondary qualities, 6s 6d to 7s; best Southdown and cross-bred shearlings 7½d to 8½d per lb; ewes, 6d per lb.

Yeovil, Friday.—Heifers with calves sold at from £18 to £20 10s; secondary animals, £13 10s to £17 10s; in-calf heifers, £12 15s to £17 5s; cows with calves, £17 to £19; secondary, £11 5s to £16; barreners, £11 10s to £14 5s; yearling heifers, £5 5s to £6 10s; store heifers, £7 15s. to £8 10s.

York, Thursday.—A smaller show of store cattle; late rates were fully maintained, whilst in a few cases a slight advance was made. Some of the best three-year-olds made up to £16, two-year olds £10 to £12. South-country buyers were present for English stirks, many of which made from £7 10s to £9. About an average supply of calving and milch cows, for which trade continues fairly good, late rates being fully maintained. Some of the very best made up to £22 10s., others £15 to £18. There was a good demand for sheep, and the best shearlings made up to 50s, others 44s to 48s; best twice crossed lambs to 40s; smaller ones, 28s to 34s. Masham lambs, for which the season is getting late, met with a very slow trade up to 24s each. A few North-country lambs were on offer, and made up to 36s each.

WOOL.

Canterbury, Saturday. — For the present Kent wool values are:—Feeces, 11d; lamb wool, 7d per lb; a slightly better demand for half-bred wool at 11½d; downs, 14d per lb.

Halifax, Saturday.—The state of business is not so good as a week ago. In home grown wools there is practically no change, late prices being upheld, with a small inquiry. Other descriptions on a limited scale are also fairly firm.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £12 10s to £13; ditto wethers, £12 to £12 10s; Kent fleeces, £12 0s to £12 5s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £11 10s to £12. Colonial—per lb.—Vic., scoured super., 2s 3d to 2s 4d; scoured, good, 2s to 2s 2d; scoured, average, 1s 10½d to 1s 11½d; greasy, average to fair, 1s 2½d to 1s 3½d; N.S.W., scoured, average, 1s 10½d to 1s 11½d; greasy, average, 1s 1d to 1s 2d; S. Aus., greasy, average, 11d to 1s; N.Z., scoured, average, 1s 11d to 2s; greasy, average, 1s to 1s 1d; Cape, scoured, super., 1s 10d to 1s 11d; fleece, average, 9½d to 10½d; greasy, average, 8½d to 9½d; Natal, scoured, 1s 6d to 1s 7d; greasy average, 8½d to 9d. Crossbreds—grs.—Vic., good to super., 1s 3½d to 1s 4½d; New Zealand fine, 1s 3d to 1s 4d; medium, 1s to 1s 1d; coarse, 10d to 11d.

LONDON HAY TRADE.

Saturday.—Supplies have been coming forward in much larger and increasing quantities both by rail and water during the week, and with the demand falling off, our market is showing considerable weakness. Prime clovers and mixtures seem about the only qualities which about maintain their value, but for anything that is not absolutely best less money has to be accepted. Best hays are in much poorer request than for some time past, and here and there a reduction of 2s 6d per ton has had to be made to effect business; plain and common hays, which are now coming along very abundantly, however, show the largest shrinkage in value and prices are a good 2s 6d to 5s per ton lower; after having been in such short supply for the last few weeks the increase in the arrivals of these plain stuffs is very noticeable.

Straw is now coming along in much shorter supply, and in consequence with demand firming up. Prices are 1s to 2s per load higher. With the weaker trade for English the demand for foreign has again fallen away, and although prices are nominally unchanged there is little or no business passing.

Prices ruling are about as follows:—Best hays, 70s per ton; good hays, 62s 6d to 67s 6d per ton; plain hays, 55s to 60s per ton; best clovers, 82s 6d per ton; good clovers, 75s to 80s per ton; inferior clovers, 70s to 72s 6d per ton; best mixtures, 80s to 82s 6d per ton; good mixtures, 75s to 77s 6d per ton; plain mixtures, 65s to 72s 6d per ton; seconds hays, clovers, and mixtures, 45s to 55s per ton; wheat straw, 26s to 28s per load; barley straw, 25s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 60s to 62s 6d per ton; second quality Dutch hay, 55s to 57s 6d per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

DAIRY PRODUCE.

London, Friday.—Butter.—We cannot report any improvement in the weather during week under review. It has been much colder and very foggy. The demand for Australian butter has shown a decided improvement, but values show no change. Cheese.—There has been a fair demand, but values are without change.—W. Weddel and Co.

EGGS.

(Number per 1s.)

Altrincham: 5. Appleby: 5 to 7. Barnstaple: 6. Berwick: 1s 6d to 1s 7d per doz. Birmingham: 6. Camelford: 8. Carlisle: 5. Chester: 6. Dartmouth: 1s 10d per doz. Derby: 6 and 7. Devizes: 7 and 8. Doncaster: 7 and 8. Dorchester: 1s 6d to 2s. Evesham: 1s 11d to 2s 2d per doz. Hereford: 6 to 8. Kidderminster. 6. Lancaster: 6 Lincoln: 6 and 7. Market Drayton: 6 and 7. Otley: 5. Penrith: 5 and 6. Penzance: 1s 7d to 1s 10d per dozen. Preston: 5. Retford: 2s 10d to 3s per score. Ripon: 6 and 7. Shrewsbury: 6. Spalding: 7. Stamford: 8. Stockport: 5. Stockton: 5. Totnes: 1s 10d to 2s per dozen. Truro: 1s 7d to 1s 9d per dozen. Wellington (Salop): 7 and 8. Worcester: 7. Worksop: 2s 4d to 2s 6d per score. York: 6 and 7.

BUTTER.

(Price per lb.)

Altrincham: 1s 3d to 1s 4d. Appleby: 1s 1d to 1s 2d. Barnstaple: 1s 1d to 1s 2d. Berwick: 10d to 1s. Birmingham: 1s 3d to 1s 4d. Camelford: 11d. Carlisle: 1s 3d. Chester: 1s 3d to 1s 4d. Dartmouth: 1s 3d to 1s 5d. Derby: 1s 3d to 1s 4d. Devizes: 1s 4d to 1s 6d. Doncaster: 1s 2d to 1s 3d. Dorchester: 1s to 1s 5d. Hereford: 1s 1d to 1s 3d. Kidderminster: 1s 2d. Lancaster: 1s to 1s 3d. Lincoln: 1s 1d to 1s 2d. Market Drayton: 1s 1d to 1s 2d. Otley: 1s 9d to 1s 10d per 24 oz roll. Penrith: 1s to 1s 4d. Penzance: 1s 1d to 1s 3d. Preston: 1s 3d to 1s 4d. Retford: 1s 2d to 1s 4d. Sale of Red Polls at Ipswich.

At the Drill Hall, Ipswich, on Friday, there was brought under the hammer about sixty head of pure bred Red Polled cattle belonging to Mr. Alfred J. Smith, whose famous Rendlesham and Eyke herds have been established upwards of thirty-three years. Among the animals were descendants from winners at the Royal, County, and London Dairy Shows, and the whole consignment, especially the twenty-two heifers and their calves, were exceptionally good, having regard to the known milking qualities of the herds. There was a good attendance and also good demand, but prices did not rule particularly high, the top figure being 34 guineas obtained for one of the heifers, Badingham Doll. Other chief prices for heifers were 31 guineas, 30½, 30, and 29½, the cows with calves made from 18½ guineas to 25½, and the bulls up to 30 guineas.

Printed and Published by the Proprietors, at the Offices, 3, Wellington Street, Strand, London, W.C.—November 25, 1907.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The autumn-sown wheat where up is of very promising appearance, germination having been very regular and the early growth decidedly lusty. In France the promise is likewise good. An increased area has been sown to wheat and an reduced acreage given to rye. This tendency to grow wheat rather than rye is general in the more progressive parts of the Continent. Sharp frost now rules Europe east of Rhine and Rhone, and the ice blockade of the Russian rivers has begun. The Baltic and the Danube are still open, though ice is forming. The heavy rains in the north of Africa, from Tangiers to Tunis, are considered extraordinarily fortunate, and may give this once-famous grain-producing littoral a good harvest of wheat, barley, and beans in 1908.

Heavy rains have also fallen in Australia and will add to the wheat yield in the south, which, under the Southern Cross, is of course the backward part of the country. Australia, however, cannot now produce as large a wheat crop as last year.

The Russian Government published on the 29th inst. a revised account of the wheat crop in that country. The final figures are as follows :—

1907	61,600,000 qr.
1906	63,115,900 ,,
1905	75,000,000 ,,
1904	84,000,000 ,,
1903	72,000,000 ,,
1902	60,500,000 ,,
1901	51,000,000 ,,

The wheat trade is said to be looking for a lead, but the clue to the markets from now to February is to be found in a source where nothing like a lead is even to be looked for. The clerk of the weather is master of the immediate situation, and he is chiefly remarkable, in this country, for not knowing his own mind. The end of January will probably see the Argentine question settled one way or the other, Argentina a holder for full prices (as we suspect) or else, of course, "bearing" the market. But between now and then the winterly or open character of the season, as the case may be, will weigh very largely with the markets. The price of 36s. quoted in London as an average on Friday seems reasonable under the circumstances, but there is no motive for taking less than 35s. since even chicken wheat fetches that price. The whole tone of trade would be mended by a fortnight of frosty air and clear skies, but these gifts of recent years have come with January rather than with December.

The wheat gradient lies at present principally between the home counties and the rest of England :—

Reading	35s. 9d. per qr.
Doncaster	33s. 8d. ,,
Range	2s. 1d. ,,

London, Canterbury, and Chichester, all home county markets, agree with Reading in a quotation of over 35s. while less than 34s. is averaged in the midlands as well as the north.

The barley gradient is as follows :—

Canterbury	31s. 3d. per qr.
Peterborough	26s. 7d. ,,
Range	4s. 8d. ,,

Oats show the following gradient :—

Mark Lane	19s. 8d. per qr.
Lincoln	18s. 2d. ,,
Range	1s. 6d. ,,

The variation in the prices made for oats is very slight. We note 19s. 3d. made at Canterbury, 19s. 4d. at Chichester, 19s. 3d. at Ipswich, 19s. 1d. at Reading, and 19s. at Salisbury, together with 18s. 7d. accepted at Cambridge and Doncaster, 18s. 4d. at Peterborough, and 18s. 8d. at Norwich.

The sales of British wheat at the statute markets last week were large, but the total sales since September 1 have been only moderate :—

This season	882,000 qr. at 33s. 8d. per qr.
Last ,,	883,000 qr. at 26s. 2d. ,,

The sales of British barley has been heavy since November came in, but September and October totals were so much below the average that the total for the period since September 1 is a good deal below the mean :—

This season	1,520,000 qr. at 26s. 2d. per qr.
Last ,,	1,898,000 ,, 24s. 8d. ,,

The sales of British oats have been large ever since the new crop was secured :—

This season	543,000 qr. at 18s. 2d. per qr.
Last ,,	415,000 ,, 16s. 7d. ,,

The imports of the United Kingdom last week were as follows :—

Wheat, 509,000 qr. : a large supply.
Flour, 126,000 sks. : a moderate supply.
Barley, 220,000 qr. : a large importation.
Oats, 90,000 qr. : less than usual.
Maize, 230,000 qr. : more than usual.

The imports of maize since September 1 have been 3,186,000 qr. against 2,899,000 qr. last season.

The supply of wheat on passage remains moderate and about 30 per cent. below the mean of the past ten years. This is very significant, and indicates the failure of the October and November rise in prices to call forth any specially large shipments. The present total is as follows :—

Californian	440,000 qr.
American	420,000 ,,
Argentine	75,000 ,,
New World	935,000 ,,
Russian	80,000 ,,
Indian	450,000 ,,
Australian	360,000 ,,
Turkish	30,000 ,,
Old world	920,000 ,,

In all 1,855,000 qr. The distribution of the wheat between old and new world sources is unusually equal.

Of flour 254,000 sacks are on passage.

The imports of breadstuffs since harvest are thus returned :—

Wheat	5,481,000 qr.
Flour	1,187,000 ,,
Breadstuffs	6,668,000 ,,
Last season	6,366,400 ,,

Expectations of spring corn are as follows :—

Qr.	Barley.	Oats.	Maize.
Russian	275,000	105,000	240,000
Asiatic	75,000	——	10,000
Californian	200,000	——	——
American	10,000	——	200,000
Argentine	——	15,000	210,000
Various	30,000	5,000	10,000
Total	585,000	125,000	670,000

Of linseed 94,000 qr., of rapeseed 12,000 qr., of cottonseed 44,000 tons, and of rice 21,000 tons are on passage.

Latest American shipments were 545,000 qr. of wheat (the heaviest this year), 128,000 sacks of flour, and 81,000 qr. of maize.

Argentina last week shipped 70,000 qr. of wheat, 141,000 qr. of maize, and 14,000 qr. of linseed.

Russia exported 285,000 qr. of wheat, 102,000 qr. of rye, 253,000 qr. of barley, 94,000 qr. of oats, and 135,000 qr. of maize; while Roumania sent off 70,000 qr. of wheat, 64,000 qr. of barley, and 5,000 qr. of maize.

India sent off 84,000 qr. of wheat and 34,000 qr. of linseed, while Australian exports at the fag end of the season were reduced to 8,000 qr. of wheat.

LONDON HAY TRADE.

Saturday.—Again we have to report the London hay trade in a very dull and quiet condition, with values showing a weakening tendency, although the weather at earlier part of week was of a most unsettled description the supplies show very little signs of falling off, and are more than ample for all requirements. Best clovers and mixtures are in much quieter demand and barely maintain their previous values, while plain and inferior kinds are if anything the turn lower. Best hays are in fair supply and find a very quiet trade, but plain and common hays, of which kinds there is such an abundance, are most difficult of sale, even at the present very low range of prices, the demand for these sorts at the moment being specially slow. It looks now that with corn and other feeding stuffs getting down to a lower level—as if farmers and holders are more inclined to realise on their hay stuffs; at any rate, prices in the country are getting more on a line with our London market, and supplies of necessity getting larger here. Straw is coming along in middling supply, and finds a fair demand at about previous quotations.

Prices ruling are about as follows: — Best hays, 70s per ton; good hays, 62s 6d to 67s 6d per ton; plain hays, 53s to 60s per ton; best clovers, 8s to 82s 6d per ton; good clovers, 75s to 77s 6d per ton; inferior clovers, 70s to 72s 6d per ton; best mixtures, 80s to 82s 6d per ton; good mixtures, 75s to 77s 6d per ton; plain mixtures, 65s to 72s 6d per ton; seconds hays, clovers, and mixtures, 45s to 55s per ton; wheat straw, 26s to 28s per load; barley straw, 26s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 60s to 62s 6d per ton; second quality Dutch hay, 53s to 57s 6d per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

THE BALTIC.

Saturday, 2 p m.

Wheat cargoes have been dull, and there is little inclination to operate. London Corn Trade Association contracts have been entered into on a basis of 39s 6d per 492 lb. for White Karachi and 39s 3d. Red, while Produce Exchange contracts in American Red Winter wheat have been at 8s. per cental (38s. 5d. per 480 lb.). The other recorded transactions have comprised Australian at 42s. 6d. per 480 lb., Rosa Fé at 39s. per 480 lb., Entre Rios at 40s. per 480 lb., No. 1 Northern Manitoba at 43s. 3d. per 480 lb., Durum at 36s. 3d. per 480 lb., and Duluth 41s. 3d. per 480 lb.

Barley cargoes have favoured buyers of Russian, for which 23s. 9d. per 400 lb. is accepted. But Oregon is held for 35s. per 448 lb., and scarcely anything above this good brewing grade is to be had from abroad. The very great difficulty in procuring malting barley of fine colour should encourage English farmers to make every effort to increase the production.

Oats are 6d. cheaper on the week, 16s 6d. being accepted for prompt shipment of 304 lb. Russian. Other cargoes sales include Argentine maize at 25s. 9d. per 480 lb.; Smyrna beans at 32s. per 480 lb.; Locust beans at 96s. per ton; Ferozepore rapeseed at 53s. per 416 lb., and Egyptian cotton-seed at £6 15s. per ton.

Weekly London Averages.

An account of the Quantities and Prices of British Corn bought on the London Market and in the area within five miles from the Royal Exchange during the week ending Tuesday, November 26, 1907 :—

	Imp. Quar.	Bus.	Total Amount. £	s.	d.	Av. Price per qr £	s.	d.
Wheat	4,158	3	7,483	6	9	1	16	0
Barley	420	0	581	15	0	1	7	8
Oats	1,849	2	1,799	13	6	0	19	6

Five Years' Comparative Averages.

(OFFICIAL.)

Comparative statement of grain sales and prices at the Statute markets for the week ending November 30, and for the corresponding week in each of the years from 1903 to 1906 :—

	WHEAT. Qrs.	s.	d.	BARLEY. Qrs.	s.	d.	OATS. Qrs.	s.	d.

Maize	1,096,100	658,300	658,300	618,000

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English firm, with an upward tendency for dry samples; whites quoted at 36s to 40s, reds at 35s to 38s 6d. Foreign firm, and held for 6d to 1s advance over Monday, but not active; No. 1 Northern Manitoba, ex ship to arrive, held at 44s to 44s 6d, landed at 45s; No. 2 Northern Manitoba, ex ship, at 43s 6d; No. 1 Durum, at 37s 6d to 37s 9d; choice white Karachi at 39s, Flour firm, but quiet; Hungarian quoted at 30s 6d to 40s 6d; Iron Dukes at 27s 6d to 28s. Maize steadily held, but inactive; Odessa landed held at 26s 3d; La Plata at 25s 9d. Barley slow, easier tendency; Odessa-Nicolaieff and Azoff-Black Sea, ex ship, quoted at 23s 2d to 23s 6d; Persian at 21s 6d to 22s. Oats slow, unchanged; South Russian quoted at 17s 0d to 18s 3d; River Plate at 18s 3d.

Mark Lane, Friday.—Wheat, English steady, quiet, at about late rates; whites quoted at 36s to 40s; reds at 35s to 38s 6d. Foreign firmly held, but not active; No. 1 Northern Manitoba, ex ship, held at 44s 3d to 44s 6d; No. 2 at 43s 6d; No. 3 at 42s 6d; No. 1 Durum at 38s; Australian, landed, at 46s; choice white Karachi, ex ship, at 38s 6d. Flour firm, but quiet; Iron Dukes held at 27s 6d to 28s. Maize slow, easier tendency; mixed American, ex ship, held at 26s to 26s 3d; La Plata, landed, at 25s 9d to 26s; Odessa, ex ship, 25s 9d, landed 26s 3d. Barley dull, unaltered; Azoff-Black Sea, ex ship, held at 23s 3d; Persian, ex ship, at 21s 9d, landed at 22s. Oats dull, at unchanged prices; La Plata held at 18s 3d; South Russian at 17s 9d to 18s 3d.

COUNTRY.

Appleby, Saturday.—Moderate supply. White oats (horse corn), 20s to 21s 6d per 26 stones.

Ashford, Tuesday.—Trade generally was dull, but wheat prices remained unchanged at 34s to 36s. Barley fell from 1s to 2s; best samples made 30s to 31s; secondary 28s to 29s. Beans were mostly soft and out of condition; Magazans made 27s to 29s; ticks 32s to 34s. Maize 1s cheaper, making 29s to 30s. Grey peas also 1s lower, at 31s to 32s. Flour unchanged.

Banbury, Thursday.—Wheat, white (new), 35s to 36s per qr; wheat, red (new) 35s to 36s per qr; barley, 25s to 32s per qr; beans (new), 29s to 32s per qr; oats, 18s to 22s per qr; peas, 30s to 35s per qr.

Berwick, Saturday.—Average attendance. Full supplies of barley. Wheat and oats little offering; fine qualities firm; secondary sorts dull. Barley of all qualities met a ready demand. Barley, 21s to 33s 6d; oats, 17s to 28s per qr.

Birmingham, Thursday.—Trading at this market was of very small dimensions, buyers being difficult to find. Manitoba wheat made 3d per qr more money, other sorts being unchanged in value. English wheat ranged from 13s to 13s 9d per 186 lb delivered. English oats were easier inclined, and made from 19s 6d to 20s per 312 lb, delivered. Beans, 13s per 196 lb. There was no change in the price of maize, Bessarabian being offered at 26s 3d, and Galatz-Foxanian at 26s per 480 lb at Sharpness. Grinding barley remained at at 24s 3d per 400 lb Sharpness.

Brighton, Thursday.—Quiet trade and small attendance. Wheat in good supply and irregular condition. New white wheat, 35s 6d to 37s 6d; new red ditto, 35s to 37s; barley, 28s to 35s; grinding ditto, 26s to 27s; oats, English, 18s 6d to 21s; peas, 33s to 34s; beans, 32s to 34s.

Bury St. Edmunds, Wednesday.—Wheat supply below average, and trade firm at 36s to 37s per qr for reds, and 35s to 35s per qr for revets. Barley in good average supply; lower descriptions the turn lower at 30s to 31s 6d per qr, but finer sorts inquired for and firm at 32s to 35s 6d per qr. Oats steady at 20s to 21s 6d per qr. Beans, new, slow, at 32s; old firm at 34s 6d to 35s 6d per qr. Maize 6d per qr lower, at 27s to 27s 6d delivered. Other feeding corns firm.

Canterbury, Saturday.—Oat prices remain steady, with only a small supply at the market, 38 lb samples making 18s 6d, and 43 lb whites up to 21s per qr. A slow trade for wheat, but prices are about the same as a week ago; 63 lb lots sell at 35s, and 64 lb at 35s 6d fetched from the farm, Prime barleys are still making about 34s, but secondary qualities range from 27s 6d to 30s per qr. Grey peas a trifle lower, at from 30s to 31s; tick beans, 31s to 32s; and Mazagans, 29s to 30s per qr. Tares, 4s 6d to 5s per bushel.

Cambridge, Saturday.—Wheat was in short supply, making a good 6d advance on the week, the price being about 37s 504 lbs on rail. Oats in better supply, prices ranging from 19s 6d to 20s. Splitting beans up to 32s per 532 lb, and feeding beans about 30s. Barley in moderate supply; prices unchanged.

Carlisle, Saturday.—Small show of oats in market to-day, prices for fine quality 24s per 336 lb; several lots inferior quality made from 20s 6d to 22s 6d per 336 lb. Wheat a good trade at 40s per qr 504 lb. Barley sold at 30s, fine quality; 28s for feeding quality. Bran grains and pollards dearer and in good demand. Very wet weather here the past week.—Thomas Robinson.

Chester, Saturday.—There was little change in values since last market day; wheat and oats quiet at recent prices. Mixed maize favoured buyers, but River Plate fully maintained last week's prices. Barley slow. Quotations:—Wheat, white and red, 5s 2d to 5s 4d per 75 lb; grinding barley, 4s to 4s 3d per 64 lb; oats, new, 2s 8d to 3s; old, 3s 1d to 3s 6d per 46 lb; Indian corn, old, 14s 6d to 14s 9d per 240 lb; round corn, old, 14s 3d to 15s 6d per 240 lb.

Chichester, Wednesday.—A fair attendance, Small quantity on offer, and not much trade. Prices unchanged. New white wheat, 36s to 37s; new red ditto, 36s to 37s; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s; peas, 34s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday. — Wheat firm, short supply. Barley, oats, and beans, quiet trade — Colin Taylor, King and Co, Ltd.

Coventry, Friday. — Attendance was fairly good. Supply of wheat not large, and prices were about as last week. Oats scarcely sold so well, and were fairly plentiful. Barley neglected, and demand very slack. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per 352 lb; new, 21s to 23s 6d; beans, old, 13s 3d to 14s; new, 12s 3d to 13s 6d per 196 lb; peas, 12s 6d to 15s per 193 lb.

Derby, Friday.—There was a fair supply of wheat, the prices of which, as well as of spring corn, were unchanged. Quotations: Wheat, white, 36s to 37s; red, 35s to 36s; barley, malting, 29s to 32s; grinding, 25s to 27s; beans, new, 35s to 36s; oats, old, 24s to 26s; new, 21s to 22s.

Devizes, Thursday. — Wheat is decidedly dearer, 12 score 12 lb of good quality in dry condition being worth 19s. Barley is depressed, and tending lower. Oats the turn in favour of the buyers. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s; winter oats, 18s to 19s; white Garton oats (330 lb), 18s 6d to 19s 6d; black Tartar oats (320 lb), 18s 6d to 19s 6d; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 34s.

Doncaster, Saturday.—Rather small supply of English wheat, which was shown in variable condition, the bulk being rather inferior, and only making 12s to 13s per load, but fine samples realised 14s to 14s 6d. Prices fairly firm. Foreign met with a slow sale at late rates, though there was an easier tendency. Quiet trade for barley, which made up to 32s 6d per qr. Small supply of oats, and only a slow sale at late rates. Maize was a shade lower. Other things unchanged.

Dorchester, Saturday.—With finer and much more seasonable weather to-day a larger number of farmers were induced to offer their samples, but no great disposition was evinced by factors to operate, except where they could do so to their own advantage. Farmers, on the other hand, were equally chary about parting with their corn, wheat especially; and circumstances somewhat militated against business, which generally ruled inactive at practically unchanged values, there being at the same time little alteration to note in foreign. Malting barley of a choice description is still exceedingly scarce, and where a really good sample is offered it is readily caught up at extreme values; inferior very much neglected except at a price; grinding about the same. Oats are occasionally a little easier for light parcels, but good qualities fetched late rates. Maize practically as last quoted. Beans and peas firm. Flour inactive, and purchases only made to meet hand-to-mouth requirements.

Dublin, Friday.—Foreign wheat quiet and unaltered in price. Maize in small inquiry, with prices unchanged. Irish wheat easier, at 20s to 22s. Oats: Best, very firm; second qualities neglected; black, 11s 6d to 12s; white, 12s to 13s; barley, malting, 15s 6d to 16s 3d, very firm, and a small supply.

Glasgow, Wednesday.—Moderate attendance at to-day's market. Wheat steady, and closing dearer. Flour steady, in sympathy with wheat, though quiet in tone. Maize and corn in slow demand, prices 3d per bull down for the former and 6d per bull down for the latter. Oats quiet, and in buyers' favour. Barley steadily held. Beans and peas firmly held at late rates. Oatmeal quiet. Bran and thirds quiet, and unchanged.—Gibson and Clark.

Glasgow, Friday.—Market quiet, and a slow sale passing for all articles at nominally unchanged prices since Wednesday.

Gloucester, Saturday.—English wheat practically unchanged: Reds, 34s 6d to 35s 6d; whites, 36s to 36s 6d. Foreign wheat unchanged: Plates, 42s to 43s; Russians, 41s 6d to 42s 6d. Plate maize 3d lower at 26s; flat 3d down at 26s 9d; Bessarabian unchanged at 26s 3d. Barley unchanged at 24s 3d. Oats 3d to 6d easier: Blacks, 18s to 19s 6d; whites, 19s 6d to 21s.

Grantham, Saturday.—Small show of wheat and a fair supply in other departments. Wheat, 35s to 36s; barley, 26s to 33s; oats, 19s to 21s; beans, 29s to 32s; blue peas up to 80s per qr.

Hereford, Wednesday.—Good supply of all kinds of grain. Wheats steady at last week's prices—4s 3d to 4s 6d. Barleys less easy to sell, and lower grades 1s to 1s 6d per qr down on the week. Oats 6d to 1s per qr easier. Beans steady. Maize a turn in favour of buyers.

Ipswich, Tuesday.—Small supply of wheat; trade steady at about last week's rates. Reds, 36s to 37s 6d; whites to 38s per 504 lb. Moderate supply of barley; trade steady; prices unaltered. Best, 32s to 33s; runs, 30s to 31s. Small supply of oats; trade firm at late rates. Maize 6d per qr lower. Beans and peas unaltered.

Leeds, Friday.—Although the foggy weather interfered with the arrivals of wheat, supplies were equal to the dull demand, without change from Tuesday's prices, either for English or foreign, and best flour was firmly held. Inferior kinds favoured buyers. Maize was quiet, Plate, Odessa, and American making from 25s to 26s. English and foreign barley was in better demand at firm prices. Beans, peas, and oats were unchanged.

Leicester, Saturday.—Good attendance, with only moderate supplies of home grown wheats. A large proportion of the samples were in variable and faulty condition. Red wheats, 33s to 35s; white wheats, 36s to 39s per 36 stones; barley, 29s to 32s per 32 stones; oats, 19s to 22s per 24 stones.

Lincoln, Friday.—Fair attendance, but only small supply of English wheat, with good demand for best qualities at an advance of 6d per qr on the week, or 36s to 37s per qr on line. Foreign slightly higher. Malting barley in fair supply, and unchanged. Oats and beans as last week.

Manchester, Thursday.—English wheat ruled rather scarce, and 6d per qr higher. Foreign ruled unchanged on the week, but closed firm. Flour unchanged and quiet. Indian corn met a rather better inquiry, but was not quotably unchanged. English and foreign barley easier. Oats in sellers' favour for both English and foreign. Beans and peas firm. Bran a little easier, but not quotably so.

Newark, Thursday.—A good attendance and prices about the same as last week. Wheat steady; other kinds easy. Quotations: Red and white wheat, 35s 6d to 36s; malting barley, 29s to 31s; grinding barley, 27s to 28s; white oats, 19s 6d to 20s; black ditto, 19s to 19s 6d; old beans, 36s to 37s; new ditto, 30s to 31s per qr.

Newcastle-on-Tyne, Saturday.—A very quiet demand for wheat here to-day, and to do business millers had practically their own way. Maize easier on the week. Oats of good dry quality firm; common sorts, however, were neglected. Beans and pease remain steady at late rates. The supply of barley was limited, prices ranging from 22s up to 30s, according to quality.—Joseph Pollard and Co.

Newport, Wednesday.—Small attendance. Trade was rather better in tone, and prices were about the same as last week. The price of fines (flour) were quoted at 32s per sack.

Northampton, Saturday.—There was again a small attendance and not much corn showing, the wretched weather having prevented threshing operations being carried out. A very slow trade for wheat, barley, and oats, all of which are down 1s, while other prices remained unchanged. New wheat, 34s to 36s; barley, 25s to 32s; white oats, 19s to 21s; black oats, 18s to 21s; old beans, 34s to 36s; new beans, 31s to 33s; peas, 33s to 35s; flour, 31s to 35s.

Norwich, Saturday.—Wheat is exceedingly scarce and difficult to buy, except at an advance of 6d per qr on last week's values. Prices now 37s to 37s 6d delivered. Barley in good supply, no alteration in price. In feeding stuffs there is not a brisk demand, but prices remain steady. English oats are not in large supply, averaging 20s to 20s 6d per qr. Maize was slightly easier, also cotton cakes; linseed cakes steady.

Nottingham, Saturday.—Wheat but little offering, and values well supported. Barley in less supply; best samples held for higher prices. Oats steady at previous rates. Beans firm.—Robt. Hubble.

Peterborough, Saturday.—We have had a moderate supply of wheat at market to-day, and found a good trade at 6d advance on last week's prices. Barley a quiet trade at late rates. The

few oats showing made last week's prices; wheat, 36s to 37s; barley, 28s to 34s; oats, 19s to 21s.—Thomas Hill and Son.

Plymouth, Thursday.—There was a very good attendance on our market here to-day. Maize, barley, and wheat at last week's prices. Oats 3d and 6d cheaper.—Orlando Davis and Co

Preston, Saturday.—A fair attendance and samples of new grain came forward slowly, but there was a poor inquiry, and no improvement was obtained on price of a week ago. Flour unchanged. Quotations:—Wheat, white, new, per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel, 3s 8d to 3s 9d; ditto, new, 3s 2d to 3s 3d; beans, per windle of 220 lb, 16s 6d to 17s.

Reading, Saturday.—There was a fair attendance and a slightly better trade at the following prices:—Wheat, 33s to 38s; barley, 27s to 32s; oats, 17s to 22s; peas, 30s to 32s; beans, 33s to 33s.

Retford, Saturday.—A fair inquiry for dry wheat, which was scarce and worth 36s to 36s 6d per qr, but lots which were out of condition were more difficult to sell at 33s 6d to 36s. A quiet trade for malting barley, and not many samples showing. Quotations were 28s to 32s, and grinding 26s to 27s per qr. Oats were distinctly lower, black winters selling at 18s 6d to 19s 6d; white, 19s to 20s; and old, 26s per qr. English beans in really good condition were not easy to meet with, and rates were 32s to 34s; peas, 28s to 30s; and maize (a trifle easier), 28s 6d per qr.

Ripon, Thursday.—Market quiet, with prices downward. For new oats and round maize rather less money had to be taken. Prices:—New wheat, 36s to 37s; foreign wheat, 46s to 48s; grinding barley, 25s. to 26s; ditto malting, 28s to 32s; new oats, 19s to 20s 6d; old oats, 26s; round maize, 27s to 26s 6d; ditto flat 32s per qr.

Shrewsbury, Saturday.—Quotations: Wheat, 15s to 15s 6d per 225 lb; old oats, 16s to 17s per 225 lb; new oats, 12s 6d to 14s; barley, 18s to 20s per 280 lb.

Stamford, Friday.—Large attendance, but trade showed no improvement. Wheat, 35s 6d to 36s 6d; barley fully 1s per qr lower on the week, making 28s to 32s; grinding barley, 25s to 26s 6d; oats, 19s to 20s; blue peas, 70s to 80s; beans, 30s to 31s per qr.

Stockton, Wednesday.—There was very little wheat showing, which made from 36s to 37s per qr. The foreign wheat trade was steadily held at last week's prices. Oats rather lower. Maize quiet, at 6d per qr lower on the week. Very little barley showing, and this was mostly out of condition. Common qualities made less money, but best kinds were slightly dearer.

Wakefield, Friday. — Small supplies of English wheat, but only best qualities sought after at 35s to 36s 6d per qr. Foreign had an upward tendency. Malting barley trade quiet at 27s to 32s per qr. Beans and oats of good quality only inquired after, but without change in value. Other feeding stuffs firm.

Warwick, Saturday. — Small attendance, values about as last week, with the exception of barley, which is depreciating owing to lack of demand, and many brewers having finished their purchases for the season. Feeding stuffs a shade easier.

Winchester, Saturday.—English wheat dull trade, condition variable. Foreign, 6d to 1s advance. Barley, 6d cheaper to arrive. Maize and oats unaltered. Flour in steady demand, late rates.—Feae, Colebrook, and Co., Ltd.

Wisbech, Saturday.—Very few samples of grain offering. Only fine dry lots of wheat sell at 36s 6d to 37s per 504 lb; secondary neglected. Barley, 28s to 30s per 448 lb. Oats, 19s 6d to 20s per 336 lb.—James Fletcher.

York, Saturday.—A small show of wheat, which was generally in poor condition, any samples at all dry selling last week's prices. Fine white, 37s to 38s; red and mixed, 36s to 37s per qr. of 36 stones. Good samples of malting barley sold quite as well as at the last market, Fine, 30s to 32s; good, 28s to 30s; other sorts, 26s to 28sper qr of 32 stones. Oats were rather cheaper: whites, 20s to 21s; blacks, 19s to 20 per qr of 24 stones; old beans, 36s per qr of 36 stones.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed Cake: As is usual at the time of year the trade is more or less of a hand to mouth description, but values remain fairly steady in spite of general inactivity. Russian move off quietly. East India seed pures and fine seedy Calcuttas are both unchanged. London made although attractively offered find a dull sale. Cotton Cakes.—The market is rather over burdened with stocks of Egyptian and consequently quotations are barely as firm, while English are if anything the turn easier. Decorticated.—London made pures find a free sale with American brands quiet. Rape cakes do not offer. Maize Germ Meal.—Some white African and American meals may be had at late rates, while English manufacturers are willing to submit to a slight reduction. Maize Gluten Feed is in good request. Rice Meal.—Landed lots of Rangoon maintain their prices, but for early arrival rather less money would be accepted, with second-hand parcels pressing. Locust Beans.—An exceptionally low figure is mentioned for Algerians, which should find a ready market, while Kibbled are fully as dear. Dried Brewers' Grains are scarce and dear. Nitrate of soda is unchanged:—

—Pinnock Bros., 30, Mark Lane, E.C.

Liverpool, Friday.—Nitrate of soda is without change. Kainit rather quiet, and likewise there is a pause in the demand for basic slag, which is to be ascribed to the wet weather of the past ten days retarding operations on the land; but as soon as climatic conditions improve a brisk demand is expected; values unchanged. Feeding stuffs all round are less firm, and there is a slow consumptive demand, users considering prices too high in many instances. The following are the current prices:—

POULTRY AND GAME.

Smithfield, Saturday.—Fairly good supply and demand. Prices: Pheasants, 4s 6d to 5s; young grouse, 5s 6d to 6s; old, 3s; young partridges, 4s 6d to 5s; old, 2s; black game, 3s 6d per brace; geese, 5s to 6s 6d; country ducks, 2s 9d to 3s 6d; wild ducks, 1s 6d to 1s 9d; Surrey fowls, 3s 3d to 4s; Sussex fowls, 3s to 3s 6d; Lincolnshire fowls, 2s 3d to 3s; Essex fowls, 2s to 2s 6d; Irish fowls, 1s 9d to 2s 3d; quails, 1s to 1s 6d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 2d; English hares, 2s 6d to 3s; leverets, 1s 9d; Scottish hares, 1s 4d to 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 6d to 9d; live hens, 1s 8d to 2s each; Australian rabbits, 5s 6d to 6s 9d per dozen; cock turkeys, 8d to 8½d per lb; hen turkeys, 4s 6d to 5s each.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fruit in good supply, but greenstuffs rather short. Quotations for English produce:—Grapes, 8d to 4s 6d; peaches, 3s to 12s per dozen; cranberries, 9s 6d to 10s 6d per case; apples, 4s to 12s 6d per bushel; tomatoes, 4s to 5s per 12 lb; cobnuts, 4s 6d to 5s 6d per 12 lb; walnuts (Grenoble), 6s to 8s 6d; chestnuts (Redon), 7s to 12s per bag; sprue, 8s to 10s per dozen bundles; celery, 5s to 12s per dozen rolls; parsnips, 2s to 2s 6d; greens, 1s 3d to 1s 6d per bag; spinach, 2s to 2s 6d; beetroot, 1s 6d to 1s 9d; sprouts, 2s to 2s 6d per bushel; leeks, 1s 6d to 2s; parsley, 1s 3d to 1s 6d; turnips, 1s 6d to 2s 6d; cucumbers, 3s to 4s 6d; endive, 1s 3d to 1s 6d per dozen; onions, 3s 6d to 4s per cwt; seakale, 12s to 15s per dozen punnets; potatoes, 75s to 105s per ton.

HOPS.

Canterbury, Saturday.—Trade at market is very quiet. Where sales are pressed prices must be quoted in buyers' favour.

Worcester, Saturday.—Trade continues on the same lines, but with the crop practically sold out, it is difficult to meet with buyers' requirements, especially if the inquiry is for fine coloured hops. One hundred and twenty-three pockets have been weighed this week, making with those previously weighed 17,987 pockets to date.—Charles Faram and Co.

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £12 10s to £13; ditto wethers, £12 to £12 10s; Kent fleeces, £12 0s to £12 5s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £11 10s to £12. Colonial—per lb.—Vic., scoured super., 2s to 2s 2d; scoured, good, 1s 10d to 2s; scoured, average, 1s 8d to 1s 9d; greasy, average to fair, 1s 1½d to 1s 2½d; N.S.W., scoured, average, 1s 8d to 1s 9d; greasy, average, 1s to 1s 1d; S. Aus., greasy, average, 10d to 11d; N.Z., scoured, average, 1s 9d to 1s 10d; greasy, average, 11d to 1s; Cape, scoured, super., 1s 9d to 1s 10d; fleece, average, 9d to 10d; greasy, average, 8d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8d to 8½d. Crossbreds—grs.—Vic., good to super., 1s 2d to 1s 3d; New Zealand fine, 1s 2d to 1s 3d; medium, 11d to 1s; coarse, 9d to 10d.

Canterbury, Saturday.—The drop in competing qualities at the Colonial wool sales has further depressed business in Kent fleeces. The general price is now 10½, and 11d is very hard to get.

Glasgow and Leith.—The Scotch wool trade during November has been extremely quiet. The financial crisis in America and the high bank rate here have practically caused a cessation of buying in the meantime, except for immediate requirements. Consumers of all classes are, however, fairly busy, and when their present stocks of wool get depleted buying will be more general. The auction of East India wools held at Liverpool towards the close of the month and the Colonial sales at present being held in London have recorded a lower range of values, and consequently any little business passing here has been at prices in buyers' favour. There are now signs of improvement in the financial situation, and the indications are that buying will gradually be resumed in the near future.—J. and W. Greig.

Halifax, Saturday.—The wool trade is rather inanimate at present. Prices rather tend to weakness, which is attributed chiefly to the financial position, as consumption is in no way diminished.

Wheat	28s. 10d. per 480 lb.
Barley.....	25s. 4d. per 400 lb.
Oats.....	18s. 11d. per 312 lb.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 P.M.

The large arrivals of strong wheat from Canada and the United States have been welcomed by millers, and these new supplies facilitating good mixtures have incidentally improved the sale of English wheat. The prices ruling to-day were not lower from the close of November, and for Australian wheat were if anything higher. Maize was a little cheaper to buy for all sorts, some arrivals from Natal sold at 26s. to 26s. 9d. per qr. Barley was 6d. cheaper for 400 lb. sorts, but firm for 448 lb. descriptions.

There was a steady trade done in new English of good secondary grade. Malt sold well at 40s. for new pale, 37s. to 38s. for new brown. Oats were firm, and perhaps the turn dearer for Manitoba and for good English, but declined 3d. for light Russian. Beans were cheap; some fine new English, weighing 532 lb., being offered as low as 34s. per qr. Peas were firm at full prices. Good arrivals of lentils and haricots made those staples rather cheaper to buy. Rye was firm.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A BETTER FEELING FOR BREADSTUFFS, AND FURTHER IMPROVEMENT IN TONE IS EXPECTED NEXT MONDAY.

THE FLOUR TRADE.

MARK LANE, Monday, 3 P.M.

No changes in London makes were reported, but a fair trade passed at November's closing quotations. Country flour being in large supply and not very good condition, the tendency was to meet bakers' views a little. American spring patents were more often offered at 31s to 32s than in November when 32s to 33s was stood out for. But with patents quotations are difficult, as each proprietor telegraphs his individual instructions.

Hungarian flour was as dear as ever. There is a great and *bona fide* scarcity of the type. No alterations were made in the prices of French, Australian, or Belgian. No Argentine or Russian flour was offered. Bran, pollard and middlings were not quite so dear as in November, but the prices are still higher than farmers find convenient. The sale of proprietary fattening meal of various recognised brands has been very large of late, and these makes have undoubtedly relieved the stringency of supply. Rice bran has also had a large and steady sale.

THE BALTIC.

Monday, 1 P.M.

State of Trade.

Wheat, maize, and barley cargoes are without change. Linseed and rapeseed cargoes are steady, sesame firmer, but cottonseed favours buyers. Oats are cheaper both for Russian for prompt shipment and for Argentine new crop February to April shipment. Canaryseed cargoes are cheap and are attracting special attention.

Business Done.

Wheat.—Rosa Fé (fair average quality Argentine), 38s 6d per 480 lb, February shipment (six cargoes sold); Barletta, 38s 3d per 480 lb., April shipment (two cargoes); Victorian, 42s 6d per 480 lb, on passage; Blue Stem (Oregon), 42s 3d per 500 lb, on passage; Walla Walla, 40s 6d per 500 lb, prompt shipment; Red Walla, 40s 3d per 500 lb, prompt shipment; Red Winter, 38s 3d per 480 lb, December shipment; Red Winter, 38s 9d per 480 lb, January shipment.

Barley.—Russian, 23s 9d per 400 lb, arrived; Persian, 21s 9d per 400 lb, on passage.

Oats.—Argentine, 16s per 304 lb March shipment; South Russian, 16s 6d per 304 lb., prompt shipment.

Maize.—Roumanian, 26s per 480 lb, prompt shipment; Galatz, 26s 3d per 480 lb, on passage; Novorossisk, 26s per 480 lb, on passage American, 26s 3d per 480 lb, on passage; American 25s 3d per 480 lb January shipment; American, 24s 9d per 480 February shipment.

Beans.—Morocco, 31s 3d per 480 lb, on passage.

Dari.—Persian, 23s per 480 lb, December shipment.

Cloverseed.—Red Chili, 75s per cwt, prompt shipment.

Linseed.—Argentine, 39s 3d per 416 lb, January shipment; Bombay, 45s 6d per 416 lb, January shipment; Calcutta, 46s 3d per 410 lb, arrived.

Rapeseed.—Brown Calcutta, 53s 6d per 416 lb, arrived; Yellow Gujerat, 58s per 416 lb, April shipment; Jumba, 45s per 416 lb, arrived.

Cottonseed, Peruvian, £6 10s per ton, January shipment; Bombay, £5 18s 9d per ton, January shipment; Egyptian, £6 15s per ton, January shipment..

Canaryseed.—Algerian, 38s per 464 lb, prompt shipment; Argentine, 27s per 464 lb, prompt shipment; Turkish, 37s 9d per 464 lb, prompt shipment.

Sesame.—Howri, 66s per 384 lb, prompt shipment; Bombay, 63s per 384 lb, prompt shipment.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—The market is idle, buyers and sellers being quite apart owing to the irregularity of the American wheat markets. Grain.—There is some improvement in the demand for round and flat corn, and prices are firmer. Beans dull. There is a demand for fine qualities of Scotch barley and oats, but off grades are very unsaleable. Oatmeal unchanged. Oilcake a slow sale. Mill stuffs.—The turn lower. Winter wheat patents, 30s to 30s 6d per 280 lb; spring wheat patents, 31s to 33s 6d per 280 lb; American corn, 15s 6d to 15s 9d per 280 lb; round corn, 15s 4½d to 15s 6d per 280 lb; grinding beans, 18s 9d to 19s per 280 lb; broad bran, 115s to 117s 6d per ton; medium bran, 110s to 112s 6d per ton; common thirds, 112s 6d to 115s per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 150s to 152s 6d per ton.—McKinnon and McDonald (Glasgow).

The arrivals of wheat are moderate. Trade is firm, and prices are 3d to 6d higher than last Monday. Flour unchanged. Maize, barley, and oats a quiet trade at late prices.—Coventry, Sheppard, and Co.

Flour.—Trade to day has been quiet, but firm on the whole. Prices for near at hand parcels have eased a little, owing to heavy arrivals, but forward prices show no sign of yielding, and are unchanged to 3d. dearer on the week.—T. S. Medill and Sons, Ltd.

Milling offals.—The trade is not so good, although London prices are unchanged, but apparently country prices are a little easier.—John Bawcomb and Co.

TERM MARKET.

Latest prices on the speculative market are as follows in in centals, 100 lb., for future delivery:—

Red winter wheat—
- 8s. per cental, December delivery.
- 8s. 1d. per cental, January delivery.
- 8s 2d. per cental, February delivery.
- 8s. 3d per cental, March delivery.

Mixed American maize—
- 5s 7d per cental, December delivery.
- 5s 4d per cental, January delivery.

Argentine maize—
- 5s 5d per cental, January delivery.

Argentine oats—
- 3s 3d per cental, March delivery.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: Prices remain about the same with a slightly firmer tendency, and business has been done during the week at 21s to 22s ale, and porter 3s per ton less on rail London. Slack brewings cause prices to advance. Dried Grains.—Prices continue firm with a steady tendency at 110s per ton for ale and 105s for mixed, bags 6d. each. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton. Kiln-dried sea damaged wheat from 22s 6d per qr, on rail, London and elsewhere.—Hamlyn and Co.

TO-DAY'S MARKETS.

POTATOES.

Berwick, Saturday.—The potato market is well stocked with home and foreign produce, which is selling at 75 per ton.

Borough, Saturday. — Arrivals were large, and trade moved off slowly. Langworthys, 80s to 100s; Up-to-Dates, 90s to 100s; Blacklands, 75s to 80s; Royal Kidneys, 80s; Sottish (grey soil), 90s to 100s per ton; Germans, 3s 6d to 4s; Dutch, 3s; French, 3s 3d to 3s 6d per bag.

Carlisle, Saturday.—The supplies were smaller than usual, and met a brisk demand at 7d to 8d per stone.

Doncaster, Saturday.—Fair supply and an average demand, but prices slight lower 8s 8d to 9s 6d per load of 18 stones.

Goole, Wednesday—A fair supply were shown, and met with a fair demand. Imperators, 9s; King Edwards, 10s; and Dates, 10s per load.

Lancaster, Saturday. — Smaller supplies, which sold at 9d to 10d per stone.

Malton, Saturday.—Potatoes, 4s 3d to 4s 9d per bag of eight stones.

Manchester, Saturday. — Potatoes: Yorkshire, 11s 6d to 12s 6d; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per load; Irish, 5s; German, 4s 6d to 5s per cwt.

Preston, Saturday.—Potatoes, 9s to 10s per load of 240 lb.

Retford, Saturday.—Market was well supplied. Best home-grown lots made 9s 6d per load, and other kinds 7s to 8s,

Spitalfields, Saturday.—Trade proved very slow, arrivals being heavy. Langworthys, 100s to 110s; Up-to-Dates, 90s to 100s; Blacklands, 80s to 85s; Royal Kidneys, 80s to 85s; British Queens, 90 to 95s; Scottish grey soil, 90s to 95s per ton; Dutch, 3s to 3s 3d; French, 3s 3d to 3s 6d; German, 3s 6d to 4s per bag.

Stockton, Wednesday.—Potatoes £1 15s to £5 per ton.

Whitby, Saturday.—Potatoes, 8d per stone.

Worksop, Wednesday.—Good supply, and trade slow. Best potatoes, 8s 6d to 9s 6d per load of 18 stones.

York, Saturday.—A fair supply met a steady trade, at prices ranging from 75s to 80s per ton.

Sheep	4 10	5 6	6 4
Lambs	—	6 0	6 8
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £24.

British arrivals include as follows:—Scotland. 16; Eastern Counties, 77; Midland, Home, and Western Counties, 1,155; Devon, 40; Ireland, 142.

We note to-day a decrease of 50 head in the number of beasts offered for sale compared with Monday last. For both prime and second quality fat cattle the inquiry was a slow one, owing to the overstocked state of the Dead Meat market. However, all sales were based on last week's currencies. The majority of the supply, was drawn from the Midland Counties and Ireland, with a sprinkling of Scotch and Devons; these two latter made our top quotation. The Irish consignment consisted of 80 Dublins (a few of which were Black Polled cattle) and 62 Waterfords, both of which shared in the slow trade, the former being quoted 1d. per 8 lb. lower. There was a small attendance of buyers for fat cows and bulls; however, late rates were maintained. A clearance is expected to be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Dec. 3, 1906.
	s d s d	s d s d
Scotch	4 4 to 4 6	4 8 to 4 10
Devons	4 4 to 4 6	4 4 to 4 6

Runts	4 0 to 4 2	4 0 to 4 4
Lincolns	3 10 to 4 0	3 8 to 3 10
Irish	4 0 to 4 3	3 10 to 4 2
Canadian	— —	— —
Fat cows	3 4 to 3 6	3 4 ex 3 6

There was a increase of 1,520 in the number of sheep and lambs penned compared with Monday last. Trade throughout the day ruled of a very slow and dragging nature, at a decline in value in the majority of cases, only a few choice small things making late currencies, this remark appyling to both wethers and ewes. Scotch and Irish descriptions were in rather smaller supply, these shared in the slow trade, but maintained late rates. A few lambs were placed on the market, and found buyers at last week's prices. A clearance is not expected to be made in this part of the market to-day. The supply included 300 Scotch, 630 Irish, and 817 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day.	Monday, Dec. 3, 1906.
	s. d. s. d.	s. d. s. d.

11 st Halfbred ditto	3 10 to 4 0	4 0 to 4 2
5 st Down Lambs	6 6 to 6 8	—
6 st Halfbred ditto	—	—

Calf trade not worth noting.

No pigs on the market.

London (Central), Monday.—Trade quiet, supplies being moderate. Beef, English, 3s 4d to 3s 6d; Scotch, 3s 10d to 4s 4d; American, 3s to 3s 6d: refrigerated hindquarters, 3s 8d to 4s 2d. Mutton, English wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 8d. Scotch tegs and wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 8d. Veal, 3s 8d to 5s. Pork, 3s 6d to 4s.

St. Ives (Hunts) Monday.—Beasts, 471; sheep, 463; pigs, 478; fat and store cattle a fair trade; fat and store sheep and pigs good demand. Milch cows a fair show and trade. Prices: Beef, 7s to 7s 9d; sheep, 8s 2d to 11s 1d; pigs, 6s 3d to 7s; milch cows, £14 to £22.

FOREIGN.

Deptford, Monday.—Beasts, 528. To-day's supply, compared with Monday last, showed a decrease of 1,150, consisting of 180 from the United States, and 348 from Canada. Trade ruled of a fairly steady nature at about late rates. The best States on offer were quoted at from 4s 1d to 4s 3d; exceptional 4s 4d; Canadians, 3s 10d to 4s; seconds, 3s 7d to 3s 9d per 8lb (offal given in). On Saturday 1,450 beasts from the United States, and 570 Canadian ranch cattle were offered for sale, and with a fair trade were quoted as follows:—States, 4s 2d to 4s 4d; seconds, 4s to 4s 2d; Canadian ranchers, 3s 2d to 3s 4d per 8lb (offal given in). Besides the above 200 States and 200 Canadians were withheld from sale.

Liverpool, Monday.—Smaller supply of cattle. Demand good for best qualities, but slow for middling sorts at late rates. Sheep supply practically unaltered. Trade slow. Finished handyweights barely maintained the quotation. Strong sheep much lower, while rough classes were difficult to cash. Prices:—Beef, 6¼d to 4½d; mutton, 9d to 6½d per lb. At market 1,639 cattle and 4,180 sheep.

OIL SEEDS.

Mark Lane, December 2.—Indian linseed is rather dearer, Argentine rather cheaper, on the week. Rapeseed and cottonseed are favourable to buyers, but bad crop reports make sesame firm. The demand for seed oils is steady, and prices are maintained.

Linseed.	per 416 lb.	Rubsen.	per 424 lb.
	s. s.		s. s.
Calcutta	47 to 48	German	71 to 75

Ferozepore	55 to 56	Hempseed.	per 336 lb.
Jamba	46 to 47	Russian	42 to 44

SEEDS.

Mark Lane, Monday.—Spring sowing seeds show considerable movement; prices generally high. In clovers, Alsikes and Whites keep firm. Reds and Trefoils move freely at rising prices in English seed. In grasses, Perennials and Italians show brisk business at still rising prices. Rape keeps firm. Rye scarce. Peas, fair business passing; supplies more plentiful. — John Picard and Co.

HOPS.

Borough, Monday. — There was decidedly more business dosng at the end of last week, and several parcels were sold. The lower prices now ruling are evidently tempting brewers to stock up. —W. H. and H. Le May.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

The number of beasts on the chief market day of the week at Islington was slightly larger, the supply consisting chiefly of consignments from the Midland Counties and Ireland, with a few Devons. Trade for both prime and second quality fat beasts ruled of a slow nature, the tendency in regard to value being a downward one, especially was this noticeable with regard to Herefords and Runts, these being quoted 2d. per 8lb. lower. The consignment from Ireland consisted of 90 Dublins (amongst which were a few black polled beasts) and 85 Waterfords. For this class of cattle, sellers were both able to ask and obtain late currencies. Fat butchering cows and bulls were steady in price but slow of sale, whilst rough cattle were difficult to vend.

At the Foreign Cattle Market, Deptford, markets were held on Monday, Tuesday, and Saturday, the supply of States cattle being of rather better quality than the previous week, slightly higher rates were both asked and obtained, whilst other descriptions remained about the same. The total number of beasts on offer at both markets was 6,508, as against 3,664 during the preceding week, consisting of 1,560 British (increase 20), and 4,948 foreign (increase 2,824), these latter comprising 2,666 from the United States and 2,282 Canadians, 1,482 of which were Ranch cattle. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 2d. to 4s. 4d.; 95 stone Runts, 4s. to 4s. 2d.; 90 stone Norfolks, 4s. 4d. to 4s. 6d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 4s. 2d. ex 4s. 4d.; 90 stone States, 4s. 3d. to 4s. 5d.; 95 stone Canadians, 3s. 8d. to 3s. 10d.; ditto ranchers, 3s. 4d. to 3s. 6d; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade at Islington was confined to Monday. Trade for all descriptions of English wethers and ewes ruled of a somewhat slow nature, late currencies governing all transactions. Irish sheep shared in the general depression, whilst Scotch met with a fairly steady inquiry; however, no advance can be quoted for these. A few lambs met with buyers at late rates. At Deptford a few Canadian sheep were consigned, but met with no buyers. The total number penned at both markets was 3,750, as against 4,390 during the preceding week, comprising 3,450 British (decrease 490) and 300 Canadians. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Down tegs, 6s. 2d. to 6s. 4d.; 8 stone Scotch ditto, 6s. 2d to 6s. 4d.; 9 stone Down ditto, 6s. to 6s. 2d.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone half-breds, 5s. 8d. to 5s. 10d.; 10 stone Down ewes, 4s. 2d. to 4s. 4d.; 11 stone Hampshires, 5s. 8d to 5s. 10d.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Only 20 calves were offered for sale, the best of which were quoted at from 5s. to 5s. 2d. per 8lb.

Trade in the West.

Supplies of store stock are coming pretty freely to hand, especially of barreners, of which very considerable numbers are being disposed of at the annual winter sales now in progress at the principal centres in this part of the country. As a rule the great bulk of the supply is in excellent condition, the result of the generally favourable season this has been for grazing stock, and which still continues to be the case, and although there has been a few sharp frosts the pastures have suffered but little, and are as full of keep as is often the case in the spring. But the trade is not particularly fast, as a rule, for graziers, except for the very best, owing to the reaction in the beef trade, which, however, is only thought to be of a temporary character, and will speedily right itself. The quietness in trade in no way applies to the better class of barreners, those morally affected being the distinctly plain or rough descriptions, which are certainly a very dragging trade, and a distinct contrast to the more serviceable grades, which are meeting a very ready sale for young, meaty bullocks at very satisfactory prices as far as the seller is concerned, animals coming in this category realising £24 up to £34 per pair for good class. Devons, Shorthorns, or cross-breds, which will speedily be available for market; less useful kinds, cows, &c., are not so easy to cash at greatly varying prices, ranging from £21 or £22 down to as low as £16 or even less for anything very old. Milch beasts fully maintain their old buoyancy, and with best heifers still selling from £16 up to £23 15s, there is a great difficulty in meeting the demand, despite the high prices ruling, plain cows and heifers also finding an equally ready market, at from £13 to £15 10s. Young stock, too, is by no means selling as well as it was, the present high prices of feeding stuffs, with the prospect of becoming still dearer in the event of our having a snap of cold weather, making buyers very cautious about speculating in this class of stock, despite the fact of the pastures being almost as verdant as ever, and also of there being such an excellent stock of roots. For the first time for several months past store sheep have experienced a slight reaction, and the trade, which has ruled so phenomenally buoyant now for so long, has at last assumed a somewhat quieter tone, which, coming so late in the season, is a matter of little importance, seeing that sheep sales for the present season are practically at an end, the closing fair of the year for Dorset being that of Martinstown, on Monday, when, despite the fact of the great bulk of the sheep penned consisting largely of final drafts, which flockmasters are discarding for the winter, and therefore of a generally plain stamp, good prices were realised; and, on the whole, the present may be looked upon by stock owners as presenting many extraordinary features, more especially in regard to the uniformly high prices which all classes of stock have been making, and which most agriculturists would only be too glad to experience again in the coming year.

The markets for fat stock keep fairly steady, but, as far as one can judge, mutton is making a better trade than beef, though the choice grades of the latter still realise high prices, some of the best Devons, Shorthorns, and Norfolks bringing their 12s. per score and over, it being the plainer grades that are mostly affected by the decline in values, some of the coarser qualities barely reaching 9s. 6d. and secondary grades not more than 10s. to 10s. 6d., without even then attracting a ready sale. Of course, a good deal of the beef now coming out is of a distinctly plain character, graziers being anxious to get rid of beasts of this class so as to devote closer attention to the reserves they have in hand preparing for the festive season now so near at hand. The veal trade keeps steady and prices firm, the calves now offering being almost entirely small animals of a poor class, for which, however, present values range from 8d. to 8¾d. per lb. for the best, and 7½d. to 7¾d. for poor calves. Fat wethers and tegs are very dear, many of the best realising 9d. to 9½d. per lb., and occasionally more, whilst ordinary runs of fat sheep sell from 7½d. to 8½d., and very little under, except in the case of coarse old rams and the like. Excepting a few suck lambs, there is little doing in lambs at present, but those being marketed sell up to 10d. per lb. Pigs keep steady, but prices generally have a slightly easier tendency than otherwise.

Trade in Ireland.

The market in Dublin on Thursday last was much the same as on the previous Thursday for cattle, there being a decrease of only three head on the week, but a decrease of nearly 400 sheep. The numbers were:—5,080 cattle and 6,406 sheep. There was a good attendance of buyers from across Channel, and home buyers were well represented. The morning was cold and wet and seriously interfered with good business. Still really tip-top beasts, which were very scarce, were somewhat dearer, it was thought. Rough cattle were a worse trade than on the previous week, they sold very irregularly, and a large number had to be driven out unsold at the end of the day. The live-weight quotation was about from 30s. to 31s. per cwt., but some very superior lots went up to 33s.; good heavy cattle sold between 26s. and 28s. per cwt. live weight. For anything lower than this, the trade was very slack at from 22s. to 24s. per cwt. Approximate dead-weight prices would be:—Best heifer and ox beef, 54s. to 56s. per cwt., good second quality beef, 48s. to 50s.; and coarse beef about 44s. per cwt. Bad English markets had a bad effect on the Dublin market.

Trade was slow for sheep, which were in much larger supply for this time of the year than in 1905 or 1906, the supply being nearly 1,000 advance of both years. A fair business was done for nice hoggets worth between 40s. and 50s. each, which sold very freely. Ewes and rough sheep were much neglected. A large number of pens failed to clear. Best wether mutton brought from 7d. to 7¾d. per lb.; prime ewe mutton, 6d. to 6½d, and inferior mutton, 5d. per lb.

Large heavy hoggets sold at from 46s. to 56s. each, and small to medium ditto at from 36s. to 44s. each. There was still a fair inquiry for lambs, which are still being brought pretty plentifully in the market. Veal of choice quality in request, but scarce; inferior calves were neglected. Choice calves sold at 7½d to 8¼d per lb, and inferior ran from 4½d per lb. upwards. Milch cows were in moderate demand, and made a good clearance. Heavy springers in good request and dear, making up to £20 and £22 each for choice beasts; ordinary cows sold at from £10 to £14.

Store cattle still selling well. Mr. Gavin Low held a large sale of about 1,000 beasts, which brought good prices and attracted a large crowd of buyers to the sale rooms. The beasts offered for sale were of very choice description, and good bidding was made for them, though the demand was hardly as strong or prices as good as they were a couple of months ago.

The popularity of Mr. Low's sales is a fact which has been very marked this season. Shorthorn three-year-old crosses sold from £13 to £14 each; two-and-a-half-year-old ditto, £10 17s. 6d. to £12 5s.; and one-and-a-half to two-year-olds, £7 12s. 6d. to £11 15s.; two and two-and-a-half Aberdeen-Angus classes made from £9 to £13 12s. 6d; and Herefords of the same age similar prices.

The Dublin pig market had a full attendance of cross-Channel buyers and home pork butchers. Business opened slowly, but a good business was concluded, at slightly lower rates, at an early hour. Good shipping pigs sold at from 44s. to 46s. per cwt. Choice porkers made from 47s. to 48s. per cwt. Coarse pigs not in much demand.

LONDON.

Central Market, Friday.—Good supplies and and a bad trade, there being practically no demand. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 6d; Deptford and Liverpool killed, 3s to 3s 7d; refrigerated hindquarters, best, 4s to 4s 2d; ditto, seconds, 3s 8d to 3s 10d; ditto, forequarters, 2s 4d to 2s 6d; inferior beef, 2s 2d to 2s 8d. Mutton, Scotch wethers, 4s 8d to 5s; ditto tegs, 5s; ditto ewes, 3s 4d to 3s 8d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 4d to 3s 8d; Dutch sheep, 4s to 4s 4d; veal, 3s 8d to 5s; English pork, 3s 8d to 4s 4d; Dutch ditto, 3s 8d to 4s per 8 lb.

Islington, Thursday.—To-day's suppy of beasts consisted of fat butchering cows, bulls, and rough cattle, trade for which was slightly brisker, though not sufficient to quote any advance in value. Top prices paid per 8 lb.:—Fat cows, 3s 4d to 3s 6d; fat bulls, 2s 8d to 3s. No sheep offered for sale to-day. A few calves offered met with buyers at late currencies, the best being quoted at 4s 10d to 5s per 8 lb.

COUNTRY.

Ashford, Tuesday.—Rough weather affected the attendance of buyers, and trade was slow; best beef, however, maintained last week's rates, selling at 4s 4d to 4s 8d. Mutton, though rather slow of sale, made late prices; Southdown tegs being quoted up to 6s, and West Kents up to 5s 10d. Veal and pork were unchanged on the week, the former making 5s to 5s 8d, and the latter up to 4s.

Aylesbury, Wednesday.—Average supply of fat beasts on offer, numbering 154. With the exception of best quality heifers and bullocks, for which there was a good inquiry, realising £24 15s and £22 10s respectively, trade was fairly good at about late rates. A moderate consignment of sheep, only 323 penned, and these sold well, fat wethers realising 57s; fat tegs, 46s 6d; and fat ewes, 51s per head.

Berwick, Saturday.—Attendance of farmers and buyers fair, and trade better. Calves, £5 10s to £6 10s; heifers, £8 10s to £10 10s; stirks, £9 10s to £12; two-year-olds, £12 10s to £14 10s;

three-year-olds, £14 to £16; Shorthorn bulls, £12; cows, £18 10s to £22.

Birmingham, Thursday. — Good supply of pigs; small supply of beasts and sheep; trade slow. Quotations:—Beef, 5d to 6½d per lb; mutton, 6½d to 8½d per lb; bacon pigs, 9s per score; cutting pigs, 9s 3d to 9s 6d per score; porkets, 10s per score; sows, 7s 2d per score.

Bristol, Thursday.—Beef was plentiful, but not in much request, and business was slow, the price of secondary qualities falling to 53s per cwt. Mutton, which was in less quantity than usual, was in moderate demand, and with a fair amount of trade passing values were well maintained. There were more pigs than lately, and trade was steady, the quotation for baconers advancing to 9s per score.

Calne, Friday.—Present prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s per score; 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s 0d per score. Pigs outside these limits at their value.—C. and T. Harris and Co.

Canterbury, Saturday.—The store stock trade is nearly over for this season. Irish horned stock was mainly offered to-day, but the demand was not at all brisk. Some of the best lots changed hands; two-year-old heifers ranged up to £13 10s; yearlings from £6 to £8, and the best ten guineas; Calves, £4 10s to £5 15s per head.

Carlisle, Saturday.—There was a smaller supply and fair attendance of buyers, and a firm trade Wintering heifers, £7 10s to £10 10s; stall feeding heifers to £15 10s; polled bullocks, £8 10s to £10 10s.

Chester, Thursday.—A good market in regard to quality, demand and prices. There was an especially quiet trade for dairy cattle, and for promising store stock, and on the whole quotations tended upwards. Milch cows, £17 to £22; calves, £15 to £19; barren cattle, £10 to £13; heifers, £9 to £15; and stirks, £6 to £10.

Colchester, Saturday.—There was little but little but grass-fed beef on offer, and this averaged 4s 4d per stone of 8lb; mutton, 6s. There seemed a glut of pork in the market, and it was sold at 8s per score.

Derby, Tuesday.—A wretched day. No alteration in the value of best beasts, but sheep of choice quality much sought after. Beasts, 5¼d to 6¼d; calves, 7¼d; sheep, 8d to 9½d per lb.

Doncaster, Saturday.—Good average supply of cattle, and a fair sprinkling of milch beasts. Steady trade for best, and milch beasts firm; others unchanged. Young stores made £7 to £10, drapes, £11 to £14; heifers £12 to £15; bullocks, £12 to £16 10s; and milch beasts, £17 to £23 each. Moderate supply of sheep, and a quiet trade, but no change. Lambs realised 34s to 40s, and breeding ewes, 42 to 47s each.

Dorchester, Saturday.—There was an exceptionally busy time at the cattle market to-day, the occasion being the annual great barrener sale of Messrs. T. Ensor and Son, to which all the best-known farmers and graziers in the county contribute. The result was that over 300 head of barreners were stalled, independent of many head of milch beasts and other horned stock. The weather being favourable a large company of buyers was attracted from all parts of the west of England, including many who make a point of regularly selecting their barreners at this particular mart in consequence of the general excellence of those usually offered here, and which this year proved no exception to the rule, the great bulk being of splendid character and such as would be sure to give satisfaction to the grazier. In consequence there was an exceedingly keen competition for all the bettermost grades of Devons, Shorthorns, and Herefords, and also of cross-breds, which brought prices even higher than have been realised at this important market at previous sales. Many excellent beasts were contributed by such well-known agriculturists as Messrs. Tory, Chick. Allen, Ford, Rowles, Lawrie, Phillips, &c. A general range for crossbreds was from £18 to £31 10s; Herefords, £24 to £32; best Devons, £25 to £36 per pair; singles making up to £21 apiece. An equally good trade ruled for heifers and calves, which were again very dear, making £16 to £23; cows and calves, £15 to £22 10s. Altogether a better trade has not been experienced for years, the most convincing testimony of which is the fact that the whole of the 400 head of beasts were disposed of by four o'clock, a contrast to some sales, when the business has had to be finished in semi-darkness.

Dublin, Thursday.—Choicely finished cattle were in good demand, but prices did not reach last week's levels. Secondary and inferior sorts more difficult to move at lower quotations, and a clearance not effected. Though demand was fair for sheep, prices were in buyers' favour. Ewes and rough qualities difficult to place. Cattle—Live weight, 29s 6d to 32s per cwt; other descriptions, 26s to 28s 6d per cwt. Mutton (dead weight), 6½d to 7¼d per lb; exceptional, 7¾d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday. — Cattle: Larger supply, fair selling trade; best polled bullocks sold to £16; horned bullocks to £15 10s; black polled £14; stirks, £11 15s. Cows: Smaller supply, fair demand; Shorthorns realised £25 10s; crosses, £24 5s; Ayrshires, £19. Sheep also down in numbers; half-bred hoggs made to 33s; greyfaced hoggets, 28s 6d; Cheviot dinmonts, 30s.

Glasgow, Wednesday.—Good show of cattle, and for prime quality a healthy demand was experienced at about late quotations: Secondary and inferior sorts sold cheaper; top, 63s to 65s; secondary, 55s to 58s per cwt. Average number of sheep penned, and trade in this department ruled firmer for finest descriptions; inferior classes slow to sell; finest mutton, 9d to 9½d; secondary, 8½d to 8¾d per lb.

Gloucester, Saturday. — Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves: Fairly good supply, the best selling at high prices (£25, £23 10s, £23, £22 15s, £22 5s, £22, &c.), but the trade for inferior quality was dull. Store cattle: A large supply with animated trade.

Hereford, Wednesday.—A good supply of beef, with trade, if anything, a trifle firmer. There was no alteration in prices, but best quality bullock and heifer beef made from 6½d to 6¾d; cow beef, 5d. A short supply of calves, with trade firm, veal making all 9d. Very few sheep on offer, and trade was firm; best wether mutton at 8d to 8½d; ewe, 7d. Lambs scarce and dear at 8½d; store lambs dear. Porks and bacons a large supply, the former at 5½d to 6d; bacons, 5d to 5½d; small stores cheap; big stores in better demand. There was a dull trade in store cattle, of which there was a fairly large supply.

Leicester, Saturday.—Full consignments of home-bred bullocks. Buyers were well represented, the demand being mainly for the best lots. Choice milch cows, £22 to £23 10s; good lots, £17 to £19; secondary, £14 to £16; heifers, £10 to £13; Shorthorn bullocks, £12 to £14 10s; Irish cattle, £13 to £16 10s; Welsh stock, £9 to £13; young stock, £5 to £7 10s; and calves, 13s to 35s each.

Lincoln, Friday.—An average supply of horned stock, and a slow demand. Young beasts, £9 to £11; strong ditto, £13 to £15; and milch cows, £17 to £23. The sheep pens were poorly filled, and the demand moderate. Hogg, 38s to 44s; in-lamb ewes, 48s to 50s each.

Lynn, Tuesday.—Fat beasts were in average supply, and trade was at late rates, from 7s to 8s per stone. Stores met a very slow trade, and were an average supply, making from £6 to £14 each. A small show of fat sheep experienced unchanged prices, from 9s to 10s, smalls 10s 6d. No store sheep. Store lambs realised from 36s to 45s each.

Manchester, Friday. — Beef: First-class, 5½d; second-class, 4d to 4½d; third-class, 3d to 3½d. Mutton: First-class, 7¾d; second-class, 6¾d to 7¼d; third-class, 5¾d to 6¼d. Veal: First-class, 7¾d; second-class, 6¾d to 7¼d; third-class, 5¾d to 6¼d. Bacon pigs: First-class, 5d; second-class, 4d to 4½d; third-class, 3d. Porket pigs: First-class, 6½d; second-class, 6d to 6½d; third-class, 5½d to 5¾d per lb.

Newcastle, Tuesday.—Trade for cattle was rather easier except for the very choicest qualities, but the only change in price was a fall of 3d for prime steers. Quotations:—Prime heifers, 7s 6d to 7s 9d; second class, 6s 9d to 7s; prime steers, 7s to 7s 6d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Sheep were a considerably larger supply, and trade was rather easier, and in several classes prices were down ½d. Quotations:—Choice young sheep 8½d to 8¾d; strong heavy, 8d to 8½d; choice hoggs, 8¾d to 9d; second class, 8½d to 8¾d; ewes, 6d to 6½d; rams, 5d to 6d per lb. Trade for calves was fair, prices remaining unchanged; veal, 5d to 8½d per lb.

Newport, Wednesday.—There was a small attendance, and little business was done. Prices were practically the same as last week. The quotations were:—Best beef, 6d to 6½d; seconds, 5¾d; cows, 4½d to 5d; best wether mutton, 8d; ewes, 7d to 7½d; lambs, 9½d; calves, 7½d; porker pigs, 10s 3d to 10s 9d per score; baconers, 9s to 9s 6d.

Norwich, Saturday.—Fat cattle were shown in rather larger numbers. Trade for the best heavy-weights was not so good, these making 7s 10d per 14 lb stone; best small-weights, 8s; and good cows, 7s. Veal calves in small supply, and fetched 8s 9d. A good show of fat sheep, all hoggets. Trade unchanged for all descriptions, the best making 9½d per lb, and secondary sorts, of which there were very few, 8¾d. A good show of pigs, with a slight rise in price, porkers making from 6s 5d to 6s 8d; baconers, 6s to 6s 3d; and sows 5s 6d per stone. Store cattle were a very good show for the time of year, and the quality was rather better. There was hardly any trade. The best made from £14 to £16 10s per head; yearlings, £8 15s to £10 5s; and others, £4 to £6 10s. Calves were a better trade at 20s to 55s. Store sheep, which were shown in small numbers, met a very good demand at from 41s to 52s 6d. Store pigs met a very slow trade, but all were sold at from 10s to 22s per head.

Nottingham, Saturday. — Smaller supply, trade being pretty good. The best in-calf cows, £18 to £22; and heifers, £14 to £18 each. Larger show of stores; strong heifers and steers selling selling at £13 to £14 each, and younger beasts £7 to £9. A small show of calves sold slower than lately, realising 40s per head.

Preston, Wednesday.—There were fair supplies of stock, and trade ruled about the same as last week. Quotations:—Local fed heifers made up to 6½d; Irish ditto, 6d to 6¼d; young cows and bulls, 5¾d; inferior cows and bulls, 4¾d to 5¼d; choice hoggs and lambs, 9d; heavy and inferior ditto, 8½d; choice ewes, 7d; heavy tups and ewes, 6¼d; calves, 7¼d to 7¾d per lb.

Retford, Saturday.—A better attendance than usual, and an improved supply of all kinds of stock. With an average demand fully late currencies were maintained, the best milch cows selling at £18 to £22; secondary, £14 to £17; two-year-old steers and heifers, £10 to £12; yearlings, £6 to £8; and calves, 35s to 45s per head.

Romford, Wednesday.—Average supply of fat beasts, trade about the same. Best beasts, 4s 4d to 4s 6d; middlings, 4s to 4s 2d per stone. Calves in short supply and dearer at 5s 4d to 5s 6d per stone. Sheep in short supply; prices about the same; best small sheep, 6s to 6s 4d; larger sheep, 5s 8d to 6s per stone. Ewes in shorter supply at 4s to 4s 4d per stone. A few store beasts on offer, slow demand. Large supply of milch cows; trade slower. Pigs in average supply; trade about the same; small porkers, 3s 10d to 4s; large hogs, 3s 4d to 3s 6d per stone.

Sheffield, Tuesday.—A poor supply and a small business done, the best milch beasts making £19 to £21 10s, and rough beasts £15 to £17.

Shrewsbury, Tuesday.—Owing to the inclement weather there was only a small supply of store sheep and pigs, but usual number of fat cattle. Small attendance of buyers, with a moderate trade. Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d to 9½d per lb; ewes, 8d per lb; veal, 7¼d to 9d per lb; pork pigs, 9s 6d to 10s per score; bacons, 9s to 9s 6d per score,

Stockton, Wednesday.—The show of best cattle was well up to the average, and prices ranged from 7s 6d to 7s 9d per stone. Rougher kinds sold at 6s to 7s per stone. Young sheep made 9d per lb; ewes, 7d; and tups, 6½d. The pig trade was very steady, and last week's prices were maintained, small porkers making 7s to 7s 6d per stone; mediums, 6s 9d to 7s; and sows, 5s 9d to 6s.

Thame, Tuesday.—The supply of stock was not so large as has been the case lately, but the quality of the cattle was exceptionally good. Buyers were in large attendance, all the principal towns being represented. Best quality beef was in demand and met a brisk trade, late improved rates being maintained. Second quality and unfinished cattle are, however, difficult to move. Sheep still continue very scarce, some choice tegs off the ploughing selling remarkably well. Bacon, pork and veal are in good demand. Messrs. Bond and Burrows' sale comprised 75 fat beasts, 83 fat sheep, 55 fat and store pigs, and 76 fat and weaning calves. Fat oxen made from £17 to £22 15s; fat heifers, £16 to £23 7s 6d; fat tegs, 54s to 58s 6d; fat wethers, 53s to 58s at calves, £3 10s to £5; weaning cow calves, 30s to 70s; bull calves, 10s to 40s; bacon hogs, £3 10s to £5 15s; porkers, 30s to 41s; store pigs, 10s to 20s.

Truro, Wednesday.—Attendance very good; business fairly brisk. Fat bullocks, 56s to 60s; barreners, 40s to 45s per cwt; store bullocks, 40s to 45s; cows and calves, £10 to £16; rearing calves, 25s to 40s; wethers, 7d to 7½d per lb; ewes, 5d to 5½d; pigs, 8s 6d to 38s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4½d to 5d.

Wolverhampton, Wednesday.—Trade slow beasts, fair for sheep; supply fair. Quotations:—Beef, 5½d to 6½d per lb; mutton, 6½d to 9d per lb; veal, 6½d to 8½d per lb.

Worksop, Wednesday.—Good average attendance, and trade brisk, especially for beef, which made about 3d per stone more than last week. Best beef, 7s to 7s 6d per stone; best Southdown wethers and cross-breds to 9d; secondary qualities, 8d; and ewes, 6d per lb.

DAIRY PRODUCE.

London, Friday.—Butter.—The demand for Australian butter has been somewhat disappointing this week, and to facilitate sales holders

have had to make some concessions. With the present high c.i.f. values this dulness may prove to be only temporary. Shipments this week are about 30,000 boxes. There has been a good demand for New Zealand, the larger portion of ss. *Corinthic* shipment having been sold at 118s landed terms, with an occasional 120s for special lines of saltless. Foreign butter shown a decided improvement upon last week, particularly Siberian, which, owing to the small arrivals, has kept very firm. There has been a good demand for Danish, but the official quotation remains unchanged. Cheese.—The demand has been quiet, although values have been well maintained at 62s to 63s for best. The *Corinthic* shipment of new season's cheese is on the whole satisfactory, being more matured than has been the case in past seasons.—W. Weddel and Co.

HAY AND STRAW.

Birmingham, Friday.—Small supply; no quotations obtainable,

Derby, Friday.—Best old clover, 90s to 100s; new ditto, 80s to 90s; best old hay, 90s to 100s; new ditto, 60s to 70s; wheat straw, 60s to 70s; pressed ditto, 50s to 60s; chop ditto, 55s to 65s; peat moss, 35s to 40s.

Hereford, Wednesday.—Hay and straw very slow trade, without quotable change in values. Hay, 45s to 55s per ton in stack; straw, 25s to 30s in bulk.

Leeds, Tuesday.—Hay and straw in the warehouses moves actively into consumption, the wintry weather having improved business and strengthened prices. Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—Good supplies, and a rather slow trade. Best hay and seeds 60s, inferior ditto 50s per ton on the ground, straw 30s per ton on the stack.

Manchester, Friday. — Hay, 5d to 5½d; clover, 5d to 6½d; straw, wheat, 3d; oat, 3d to 3½d per stone.

Newcastle, Tuesday, Old land hay, from £3 10s to £4 4s per ton; new land hay, £4 10s to £5 5s; this year's growth, £4 to £4 15s; wheat straw, £1 4s to £1 6s per load; barley straw, £1 1s to £1 4s; oat straw, £1 4s to £1 6s.

Nottingham, Wednesday.—Small supplies on offer, which met with a slow sale. Quotations:—Inferior to good hay, 50s to 60s; prime ditto, 85s to 90s; inferior to good clover, 55s to 70s; prime ditto, 85s to 95s; wheat straw, 45s to 55s; old hay, 90s to 100s; old seeds, 95s to 100s per ton.

Sheffield, Tuesday.—Small supply, and very few dealers in attendance. Seeds, choice, £4 10s to £4 15s; hay, £3 15s to £4 5s; straw, £2 10s to £3 per ton.

Whitechapel, Saturday. — Heavy arrivals met a slow sale, at generally easier prices. Best clover, 84s to 92s 6d; inferior ditto, 72s to 80s; specially picked hay, 82s 6d; good ditto, 65s to 75s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 25s to 31s per load.

CHEESE.

Glasgow, Wednesday. — Arrivals of cheese were light, and trade was slow, as dealers have fairly important stocks on hand. Values did not show any change; Cheddars, 62s to 66s; Dunlops, 53s to 63s per cwt. Business quiet in Canadian parcels. October make quoted at 61s to 61s 6d f.o.b.

Highbridge, Tuesday.—A large attendance of buyers, a brisk trade, and all cleared. Best Caerphilly dairies realised up to 61s per cwt; secondary dairies, 57s to 60s 0d; and other dairies, 53s to 53s 0d. A few inferior lots failed to reach 52s. Cheddars, 59s to 61s; truckles, 58s 6d to 62s; doubles, 58s 6d to 61s.

Newport, Wednesday. About 7 tons were pitched. There was a brisk demand and good attendance. Quotations:—Caerphillies, 52s to 58s per cwt; fancy dairies, 59s to 61s; Derbys, 68s to —; truckles, 60s to 62s; Cheddars, 62s to 65s.

Lord Carrington "At Home."

Lord Carrington will be "at home" to farmers at the offices of the Board of Agriculture, 4, Whitehall Place, S.W., on Wednesday, December 11, and Thursday, December 12, from 12 o'clock to 2 p.m., and from 3 p.m. to 4 p.m.

It is impossible for him to accept all of the very numerous invitations he receives to attend agricultural gatherings in different parts of the country, and he hopes, therefore, that farmers who are in London for the Cattle Show, and who desire to see him, will do him the honour of calling upon him on the days mentioned.

Lord Carrington will visit the show of the Smithfield Club on Monday, December 9, and he has accepted an invitation to be present at the annual dinner of the Farmers' Club and the Central Chamber of Agriculture on December 10.

The annual hirings at Goole were held on Wednesday, when there was a large influx of farm servants. Foremen obtained £30; seconders, £25; and third men, £18; boys to £10; and girls were paid from £10 to £12 per annum.

The profound interest now being taken in Canada by the British working classes may be realised from the fact that 2,100,000 copies of a little pamphlet entitled "Work and Wages" have been sent out in the last five years in response to inquiries from the various offices of the Canadian Pacific Railway in this country. Of these, 935,000 have been sent out in the last eighteen months. This pamphlet is compiled with the assistance of the Canadian Provincial Governments, and gives a statement of wages current in the various trades throughout the Dominion.

At a meeting of the County Councils Association, held on Wednesday, it was decided to press the Government to bring in a Bill with regard to motor cars as soon as possible, and also to arrange for a deputation to the Chancellor of the Exchequer in favour of a special grant being given from the Exchequer, in consequence of the increased through traffic on the principal roads in the country, whilst the Highways Committee were instructed to confer with representatives of the Association of Municipal Corporations with a view to uniformity in the by-laws under the Lights on Vehicles Act.

100,000 SUPERLATIVE RASPBERRY CANES 5s. 100; 20s. 1,000. Hornet, 5s. 100; 25s. 1,000. Perfection, 6s. 100; Norwich Wonder, 15s. 1,000. Carter's Prolific, 20s. 1,000. —W. Horne & Sons, Cliffe, near Rochester, Kent.

"THE HORSEKEEPER'S HANDBOOK," 1s. 1d.; how to quickly fatten a horse for show or sale, how to manage vicious horses, kickers and shiers; vet.'s condition powders and numerous other recipes and secrets; hundreds of testimonials. — W. Turner, 71, Grangemoor, Rhyl.

FOOT-ROT

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

We sincerely hope that the Meteorological Office will cease assuring us that this is a year of under-average rainfall, seeing that the more we meet with this assertion the wetter does the surface soil become, and the more difficult is it for farmers to get on the land. The Board of Agriculture published on Tuesday last an estimate of the potato crop, which shows a deficiency of 9,016,020 cwt., or say 18,000,000 bushels. This is a matter of importance not only to those who deal directly in or with the tuber, but to the wheat trade as well. Potatoes are very largely used for human consumption, occupying an interesting position between green crops and white crops and between vegetables and breadstuffs. If a deficiency of 18,000,000 bushels of potatoes is likely to entail an extra demand for, say, 9,000,000 bushels of wheat, the price of the latter in 1908 will be appreciably affected. The yield is only ·32 of a ton below average, but when under-production has to be added to the drawback of a reduced acreage the total resulting deficiency is apt to be considerable.

Foreign crop news is to the effect that autumn-sown wheat, where up, is decidedly promising in all the three Latin countries, also in Germany, but that it is mediocre in Central Europe, and in Roumania and Russia decidedly below the average. The area sown is believed to be a full average in France, Italy, and Spain, and an average in Germany, but is known to be less than an average in Austria-Hungary, Roumania, Servia, and Russia. The European yield of wheat in 1908 is therefore unlikely to equal that of 1907. As that of 1907 was inferior to that of 1906, English wheat growers should take heart.

The reports from India point to a decidedly small crop of wheat being reaped in April next, but the India Office after issuing in December, 1906, January and February, 1907, quite alarmist reports of the 1907 harvest prospects published in June last a return of a forty million quarters' yield, or a good deal above the average. Official advices from India are therefore to be received with caution.

The Argentine wheat crop now being reaped is semi-officially estimated at 21,500,000 qr. and an export surplus of 16,000,000 qr. is indicated. This is a moderate estimate, and probably is arrived at by reckoning the average yield per acre at the ordinary Argentine average rate of 5 cwt. to the acre. But the large area of virgin soil newly submitted to the plough will probably produce in its first year 10 or 12 cwt. to the acre at least, and it therefore may easily be that the eventual Argentine surplus will reach the total of eighteen million quarters.

These figures need not frighten English farmers; all the wheat will almost certainly be required, and the only thing to note is that Argentina, with so large a surplus to get rid of, will probably be forced for a couple of months at all events to play the part of a "bear" in the International Corn Trade. The price asked for fair average quality of the new crop for February shipment opened in November at 38s. 6d., and is still at that level. We could wish it higher, but we cannot label it "depression."

The English wheat gradient is not steep this week; in other words market opinion is more than usually uniform:—

Mark Lane	36s. 0d.	per qr.
Doncaster	33s. 7d.	,,
Range	2s. 5d.	,,

The gradient for barley is 4d. more than this, and some good quality is now coming to market in the South:—

Chichester	29s. 5d.	per qr.
Peterborough	26s. 8d.	,,
Range	2s. 9d.	,,

Oats show the following gradient:—

Canterbury	20s. 3d.	per qr.
Peterborough	18s. 1d.	,,
Range	2s. 2d.	,,

Of other English staples we may briefly note that though no official averages are published, maple peas may be averaged at 36s. per 504 lb., Dun peas at 33s. per 504 lb., rye at 29s. per 480 lb., and rapeseed at 80s. per 424 lb. at the chief country markets where they are to be had at all. None of these staple are common in the West or South-west of England, and rapeseed is rarely met with outside the circle of perhaps forty miles round Peterborough. At present prices, however, it should pay to grow.

The sales of British wheat at the statute markets last week were fairly good, and the total sales since September 1 now slightly exceed those of the like period last season. The price we are glad to say is a good deal better:—

This season ...	945,000 qr.	at 33s. 5d.	per qr.
Last ,, ...	943,000 ,,	26s. 2d.	,,

The sales of barley have been less than last season, the price higher, but not very satisfactory.

This season ...	1,785,000 qr.	at 26s. 3d.	per qr.
Last ,, ...	2,057,500 ,,	24s. 7d.	,,

Of oats the sales have been exceptionally heavy.

This season ...	585,000 qr.	at 18s. 2d.	per qr.
Last ,, ...	450,000 ,,	16s. 8d.	,,

The imports of the United Kingdom last week were as follows:—

Wheat, 242,000 qr.: small.
Flour, 113,900 sks.: fair.
Barley, 146,000 qr.: liberal.
Oats, 80,000 qr.: inadequate.
Maize, 246,000 qr.: liberal.

Total supplies since September 1 have been as follows:—

Wheat, 5,722,000 qr.: liberal.
Flour, 1,536,100 sks: moderate.
Barley, 2,416,000 qr.: liberal.
Oats, 960,000 qr.: very small.
Maize, 3,431,000 qr.: very large.

The imports of linseed and cottonseed have been liberal.

Supplies on passage have not changed much on the week, but there are to be noted certain not wholly insignificant reductions in our expectations of wheat, flour, maize, and cottonseed from abroad.

Actual quantities of wheat are:—

Californian	555,000 qr.
American	390,000 ,,
Russian	65,000 ,,
Indian	316,000 ,,
Argentine	70,000 ,,
Australian	300,000 ,,
Various	50,000 ,,
	1,746,000 ,,

Of barley 510,000 qr. are on passage, of oats 100,000 qr., of maize 610,000 qr., of linseed 80,000 qr., of rapeseed 11,000 qr., of cottonseed 40,000 tons, and of rice, 19,500 tons. There are scarcely any supplies of beans and peas in sight.

The American shipments last week were 452,000 qr. of wheat, 116,000 sacks of flour, and 121,000 qr. of maize. No shipments of oats or barley were reported.

The Argentine shipments were 19,000 qr. of wheat, 76,000 qr. of maize, 11,000 qr. of linseed, and 9,000 qr. of oats.

Russia is beginning to feel the nip of winter, but out of fifteen leading ports ten are still open, and from them were shipped 101,000 qr. of wheat, 37,000 qr. of rye, 211,000 qr. of barley, 95,000 qr. of oats, and 70,000 qr. of maize; to which may be added Roumania's exports of 92,000 qr. of wheat, 47,000 qr. of barley, and 80,000 qr. of maize.

India shipped 41,000 qr. of wheat and 22,000 qr. of linseed, but no wheat was exported by Australia, and other non-shippers were Chili, Persia, and Asia Minor. All barley shipments from the Turkish Empire are forbidden as the yield was decidedly short, and the local needs are expected to absorb all that has not already been exported.

THE BALTIC.

Saturday, 2 p.m.

Sale of wheat cargoes have been quiet, but the tone is not depressed. Recent days' transactions include White Karachi wheat at 38s. 3d. per 492 lb., Red at 38s. 3d. (this is rare, white usually is 6d. to 1s. dearer than red) same weight; Australian at 43s. per 480 lb., No. 2 Red Winter at 7s. 6d. per cental, No. 1 Northern Manitoba at 8s. 8d. per cental, No. 2 Hard Winter at 7s. 9d. per cental, La Plata at 38s. 6d. per 480 lb., and Odessa Ghurka at 42s. per 492 lb.

Sales of maize have been difficult, and the trade closed the week in buyers' favour. Prices made included 5s. 5d. per cental for American, 5s. 7d. for Cinquantina, 5s. 6d. for Novorossisk, and 5s. 4d. for White African. In Odessa 25s. 6d. per 480 lb. was paid, and 25s. per 480 lb. La Plata, but these prices would not have been obtainable had there been need of prompt resales.

Other cargo sales of the week have comprised Novorossisk barley at 25s. per 400 lb., Odessa barley at 25s. 3d. per 400 lb., Black Libau oats at 16s. 9d. per 304 lb., Argentine oats at 16s. 3d. per 288 lb., Larache beans at 31s. 6d. per 480 lb., brown Calcutta rapeseed at 51s. per 416 lb., Argentine linseed at 39s. 6d. per 4s. 6d. lb., and Egyptian cottonseed at £6 18s. 9d. per ton.

Arrivals of cargoes off coast from January 1 to December 7 were:—

	1907.	1906.
Wheat	253	251
Maize	28	5
Barley	8	6
Linseed	18	27

These are arrivals of whole and undivided cargoes, but there is an increasing tendency to ship mixed cargoes divided into convenient "parcels" of 200 to 1,000 tons.

LONDON HAY TRADE.

Saturday.—Once more we have to report a continuance of the very bad trade at all London points. It is not so much a matter of price as to do business holders are quite willing to make concessions, but there is almost an entire absence of demand. All classes and kinds of stuffs are in good supply, and values all round are a great deal weaker. Best clovers and mixtures have dropped away, and are now quoted 2s 6d ton lower. Best hays are also much weaker, while plain and common sorts of all kinds are a positive glut, and difficult to realise at any price.

It looks as if we are in for a spell of very bad trade, and the likelihood is that things will not improve until after the New Year, as there seems little hope of supplies diminishing until then, farmers being now more inclined to sell, and we hear of large consignments coming forward between now and Christmas. Straw, for the moment, is in rather shorter supply, and full prices are obtainable. The trade for foreign hays is almost dead; shipments keep dribbling in, and importers are at their wits' end to find customers, as demand for this class of stuff has fallen completely away.

Prices ruling are about as follows:—English: Best hays, 67s 6d to 70s per ton; good, 60s to 65s per ton; plain hays, 55s to 57s 6d per ton; best clovers, 80s per ton; good clovers, 75s to 77s 6d per ton; inferior clovers, 70s to 72s 6d per ton; best mixtures, 80s per ton; good mixtures, 75s to 77s 6d per ton; plain mixtures, 65s to 72s 6d per ton; seconds hays, clovers, and mixtures, 45s to 55s per ton; wheat straw, 26s to 28s per load; barley straw, 25s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 60s per ton; second quality Dutch hay, 55s per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 15s to £14 5s; half-bred hoggs, £12 10s to £13; ditto wethers, £12 to £12 10s; Kent fleeces, £12 0s to £12 5s; South Down ewes and wethers, £13 10s to £14; Leicester ewes and wethers, £11 10s to £12. Colonial—per lb.—Vic., scoured super., 2s to 2s 2d; scoured, good, 1s 10d to 2s; scoured, average, 1s 8d to 1s 9d; greasy, average to fair, 1s 1½d to 1s 2½d; N.S.W., scoured, average, 1s 8d to 1s 9d; greasy, average, 1s to 1s 1d; S. Aus., greasy, average, 10d to 11d; N.Z., scoured, average, 1s 9d to 1s 10d; greasy, average, 11d to 1s; Cape, scoured, super., 1s 9d to 1s 10d; fleece, average, 9d to 10d; greasy, average, 8d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8d to 8½d. Crossbreds—grs.—Vic., good to super., 1s 2d to 1s 3d; New Zealand fine, 1s 2d to 1s 3d; medium, 11d to 1s; coarse, 9d to 10d.

Canterbury, Saturday.—Fall in prices has brought trade to a standstill. Staplers only offer 10½d for Kent fleeces, and growers disinclined to sell at this figure. Halfbreds and Downs in a little better demand at last week's rates.

Seven Years Grain Averages.

(OFFICIAL.)

Wheat	28s. 10d. per 480 lb.
Barley	25s. 4d. per 400 lb.
Oats	18s. 11d. per 312 lb.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet. Whites quoted 36s to 40s; reds, 35s to 38s 6d. Foreign slow sale at 3d to 6d decline. No. 1 Northern Manitoba, ex ship, held at 43s 9d to 44s; No. 2 at 43s 6d; No. 1 Durum, 37s 3d; choice white Karachi at 38s 9d. Flour steady, quiet. Maize steadily held, but inactive. Mixed American, ex ship, held at 26s; white Natal, landed, at 26s 9d; River Plate, ex ship, at 25s; landed, 26s; Odessa, ex ship, to arrive, at 25s 3d; landed at 25s 9d. Barley slow, but quiet. Azoff-Black Sea and Odessa-Nicolaieff, ex ship, quoted at 23s 6d; landed at 24s; Persian, ex ship, 21s 6d; landed at 22s. Oats slow, with an easier tendency. River Plate, landed, quoted at 18s 3d; South Russian 17s 6d to 18s.

Mark Lane, Friday.—Wheat: English steadily held at full prices, but demand slow; whites quoted at 36s to 40s; reds at 35s to 38s 6d. Foreign rather firmer tone, but only in small demand; No. 1 Northern Manitoba, ex ship, held at 44s 3d; No. 2 at 43s 6d; No. 1 Durum at 37s 6d; choice white Kurachi at 39s. Flour firm, but quiet; Hungarians quoted at 39s 6d to 40s 6d; Iron Dukes at 27s 6d to 28s. Maize dull; Odessa, ex ship, offered at 25s, landed at 25s 6d; mixed American, ex ship, held at quite 26s; River Plate, ex ship, at 25s; old crop landed at 26s. Barley rather steadier; Odessa-Nicolaieff and Azoff-Black Sea, ex ship, quoted at 23s 6d, landed at 24s. Oats firm, but quiet; River Plate held at 17s 9d to 18s; South Russian (38 lb) at 17s 6d to 18s.

COUNTRY.

Appleby, Saturday. — Inquiries for good samples. White oats (horse corn), 20s to 23s 6d per 26 stones.

Ashford, Tuesday.—Trade generally was rather firmer for most sorts of corn; heavy samples of wheat were out of condition, but the best were quoted as 34s to 37s; best English barley made 30s to 31s; secondary 28s to 29s; foreign grinding barley, 26s; mazagan beans, 28s to 29s; tick beans, 32s to 34s; maize rather cheapor, 28s to 29s; peas, 31s to 32s; black oats, 18s to 21s; white, 18s to 28s. Flour unchanged.

Banbury, Thursday.—Wheat, white (new), 35s to 36s per qr; wheat, red (new), 35s to 36s per qr; barley, 25s to 30s per qr; beans (new), 29s to 31s per qr; oats, 18s to 22s per qr; peas, 30s to 34s per qr.

Berwick, Saturday.—Average attendance, with a good show of grain. Prices of barley and fine samples of oats remain unaltered; weathered and inferior oats lower. Barley, 21s to 33s 6d; oats, 17s to 28s per qr.

Birmingham, Thursday.—Large attendance here; trade generally quiet. Foreign wheats were from 3d to 6d per qr lower on the week. English ranged from 13s to 14s per 186 lb delivered. Bessarabian maize 6d lower, and Galatz-Foxonian 3d. Grinding barley was 3d down at 24s per 400 lb at Sharpness. English oats made from 19s 6d to 20s 6d per 312 lb., and beans 13s per 196 lb delivered.

Brighton, Thursday.—Quiet trade and small attendance. Wheat in good supply and condition better; prices firm and unchanged. Barley, 28s to 33s; grinding ditto, 24s to 25s; oats, English, 18s to 21s; peas, 33s to 34s; beans, 32s to 33s.

Bristol, Thursday.—Our market was well attended to-day. English wheat was in moderate supply at about last week's prices. Foreign wheat 3d to 6d lower. Maize 3d down. Barley unchanged, with a rather better feeling prevailing. Oats 6d decline. Flour trade still dull, recent prices being maintained.—Grace Bros.

Bury St. Edmunds, Wednesday.—A small attendance, and a smaller supply on offer. Wheats made late rates, and the same may be said of barleys, though the demand was slower, and the supply moderate. Ordinary samples made 30s to 32s, and good up to 34s. Feeding stuffs, &c., at about late rates.

Cambridge, Saturday.—Wheat was in small supply; price unaltered on the week, up to 37s 6d 504 lb into the mill. Beans a turn easier, making up to 31s 6d per 532 lb for splitters. Barley in fair supply; but prices are a little weaker. Oats in good supply, and prices unchanged.

Canterbury, Saturday.—Prices seem steadier, and there is a little more business doing. Wheat samples, seeding 64 lb to the bushel, are selling at 36s delivered and 35s 6d fetched from the farm. The values of barley range from 28s 6d to 32s. A fair inquiry for oats at 21s for 43 lb and 18s 6d for 39 lb; old oats up to 23s. Grey peas range from 30s to 31s, and up to 33s for extra choice quality. Tick beans, 31s to 32s; mazagans, 29s to 30s; and old beans, 30s per qr.

Carlisle, Saturday.—Usual supply of oats in our market to-day, rather worse trade for inferior quality. Good oats, 24s; secondary, 23s per 336 lb. Wheat slow trade, 39s per qr 504 lb. Several lots of inferior barley made 28s per 448 lb. Bran, grains, and pollards good trade. Weather not good for thrashing last week.—Thomas Robinson.

Chester, Saturday.—The demand for English grain is quiet, and prices favour buyers. Barley and beans sparingly offered, with little inquiry; mixed and round maize easier. Offals in better supply, with a tendency against sellers. Quotations:—Wheat, white and red, 5s 2d to 5s 4d per 75 lb; grinding barley, 3s 10d to 4s per 64 lb; oats, new, 2s 8d to 2s 10d; old, 3s 1d to 3s 6d per 46 lb; Indian corn, 14s 3d to 14s 6d per 240 lb; round corn, old, 14s to 15s 6d per 240 lb.

Chichester, Wednesday.—A good attendance and fair trade. New white wheat, 36s to 37s; new red ditto, 36s to 37s; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s 6d; peas, 34s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday.—Wheat firm on the week, 37s 6d to 38s. Oats and beans steady. Barley quiet. — Colin Taylor, King and Co., Ltd.

Coventry, Friday. — Attendance was fairly good. Wheat soown pretty freely, and prices may be quoted the same as last week. Oats were a shade lower. Beans about held late values. Barley quite neglected, and the turn in sellers' favour. Quotations:—Wheat, 13s to 14s per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per 352 lb; new, 21s to 23s 6d; beans, old, 13s 3d to 14s; new, 12s 3d to 13s 3d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Derby, Friday.—Wheat was in fair supply, and prices remain unchanged; spring corn sold at late rates. Wheat, 36s to 37s; red, 35s to 36s; barley, malting, 29s to 32s; grinding, 25s to 27s; beans, new, 35s to 36s; oats, old, 24s to 26s; new, 21s to 22s.

Devizes, Thursday.—Wheat again in small supply, and the condition of many of the samples was not good. Wheat and barley a slow trade at late rates. Black oats again cheaper, being 1s per qr down since they reached their highest point. White Gartons realise 1s more than blacks. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s; winter oats, 18s to 19s; white Garton oats (330 lb), 18s 6d to 19s 6d; black Tartar oats (320 lb), 18s to 19s; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 38s.

Doncaster, Saturday.—Very small supply of English wheat, and trade slow, though good and dry samples sold readily, and made fully last week's prices, fetching 13s 6d to 14s per load. A steadier tone marked the foreign trade, late rates prevailing. A fairly good show of barley, but prices were lower, and from 6d to 1s per qr down. Good supply of oats, and 6d to 1s per qr cheaper, prices ranging from 18s to 20s. For maize 3d per qr less had to be accepted.

Dorchester, Saturday.—There was a fairly good offer of samples at to-day's corn market, despite the unfavourable character of the weather for threshing the greater part of the week. However, it was fine and dry to-day and a little colder, and this gave some little tone to business, which, however, was generally inactive, with a tendency if anything to lower values, though hardly to a quotable extent, both English and foreign, as a rule, bringing last week's rates, though buyers bought very reluctantly just to cover hand-to-mouth requirements. Malting barley, if at all serviceable, realised recent rates; but feeding barley, as a rule, was 3d per qr dearer. Maize slow, and full values not easy to realise. Oats also rather favoured buyers. Beans and peas very firm as all through, scarcity keeping prices buoyant. Flour generally inactive, and late prices were only with difficulty obtainable.

Exeter, Friday.—Rather small attendance, and trade quiet. English wheat firm, foreign unchanged. Barley a shade easier. Maize 3d cheaper. A weak tendency for orts. Flour unchanged. English wheat, 4s 6d; English barley, 3s 6d to 4s 6d; superfine flour, 32s to 34s; fines, 30s to 32s.

Glasgow, Wednesday.—Moderate attendance at to-day's market. Wheat quiet, and easier. Flour in poor demand at nominally unchanged values. Maize and corn steady, and to day's prices show an advance of 3d per boll on both. Oats quiet, and favouring buyers for both home and foreign. Barley steady at late rates. Beans quiet, and cheaper. Pease, none on the spot. Bran and thirds unaltered. Oatmeal a very poor sale at reduced prices.—Gibson and Clark.

Gloucester, Saturday.—English wheat in fair supply, with a lower tendency: Reds, 34s 6d to 35s 6d; whites, 36s to 36s 6d per qr. Foreign wheat occasionally 6d cheaper: Plates, 42s to 43s; Russians, 41s 6d to 42s 6d. Maize 3d cheaper: Plates, 25s 6d; flat 26s 6d; Bessarabian, 26s. Barley unchanged at 24s 3d. Oats unchanged: Black, 18s to 19s 6d; white, 19s 6d to 21s.

Grantham, Saturday.—Small show of wheat, and an average supply in other departments. Wheat made 35s to 36s 6d; barley, 26s to 33s; oats, 19s to 21s; beans, 29s to 32s; blue peas up to 30s per qr.

Hereford, Wednesday. — A rather small attendance. Moderate supply of wheats, with trade dull, and in some cases 1d per bushel below last week. Barley a moderate supply, but buyers warily operate at reduced prices. Oats 1d per qr easier. Maize 3d to 6d per qr easier. Beans slow, without change in prices.

Ipswich, Tuesday. — Moderate supply of wheat; trade firm, at fully last week's prices. Reds, 36s to 37s; white to 38s per 504 lb. A large supply of barley, and trade for all descriptions quiet, at barely late rates. Oats rather easier. Maize quiet. Beans and peas unaltered.

Leeds, Friday.—With better supplies of English and foreign wheat, prices were steady at about Tuesday's rates. Flour was about 6d per bag easier, except for finest runs, which remained firm. Maize was steady, Plate making 25s to 26s, and Odessa and American a little under. Foreign malting barley was the turn dearer. English was at barely late prices. Peas, beans, and oats were unchanged.

Leicester, Saturday.—Good attendance of buyers and dealers with moderate supplies of home-grown wheats, which came to hand in valuable condition. Dry samples firm; inferior irregular. Red wheats, 33s to 38s; white wheats, 36s to 39s per 36 stones; bright samples of barley in fair demand at 28s to 32s per 32 stones; oats steady at 19s to 22s per 24 stones.

Lincoln, Friday.—There was a moderate show of English wheat, trade firm at last week's full prices. Little inquiry for foreign. Barleys firm at lase rates, with a better inquiry for best qualities. Oats a slow trade, and 6d per qr easier.

Manchester, Thursday.—Market ruled slow. English wheat showed little change, and trade ruled dull. Foreign was about 1d per cental lower on the week. Foreign in poor demand. Maize about ½d per cental lower. Foreign barley easier. English oats about 1d per bushel lower. Beans and peas steady. Bran and offals scarce.

Newark, Wednesday.—A fair attendance; trade dull. Prices easy; more samples showing, many in damp condition. White and red wheat, 35s 6d to 36s; malting barley, 29s to 30s; grinding barley, 26s to 27s; white oats, 18s 6d to 19s 6d; black ditto, 18s to 19s 6d; old beans, 36s to 37s; new ditto, 39s to 31s per qr.

Newcastle-on-Tyne, Saturday. — A dull trade for wheat at our to-day's market at unchanged prices. A fair consumptive demand for maize at last Saturday's quotations. Oats slightly in the favour of buyers for good dry samples; soft qualities difficult to dispose of. Beans and peas steady with a fair inquiry. Barley was in fair demand at last week's prices.—Joseph Pollard and Co.

Newport, Wednesday.—Trade was rather quiet, and prices were unchanged.

Northampton, Saturday.—The attendance was again a moderate one, and the wheat trade was not very brisk, only a small supply being shown, which sold at last week's prices. Oats and bean trade very quiet, with prices unchanged, whilst barley was hardly ever asked for. Prices: Wheat, 35s to 36s; barley, 25s to 30s; white oats, 18s to 21s; black oats, 18s to 20s 6d; beans, 30s to 32s; flour, 31s to 35s 6d.

Norwich, Saturday. — Wheat continued to be offered very sparingly, and prices were 6d per qr dearer through scarcity, 38s delivered being paid. Barley was a fair supply, and there was no alteration in prices. There was a fair demand for feeding stuffs at unaltered prices.

Nottingham, Saturday. — Wheat, small supply from growers, mostly in poor condition; trade slow at previous rates. Inquiry for good barleys, which make full prices. Oats but few offering, values unchanged. Beans firm. —Robt. Hubble.

Peterborough, Saturday.—Only a small show of wheat again, and trade was quiet at late rates. Barley a slow trade. Oats more showing, and could be bought at a little less money. Wheat, 36s to 37s; barley, 27s to 34s; oats, 18s 6d to 20s.—Thomas Hill and Son.

Plymouth, Thursday. — There was a poor attendance on our market here to-day. Maize and barley unchanged. Oats 3d cheaper. Wheat 6d cheaper.—Orlando Davis and Co

Preston, Saturday.—Although there was a fairly good attendance, farmers' wheat and oats were neglected, and less money would have to be taken to do business. Flour unchanged. Quotations:—Wheat, white, new, 15s 6d to 16s per windle of 220 lb; ditto red, 14s 6d to 15s; oats,

old, 3s 8d to 3s 9d per bushel; ditto, new, 3s 2d to 3s 3d; beans, 16s 6d to 17s per windle of 220 lb.

Reading, Saturday.—The attendance was hardly up to average, with not a large disposition to trade. The following represent prices of sales or parcels held:—Wheat, 34s to 38s; malting barley, 27s to 34s; oats, new, 17s 6d to 22s; old ditto, 21s to 23s; peas, 30s to 32s; beans, 33s to 37s; specially-picked hay, 85s per ton; best clover, 80s to 85s; straw, 28s to 32s per load.

Retford, Saturday.—Wheat firm, and a good trade at 35s 6d per qr. Good malting barley sold at 30s to 31s; medium, 28s to 29s 6d; and grinding 27s per qr. Oats continued slow at 18s to 19s for black; white, 19s to 20s; and old oats, 25s per qr. Maize, 28s 6d; new English beans, 30s; old ditto, 38s; and peas, 30s per qr.

Ripon, Thursday.—Poor attendance of farmers. Both English and foreign wheat show a decline in price. No maize on offer. Prices:—New wheat, 35s to 36s; foreign wheat, 45s to 47s; barley, grinding, 25s. to 26s; ditto malting, 28s to 32s; new oats, 19s to 20s 6d; old oats, 26s; maize, round, 27s to 26s 6d per qr; bran, £5 15s to £6 5s per ton.

Sheffield, Tuesday.—With stocks of grain showing a considerable increase at the ports, buyers are holding back, and a small trade only is passing. Foreign wheats dull and slightly easier, but English was in good request at about 6d. per qr. improvement on the week. Maize, beans, oats, and barley all unchanged from last week's prices. Quotations: Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, new, 20s to 21s per 336 lb; peas, grinding, 36s to 36s 6d; ditto blue, new, 75s to 90s per 504 lb; beans, English, 36s 6d to 37s per 532 lb; barley, grinding, 28s to 30s; ditto malting, 28s to 32s per 448 lb; Indian corn, small, 27s 9d to 28s; ditto Plate, 27s 3d to 27s 6d; ditto flat, 30s to 30s 6d per 480 lb.

Shrewsbury, Saturday.—Wheat, 15s to 15s 6d per 225 lb; old oats, 16s to 17s per 225 lb; new oats, 12s 6d to 14s; barley, 18s to 20s per 280 lb.

Stamford, Friday.—No appreciable change in to-day's prices. Malting barley was in demand, and made up to 33s per qr; grinding barley, 25s to 26s; wheat, 35s to 35s 6d; oats, 18s 6d to 19s; beans, 30s to 31s per qr. Peas quiet.

Stockton, Wednesday.—Local wheat made 34s to 36s 6d per qr. A slow trade in foreign wheat, and prices showed a decline of 6d on the week. Oats and maize quiet and unchanged. Small show of malting barley; best qualities maintained their prices of last week, but common qualities were slightly lower.

Warwick, Saturday.—Moderate attendancee: little grain offering. Prices depreciating, and condition generally of grain very bad, especially beans and wheat. All grain about 6d per qr lower on the week. Feeding stuffs about the same.

Winchester, Saturday.—English wheat in short supply and last week's prices fully maintained. Foreign unaltered. Barley occasionally 6d cheaper. Oats and maize unchanged. Flour a steady trade, late rates.—FEAR, COLEBROOK, AND CO., LTD.

Wisbech, Saturday.—Very small supplies of grain at market. Wheat, 36s 6d to 37s per 504 lb; barley, 28s to 30s per 448 lb; oats, 19s 6d to 20s 6d per 336 lb.—JAMES FLETCHER.

Worksop, Wednesday.—Very large attendance, and a moderate show of grain, except oats, which were a big supply. Wheat, 36s to 37s; red wheat, 35s 6d to 36s 6d; best malting barley, 31s to 33s; secondary qualities, 29s to 31s; grinding barley, 27s to 28s; white oats, 19s to 21s; black oats, 18s to 20s; maize, 28s 6d to 30s per qr.

Yeovil, Friday.—Prices for wheat tended lower, foreign being down 3d, but barley was firmly held. Oats sold at 3d per qr below last week, and maize also favoured buyers. A few parcels of old wheat made from 40s to 42s 6d per qr; new season's wheat of best quality, 37s to 38s; secondary, 32s 6d to 36s; grinding barley, foreign, 24s 6d to 25s; malting barley, 29s to 32s; secondary, 26s to 28s; grinding, home grown, 25s to 27s 6d; oats, Irish black, 18s to 18s 6d; black Tartary, 18s 6d to 19s 6d; white Gartons, 18s 6d to 19s 6d; old oats, 22s 6d to 24s; beans, 35s to 36s; round maize, 25s 3d to 26s 3d; ditto flat, 27s 6d; vetches, 5s 6d to 6s 6d per bushel. The trade in flour was firmer, fines makes selling at from 31s to 32s per sack; extra fine, 33s to 38s. Feeding stuffs continue to sell well at prices which favour sellers.

York, Saturday.—Dry samples of wheat sold slowly at last week's prices, and other sorts were difficult to sell. Fine white, 37s to 38s; red and mixed, 36s to 37s per qr. of 36 stones. Malting barley was firm for anything good, but there was too much common offering. Fine made 30s to 32s; good, 28s to 30s; and other sorts, 26s to 28s per qr of 32 stones. Oats were 6d lower, and not easy to dispose of. White Gartons, 20s to 20s 6d; black ditto, 19s 6d to 20 per qr of 24 stones. Rye, 28s to 29s; and old beans, 35s to 36s per qr of 36 stones.

FOREIGN.

Hamburg, Saturday. — Weather mild and damp. Trade quiet, there being but little demand from the interior and prices of all articles tend slightly in buyers' favour. Light German wheat is offering at 32s to 35s, fine heavy at 37s to 38s per 504 lb.; American hard winter No. 2 has been taken for the North at 36s 9d to 37s; red winter No. 2 is offering at 37s 3d; Macaroni No. 1 at 35s 6d; 80 ko Barletta Russo Jan./Feb. from the River Plate at 36s 9d per 480 lb c.i.f. Hamburg. Rye quiet. 9 10/15 Taganrog on the spot is selling at 35s 3d to 35s 6d per 480 lb c.i.f. Hamburg. Offers of foreign rye are scarce, but native is coming forward more freely. Malting barley firm; Holstein, Mecklenburg, and Russian is selling at 36s to 41s including duty, Danish is held at 31s to 33s, Bohemian and Slovakian at 36s to 40s per 448 lb. Grinding barley quiet; 60/61 ko South Russian, December, 22s 9d; January-March, 23s 3d per 400 lb c.i.f. Hamburg. Dry white Holstein and Pomeranian oats are held at 20s 3d to 21s per 336 lb c.i.f. Odessa maize, January shipment, is offering at 24s 6d; River Plate, May-June, at 24s 3d; mixed American, January-March, at 24s 6d per 480 lb c.i.f. Hamburg.—JOHN TATLOCK.

FEEDING STUFFS.

Liverpool, Friday.—Nitrate of soda is now quoted on the spot £11 2s. 6d. to £11 5s. Kainit and phosphates are in fair demand at late rates. The trade in feeding stuffs is a disappointing one, and no improvement in the consumptive demand has resulted from the reduced prices of the past week or so, nor likely to be so until the new year. Market continues bare of American decorticated cotton cake. Feeding treacle continues to meet a fair demand.

—H. JONES LANGAR AND CO.

Mark Lane, Monday.—Linseed Cake: There is a distinctly better feeling in the trade, and with an increased consumptive demand, values show signs of improving, while already home manufacturers have advanced their limits 2s 6d per ton. Russian meet a steady inquiry. East India seed pures to arrive are 2s 6d less money. Fine seedy Calcuttas command last week's prices. London made attract considerably more attention, being relatively cheaply offered. Cotton Cake.—The market is well supplied with shipments of Egyptian, which, however, find a dull sale even at the reduced price, while English remain quiet but steady. Decorticated.—London made pures continue in good request, with American brands unchanged. Rape cakes do not offer. Maize Germ Meal.—White African and American meals are quoted unaltered, but there are sellers of English makes at slightly less money for immediate removal. Maize Gluten Feed moves off freely. Rice Meal.—Landed lots of Rangoon command full prices, and second-hand steamer parcels afloat are available at a slight advance. Locust Beans remain good value. Dried Brewers' Grains are scarce and dear. Nitrate of soda is without alteration.

POULTRY AND GAME.

Smithfield, Saturday.—Good supplies; in fair demand. Pheasants, 5s to 5s 6d; young grouse, 6s; old, 3s; young partridges, 5s; old, 2s 6d; black game, 3s to 3s 6d per brace; geese, 5s to 6s 6d; country ducks, 2s 9d to 3s 6d; wild ducks, 1s 6d to 2s; Surrey fowls, 3s to 4s 3d; Sussex fowls, 2s 9d to 3s 3d; Lincolnshire fowls, 2s to 3s; Essex fowls, 2s to 2s 9d; Irish fowls, 1s 9d to 2s 3d; quails, 1s to 1s 8d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 3s to 3s 6d; leverets, 2s; Scottish hares, 1s 6d; tame rabbits, 1s 4d to 1s 10d; wild rabbits, 6d to 10d; live hens, 1s 8d to 2s each; Australian rabbits, 5s to 6s 9d per dozen; turkeys, 7½d to 8d per lb.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Heavy supplies of imported fruit, demand being brisk and prices moderate. Vegetables in fairly good supply, at about late rates. Quotations for English produce:—Grapes, 10d to 5s; pears (English Comice), 2s to 4s per dozen; medlars, 3s to 3s 6d per crate; apples (Cox's orange), 4s to 9s per half bushel; ditto (Oregon Newtowns), 10s 6d to 13s; cranberries, 8s to 10s per case; peaches, 3s to 12s per dozen; tomatoes, 4s to 5s per 12 lb; cobnuts, 4s per 12 lb; Brazil nuts, 55s to 60s per cwt; chestnuts (Redon), 7s to 10s 6d per bag; walnuts (Grenoble), 4s to 8s per bag; spinach, 2s to 2s 6d; sprouts, 1s 9d to 2s; beetroot, 1s 6d per bushel; onions, 4s to 5s per cwt; cucumbers, 2s 6d to 4s 6d; endive, 1s to 1s 6d per dozen; celery, 5s to 12s; horseradish, 10s to 15s per dozen bundles; leeks, 1s 6d; potatoes, 75s to 110s per ton.

CHEESE.

Glasgow, Wednesday. — Arrivals small, and trade limited. Holders were willing to make concessions to effect sales. Cheddars, 60s to 64s per cwt; Dunlops, 54s to 62s. Canadian cheese slow of sale; prices, 60s to 61s.

Highbridge, Tuesday.—A large attendance of buyers, general advance in prices, and all cleared. The whole of the cheese exhibited on the previous day was sold, and good prices obtained. Best Caerphilly dairies realised up to 63s 6d per cwt; secondary dairies, 61s 6d to 63s; and other dairies, 58s 6d to 60s. A few inferior lots failed to reach 53s. Cheddars, 67s to 70s 6d; truckles, 66s to 77s; doubles, 53s to 60s.

Newport, Wednesday.—Fair supply, good demand, average attendance. Quotations:—Caerphillies, 52s to 55s per cwt; fancy dairies, 62s to 63s; Derbys, 68s to —; truckles, 62s to 65s; Cheddars, 63s to 65s.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 p.m.

If Monday were a shilling day at Islington, Mark Lane, prior to the Smithfield opening at 2 p.m., would be thronged, indeed. Even as it is, "the five-shilling people" are not an insignificant addition to the Corn Exchange attendance, and the tone of business is improved, with a general increase of animation. Wheat to-day was the turn easier for American and Canadian sorts, which constituted the bulk of the new arrivals, but English, Russian, and Australian descriptions were firm at full prices. Argentine pending new crop shipments is hardly obtainable, and Californian, though a fair supply is on passage, is also scarce on spot.

Indian sorts slightly favoured buyers. Barley was a steady trade in English; 30s was about a medium quotation. Foreign was neglected. Oats were unchanged; the newly arrived South African made 17s 3d per qr; weight is light and the grade low. Some beans from Morocco sold as low as 29s, but supply is not enough to affect the chief sorts. Peas rather favoured sellers, but maize was 6d cheaper to buy, and not in much request even then.

THE FLOUR TRADE.

MARK LANE, Monday, 3 p.m

There are no changes to-day in the prices asked for the chief types of flour. A rather improved business is doing at the values of the 2nd inst.

Bran, middlings, and pollard show a slight inclination to favour buyers, and where concessions are made, purchasing is stimulated. Whole meal at 247s per ton for best has only a small sale.

Hungarian flour may be quoted as below for to-day, but it is possible that terms will be raised 1s. next Monday.

Potato flour sells steadily at £11 10s. per ton for finest.

Locust bean flour is rather in request at £7 5s. per ton.

Operators naturally comment on the fact that flour is now rather cheaper in Paris than in London despite an import duty of 10s. per sack on all foreign flour coming into France.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH LESS CONFIDENCE AS THE WEATHER WAS EXTRAORDINARILY MILD AND OPEN FOR THE TIME OF YEAR.

THE BALTIC.

Monday, 1 p.m.

State of Trade.

Oilseed cargoes are firmer from last week. In cargoes of oats more is doing, but only at very moderate prices. Cargoes of wheat, barley, and maize are dull, and there is little inclination to operate.

Business Done.

Wheat.—Rosa Fé, 38s per 480 lb, February shipment; Entre Rios, 39s 3d per 480 lb., January shipment; Red Walla, 39s 6d per 500 lb, prompt shipment Odessa Glinka, 42s per 492 lb, on passage.

Maize.—Argentine, 25 3d per 480 lb, on passage; Bessarabian, 26s 9d per 480 lb, on passage; American, 24s 3d per 480 lb, January shipment; South African, 25s 9d per 480 lb, January shipment.

Barley.—Azoff, 25s per 400 lb, on passage.

Oats.—Black Euxine, 16s. 6d. per 304 lb., prompt shipment.; White Euxine, 17s. 3d. per 304 lb., prompt shipment; White Libau, 17s. per 304 lb, prompt shipment; Argentine, 15s. 6d. per 304 lb, April shipment; Salonica. 17s. per 304 lb, prompt shipment; Konigsberg, 18s. 6d. per 320 lb., prompt shipment.

Buckwheat.—Russian, 28s per 416 lb, prompt shipment.

Linseed.—Argentine, 39s 6d per 416 lb, prompt shipment.

Sesame.—Indian, 62s 3d per 384 lb prompt shipment.

TERM MARKET.

Speculation is irregular, but the following prices per cental may be quoted:—

Red winter wheat—
- 7s. 8d. per cental, December delivery.
- 7s. 9d. per cental, January delivery.
- 7s. 10d. per cental, February delivery.
- 7s. 11d per cental, March delivery.
- 8s. per cental, April delivery.
- 7s. 11d. per cental, May delivery.

Argentine—
- 8s per cental, March delivery.

Mixed American maize—
- 5s 4d per cental, January delivery.
- 52 2d per cental, February delivery.
- 5s 3d per cental, March delivery.

Argentine maize—
- 5s 3d per cental, January delivery.

Argentine oats—
- 5s 2d per cental March delivery.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—There is no improvement to report, buyers and sellers looking on. Grain.—The supplies are moderate, but the demand is likewise small. Prices are unchanged on the week. Beans weak. Foreign oats for shipment depressed by cheap offers of Plate oats. Oatmeal, 6d. to 1s. per sack lower. Oilcake only in small demand. Mill Stuffs.—Steady. Winter wheat patents, 30s to 30s 6d per 280 lb; spring wheat patents, 31s to 32s 6d per 280 lb; American corn, 15s 4½d to 15s 6d per 280 lb; round corn, 15s 4½d to 15s 6d per 280 lb; grinding beans, 18s 6d to 18s 9d per 280 lb; broad bran, 115s to 117s 6d per ton; medium bran, 110s to 112s 6d per ton; common thirds (sharps), 112s 6d to 115s per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 147s 6d to 150s per ton.—McKinnon and McDonald (Glasgow)

The demand for milling offals is not so good, and prices must be written 2s 6d per ton down on the week.—John Bawcomb and Co,

Arrivals of wheat and flour are very large. The trade is dull, and wheat is 3d per qr. lower. Flour unchanged. Maize 3d to 6d per qr lower. Oats a slow trade, and 3d per qr lower for common qualities.—Coventry, Sheppard, and Co.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 3,434 bales, and from foreign ports, 12,957 bales. There was an improved market for bacon throughout the week and prices for Danish were quoted 1s to 2s dearer on Friday. Quotations ranged:—Irish, 54s to 55s up to 58s; Danish, 50s to 54s up to 56s; Canadian, 48s to 50s up to 52s. Butter: The butter market was steady. French, 104s to 120s; Danish, 122s to 124s; Russian, 90s to 110s; Irish, 96s to 120s; Victorian, 94s to 118s; New South Wales, 94s to 116s; Queensland, 90s to 114s; New Zealand, 110s to 120s; Argentine, 112s to 118s. Lard.—Lard was a quiet market. Irish, 46s to 58s; Danish, 47s to 54s; American, 44s to 46s 9d.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: With a good trade and owing to slack brewings prices have a firmer tendency, and business has been done during the week at 22s 6d to 23s 6d ale, and porter 3s per ton less on rail London. Dried Grains.—Prices continue firm with a steady tendency at 110s per ton for ale and 105s for mixed, bags 6d. each. Colder weather will probably cause a rise of 2s 6d per ton in the near future. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton. Kiln-dried sea damaged wheat from 21s per qr, on rail, London and elsewhere.—Hamlyn and Co.

BUTTER.

(Price per lb.)

Altrincham: 1s 3d to 1s 4d. Appleby: 1s 1d to 1s 3d. Berwick: 9d to 10d. Birmingham: 1s 3d to 1s 4d. Camelford: 1s. Carlisle: 1s 3d to 1s 4d. Chester: 1s 2d to 1s 3d. Dartmouth: 1s 4d to 1s 6d. Derby: 1s 3d to 1s 4d. Devizes: 1s 4d to 1s 6d. Doncaster: 1s 3d. Dorchester: 1s to 1s 5½d. Ipswich: 1s 3d to 1s 4d. Kidderminster: 1s 2d. Lancaster: 1s 1d to 1s 3d. Lincoln: 1s 1d to 1s 2d. Market Drayton: 1s 3d to 1s 4d. Otley: 1s 10d to 2s per 24 oz roll. Penrith: 1s 0½d to 1s 3d. Penzance, 1s 2d to 1s 5d. Preston: 1s 3d to 1s 4d. Retford: 1s 4d to 1s 5d. Ripon: 2s to 2s 1d per 24 oz roll. Scarborough: 1s 3d. Shrewsbury: 1s 3d. Spalding: 1s 1d. Stamford: 1s 2d to 1s 3d. Stockport: 1s 3d to 1s 4d. Stockton: 1s 3d to 1s 4d. Totnes: 1s 4d to 1s 5d. Truro: 1s to 1s 2d. Wellington (Salop): 1s 2d to 1s 3d. Worcester: 1s to 1s 3d. Worksop: 1s 3d to 1s 4d. York: 1s 2d to 1s 4d.

POTATOES.

Borough, Saturday.—A quiet demand prevailed for the good arrivals. Langworthys, 80s to 90s; Up-to-Dates, 90s to 100s; Blacklands, 70s to 80s; Royal Kidneys, 80s; British Queens, 90s to 95s; Scottish (grey soil), 90s to 95s per ton; Germans, 3s 6d to 3s 9d; Dutch, 2s 6d to 3s; French, 3s 6d per bag.

Berwick, Saturday.—Owing to large arrivals of foreign potatoes, trade was rather dull at 75s to 80s per ton.

Goole, Wednesday.—There was a fair lot of potatoes on offer, and also a good company of farmers. The demand was moderate. Foreign trade quiet. Quotations:—King Edwards, 90s; Up-to-Dates, 85s; Imperators, 80s; and good kidneys, 80s per ton.

Lancaster, Saturday.—Potatoes 9d to 10d per stone.

Manchester, Saturday.—Potatoes: Yorkshire, 11s 6d to 12s 6d; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per load; Irish, 5s; German, 4s 6d to 5s per cwt.

Spitalfields, Saturday.—A slow demand prevailed for the heavy arrivals. Langworthys, 100s to 110s; Up-to-Dates, 90s to 100s; Blacklands, 80s to 85s; Royal Kidneys, 85s to 90s; British Queens, 90s to 95s; Scottish grey soil, 90s to 95s per ton; German, 3s 6d to 4s; Dutch, 3s to 3s 6d; French, 3s 6d per bag.

York, Saturday.—A moderate supply met a quiet trade at 75s to 80s. per ton.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations: Hay, £3 5s to £3 12s 6d per ton. Straw no quotations.

Derby, Friday.—Best old clover, 90s to 100s; new ditto, 80s to 90s; best old hay, 90s to 100s; new ditto, 50s to 70s; second ditto, 40s to 50s; wheat straw, 60s to 70s; pressed ditto, 55s to 60s; chop ditto, 55s to 65s; peat moss, 35s to 40s per ton.

Lancaster, Saturday.—Meadow hay, 6d; clover, 7d; wheat straw, 4d; oat straw, 3½d per stone.

Whitechapel, Saturday.—Arrivals were heavier, but a better demand prevailed, prices being steadier. Best clover, 84s to 92s 6d; inferior ditto, 72s to 80s; specially-picked hay, 82s 6d; good ditto, 65s to 75s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 25s to 31s per load.

SEEDS.

Mark Lane, Monday.—Spring sowing seeds are moving freely in spite of the high prices ruling. In clovers, Alsikes are dearer. Whites unchanged. Reds and Trefoils still rising in both English and foreign seed. In grasses, French-Italian, Perennials, and Irish-Italian all rising. Rape keeps firm. Mustard unchanged. Rye scarce. Peas fair business; supplies more plentiful.—John Pickard and Co.

TO-DAY'S MARKETS.

CATTLE.

Metropolitan Market, Islington.

	Monday, Dec. 9, 1907. British.	Total.	Monday, Dec. 10, 1906.
Beasts	1,420	1,420	1,340
Sheep and Lambs	4,700	4,700	4,740
Calves	20	20	20
Pigs	—	—	—
Milch Cows	40	40	40

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 6	4 0	4 10
Sheep	4 8	5 4	6 2
Lambs	—	—	—
Calves	4 0	4 8	5 2
Pigs	—	—	—

Milch cows, per head, £16 to £24.

British arrivals include as follows:—Scotland, 16; Eastern Counties, 100; Midland, Home, and Western Counties, 1,103; Devon, 77; Ireland, 124.

We note to-day a decrease of 10 head in the number of beasts offered for sale compared with Monday last, the supply including a large proportion of prime quality Scotch, Devon, and Norfolks. For best quality fat beasts, trade ruled of a slow nature; however rates were fairly steady, in some cases an advance in value being both asked and obtained. The Irish arrivals consisted of 60 Dublins and 64 Waterfords, these were slow of sale at a decline of 1d. per 8 lb for the former. Fat butchering cows and bulls were in excess of the demand; nevertheless, no decline is quotable. On Monday next will be held the great Christmas market. A clearance is not expected to be made in this part of the market to day.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s d	s d	Monday, Dec. 10, 1906. s d to s d
Scotch	4 8 ex	4 10	4 10 to 5 0
Devons	4 6 ex	4 8	4 6 to 4 8
Herefords	4 2 ex	4 4	4 2 to 4 4
Norfolks	4 4 ex	4 6	4 6 to 4 8
Runts	4 1 ex	4 3	4 0 to 4 4
Lincolns	3 10 ex	4 0	3 8 to 3 10
Irish	4 0 ex	4 2	3 10 to 4 2
Canadian	—	—	— —
Fat cows	3 4 ex	3 6	3 4 to 3 6

There was a decrease of 270 in the number of sheep penned compared with Monday last. Trade for all descriptions of English wethers was slow; neverth less late rates were maintained. Ewes were difficult to vend on account of the large supply at Deptford. Scotch sheep were in fuller supply and met with no correspon ling increase in the demand, consequently a decline of 2d. per 8 lb. in value was inevitable. Irish descriptions are now falling off in point of number, but maintained late rates. The supply included 500 Scotch, 353 Irish, and 900 from the Eastern Counties. A clearance is not expected to be made.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	s. d.	Monday, Dec. 10, 1906. s. d.	s. d.
8 st. Scotch	6 0 to 6	2 6	4 to 6	6
7½ to 8 st Down Tegs	6 0 to 6	2 6	4 to 6	6

10 st Down Ewes	4 0 to 4	2 4	4 to 4	6
11 st Halfbred ditto	3 10 to 4	0 4	2 to 4	4
5 st Down Lambs	—		—	
6 st Halfbred ditto	—		—	

The calf trade ruled of a slow nature, but steadily in regard to value, the best on offer being quoted at from 5s. to 5s. 2d per 8 lb. (offal given in).

London (Central), Monday.—Trade quiet for moderate supplies. Beef, English, 3s 6d to 3s 8d; Scotch, 4s to 4s 6d; American, 3s 4d to 3s 8d; refrigerated hindquarters, 3s 10d to 4s 2d. Mutton, English wethers, 3s 10d to 4s; ewes, 3s to 3s 4d. Scotch tegs and wethers, 4s 8d to 5s; ewes, 3s 2d to 3s 6d. Veal, 3s 6d to 4s 8d. Pork, 3s 4d to 4s per stone.

St. Ives (Hunts) Monday.—Beasts, 441; sheep, 324; pigs, 553; fat and store cattle fair demand; fat and store sheep good demand; and store pigs fair trade. Milch cows short, good demand. Prices: Beef, 7s to 7s 9d; mutton, 8s 2d to 10s 6d; pigs, 6s 3d to 7s; milch cows, £14 to £23.

FOREIGN.

Deptford, Monday.—Beasts, 855. To-day's supply, compared with Monday last, showed an increase of 327 head, and consisted of 654 from the United States, and 201 from Canada (100 of which were ranch cattle of rather inferior quality). Trade ruled of a slow nature, rates favouring the buyer to the extent of 1d per 8 lb for States cattle, 3d for Canadians, and 2d for Ranchers. Besides the above, 600 States and 500 Canadians were withheld from sale. The best States on offer were quoted at from 4s 1d to 4s 3d; seconds, 3s 10d to 4s; Canadians, 3s 4d to 3s 6d; Ranch cattle, 2s 10d to 3s per 8lb (offal given in). On Saturday 1,312 beasts from the United States, and 806 from Canada (486 of which were ranch cattle) were offered for sale. Trade ruled of a fairly steady nature, the decline in value being due to the fact that the cattle were not of such good quality. Besides the above, 400 States and 600 Canadians were withheld from sale. The best States on offer were quoted at from 4s 2d to 4s 4d; seconds, 4s to 4s 2d; Canadians, 3s 7d to 3s 9d; Canadian ranchers, 3s to 3s 2d per 8 lb (offal given in); 1,231 Canadian ewes were consigned, and met with a fair trade at from 3s 10d to 4s per 8 lb.

Liverpool, Monday.—Smaller supply cattle, Demand slow, but prices practically unchanged. Increased supply sheep, trade of slow dragging character, with very limited demand. Small finished quality were not quotably lower, but strong and rough sorts were from 2s to 3s down. Beef, 6½d to 4½d; mutton, 9d to 6d per lb. At market 1,475 cattle and 5,338 sheep. Christmas market Monday next.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—Though the trade is dull and disappointing considering the time of year, there is no weakening in values. Foreign makes continue to be sparingly offered, and home crushers hold for full prices.

Cotton Cake.—Egyptian have been arriving rather freely, and with fair quantities of London-made on the market, prices are 2s 6d per ton easier.

Decorticated Cotton Cake and Meal.—Both mee with a low sale, but there being only a small quantity of foreign here, last quotations are well maintained.

Linseed.—A good business is doing in the qualities suitable for feeding purposes.

HOPS.

Borough, Monday.—The lower prices now being accepted is bringing about more business, consumers are availing themselves of the present favourable opportunity to stock up—W. H. and H. Le May.

Worcester, Saturday.—Trade has gone rather quiet and holders are not offering till the New Year. Some brewers are taking advantage of the lull in business to pick up anything that offers special value. Only 17 pockets have been weighed this week.—Charles Faram and Co.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market on Monday there was a slight decrease in the number of beasts on offer, consisting chiefly of consignments from the Midland counties, Scotland sending a short supply. Trade for fat beasts was of a slow nature, especially for any of middling description; however, sellers were not willing to accept any further decline. The Irish arrivals consisted of 80 Dublins, amongst which were a few black polled beasts, and 62 Waterfords, these shared in the slow trade, the former favouring the buyer to the extent of 1d. per 8 lb. Fat butchering cows and bulls were slow to vend, however, late values governed all transactions. On Thursday trade was again of a slow nature, the supply consisting entirely of fat butchering cows, bulls, and rough cattle, all sales being based on last Monday's values. A few fat beasts were held back in the market lairs.

At the Foreign Cattle Market, Deptford, there was a smaller number of both States and Canadian beasts on offer. However, the supply was quite sufficient for the demand. Markets were held on Monday and Saturday, trade ruling of a fairly steady nature at about late rates. The total number on offer at both markets was 4,154, as against 6,503 during the preceding week, consisting of 1,510 British (decrease 50), and 2,644 foreign (decrease 2,304), comprising 1,490 from the United States, and 1,154 from Canida. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Scotch, 4s. 4d. to 4s. 6d.; 80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 2d. to 4s. 4d.; 95 stone runts, 4s. to 4s. 2d.; 90 stone Norfolks, 4s. 4d. to 4s. 6d.; 100 stone Shorthorns. 3s. 10d. to 4s.; 95 stone Irish, 4s. 1d. to 4s. 3d.; 90 stone States, 4s. 2d. to 4s. 4d.; 95 stone Canadians, 3s. 10d. to 4s.; ditto ranchers, 3s. to 3s. 2d.; 90 stone fat cows, 3s. 4d. to 3s 6d.

The sheep trade at Islington was again confined to the first market-day of the week, when a slow trade prevailed for all descriptions of English sheep, sellers being obliged to accept a decline of 2d. per 8 lb., in most cases for both wethers and ewes, only a few choice small sheep making the previous week's values. Irish and Scotch descriptions were in smaller numbers and maintained late rates, as also did the few lambs that were offered for sale. At the Foreign Cattle Market, Deptford, a consignment of Canadian ewes were placed on the market and met with a fairly steady trade. The total number penned at both markets was 6,201, as against 3,750 during the preceding week, consisting of 4,970 British (increase 1,520) and 1,231 from Canada (increase 931). Best pens ma le per 8 lb. as follows (sinking the offal):—7½ to 8 stone Down tegs, 6s. to 6s. 2d.; 8 stone Scotch tegs, 6s. 2d to 6s. 4d.; 9 stone Down tegs, 5s. 10d. to 6s.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone Down tegs, 5s. 8d. to 5s 10d.; 10 stone half-breds, 5s. 6d. to 5s. 8d.; 10 stone Down ewes, 4s. to 4s. 2d.; 11 stone Hampshires, 5s. 8d to 5s. 10d.; 9 stone Canadian ewes, 3s. 10d. to 4s.; 5 stone fat Down lambs, 6s. 6d. to 6s. 8d.

Calves numbered 15 and met with a slow trade at from 4s. 10d. to 5s. per 8 lb. (sinking the offal).

Trade in the West.

Now that business in most classes of stores is almost—if not quite—practically over for a time, attention for the next fortnight or three weeks will naturally be absorbed by the fat stock sales in progress all over the country, some of which have already terminated. Though it is somewhat early as yet to predict very decisively what the results of these sales may be, yet, so far as we are able to glean from the business already transacted, there is, despite the depression which undoubtedly exists, a by no means bad prospect before the vendors of really choice fat beasts and sheep—we mean for animals of that special class for which there is always a keen demand at this particular season, if at no other throughout the year. And for this class of meat there are purveyors who readily pay fancy prices such as they would hesitate about giving at any other time, but for the reputation they have to maintain. At some of the earliest sales which have already taken place specially-finished steers and heifers (to be kept on till wanted for the Christmas trade) are making £18 (for very small weights) up to £36 10s. for heavier weights—not less than 13s. to 14s. per score in many cases, and very seldom under 12s. 6d. to 13s. for even ordinary runs. Other fat bullocks are still selling at 11s. to 11s. 6d. and 12s., but then they must be classed as ordinary—not exactly the kind of beef that appeals to the tastes of those who go in for something "prime" just for this once during the year, and would be very dissatisfied with their butcher if he sent them beef bought at 10s. to 10s. 6d. per score, of which there is plenty still obtainable on the market. But the general public is a little bit fastidious at this particular season, and it is to cater for this taste that butchers have now to lay themselves specially out. Whilst the bettermost qualities are finding a quick sale at the prices we have indicated, there is also a market for plain bullocks, and therefore the varying requirements of the public are, we feel confident from the sales in progress, being well met all round in regard to our home-grown beef, and at a price, too, fairly remunerative to graziers, whatever may be the case with foreign supplies. Mutton is even meeting a better sale than beef in regard to the prices ruling, plenty of the choicer grades of wethers and tegs specially prepared for the coming season's requirements making 10d. to 10½d. per lb. as sold in the pen, and sucking lambs wanted for show purposes 1s. and over. But these quotations refer to the pick of the mutton and lambs. The more ordinary runs are also meeting a good, steady, consumptive sale at lower rates—8d. to 9d.—only very coarse, old, rough sheep fetching lower prices. Therefore the outlook for the farmer with plenty of ripe, fat sheep to go out is equally satisfactory. Some very good calves are being marketed, but the supply of the best is somewhat restricted, the trade having been so good all through the season that there has been no special inducement to stockowners to hold over any at all fit for market, as is the case some years. The present value of ripe, well-finished vealers is from 9d. to 9½d. per lb., and 10d. in special cases, ordinary grades selling from 7d. to 8½d. per lb. Pigs have of late shown a slightly downward tendency, but once more small weights of porkers are again touching 10s. 6d. to 11s., and baconers 9s. to 10s. Coarser weights vary in price from 8s. to 8s. 6d., according to quality. Therefore, taken all round, purveyors of fat stock have every reason to be satisfied with the present outlook for the Christmas trade, which, it is thought, will compare favourably with bygone seasons.

The little business passing is confined almost exclusively to milch beasts and barreners, trade for both of which keeps exceedingly buoyant, there being the same difficulty in adequately meeting the demand for milk, as was the case earlier in the season, though buyers are still giving £17 up to £24 apiece for cows and heifers specially adapted for town milk walks, and from £20 up to £36 for anything serviceable in the barrener line, more being wanted than are on the market.

Trade in Scotland.

The number of fat cattle on offer was not quite so large, but the general quality was fully as good. A better demand has been experienced, and prices on an average from 10s. to 15s. per head higher. Fat sheep have been shown in full average numbers. A fairly steady trade was experienced at prices unchanged, except for ewes, which, being shown in large numbers, made about 2s. a head less money. Good-class calves dear; while pigs met rather a worse market at slightly lower prices. There was a fair supply of store cattle for the time of year, and, with plenty of buyers, a total clearance was effected at prices favouring sellers. Store sheep rather more plentiful, and they got nearly all sold out at fairly satisfactory prices. Milch cows a good show, the best class of which met a dear trade, while secondary were more difficult to sell. Quotations:—Top price of cattle per live cwt., 39s.; current, 35s. to 37s.; mutton, 6½d to 9½d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland.

There was not so full an attendance of buyers at last Thursday's Dublin market as regards shippers, but home victuallers and dealers were well represented. There was a pretty large decrease of both cattle and sheep—cattle being 763 fewer, and sheep 558—as compared with the corresponding week of last year. Trade was strong for the better descriptions of cattle. Any slackness this week was probably due to Christmas being now so near and victuallers waiting to pick up their supply all in the one market. Thursday market in Dublin was about 10s. per head dearer on good beasts. There were a few good stall-fed beasts in the market, and for the best of these from 33s. to 34s. (live-weight) was got easily enough. Out-fed bullocks and heifers of superior quality found very good buyers at good rates. Best heifer and bullock beef was worth from 51s. 9d. to 55s., and for extra choice up to 59s. per cwt.; second quality beef from 46s. to 50s.; and inferior beef from 42s. to 45s. per cwt. The total number of beasts in market was 4,317.

In the sheep department, with a total of 8,848, there was a slow and dragging market. The exports were few; in fact, it was one of the worst markets for sheep met with this year. The export trade was very limited, and it was a bad home trade also. Nice light sheep worth about from 40s. to 56s. apiece sold fairly well, but there was very little demand for any other sort. The market for sheep made a very bad finish at cheaper and irregular prices. Best wether mutton was worth from 6⅝d. to 7½d. per lb.; best ewe mutton 6d. to 6½d.; and inferior mutton from 4½d. per lb. upwards.

Large heavy hoggets sold at from 46s. to 56s., and small to medium ditto at from 36s. to 44s. each.

Prime veal scarce, and sold well, choice calves making up to 8½d. per lb., inferior sorts selling from 4½d. per lb. upward. There was a decrease in veal, and it was easily cleared. There was a good demand for milch cows, which are always wanted about this time of year. Choice cows made between £16 and £20 each, and were hard to get; other sorts could be got at from £10 to £14 each. A fairly good clearance was made. Store cattle market was well supplied for this period of the year. Two auctions of stores were also held and were well attended, and met with a good sale at fair prices. The Dublin pig market was well attended by both home and shipping buyers. Owing to want of feed many are rushing their pigs on the market before they are fit.

The Christmas market will be held in Dublin on Friday, December 27, instead of Thursday, December 26.

LONDON.

Central Market, Friday.—Fair supplies and trade very slow, prices being difficult to maintain. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 6d, extreme 4s 8d; Deptford and Liverpool killed, 3s 2d to 3s 7d; refrigerated hindquarters, best, 4s to 4s 2d; ditto, seconds, 3s 8d to 3s 10d; ditto, forequarters, 2s 4d to 2s 8d; inferior beef, 2s 2d to 2s 8d. Mutton, Scotch wethers, 4s 8d to 5s; ditto tegs, 4s 8d to 5s; ditto ewes, 3s 4d to 3s 8d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 4d to 3s 8d; Dutch sheep, 4s to 4s 4d; veal, 3s 8d to 4s 8d, extreme 5s; English pork, 3s 6d to 4s; Dutch ditto, 3s 6d to 3s 10d per 8 lb.

Islington, Thursday.—To-day's supply of beasts consisted entirely of fat cows and bulls from South-Western counties. Owing to the small attendance of buyers trade ruled slow, but at late values. Top prices paid per 8 lb. as follows:—Fat cows, 3s 4d to 3s 6d; fat bulls, 2s 6d to 3s. No sheep were placed on the market. Calf trade not worth noting.

COUNTRY.

Ashford, Tuesday.—Trade for beef and mutton was rather dull, though the supply was not large. Choice animals, however, made last week's rates, beef being quoted up to 4s 8d; small Downs up to 6s; next Kent wethers up to 5s 10d; barreners up to 4s 6d. Veal sold well up to 5s 8d, but pork was slow, 4s being top price.

Aylesbury, Wednesday.—A short supply of stock was on offer at this market, probably on account of the special Christmas show and sale being fixed for Wednesday next, December 11, for which a record entry has been made. The numbers penned were 345 fat sheep and 140 fat beasts, and trade in both departments remains about the same

as the previous week, good quality animals meeting a fair inquiry.

Bath, Wednesday.—There was a lage attendance, and the trade was good. Fat steers, £24 to £37 10s; fat heifers, £22 10s to £35 10s; fat cows, £20 10s to £30; fat tegs, 50s 6d to 84s; fat wethers, 68s 6d to 85s; fat lambs, 30s to 42s 6d.

Berwick, Saturday.—Attendance of farmers and buyers fair, and trade fair. Calves, £5 10s to £6 10s; heifers, £6 10s to £10; stirks, £10 to £12 5s; two-year-olds, £13 to £14 10s; three-year-olds, £14 to £16 10s; Shorthorn bulls, £12.

Birmingham, Thursday. — Good supply of pigs; small supply of beasts and sheep; trade slow. Quotations:—Beef, 5d to 6½d per lb; mutton, 6d to 8½d per lb; bacon pigs, 8s 10d to 9s per score; cutting pigs, 9s 2d to 9s 3d per score; porkets, 9s 6d per score; sows, 7s per score.

Bristol, Thursday.—At this market there was a fair supply of beef, and with less than an average demand, lower; quotations for best qualities, 56s to 58s per cwt. Mutton was less plentiful, and trade quiet at last week's values, except ewes, up to 6½d per lb. A small number of pigs at late rates.

Calne, Friday.—Present prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s per score; 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s per score. Pigs outside these limits at their value.—C. and T. Harris and Co., Ltd.

Canterbury, Saturday.—A few sheep offered to-day, but the principal supply was that of Irish horned stock; the demand, however, is nearly over, and sales were few. Calves were quoted from 50s up to £3 12s, and stronger animals from £4 4s to £5 7s 6d; yearlings, £7 10s to £8 10s per head.

Carlisle, Saturday.—Few buyers were present, but a firm trade was done. Wintering heifers, £7 10s to £11 10s; stall-fed cattle, to £14 10s; polled bullocks, £8 10s to £10 10s each.

Chester, Thursday.—The supplies of stock were smaller than last week, and the demand for all descriptions except milch cows was quieter. Generally last week's prices were repeated. Milch cows, £17 to £22; calvers, £15 to £19; barrens, £10 to £13; heifers, £9 to £15; stirks, £6 to £10 each.

Chichester, Wednesday.—There was a capital attendance of buyers. The supply of fat and store sheep was light, and all changed hands about late rates. The entry of fat cattle included a large number of fat cows, which met a dragging sale. Well finished stores and heifers made about late values. Competition for dairy cows and heifers was very brisk, and all were quickly sold at an advance of fully 30s per head. The best trade of the season was experienced for store cattle, and all were sold. Quotations:—Prime Devon beast, 4s 6d to 4s 9d per stone; prime Shorthorn ditto, 4s 3d to 4s 8d; prime Southdown tegs, 6s 6d to 7s; prime West Country ditto, 6s to 6s 6d; fat ewes, 5s to 5s 4d; fat calves, 5s to 5s 6d; fat pigs, 3s 6d to 4s 6d; suckler calves, 15s to 30s per head; store pigs, 8s to 20s per head.

Colchester, Saturday.—A dull market. Beef made from 4s to 4s 6d, and mutton 5s 8d to 6s per stone of 8 lb; pork, 7s 6d to 8s per score.

Derby, Tuesday.—A busy market, with rather better supplies of first-class beasts and sheep, which remained dear. Beasts, 5½d to 6½d; calves, 8d; sheep, 8d to 9½d.

Doncaster, Saturday.—Large supply of cattle, and a fair trade, especially for milch beasts, which were slightly dearer. Milch beasts, £18 to £23; bullocks, £12 to £17; heifers £11 to £16; drapes, £10 to £14; stirks, £9 to £12; young stores, £7 to £9 each. Only a small supply of sheep, and trade slow, but late prices generally ruled. Hoggs, 40s to 46s; drape ewes, 35s to 37s each.

Dorchester, Saturday.—A very full cattle market to-day, this being the first of the great Christmas fat stock sales. Messrs. Duke and Son had a very full entry of both fat and store things, especially of milch beasts, and Messrs. Symonds and Sampson's sale was equally well supplied, a feature of which was a magnificent lot of fat steers and heifers specially grazed for their sale, as well as some choice fat sheep and lambs, and for which Messrs. Symonds and Sampson offered a number of liberal prizes. The prize stock made a grand display, the beef, as at Messrs. Duke's sale, being exceedingly ripe, and had evidently been very carefully prepared for market. Buyers were largely represented from over a wide area, and the prize beasts excited keen competition at prices fully up to sellers' best expectations for the best weights both in steers and heifers, good-quality cows also finding a ready sale. The best Devon steers and maiden heifers ranged from £23 to £28 10s; and seconds, £18 to £22, small heifers ranging down to £6 each (or for best beef, 11s 6d to 12s 6d per score); cows, £16 to £26 (or 10s 6d to 11s; fat bulls, £19 (or 9s to 10s). The mutton was of excellent quality, ripe and well turned out of hands, especially the wethers, which sold up to 71s each (or 9½d to 10d per lb), ranging down for others to 48s 6d (or 8½d to 9d); fat ewes, 46s to 50s (or 8½d to 8¾d); and fat lambs, 40s to 44s. The trade in useful store things was equally satisfactory, milch beasts selling exceedingly well at from £18 to £23 for best heifers, others £13 to £16 10s; in-calvers, £9 10s to £14 each. Young fleshy barreners in demand at from £22 to £26 per pair; older beasts, £12 10s to £18 per pair, with a slower sale. But in spite of the extensive offer of stock very few things remained over unsold.

Dublin, Thursday.—A brisk demand for choicely finished bullocks and heifers at improved prices. Secondary sorts easier sold at late rates, and an early clearance effected. A quieter trade for sheep at prices favouring buyers, shippers being in bad form and local men operating with more caution. Cattle—Live weight (best), 30s to 33s per cwt; secondary and inferior qualities, 26s to 29s per cwt. Mutton (dead weight), 6d to 7½d per lb; extremes, 7¾d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday.—Medium supplies and medium trade; half-bred lambs at 35s; Cheviot ewes, 28s; half-bred hoggs to 33s; Cheviot hoggs, 30s; cross-Down hogg, 33s; polled bullocks, £15; horned to £14; best Shorthorned cows to £24; Irish, £10 10s.

Exeter, Friday.—Small supply of beasts, and good demand for choice steers and maiden heifers at 11s 3d; plainer quality and cows, 10s; some unsold. Immense supply of sheep, but a small proportion of ripe mutton; small size, 9d; second clas, 8½d; ewes quiet at 6½d; extraordinary large number of hogs for turnips at lower prices, 34s to 36s; the best 38s. Calves, 7d. An unsatisfactory market to sellers generally.

Glasgow, Wednesday.—Large show of cattle; prime sorts scarce and dear, while other classes met firmer inquiry; top, 63s to 65s; secondary, 57s to 59s per cwt. Large number of sheep penned, and demand for best hoggs good; inferior descriptions only met slow inquiry; ewes in good request but easier in price; best mutton, 9d to 9½d; secondary, 8½d to 8¾d per lb.

Gloucester, Saturday. — Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves: A moderate supply with very good trade for the best qualities, the best prices being £24 15s (2), £24 5s, £24, £23 10s, £23, £22 12s 6d, &c. Store cattle: A short supply, all the lots being disposed of.

Hereford, Wednesday.—An oversupply of beef, and a dragging trade, the best bullock and heifer ranging from 6½d to 7d, and cow beef meeting with little demand. Store cattle experienced a dull trade. Sheep were a short supply. Wethers and fat lambs dear and scarce, fetching 8½d to 9d; store lambs also few. Calves were a short supply and dear; veal at 6½d to 7d per lb. There was a large quantity of pork and bacon at 5d to 5½d; sows, 4½d to 5d; stores cheap.

Leicester, Saturday.—Full consignments of store stock. Buyers were well represented, and choice lots sold steadily at high rates. The best milch cows made £22 to £24; good lots, £18 to £20; secondary, £15 to £17; Shorthorn bullocks, £13 to £16; Irish cattle, £12 to £15 10s; Welsh bullocks, £9 to £13 10s; young stock, £5 to £8; calves, 20s to 40s each.

Lincoln, Friday.—An good supply of beasts, and a slow demand. Young beasts, £9 to £11; strong ditto, £13 to £15; and milch cows, £17 to £23.

Lynn, Tuesday.—A larger show of fat beasts, and trade not quite so good as last week, from 7s to 7s 9d per stone. Stores average supply for time of year, trade very slow £6 to £15 each. Average show of fat sheep made more money from 9s to 10s per stone. No stores. A few store lambs fetched from 35s to 42s each.

Manchester, Friday. — Beef: First-class, 5½d; second-class, 4d to 4½d; third-class, 3d to 3½d per lb. Mutton: First-class, 7¾d; second-class, 6¾d to 7¼d; third-class, 5¾d to 6¼d per lb. Veal: First-class, 8d; second-class, 7d to 7½d; third-class, 6d to 6½d per lb. Bacon pigs: First-class, 5d; second-class, 4d to 4½d; third-class, 3d to 3½d. Porket pigs: First-class, 6½d; second-class, 6d to 6¼d; third class, 5½d to 5¾d per lb.

Newcastle, Tuesday.—Trade was a fair trade for choice quality cattle; other sorts quiet. Quotations:—Choice heifers, 7s 6d to 7s 9d; second class, 6s 9d to 7s; prime steers, 7s to 7s 6d; second class, 6s 9d to 7s; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Sheep were a slightly larger supply, and trade was rather easier, and prices showed a fall of ¼d to ½d. Quotations:—Choice young sheep 8¼d to 8½d; strong heavy, 8d to 8¼d; choice hoggs, 8¼d to 8¾d; ewes, 6d to 6½d; rams, 5d to 5½d; rams, 5s to 5½d per lb. Calves were rather smaller supply, and trade was fair, but prices fell ½d, veal making 5d to 8½d per lb.

Newport, Wednesday.—Large supply of cattle, sheep, and lambs. There was a good attendance of buyers, and brisk trade all round. The quotations were:—Best beef, 6½d; seconds, 6d; cows, 4½d to 5d; best wether mutton, 8½d; ewes, 7d to 7½d; lambs, 9½d; calves, 7½d; porker pigs, 10s 3d to 10s 9d per score; baconers, 9s to 9s 3d.

Norwich, Saturday.—Fat cattle not such a good show, the majority being of secondary quality. Trade was better, the best making 8s, others, 7s 6d to 7s 9d, and cows, 7s per 14 lb stone. Fewer fat sheep on offer, but the quality was unchanged; prices were ½d per lb lower, best sorts making from 8½d to 9d, and ewes 6½d per lb. Good supply of fat pigs, but trade was slow, bacons making from 5s 6d to 5s 9d; porkers, up to 6s 3d; and sows, 5s to 5s 3d per stone. Store cattle were quiet, 1,000 short of usual numbers; trade was very dull and slow, the quality not being so good; second quality, two and three year olds, mixed, made from £12 to £14 15s; yearlings, £8 10s. to £10 5s; younger cattle, £4 10s to £6. A clearance was not effected. Trade for rearing calves was slightly easier, prices ranging from 25s to 52s. Not many store sheep shown, and trade was slower by 1s to 2s per head, prices ranging from 38s to 48s. Good show of store pigs, which sold cheaply at from 10s to 21s per head.

Nottingham, Saturday. —A shorter supply of stock, which met with a brisk trade. Best cows made £24; heifers to £19 10s. Store beasts realised good prices; strong heifers and steers, up to £14; younger beasts, £7 to £9; and calves, about 45s each.

Preston, Wednesday.—There were large supplies, but trade was slow, and last week's rates were barely maintained. Quotations:—Best local heifers to 6½d; secondary, 6d to 6¼d; Irish ditto, 6d to 6½d; choice young cows and bulls, 5½d; coarse and inferior, 5d; sheep, hoggs, and lambs, 8¾d; secondary ditto, 8½d; choice ewes, 7½d; heavy tups and ewes, 6d to 6½d; calves, 7½d to 7¾d.

Retford, Saturday.—Fair attendance and a full average supply; the best qualities of milch beasts and bullocks realised £18 to £22, secondary down to £14, yearlings and two-year-olds as before; calves, 35s to 45s per head.

Romford, Wednesday.—Average supply of fat beasts, pricesabout the same. Best beasts, 4s 4d to 4s 6d; middlings, 4s to 4s 2d per stone. Calves in short supply and dearer at 5s 4d to 5s 6d per stone. Sheep in short supply; trade slow; best small sheep, 6s to 6s 4d; larger sheep, 5s 8d to 6s per stone. Ewes in average supply, trade slow at 4s 2d to 4s 4d per stone. No store beasts on offer. Milch cows in good supply, with a little better trade. Average supply of pigs, prices about the same. Large hogs, 3s 6d to 3s 8d; smal porkers, 4s to 4s 2d per stone. The swine fever restrictions have been removed except with regard to certain parishes.

Sheffield, Tuesday.—Small supply of milch beasts, and a good demand for the best qualities, which sold at £20 to £23; secondary ditto, £16 to £18.

Shrewsbury, Tuesday.—Small supply of store cattle, with a very quiet trade. Good number of fat cattle, which met with ready buyers at last week's prices. Small supply but good trade in sheep. Good number of fat pigs, which sold well, but store pigs was a sluggish trade. Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d to 9½d per lb; ewes, 7½d to 8d per lb; veal, 7½d to 8½d per lb; pork pigs, 9s to 9s 6d per score; bacons, 8s 6d to 9s per score.

Stockton, Wednesday.—A smaller show of the best cattle. Trade was slow, but firm, at 7s 6d to 7s 9d per stone for the best; and 6s to 7s per stone for rougher kinds. Sheep were quoted at 8½ per lb; and tups and ewes, 6d to 7d, were a slow trade. The pig trade was also quiet, sows making about 5s 7d per stone; young pigs, 6s 6d; and porkers, 7s 6d per stone.

Truro, Wednesday.—Attendance very good; business fairly brisk. Fat bullocks, 54s to 58s; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves, 25s to 40s; wethers, 7d to 8d per lb; ewes, 5d to 5½d; pigs, 6s to 35s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4½d to 5d per lb.

Wolverhampton, Wednesday.—Trade very slow; supply moderate. Quotations:—Beef, 5d to 6d per lb; mutton, 6½d to 9½d per lb; veal, 6d to 8d per lb.

Worksop, Wednesday. — Fair supply of beasts and sheep, with trade fairly brisk. Best beef, 7s to 7s 6d per stone; secondary, 6s 9d to 7s 3d. Best Southdown wethers and cross-breds to 9d per lb; ewes, 6d per lb.

Yeovil, Friday.—Good supply, and trade inactive. Milkers were in request, heifers with calves making from £17 to £20 10s; secondary, £13 5s to £16 10s; cows with calves, £16 5s to £21; secondary, £11 10s to £15 15s; fresh

barreners to £29 10s per pair; store heifers, from £7 10s to £9 5s; yearling heifers, £5 5s to £7 5s; Down wethers, 46s to 53s; Down ewes, 41s to 46s; Down lambs, 45s to 40s; horn wethers, 47s 6d to 55s; horn ewes, 44s to 51s; horn lambs, 34s to 39s 6d.

York, Thursday.—A lighter show of English store cattle, and a very large one of Irish, considering the lateness of the season. A fair attendance of buyers, but trade ruled slow and dear, and in some cases there was a slight advance on late rates. Some of the best three-year-olds made up to £15 5s, two-year-olds from £9 10s to £12. The bulk of the English cattle was sold, but a good many Irish were left on hand. A small supply of Irish stirks, which South-country buyers picked up at from £7 to £9 each. A small show of calving and milch cows, with fewer customers and less brisk trade than of late. Fairly good prices were, however, still obtained. The best made up to £22, but the general run of prices was from £9 to £16. About 3,000 sheep were offered, and the best shearlings and lambs met with an improved demand at fully 2s per head advance. Best shearlings made up to 48s; others, 40s to 44s; best twice crossed lambs, up to 43s; others, from 32s to 38s. One or two good lots of Masham lambs made 30s, but the majority only commanded from 22s to 26s.

Weekly London Averages.

An account of the Quantities and Prices of British Corn bought on the London Market and in the area within five miles from the Royal Exchange during the week ending Tuesday, December 3, 1907:—

THE AGRICULTURAL ANNUAL AND MARK LANE EXPRESS ALMANAC FOR 1908.

The 1908 edition of the Agricultural Annual and Mark Lane Express Almanac, more popularly known as "The Farmers' Red Book," establishes a record for this publication as regards size, for there are 324 pages, a number considerably in excess of any previous year; and when it is mentioned that in the first issue there were only 150 pages, it will be seen how wonderfully the Annual has grown—more than doubled itself. A similar comparison might be made as regards the circulation, which has also increased every year, thus testifying to the popularity of the Farmers' Red Book, and the 1908 edition should still further enhance it in public favour.

All the well-known features are retained, such as the abundance of excellent illustrations, typical of the various branches of farming, the statistical tables and items of reference all brought up to date, the list of agricultural societies, and last, but by no means the least, a good number of readable articles on well-selected topics, which, whilst interesting, are instructive, and should prove useful to farmers throughout the coming year.

Further, there are one or two new features which add to the value of the work, and of these we may mention the list of the principal live stock fairs to be held in 1908. This has never before been given in this Annual, but we think it is a feature that will be appreciated; at any rate, it has meant the addition of twelve pages, a nett gain to the purchaser, for nothing has been sacrificed to make room for the fairs, but the necessary extra pages have been given in. Another welcome feature is the extension of those useful articles accompanied by diagrams, such as "How to Measure Manure Heaps," "Weight of Cattle by Measurement," "Methods of Tying up a Horse," "To Prevent Cows Kicking," "How to Cure Self-Sucking Cows," &c. These are matters which farmers require to know, yet we have found that many do not know the rules, so that their inclusion in the Farmers' Red Book will be much appreciated.

The Yellow Supplement of twenty pages devoted entirely to feeding stuffs and fertiliser matters, which is again included, has been thoroughly revised and brought up to date, as has in fact the whole of the book, which as a work of reference for farmers has a widespread reputation. Space does not permit of mention of the articles, but it may be stated that they cater for all tastes, touching as they do on live stock of all descriptions, arable farming, dairying, poultry keeping, hop growing, cider making, and that all-important question, wheat prices. Thus every class of agriculturist will find something to interest and be of use to him in the Farmers' Red Book, which, published at 1s., is wonderful value for money. It can be obtained of all booksellers, or can be had for 1s. 4d., post free, direct from the publishers, 3, Wellington Street, Strand, London, W.C.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended November 23, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (11,054), 4,929; sheep and lambs (3,470), 1,546; horses (193), 144.

Fresh meat:—Beef (85,074 cwts.), 90,394; mutton (18,525), 76,037; pork (11,710), 14,900.

Salted or preserved meat:—Bacon (85,954 cwt.), 85,505; beef (3,289), 2,100; hams (17,655), 15,190; pork (3,004), 3,940; meat (8,515), fresh, 14,048, salted, 1,254; meat, preserved (5,975), 9,948.

Dairy produce and substitutes:—Butter (61,116 cwt.), 58,762; margarine (19,421), 17,792; cheese (55,374), 42,302; milk, cream (71), 119; milk, condensed (15,274), 18,454; milk, preserved, other kinds (150), 459.

Eggs (great hundreds):—(367,336), 418,451; poultry (value £10,223), £14,648; game (value £2,347), £3,922; rabbits, dead (not tinned), (7,543 cwt.), 10,546; lard (38,609 cwt.), 33,360.

Corn, grain, meal, and flour:—Wheat (1,615,800 cwt.), 1,033,100; wheat, meal and flour (226,400), 282,500; barley (447,800), 519,700; oats (100,000), 214,600; peas (33,890), 58,780; beans (10,420), 17,760; maize or Indian corn (1,096,100), 1,051,200.

Fruit (raw):—Apples (160,280 cwt.), 169,989; grapes (5,934 cwt.), 17,069; pears (5,070 cwt.), 6,035.

Hay (2,371 tons), 1,991; straw (1,216 tons), 1,281; moss litter (1,870 tons), 1,413; hops (13,028 cwt.), 6,283; locust beans (22,000 cwt.), 48,613.

Vegetables, Raw:—Onions (247,680 bushels), 119,728; potatoes, (35,725 cwt.), 202,805; tomatoes, (12,145 cwt.), 12,947.

The Value of Agriculture.

No growth of cities, no growth of wealth, can make up for any loss in either the number or the character of the farming population. We of the United States should realise this above almost all other peoples. We began our existence as a nation of farmers, and in every great crisis of the past a peculiar dependence has had to be placed on the farming population; and this dependence has hitherto been justified. But it cannot be justified in the future if agriculture is permitted to sink in the scale as compared with other employments. We must do all we can to render country conditions more easy and pleasant. The National Government, through the Department of Agriculture, should do all it can by joining with the State governments and with independent associations of farmers to encourage the growth in the open farming country of such institutional and social movements as will meet the demand of the best type of farmers, both for the improvement of their farms and for the betterment of the life itself. Farmers must co operate with one another and with the Government, and the Government can best give its aid through associations of farmers. —An Extract from President Roosevelt's Message to the United States Congress.

Weekly Arrivals into London.

November 28 to December 4 inclusive.

	British.	Foreign.	Total.
Wheat qrs.	2,386	70,166	72,552
Barley	1,800	13,000	14,800
Malt	13,315	—	13,315
Oats	5,500	22,000	27,500
Beans	742	3,035	3,777

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The violent south-westerly gale of Saturday did a good deal of damage to stacks and barns, and it added to the trouble of the floods which now cover almost unprecedented meadow areas, and should convince even the Meteorological Office that the weather has been wet. We note, however, that up to Saturday the Powers that be at St. James's Park were unpenitent, and after a Friday when it rained for eight hours without a break reported that a third of an inch of rain had fallen. The wheat which was sown in October had obtained a good hold on the soil before the floods descended, but November sowings must have been injured. The state of the air, which is saturated with moisture, is utterly adverse to grain threshings and deliveries, and of the 1s. fall in prices reported from many markets for wheat, at least half must be attributed the damp state of the average samples offering.

The American cereal year is the subject of a special report by Mr. Secretary Wilson who in his annual review presented to the President and Congress on December 3 last, stated that the total cereal produce of the Republic in 1907 was 5 per cent. below the average. The rise in prices will, if maintained, not only wipe out this deficiency, but add 20 per cent. to the national wealth as compared with the cereal earnings of 1906. The wheat crop is put at 5 per cent. below an average, the price likely to be made at 5½ per cent. above an average. The identity of the wheat crop deficiency with the total cereal deficiency is a mere coincidence. The dairy produce is valued at £160,000,000, and the report ends —"Agricultural wealth is the backbone of our prosperity, and these figures certainly do not spell panic." The weak point in theory in the report is its assumption that present prices will be maintained, but in practice we fancy that they form a fairly safe basis on which to build the calculations of the Agricultural Department.

The "equal weight" remains an ideal beyond the abilities of our statesmen to obtain. But from time to time the press can mitigate the State confusion by giving leading articles of food, &c., in an equal weight, cental cwt. or ton. Comparative prices per ton include the following :—

	£	s.	d.
Pure crushed linseed	13	10	0
Aberdeen oatmeal	13	0	0
Potato flour (best)	11	0	0
Wheat flour (ordinary country)	11	0	0
Ground Linseed cake	8	10	0
Bean meal	8	2	6
English wheat	8	1	5
Rough feeding rice	8	0	0
Barley meal	7	15	0
English barley	7	10	4
Roumanian barley	7	7	6
Russian barley	7	5	9
Fine middlings	7	3	9
Persian barley	7	1	3
Russian oats	7	0	0
English oats	6	12	10
Coarse middlings	6	2	6
Bran (broad)	5	15	0
Dried ale grains	5	10	0
Bran (fine)	5	5	0
Malt Cooms	4	15	0
Oat husks	3	15	0

The fact that English oats are fastly underselling foreign is also to be noted. The dearest article on the list is by no means the dearest, value for value, as fattening material to strengthen other rations.

We note with interest the following editorial note in the *Miller* :—

"Durum Wheat.—This hybrid grain does not appeal to our judgment at 37s. for forward positions, and we trust our friends who are not as yet fairly well acquainted with it will not be tempted to use it at all freely."

This new type of Dacota, Minnesota, and Wyoming wheat—those are the States whence it is derived for the most part—has been much in evidence at Mark Lane of late. We should be glad to learn a little more of what millers really think of it in the mill. Apparently the trade journal in question has reason to advise caution in its purchase. It is not yet quoted in the ordinary journals, but from its first appearance at Mark Lane in quantity—some few months ago—it has been regularly quoted in our list of prices. We hold that readers are entitled to such knowledge, albeit the inclusion of any article in our list is not to be taken as any guarantee of its being a desirable purchase.

The wheat gradient last week showed that the best prices were being made in the Thames Valley, Kent, Essex, and Sussex, while the lowest terms were being accepted in East Anglia and Lincoln. The North is now accepting comparatively low prices, but the West is reasonably firm :—

Reading	35s. 6d. per qr.
Doncaster	33s. 4d. ,,
Range	2s. 2d. per qr.

Barley sells better in S.E. England than elsewhere.

Canterbury	29s. 10d. per qr.
Peterborough	26s. 4d. ,,
Range	3s. 6d. ,,

Oats sell better in the South than in the North.

Chichester	19s. 4d. per qr.
Lincoln	17s. 9d. ,,
Range	1s. 7d. ,,

Canterbury quoted 19s. 4d., as well as Chichester, and Chelmsford quoted 19s 2d., but 17s. 11d. was accepted at Doncaster, 18s. at Cambridge, and 18s. 1d. at Peterborough

Sales of British wheat at the statute markets have been for the period since harvest :—

This season .. 999,000 qr. at 33s. 10d. per qr.
Last ,, ... 1,006,000 ,, 26s. 2d. ,,

The close agreement in the total sales of the two seasons, thus far is interesting. The price happily shows a very merited improvement on the period.

Sales of British barley at the statute markets have been smaller than in the like period of last season, but a good business for the time of year has been done since December came in.

This season ... 2,015,000 qr. at 26s. 4d. per qr.
Last ,, ... 2,226,000 ,, 24s. 7d. ,,

The returns of sales of oats indicate a very special demand.

This season ... 624,000 qr. at 18s. 3d. per qr.
Last ,, ... 487,000 ,, 16s. 8d. ,,

There are no returns of other cereals, but English beans, peas, and rye, all sell steadily at a fair price.

Imports of the United Kingdom have been as follows. Latest returns, as received from the Custom House on Monday morning, will be found in the portion of the paper reserved for "Latest Intelligence" :—

Wheat, 312,000 qr. : a fair supply.
Flour, 165,700 sks. : a large supply.
Maize, 157,000 qr. : less than usual.
Barley, 130,000 qr. : a little above the average.
Oats, 45,000 qr. : an extremely small supply.

Total imports this season thus compare with 1906 :—

	1907.	1906.
Wheat, qr. ...	6,034,000 ...	5,817,000
Flour, sks. ...	1,742,000 ...	1,819,000
Maize, qr. ...	3,587,000 ...	3,351,000
Barley, qr. ...	2,545,000 ...	2,596,000
Oats, qr. ...	1,004,000 ...	1,357,000

We cannot recall a season when arrivals of oats were so small as those received from abroad since September 1. The English crop should be held with firmness.

The supplies on passage on the 14th inst. included the following quantities of wheat :—

Californian	620,000 qr.
American	300,000 ,,
Indian	322,000 ,,
Russian	60,000 ,,
Argentine	55,000 ,,
Australasian	305,000 ,,
Various	50,000 ,,
Total	1,712,000 ,,

This is 780,000 qr. below the average, and is an influence which should help materially in steadying the market. Flour, on passage, shows a total of 276,000 sacks, which, although 260,000 above the mean, is 30,000 sacks less than on the 7th inst.

The supplies of barley, on passage, are :—

Russian	215,000 qr.
Californian	210,000 ,,
American	10,000 ,,
Asiatic	100,000 ,,
Total	535,000 ,,

This is 35,000 qrs above an average. Of oats, however, only 115,000 qr. are on passage, which is 125,000 qr. below the mean. Of maize there are on passage :—

American	210,000 qr.
Russian	140,000 ,,
Argentine	120,000 ,,
Total	470,000 ,,

Other supplies on passage are 71,000 qr. of linseed, 120,000 qr. of rapeseed, 44,000 tons of cottonseed, and 19,000 tons of rice.

The shipments from America last week were very large of breadstuffs, but very small of other articles. Wheat, 457,000 qr.; flour, 158,000 sacks; maize, 68,000 qr.; barley, 5,000 qr.; oats, 2,000 qr. Argentine sent off 36,000 qr. of wheat, 138,000 qr. of maize, and 3,000 qr. of oats.

Russia is shipping well for a winter month, but of course is not represented anything like so fully as when all her ports were open in October and November. Totals exported were wheat, 167,000 qr.; barley, 147,000 qr.; oats, 52,000 qr.; and maize 16,000 qr. Roumania shipped 55,000 qr. of wheat, 70,000 qr. of barley, and 19,000 qr. of oats. Total maize exports from the Euxine and outside Russian returns come to the high total of 172,000 qr.; this includes Roumania, Bulgaria, and the Turkish district bordering on the Black Sea.

India shipped 35,000 qr. of wheat and 15,000 qr. of linseed, while Australia sent off 12,000 qr. of wheat.

THE BALTIC.

Wheat cargoes are irregularly lower on the week, the feeling being very adverse to holders of American, Argentine, Indian, and Australian, but firm for Russian, Roumanian, and Canadian. Prices accepted have been inclusive of 40s. per 500 lb. for Blue Stem, 39s. per 500 lb. for Walla Walla, 39s. per 480 lb. for Australian, 35s. 9d. per 480 lb. for Rosa Fé, and 41s. 6d. per 480 lb. for No. 1 Northern Manitoba.

Maize cargoes have been weak. Prices accepted included 25s. per 480 lb. for Odessa and 24s. per 480 lb. for American.

Barley cargoes have made 21s. per 400 lb. for Persian (at which price there has been a desire to buy, and four cargoes have been placed), 23s. per 400 lb. for Azoff, and 35s. per 448 lb. for Oregon.

Oats have made 15s. 6d. per 304 lb. for new crop Argentine, and 20s. per 320 lb. for fine Konigsberg. Other cargo sales include Indian linseed at 43s. 3d. per 410 lb., Brown Cawnpore rapeseed at 51s. per 416 lb., and Egyptian cottonseed at £6 12s. 6d. per ton.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were 2 maize (1 Kustendj and 1 La Plate).

The sailings of grain and seed-laden vessels from ports-of-call for week were 1 maize (Durs kirk).

Since January 1, 1907, the total arrivals have been 253 wheat, 1 flour and wheat, 3 barley and wheat, 8 barley, 1 maize and wheat, 26 maize, 1 maize and barley, and 17 linseed; total, 310.

Last year during the same time the arrivals were 244 wheat, 2 barley and wheat, 4 barley, 5 maize, 1 locust beans, and 28 linseed; total, 284.

The London Corn Trade Association executive announces that the following standards of September shipments have now been made up :—

Wheat.—Choice White Kurrachee; Soft Red Kurrachee; Choice White Bombay.

Barley.—Kurrachee.

Lentils.—Kurrachee; Bombay. Gram.—Kurrachee.

The East Indian wheat rejections of the same body are :—

Crop 1907.

Choice White Kurrachee	38s.
Soft Red Kurrachee	38s.

These prices are per 492 lb., and for cargoes arriving under the Association's contracts

Weekly London Averages.

An account of the Quantities and Prices of British Corn bought on the London Market and in the area within five miles from the Royal Exchange during the week ending Tuesday, December 10, 1907 :—

	Imp. Quar.	Bus.	Total Amount. £	s.	d.	Av Price per qr £	s.	d.
Wheat ..	1,672	6 ...	2,996	10	7 ...	1	15	10
Barley ..	1,522	5 ...	2,110	13	6 ...	1	7	9
Oats	2,351	4 ...	2,294	9	7 ...	0	19	6

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English steady, quiet. Whites quoted at 36s to 40s; reds, 35s to 38s 6d. Foreign dull, with an easier tendency. No. 1 Northern Manitoba, ex ship, quoted at 43s 9d to 44s; No. 2 at 43s 3d; No. 1 Durum at 36s 3d to 37s; choice white Karachi at 38s. Flour dull, and prices favour buyers. Iron Dukes quoted at 27s 6d to 28s; Hungarian at 39s 6d to 40s 6d. Maize dull at about 3d decline. Mixed American, ex ship, quoted at 25s 9d; River Plate, ex ship, at 24s 9d; Odessa, ex ship, at 24s 6d. Barley steady, but quiet. Odessa-Nicolaieff and Azoff-Black Sea, ex ship, quoted at 23s 3d; landed, 24s; Persian, ex ship, at 21s 9d; landed at 22s. Oats slow, unchanged. La Plata, landed, quoted at 17s 6d to 17s 9d; South Russian 16s 9d to 17s 3d.

Mark Lane, Friday.—Wheat: English dull, unchanged; whites quoted at 36s to 40s; reds at 35s to 38s 6d. Foreign slow and 3d easier. No. 1 Northern Manitoba, ex ship, quoted at 43s 6d to 43s 9d; No. 2 at 43s; No. 1 Durum, 36s 6d; choice white Karachi at 37s 6d to 38s. Flour dull, with an easier tendency; Kansas Patents quoted at 29s 6d to 30s; Iron Dukes at 27s to 27s 6d. Maize slow and 3d lower to sell; River Plate, landed, held at 24s 9d; Odessa, landed, at 24s 6d to 24s 9d. Barley dull and 3d easier. Azoff Black Sea and Odessa-Nicolaieff, ex ship, quoted at 22s 9d to 23s; landed at 23s 9d. Oats quiet; River Plate, landed, quoted at 17s 9d; South Russian (38 lb), landed at 17s to 17s 3d.

COUNTRY.

Appleby, Saturday.—Dry samples scarce, for which there are inquiries. White oats (horse corn), 20s to 2?s 6d per 26 stones.

Ashford, Tuesday.—Trade for wheat dull, and prices somewhat lower, English making 33s to 36s; best English barley made 30s to 31s; and secondary, with a slow demand, 27s to 28s. Maize is a little cheaper, and did not exceed 28s. Other corn was about on a par with the previous market, mazagan beans fetching 28s to 29s; tick beans, 32s to 34s; oats, 18s to 22s; and peas, 31s to 32s per qr.

Berwick, Saturday.—Good attendance, with full supplies of grain. Barley and oats quieter, except for finest samples. Barley, 20s to 34s; oats, 17s 6d to 28s per qr.

Banbury, Thursday.—Wheat, white (new), 35s to 36s per qr; wheat, red (new), 35s to 36s per qr; barley, 25s to 30s per qr; beans (new), 30s to 31s per qr; oats, 17s 6d to 21s per qr; peas, 30s to 34s per qr.

Birmingham, Thursday. — The attendance at this market was small, and very little business was transacted. Foreign wheats were almost neglected, and were generally 3d per qr lower on the week. English wheat made from 12s 9d to 13s 6d per 186 lb delivered. Oats were easier to buy, making from 19s to 20s per 312 lb. Beans remained at 13s per 196 lb. Bessarabian maize was on offer at 25s 6d per 480 lb, and Galatz-Foxanian at 25s 3d at Sharpness. Grinding barley was 3d dearer at 24s 3d per 400 lb at Sharpness.

Brighton, Thursday.—Quiet trade and small attendance. English oats 6d cheaper. Wheat, except for the best samples, 6d cheaper. Very small supplies. Barley, 28s to 33s; grinding ditto, 24s to 26s; oats, English, 18s to 20s; peas, 33s to 34s; beans, 32s to 34s.

Bristol, Thursday.—English wheat in very small supply, continued wet weather preventing threshing. Values have declined 6d, and now stand at 34s 6d to 35s 6d per 496 lb. Foreign wheat the turn lower. Maize, 3d to 6d decline. Barley un changed. Oats ditto. Flour unaltered, with only a slow trade passing.—GRACE BROS.

Bury St. Edmunds, Wednesday.—Wheat was in short supply, but the demand was quiet and trade slow at 36s to 36s 6d per qr for reds in good milling condition. Barley in average supply, with a fair inquiry at about last week's prices; ordinary malting samples, 30s to 32s; finer parcels at 33s to 35s per qr. Feeding corns steady, with oats at 19s 6d to 22s, and new beans at 31s to 32s per qr.

Canterbury, Saturday.—A fair amount of business doing, at recent rates. Barley ranged from 28s 6d up to 32s, and oats are firm at from 19s to 20s for 39 lb blacks, and 21s to 22s for heavier weights. Wheat meets a quiet sale, 62 lb lots being worth 34s fetched from the farm, and 63 lb and 64 lb samples making 36s delivered. Grey peas 30s to 31s, and up to 34s for seed; tick beans, 31s to 32s; mazagans, 29s to 30s per qr.

Carlisle, Saturday.—A ger show of oats in our market to day, slow trade. Finest quality oats made 23s to 24s per 336 lb.; second quality oats made 20s to 22s. Wheats made up to 40s per 504 lb. Good demand for bran, which has gone up 5s per ton. Dried grain good trade, 2s 6d advance. Very wet week.—THOMAS ROBINSON.

Chester, Saturday.—The demand for feeding stuffs was fair. There was, however, little change in prices since last market day, the tendency being easier. English grain a quiet trade, with small offerings; prices in buyers' favour. Quotations:—White and red wheat, 5s 2d to 5s 4d per 75 lb; new grinding barley, 3s 10d to 4s; Indian corn, 14s 3d to 14s 6d per 240 lb; round corn, 14s to 15s 6d; old beans, 18s 6d to 21s per 80 lb; old oats, 3s 4d to 3s 8d; and new, 2s 7d to 2s 9d per 46 lb.

Chichester, Wednesday.—A small attendance and very little business doing. New white wheat, 36s to 37s; new red ditto, 36s to 37s; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s 6d; peas, 34s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday. — Wheat in buyers' favour, 36s to 37s. Oats and beans short supply owing to bad weather, unchanged.—COLIN TAYLOR, KING AND CO., LTD.

Coventry, Friday.—The attendance was poor. Thinner show of wheat, but prices decidedly in buyers' favour. Oats plentifully offered, and must be quoted 6d per qr lower on the week. No change in other sorts Quotations:—Wheat, 12s 9d to 13s 8d per 186 lb; barley, 30s to 34s per 448 lb; oats, old, 24s 6d to 27s per 352 lb; new, 20s to 22s 6d; beans, old, 13s 3d to 14s; new, 12s 3d to 13s 3d per 196 lb; peas, 12s 6d to 15s per 196 lb.

Derby, Friday.—There was a small supply of wheat, and little trade doing at the prices of last week for all sorts of grain. Wheat, 36s to 37s; red, 35s to 36s; malting barley, 29s to 32s; grinding, 25s to 27s; beans, 35s to 36s; old oats, 24s to 26s; new, 21s to 22s.

Devizes, Thursday.—There was a very small supply, with prices about the same as last week, but trade was slow for both wheat, barley, and oats, although the barley trade seems steadier. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s; winter oats, 18s to 19s; white Garton oats (330 lb), 18s 6d to 19s 6d; black Tartar oats (320 lb), 18s to 19s; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 38s.

Doncaster, Saturday.—Short supply of grain, the weather having been against threshing, and only a poor attendance. Moderate trade. English repeated late rates, and made 14s per load. Foreign wheat unchanged. Quiet trade for barley, which made recent prices, though secondary qual ty made lower prices. Slow demand for oats, and only fine qualities realised recent rates; secondary kinds 6d per qr easier.

Dorchester, Saturday. — Only moderate supplies were on offer at to-day's market, the weather of the past week putting a stop altogether to all threshing operations. With no great demand in any deparment the supplies proved fully equal to every demand, as factors showed a general disinclination to buy, except in sufficient quantity to tide over Christmas requirements. Prices generally had a falling tendency, and factors declined all offers of wheat, except at a decline of from 3d to 6d per qr all round, the general impression being that once the American supplies are liberated and put on the market a still further decline will result. Good malting barley maintained late values, and feeding descriptions kept fairly steady, though where any alteration took place it favoured the buyer. Oats and maize were both easier to buy, holders having to accept less to do business. Flour trade very inactive.

Glasgow, Wednesday.—There was the usual attendance at to-day's market. Wheat quiet, but not quotably altered on the week. Flour quiet, and 6d per sack cheaper. Maize and corn quiet, with prices favouring buyers. Barley steady. Oats quiet and unchanged. Beans against holders. Pease scarce. Bran and thirds unaltered. Oatmeal 1s per sack cheaper for Scotch, other qualities unaltered.—GIBSON AND CLARK.

Gloucester, Saturday.—English wheat about 6d per qr cheaper; reds, 34s to 35s; whites, 35s to 36s. Foreign wheat 1s lower on the week: Plates, 41s 6d to 42s; Russian, 40s 6d to 41s 6d. Feeders all 3d cheaper: Plate maize, 25s 6d; flat 6d cheaper; black, 18s to 19s; white, 19s to £1.

Grantham, Saturday.—Owing to wet weather there was only a small supply of grain at the Corn Exchange Wheat, oats, and blue peas were slightly lower. Wheat, 32s to 36s; barley, 26s to 33s; oats, 18s 6d to 20s; beans, 29s to 30s; blue peas, up to 75s per qr.

Hereford, Wednesday. — Moderate attendance, but not much corn on offer. English wheats met with reluctant buyers at last week's prices, 4s 3d to 4s 6d. Barleys very dull, and generally 1s per qr lower. Oats also 1s per qr lower. Maize 3d per qr lower. Beans very little doing.

Ipswich, Tuesday.—Small supply of wheat; trade slow, at barely last week's rates. Reds, 36s to 37s; white to 38s per 504 lb. Good supply of barley, trade for all descriptions quiet; prices in buyers' favour. Oats rather easier. Maize 6d per qr cheaper. Beans and peas unaltered.

Leeds, Friday. — The demand for English wheat at 12s to 14s per load was very quiet. Inquiry for foreign was not so great, and the tone was easier. Best barley in fair demand, though inferior sorts were neglected. Feeding stuffs were firm, except oats, which were 6d lower.

Leicester, Saturday.—Good average attendance with fair supplies of home-grown wheats, but the samples came to hand in variable condition. Trade ruled flat, especially for lots out of condition. Red wheats, 33s to 38s; white wheats, 36s to 39s per 36 stones; bright barley in steady request at 28s to 31s per 32 stones; good oats a better trade at 19s to 22s per 24 stones.

Lincoln, Friday.—For the time of the year there was a small show of wheat, which sold very slowly at a reduction of 6d per qr on the week. Barley firm at late rates. Oats 6d per qr dearer. Beans, owing to poor conditions, a slow trade at late rates.

Manchester, Thursday.—English wheat was 6d per qr lower, and foreign 2d per cental under last week. Flour extremely slow at 6d a sack down. Indian corn, ½d to 1d per cental lower. English barley easier. English oats declined 1d per bushel. Offals are generally 6d per load lower, although bran shows little change.

Newark, Wednesday.—Good attendance, but business quiet; prices slightly easier. Quotations:—Red and white wheat, 35s to 36s; malting barley, 28s to 30s; grinding barley, 25s to 27s; white oats, 18s 6d to 19s 6d; black oats, 18s to 19s; old beans, 36s 6d to 37s 6d; new beans, 29s to 31s per qr.

Newcastle-on-Tyne, Saturday.—A quiet demand for wheat of all descriptions prevailed at our to day's market, and to do business lower prices had to be accepted. Maize in buyers' favour. Fine oats in dry condition remains fairly steady at last week's prices; parcels in soft condition, however, are bad to sell even at a reduction of 6d per qr. Barleys are only slow to move; prices, however, remain unchanged. Beans remain steady at last week's quotations.—JOSEPH POLLARD AND CO.

Newport, Wednesday.—Trade was quiet, and prices were unchanged. Flour, fines, in fair demand, at 31s 6d.

Northampton, Saturday.—Very poor attendance, and business was of a very quiet character for all grains, scarcely any wheat showing, the wretched weather having practically brought threshing operations to a standstill. Prices, which vary very little from last week's, are:—Wheat, 34s to 36s; barley, 25s to 32s; white oats, 19s to 21s; black oats, 18s to 20s; old beans, 34s to 36s; new beans, 31s to 33s; peas, 33s to 35s; flour, 31s to 35s.

Norwich, Saturday.—Market steady. The supply of wheat is slightly larger, and the extreme prices of last week are not touched; values, 37s 6d per qr delivered. Barley in smaller supply and rather cheaper. Feeding stuffs steady at last week's prices, with a fair demand.

Nottingham, Saturday.—Wheat a fair supply, but poor condition; trade ruled slow at late rates. Barleys realised full prices, but other sorts 6d lower. Oats moderate supply, and values maintained Beans, owing to poor condition, were neglected.—ROBT. HUBBLE.

Peterborough, Saturday.—The wet rough week has prevented threshing, so the supply at market was only moderate. Wheat found a slow trade at about 1s less than last week. Barley quiet. Oats quiet at 6d less money. Beans unaltered. Wheat, 35s to 36s; oats, 18s to 19s 6d; barley, 27s to 34s.—THOMAS HILL AND SON.

Plymouth, Saturday. —There was only a moderate attendance on our market to-day, due, no doubt, to the fact that the fat stock show is being held here. Wheat remains unchanged. Maize and barley were very quiet at last week's rates. Oats 3d cheaper.. — ORLANDO DAVIS AND CO

Preston, Saturday.—The market is still weak, and wheat holders have had to concede 2d per cental. To-day's market was moderately attended, farmers' wheat and other grain being in small demand at slightly reduced quotations. Flour 6d per peck lower. Quotations:—Wheat, white, new; per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel, 3s 8d to 3s 9d; ditto, new, 3s 2d to 3s 3d; beans, per windle of 220 lb, 17s to 17s 6d.

Reading, Saturday.—The attendance was not large, and business was again on the quiet side, prices realised were:—Wheat, 32s to 38s;

barley, 26s to 34s; oats, 16s 6d to 21s 6d; peas, 29s to 32s; beans, 31s to 35s.

Retford, Saturday.—Wheat trade slow. Dry lots were very hard to find, and were worth 36s to 36s 6d per qr, out of condition samples made 32s to 34s 6d. Demand for malting barley sluggish. Qualities varied greatly, and quotations were 28s 6d to 32s; grinding samples, 27s; and maize, 28s per qr. Oats were again a dull trade, black making 18s to 19s; white, 19s to 20s; new English beans (if dry), 31s to 32s; and old ditto up to 40s per qr.

York, Saturday.—The supply of wheat was small, and mostly in poor condition. Prices were 6d per qr lower. Fine white, 36s 6d to 37s 6d; red and mixed, 35s 6d to 36s 6d per qr of 36 stones. Malting barley was firm at last week's prices. Fine, 30s to 32s; good, 28s to 30s; and feeding barley, 26s to to 28s per qr of 32 stones. Oats were steady. Tartarys, 18s to 19s; black, 19s to 20s; and short, 19s 6d to 20s per qr of 24 stones. Rye made 28s to 29s; and old beans, 36s per qr of 36 stones.

Ripon, Thursday.—Fair attendance of farmers, but a slow trade. New wheat, 35s to 36s; foreign wheat, 44s to 46s; barley, grinding, 24s to 26s; ditto malting, 28s to 32s; new oats, 19s to 20s 6d; maize, round, 27s per qr.

Sheffield, Tuesday.—Wheat quiet; trade at last week's prices. Beans, oats, barley, and maize unchanged. Quotations: Wheat, white, new, 36s to 38s; ditto red, new, 36s to 38s per 504 lb; oats, white, old, 26s to 26s 6d; ditto, new, 20s to 21s 6d per 336 lb; peas, grinding, 32s 6d to 36s 6d per 504 lb; beans, English, new, 36s to 37s per 632 lb; barley, grinding, 28s 6d to 29s; ditto malting, 29s to 32s per 448 lb; Indian corn, small, 27s to 27s 6d; ditto Plate, 27s to 27s 6d per 448 lb.

Stamford, Friday.—Trade was very dull, and prices declined. Wheat was 6d per qr down on the week. Best malting barley, 31s to 32s; grinding sorts, 25s 6d to 26s 6d; beans, 29s 6d to 31s per qr. Oats firm, and peas were little inquired for.

Stockton, Wednesday.—There was not much local wheat showing, which brought last week's prices. The foreign wheat trade keeps slow, owing to the stringency of the American money market, and prices were 3d to 6d lower. Maize and oats, 3d to 6d lower. Malting barley firm, 21s to 31s per qr.

Winchester, Saturday.—English and foreign wheat quiet and unaltered. Barley and oats unchanged. Maize 6d to 9d cheaper. Flour steady trade, but a shade lower rates.—Fear, Colebrook, and Co., Ltd.

Wisbech, Saturday.—Wheat small supply, 36s 504 lb. Barley no supply, 28s to 30s 448 lb. Oats, 19s to 20s 336 lb.—James Fletcher.

Worksop, Wednesday.—Small attendance, slow trade, and very little grain on offer. White Wheat, 36s to 37s; red ditto, 35s 6d to 36s 6d; best malting barley, 31s to 33s; secondary qualities, 29s to 31s; grinding barley, 26s to 28s; white oats, 18s to 20s; red oats, 17s to 19s; maize, 28s to 29s per qr.

FEEDING STUFFS.

Liverpool, Friday.—Late rates are maintained for nitrate of soda. For kainit there is a fair demand and all phosphates are attracting more attention. Feeding stuffs continue in slow consumptive request, and there is an absence of North American decorticated cotton cake on the spot, with limited supplies of English, poor in colour, and high in price. Small arrivals of Peruvian semi-decorticated cotton cake have, however, been obtainable at comparatively moderate prices and are soft, and contain as much as 11 per cent. oil. Feeding treacle, too, is reasonable.

—H. Jones Langar and Co.

Mark Lane, Monday.—Linseed Cake.—The improvement in the demand of last week is fairly well maintained, and country dealers anticipate higher rates after the turn of the year, and are more inclined to go into stocks again. Russians meet a better inquiry. East India seed pures and Calcuttas are unchanged. London made attract rather more attention.

Cotton Cake.—In spite of the prevailing low values, the trade is disappointing, and Egyptian in warehouse are only in moderate request. English find a quiet sale. Decorticated: London made pures move off more readily, and American brands are quoted the turn easier.

Rape cakes do not offer.

Maize Germ Meal.—Some recent arrivals of white African meal have changed hands at an advance, but English makes may still be bought at last week's quotations. Maize gluten meal is obtainable on slightly better terms.

Rice Meal.—Landed lots of Rangoon find buyers at an advance of 2s. 6d., with steamer parcels afloat, offering at late rates.

Locust beans are relatively cheaply offered.

Dried brewers' grain are scarce and dear.

Nitrate of soda is without change.

POULTRY AND GAME.

Smithfield, Saturday.—Good supplies; fairly good demand. Pheasants, 5s to 6s; young grouse, 5s; old, 3s; young partridges, 5s; old, 2s 6d; black game, 3s 6d to 4s per brace; geese, 4s 6d to 6s 6d; country ducks, 3s to 4s 3d; wild ducks, 1s 6d to 2s; Surrey fowls, 3s to 5s; Sussex fowls, 3s to 3s 6d; Lincolnshire fowls, 2s to 3s 3d; Essex fowls, 2s to 3s; Irish fowls, 1s 9d to 2s 3d; quails, 1s to 1s 6d; feathered pigeons, 8d to 10d; Bordeaux pigeons, 10d to 1s 2d; English hares, 3s 6d to 4s; leverets, 2s; Scottish hares, 1s 8d; tame rabbits, 1s 3d to 1s 8d; wild rabbits, 6d to 10d; live hens, 1s 8d to 2s each; Australian rabbits, 5s 6d to 7s per dozen; cock turkeys, 8d to 10d per lb; hen turkeys, 4s 6d to 5s 6d each.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fruit plentiful and in good demand. Greenstuff in moderate supply, at about late rates. Quotations for English produce:—Grapes, 8d to 5s; medlars, 3s and 3s 6d per crate; cranberries, 8s to 10s per case; apples, 2s 6d to 10s per half bushel; cobnuts, 4s to 4s 6d per 12 lb; tomatoes, 4s to 5s 6d per 12 lb; sprue, 8s to 10s; horseradish, 10s to 15s; celery, 6s to 12s per dozen bundles; cauliflowers, 6s to 10s; cabbage, 4s to 6s per tally; sprouts, 2s to 2s 6d; spinach, 2s to 2s 6d; beetroots, 1s 6d per bushel; shallots 2s to 2s 6d per 12 lb; onions, 4s to 5s per cwt; seakale, 12s to 15s per dozen punnets; endive, 1s to 2s; cucumbers, 7s 6d to 10s 6d per dozen; leeks, 1s 6d to 2s; parsley, 1s 3d to 1s 6d; turnips, 1s 6d to 2s 6d per dozen bunches; parsnips, 2s to 2s 6d; greens, 1s 6d per bag; potatoes, 70s to 100s per ton.

DAIRY PRODUCE.

Butter.—There is more animation in the market for Australian and New Zealand butter. A good demand has been experienced this week, and arrivals have been well cleared, especially those from New Zealand. Prices are very firm, and in some cases an advance of 1s to 2s per cwt has taken place. 116s to 118s having been made for "Superfine" Australian, and 118s to 120s for "Choicest" New Zealand, the latter figure being for brands that have a very good reputation. Cheese.—The demand for Canadian and New Zealand cheese is fair at an advance of 1s per cwt. The *Mumari*, which last week sailed from New Zealand, and is due in London on January 18, is carrying 900 tons of cheese, which is a record cargo from the Dominion of New Zealand.—W. Weddel and Co.

CHEESE.

Glasgow, Wednesday.—The arrivals of home cheese were larger than for the last month. There was a little more inquiry, especially for medium and cheaper qualities. Cheddars, 60s to 65s; Dunlops, 54s to 62s per cwt. A quiet business was passing in Canadians at 61s.

Newport, Wednesday.—A short supply, but a fair attendance and demand. Quotations:—Caerphillies, 60s to 67s per cwt; fancy dairies, 68s to 69s; Derbys, 68s; truckles, 62s to 66s; Cheddars, 62s to 65s.

WOOL.

London, Tuesday.—The sixth series of the Colonial wool sales was brought to a conclusion this afternoon. The result of the sales has been disappointing to wool growers, as competition throughout was hesitating and prices continued to decline. Merinos formed the bulk of the offering, and faulty scoured and all greasies except the best qualities were difficult of sale and generally 15 to 20 per cent. lower than in the September series. Lambs, however, sold best, but also marked a fall of 5 to 10 per cent. Only a moderate amount of crossbreds was brought forward, mainly consisting of slips, but they sold at a reduction of 7½ to 10 per cent. Capes show a falling off of 5 to 10 per cent. The next series will begin on January 21. The following are some of the principal prices obtained:—New Zealand: Greasy, 7½d to 9d; slipe, 7½d to 1s 3½d; pieces, 8d to 11½d. New South Wales: Greasy, 7½d to 12d; lambs, 6¾d to 11d; pieces, 6¾d to 9d; scoured, 11d to 1s 8½d; lambs, 1s 1½d to 1s 6½d; pieces, 11d to 1s 3d. Victoria: Greasy, 6½d to 1s 3d; lambs, 6d to 12d; pieces, 6½d to 10½d; scoured pieces, 10d to 1s 5½d. Cape and Natal: Greasy, 5½d to 10d. Queensland: Greasy, 9d to 13d; lambs, 10d to 11½d; scoured, 13d to 1s 10½d; lambs, 1s 5½d to to 1s 8½d; pieces, 6½d to 1s 8½d. South Australian: 6¾d to 9½d per lb.

Canterbury, Saturday.—The market for Kent fleeces continues very inactive. Staplers do not offer more than 10½d for the fleeces, and 7d for the lamb wool.

Halifax, Saturday.—All through the week business in wool has been very quiet. Offers for home-grown wools are, as a rule, too low for acceptance. But prices are weak, and Irish descriptions are ¼d lower, and indeed are lower for English and Scotch wools generally, with very little doing.

HOPS.

Canterbury, Saturday.—East Kent growths are making from 56s to 65s per cwt, with choice up to 90s. Weald Fuggles 60 to 63s, and an occasional good lot up to 75s.

Worcester, Saturday.—Trade keeps pretty good for so near to Christmas, and here and there some fair sized lots are going into consumers' hands. The quantity offered by growers is very small, and merchants have to rely on their own stocks. Only 36 pockets weighed this week.—Charles Faram and Co.

Seven Years Grain Averages.

(OFFICIAL.)

Wheat	28s. 10d. per 480 lb.
Barley	25s. 4d. per 400 lb.
Oats	18s. 11d. per 312 lb.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, Monday, 3 P.M.

Grain holders are somewhat discouraged but not dejected. The weather has been utterly against business, both in breadstuffs and feeding stuffs, and the money market throws an unusually heavy burden on those who have to hold over Christmas. The burden, however, will be borne by the majority of merchants, and the real state of trade can scarcely be gauged from the sacrifices forced on weak holders. Indian wheat was 1s lower to-day, and American sorts were in buyers' favour also.

English samples, if fairly dry, were not only firm but in request. Unfortunately the damp and unfit lots predominated; on these 6d. decline was allowed. The market for maize showed 6d. decline on African, and 3d. on other sorts; the buying is very limited. Oats were not quite so depressed as on the 9th for cheap foreign types, and English sold steadily at currencies. For barley, beans, and peas firmer prices were obtained, but sales were slow.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH A BETTER FEELING FOR BOTH BREADSTUFFS AND FEEDING STUFFS, BUT THERE WAS NO REAL BRISKNESS IN TRADE, NOR IS THERE NOW LIKELY TO BE ON THIS SIDE OF CHRISTMAS.

THE FLOUR TRADE.

MARK LANE, Monday, 3 P.M.

The market for flour was 6d cheaper on the week for Town Whites, Town Households, American Patents, American Bakers' grades, and for the Canadian sorts which resemble the better type of American. For Whole Meal, 1s per sack less money was sometimes accepted, but the fall in milling offals, which occurred on the 9th, formed a basis for a fairly steady trade to-day.

Top-price London flour was firm at 37s. and Hungarian was advanced, owing to extreme scarcity, 1s. per sack. Belgian sorts were firm as their high quality is appreciated.

Oatmeal made 29s. per 240 lb. sack for fine Irish, and 29s. 3d. for Canadian.

Maize meal at 13s. to 13s. 6d. per 240 lb. sack was in moderate request. At 16s. per 240 lb. sack barley meal sold fairly well. The trade in other sorts of meal was quiet at the prices of the 9th inst.

THE BALTIC.

Monday, 1 P.M.

State of Trade.

There is more business doing to-day from last week, the reduced prices tending to increased wish to purchase. The increased steadiness of trade is most noticeable in the case of oats and maize. The fall in Argentine wheat futures is the one disquieting feature in the sales of this morning.

Business Done.

Wheat.—No. 2 Western Winter, 7s 5d per 100 lb, January shipment; No. 2 Red Winter, 7s 6d per 100 lb, January shipment; No. 2 Hard Winter, 7s 9d per 100 lb, January shipment; Red Walla, 39s per 500 lb, on passage; Rosa Fé, 36s per 480 lb, February shipment; Barletta, 35s 9d per 480 lb, February shipment; Entre Rios, 38s 6d per 492 lb., February shipment; Russian Winter, 44s per 492 lb, on passage; Russian Spring, 41s per 492 lb, on passage; Australian, 39s per 480 lb, February shipment.

Maize.—Mixed American, 5s 3d per 100 lb, January shipment; white American, 5s 4d per 100 lb, Janaury shipment; Argentina, 5s 7d per 100 lb, January shipment; Odessa, 5s 6d per 100 lb, January shipment; Novo Rossisk, 5s 6d per 100 lb, January shipment; South African, 5s 3d per 100 lb, January shipment; Argentine, 5s 2d per 100 lb, January shipment; Argontine, 5s 3d per 100 lb, February shipment.

Barley.—Tunisian, 31s per 448 lb, December shipment; Karachi, 23s 3d per 400 lb, December shipment.

Oats.—Argentine, 15s 3d per 304 lb, February shipment; South Russian, 17s per 304 lb, on passage.

Beans.—Odessa, 34s per 480 lb, prompt shipment (if port open); Saida, 34s per 480 lb prompt shipment (if port open); Panderma, 32s per 480 lb, prompt shipment (if port open).

Peas.—New Zealand, 51s per 504 lb prompt shipment (if port open).

Linseed.—Duluth, 41s 6d per 416 lb, prompt shipment (if port open); Argentine, 39s per 416 lb, February shipment.

Rapeseed.—Ferozepore, 51s 6d per 416 lb, January shipment.

Cottonseed.—Egyptian. £6 11s 3d per 2,240 lb, January shipment; Bombay, £5 15s per 2,240 lb, January shipment; Peruvian, £6 per 2,240 lb, January shipment.

TERM MARKET.

At the lower prices generally accepted the business in futures shows an increased activity. Prices per cental are as follows:—

Red winter wheat—

7s. 8d. per cental (delivery any month as desired: January to May).

American flat maize—

5s 3d per cental, delivery any date in February, March, or April.

Argentine yellow maize—

5s 2d per cental, January delivery.

5s 3d per cental, February delivery.

Canadian White Peas—

7s 8d per cental, January delivery.

Argentine oats—

5s 2d per cental, March delivery.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—Dull, with little or nothing doing, unless where flour is offered at moderate prices for forward delivery. Grain.—Indian corn is in very small demand at drooping prices. Beans, 3d to 6d lower. Oats quiet and unchanged. Oatmeal again 6d to 1s per sack lower. Oilcake quiet. Mill Stuffs.—Rather against sellers. Spring wheat patents, 31s to 32s 6d per 280 lb; winter wheat patents, 30s to 30s 6d per 280 lb; American corn, 15s 1½d to 15s 3d per 280 lb; round corn, 15s 1½d to 15s 3d per 280 lb; grinding beans, 18s to 18s 3d per 280 lb; broad bran, 115s to 117s 6d per ton; medium bran, 110s to 112s 6d per ton; common thirds (sharps), 112s 6d to 115s per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 147s 6d to 150s per ton.—McKinnon and McDonald (Glasgow).

The trade remains unchanged from last week, with a fair demand.—John Bawcomb and Co.

Arrivals of wheat and flour are large. The trade has recovered from the depression of last week, and prices are unchanged. Prices of maize, barley, and oatsa are about as last Monday.—Coventry, Sheppard, and Co.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: With a good trade and owing to slack brewings prices have a firmer tendency, and business has been done during the week at 23s ale, and porter 3s per ton less on rail London. Dried Grains.—Prices continue firm with a steady tendency at 110s for ale and 105s for mixed, bags 6d each. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton. Kiln dried sea-damaged wheat from 21s per qr, on rail, London and elsewhere.—Hamlyn and Co.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 3,506 bales, and from foreign ports, 13,962 bales. The market was steady last week, but closed a shade quiet on Friday. Quotations ranged:—Irish, 55s to 56s up to 60s; Danish, 53s to 56s up to 58s; Canadian, 50s to 52s up to 55s. Butter: The butter market was steady. French, 104s to 120s; Danish, 122s to 124s; Russian, 90s to 110s; Irish, 96s to 120s; Victorian, 96s to 118s; New South Wales, 96s to 118s; Queensland, 98s to 116s; New Zealand, 94s to 122s; Argentine, 114s to 118s; American Ladles, 94s to 96s.. Lard.—Lard was a quiet market. Irish, 46s to 58s; Danish, 47s to 54s; American, 43s 9d to 45s 9d.

Lambs	—	6 6	7 0
Calves	—	—	—
Pigs	2 10	3 10	4 0

Milch cows, per head, £13 to £24.

British arrivals inelude as follows :—Scotland, 450; Eastern Counties, 570; Midland, Home, and Western Counties, 1,370; Devon, 150; Ireland, 150.

The chief event of the year in connection with the cattle trade at Islington has been the holding to-day of the annual Christmas Market, commonly known as the "Great Day." The numbers exhibited showed but little variation from those of last year.

As a display it is quite as valuable as the Smithfield Club or Birmingham Shows inasmuch as, whilst the show cattle are in a great measure isolated specimens of what can be done in bringing cattle to perfection, the Christmas market gives a more general idea of the farmer's capabilities in producing herds which possess a general evenness of quality and condition. No falling off can be reported in the Scotch arrivals, but whilst Scotland retains its traditional position, it must not be supposed that the northern parts possess the monopoly. Closely vying with these are the Devon cattle, which in the estimate of many good judges, are fully equal to the former in all points. With regard to the quality of the Scotch breeds, these were well up to last year's standard, being compact in form, light in bone, and not carrying too much fat, consequently not producing so much waste to the butchers. The best of these were to be seen on the stands of Messrs. Bound and Son, Eve and Son, W. Haywood, G. Hill, W. Reid, the chief breeders and graziers being Messrs. A. Beddie, A. Ingram, (Cupar), G. Walker (Tillygreig), Young Bros., of Rothshire, and C. Leys (Aberdeen). There was also a fine show of the Devon breed, these comparing very favourably with the last "Great Day," Mr. T. Law (Parnell) and McTurk being the principal salesmen. The Irish consignments were much shorter and comprised 130 Dublins, 107 of which were seen on the stands of Mr. T. Oliver (of which 98 were choice Royal Dublin Society's show cattle) and 40 Waterfords, these latter being for sale on Mr. Fitzgerald's stand. Mr. McTurk also must be mentioned as having some very choice Polled Waterfords. Norfolks were in short supply, the majority, however, made up for the disparity in numbers by being fully up to last year's standard, both with regard to size and quality, no big awkward beasts being shown, greater number ranging from 90 to 110 stone. Some of the best specimens were seen on the stands of Messrs. E. and P. Chapman, W. Law, F. Syder, A. Allday, and T. Banner, the majority of which were consigned by E. Chapman, of Fakenham, Norfolk. Herefords were but a medium display, which is natural at this season of the year, whilst runts were fully up to, if not in advance of last year's standard, the best of which were shown on Messrs. B. Ashton and Sons' stand. Shorthorns consisted principally of consignments from Lincolnshire and Leicestershire, and were quite up to last year's quality, the principal holders of which were Messrs. Goodale and Stranks.

On Mr. Webb's stand were to be seen some very choice bulls and other cattle which were consigned to him by the following well-known senders and others. Shorthorns, Messrs. J. Wilson of Swindon, P. Kerr of Cheam. Devons by Messrs. E. Way and J. Elliott of Barnstaple. Herefords by J. Mitchell of Warwickshire and T. Maher of Maidenhead, the latter consigning a Hereford heifer from his Majesty's Farm, Windsor. On this stand there was also an old-fashioned Long-horned bull which had taken third prize at Gillingham Show: it is thought by some that it is a pity to allow this breed to become extinct, which it very nearly is, as they are a good hardy race of cattle, Mr. Webb never having known one to have tuberculosis.

Trade, owing to early fog, was very late in commencing, even when sales were beginning to be made they were very protracted, owing to buyers holding out for lower rates, which sellers after some time had to concede to for all descriptions from 2d. to 4d. per 8 lb. Fat cows were very little sought after; late currencies, however, governed all transactions.

The following are top quotations per 8 lb (sinking the offal) :—

	To-day. s. d.	s. d.	Monday, Dec. 17, 1906. s. d.	s. d.
Scotch	4 10 to 5	0	5 0 to 5	2
Devons	4 6 to 4	8	4 8 to 4	10
Herefords	4 4 to 4	6	4 4 to 4	6
Norfolks	4 4 to 4	6	4 8 to 4	10
Runts	4 2 to 4	4	4 4 to 4	6
Lincolns	3 10 to 4	0	3 2 to 4	4
Irish	4 2 to 4	4	4 2 to 4	4
Dublin show cattle	4 6 to 4	8	5 0 to 5	2
Fat cows	3 4 to 3	6	3 6 to 3	8

The following table shows the number of beasts offered for sale on each great market day for the last eleven years :—

Year.	Beasts.	s. d.	s. d.
1897	4,570	2 4 to 4	8
1898	3,940	2 6 to 4	10
1899	3,960	3 6 to 5	2
1900	3,020	3 0 to 4	10
1901	2,510	2 8 to 5	4
1902	3,660	2 10 to 5	6
1903	2,960	2 4 to 4	8
1904	2,250	2 10 to 5	2
1905	2,510	3 0 to 5	0
1906	2,190	2 9 to 5	2
1907			

Turning our attention to the sheep market the supplies were fully up to last year's standard in regard to quality, and were also numerically stronger. As usual, Downs and Halfbreds predomidated, some very choice Suffolk and Hampshire Down tegs being seen in the pens of Mr. R. Worboys, his principal senders being Messrs. Ward (Newnham), Cooper (Ashwell), Hunt (Guilder Moseler), and McLaren of Littington. Mr. F. Syder also had a choice collection, whilst in Mr. Woodward's pens were to be seen some fine quality Lincoln Halfbreds, some of which had taken 1st prize at the Peterborough Show.

Trade throughout the day was of a very slow nature at late values for all descriptions, partly due to the supply being in excess of the demand. Scotch descriptions were in fair average numbers, as also were Irish, both being governed by late currencies. The few lambs on offer were disposed of. A clearance is not expected to be made.

Undermentioned quotations are at per 8 lb (sinking the offal) and are for the best of each class penned :—

	To-day. s. d.	s. d.	Monday, Dec. 17, 1906. s. d.	s. d.	s. d.
7½ to 8 st Downs	6 0 to 6	2	6 4 to 6	6	
9 st. Down Tegs	5 10 to 6	0	6 0 to 6	2	
10 st Halfbreds	5 6 to 5	8	5 10 to 6	0	
10 st Yorkshires	—		—		
12 st Lincolns	—		4 4 to 4	6	
10 st Irish	5 2 to 5	4	5 6 to 5	8	
10 st Down Ewes	4 0 to 4	2	4 4 to 4	6	
11 st Halfbred ditto	3 10 to 4	0	4 2 to 4	4	
5 st Down Lambs	6 8 to 7	0	7 10 to 8	0	
6 st Halfbred ditto	—		7 0 to 7	4	

Calf trade not worth noting.

The following table shows the number of sheep and lambs penned each year since 1897, together with the current top rate :—

Year.	Sheep.	Top price. s. d.
1897	12,150	6 0
1898	10,850	5 10
1899	9,220	5 10
1900	10,560	6 0
1901	10,590	5 10
1902	10,600	6 0
1903	11,120	6 0
1904	11,550	6 0
1905	10,630	6 0
1906	10,700	6 6
1907		

London (Central), Monday.—Quiet trade for good supplies. Beef, English, 3s 4d to 3s 9d; Scotch, 4s to 4s 4d; American, 3s 4d to 3s 8d; refrigerated hindquarters, 3s 4d to 3s 10d. Mutton, English wethers, 3s 8d to 4s 4d; ewes, 2s 10d to 3s 2d. Scotch tegs and wethers, 4s 6d to 5s; ewes, 3s to 3s 4d. Veal, 4s to 5s 8d. Pork, 3s 4d to 4s per stone.

FOREIGN.

Deptford, Monday.—To-day's supply, compared with Monday last, showed a decrease of 385 head, and consisted entirely of shipments from the United States, trade for which ruled of a slow nature, the best on offer being quoted at from 4s 2d to 4s 4d; seconds, 4s to 4s 2d per 8 lb (offal given in). On Saturday 2,482 States and 758 Canadians were offered for sale. Trade ruled of a slow nature, States Christmas cattle being quoted at from 4s 4d to 4s 6d; Canadians, 3s 6d to 3s 8d; Ranch cattle were not sold. 940 Canadian ewes met a slow trade at from 3s 10d to 4s per 8 lb.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed Cake.—Demand keeps slow, and foreign makes are the turn weaker, but there is no change in value of London made. Cotton Cake.—Business is not very brisk. With continued arrivals of Egyptian market turn weaker. Decorticated Cotton Cake-Meal.—Stocks light, but there is little or no inquiry, so prices keep about the same. Linseed.—A good trade is doing in the feeding sorts.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

With a slight decrease in the number of beasts offered for sale on both market days, trade ruled of a slow nature. Nevertheless, on Monday prime quality fat cattle were firm in regard to values, in some cases sellers both asking and obtaining an advance on late rates. The arrivals were chiefly from the Midland counties, though some good Scotch, Devons, and Norfolks were included. As usual, the Polled Aberdeen cattle obtained our top quotation. The Irish arrivals consisted of 60 Dublins and 64 Waterfords, sellers of the former being obliged to accept 1d. per 8 lb. less money to effect sales. Fat butchering cows were less sought after by country buyers, consequently late values were somewhat difficult to maintain. On Thursday only fat cows, bulls, and rough cattle were offered for sale, Monday's values governing all transactions; 30 Polled Aberdeen beasts were consigned and withheld in the market lairs for Monday.

At the Foreign Cattle Market, Deptford, trade on Monday and Saturday (no market being held on Wednesday) ruled of a slow but steady nature, prices being lower on Monday owing to the cattle being of somewhat inferior quality. The total number of beasts on offer at both markets was 5,585, as against 4,154 during the preceding week, consisting of 1,490 British (decrease 20), and 4,095 foreign (increase 1,451), these latter comprising 3,136 from the United States, and 959 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Polled Aberdeens, 4s. 8d. ex 4s. 10d.; 90 stone Devons, 4s. 6d. ex 4s. 8d.; 90 to 95 stone Herefords, 4s. 2d. to 4s. 4d.; 90 stone Norfolks, 4s. 4d. to 4s. 6d.; 95 stone runts, 4s. 1d. to 4s. 3d.; 100 stone Shorthorns. 3s. 10d. to 4s.; 95 stone Irish, 4s. to 4s. 2d.; 90 stone States, 4s. 1d. to 4s. 3d.; 95 stone Canadians, 3s. 4d. to 3s. 6d.; Ranch cattle, 2s. 10d. to 3s.; 90 stone fat cows, 3s. 4d. to 3s 6d.

The sheep trade at Islington was practically fined to Monday, there being too few on offer on Thursday to note or quote. On Monday all grades of English sheep were governed by late currencies, with a slow trade. Irish descriptions showed a falling off in point of numbers, whilst Scotch, on the other hand, were in larger supply, but met with no corresponding increase in the demand, consequently sellers had to accept a decline of 2d. per 8 lb. in value to force sales; ewes were difficult to vend on account of the large supply at Deptford on the previous Saturday. At Deptford, another consignment of ewes were offered for sale on Saturday, numbering 940. The total number penned was 5,650, as against 6,201 during the preceding week, consisting of 4,710 British and 940 Canadians. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Down tegs, 6s. to 6s. 2d.; 8 stone Scotch 6s. to 6s. 2d.; 9 stone Downs, 5s. 10d. to 6s.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone Down tegs, 5s. 8d. to 5s 10d.; 10 stone half-breds, 5s. 6d. to 5s. 8d.; 10 stone ewes, 4s. to 4s. 2d.; 11 stone Hampshires, 5s. 8d to 5s. 10d.; 8½ stone Canadian ewes, 3s. 10d. to 4s.

Calves numbered 40 head, and met with a slow trade, the best on offer being quoted at from 5s. to 5s. 2d per 8 lb. (sinking the offal).

Trade in the West.

By the time these lines reach the eyes of our readers most of the stock required for the great national slaughter which will now in a few days be in progress all over the country will have been acquired, and from the generally excellent character of the supplies which have been on offer—no matter whether of beef, mutton, lamb, veal, or pork, leaving out of the question all kinds of poultry—purveyors have found very little difficulty, where prepared to pay a price for what wanted, in getting their requirements met. All the better-class Devon, Norfolk, Shorthorn and Polled-Angus sold during the past and present week have been readily making 12s. to 13s. per score (or from £16 for very small weights up to £38 for some of the heaviest bullocks which have been sent to market), and only very plain bullocks, such as cows, bulls, &c., have been purchasable under from 10s. to 11s., those selling at a lower figure being adapted for the very poorest class of trade. Fat sheep of choice quality have cost butchers, as a rule, dearly, tegs and wethers especially, as many of special finish have realised from 60s. up to 75s. apiece (or not less than 9½d. to 10d. if bought for the money); and young ewes have been very little cheaper, the best Downs and Cross-breds selling from 8½d. to 9d.; and old coarse sheep 7d. to 8d. Choice fat lamb has also realised fancy prices for specially finished lots, 11d. to 1s. being a general run for dainty weights, which make up to 63s. each, and 10d. to 10½d. for more ordinary runs, only poorly-finished animals being obtainable at 9d. to 9½d. Pigs are meeting a fairly steady trade, though last year's prices have not been reached, even for the daintiest porkers, 11s. being an outside figure against 11s. 6d. last season, and baconers are also correspondingly cheaper, 9s. 6d. to 10s. 3d., and heavy-weights 8s. 6d. to 9s. Despite the prevailing depression still affecting many of our industries, we are glad to be able to report a good clearing business in most departments of the fat stock trade at prices which must, on the whole, be fairly satisfactory to the seller, but hardly so to purveyors who, as a rule, have been called upon to pay a price which will quite preclude the possibility of their giving the public the benefit of very cheap meat this season, anxious and desirous as many of the more enterprising amongst our purveyors may be to do so.

Trade in Scotland.

The number of fat cattle on offer was under an average, but the general quality was fairly satisfactory. A very active trade was experienced, and prices advanced on an average fully £1 per head. Fat cows also participated in a like advance. Sheep have been shown in moderate supply. Owing to the severe fall in the price of skins trade was slow, and prices would be nearly 1s. a head lower than those of the previous week. Ewes, especially those of secondary descriptions, continue to sell at moderate prices. Fat calves generally of secondary quality. Anything good made full prices. A large show of pigs met a good trade without change in prices. For the time of year there was a large show of store cattle, and generally of good quality. There was a full attendance of buyers, and a nearly total clearance was effected at prices equal to those of the preceding week. There was a large supply of store sheep, many of them being of a secondary and inferior description. An exceedingly slow trade was met, and a large proportion of those on offer were left unsold at the finish. To effect sales, from 1s. to 1s. 6d. per head less had to be taken. A small show of milch cows met a stiff trade. Quotations:—Top price of cattle per live cwt., 41s.; current, 37s. to 38s. 6d; mutton, 6d to 9d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland.

There was an increase of nearly 800 head of beasts and just 1,200 sheep at last Dublin's Thursday market over the previous week. These numbers (5,200 cattle and 7,021 sheep) supplies a record level, and were perhaps the record level for some years past. The large numbers of both cattle and sheep had a bad effect on the prices. The attendance of buyers was good, and some, as usual, bought choice lots of cattle and sheep at the winter show at Ballsbridge. Bullocks and heifers in good finish sold well, and were cleared off at an early hour, but the heavy supplies of really good average cattle kept ordinary prices down to a reasonable figure. Good stall-fed beasts were inquired for, which were taken largely at the price noted for last week—viz., 32s. to 34s. per cwt. (live weight). Some fancy bullocks from Navan made 35s. per cwt. (£23 each). All round prices were hardly as good as would be expected at this market. Strong cattle sold at about 28s. to 29s. per cwt., and were in fair demand.

The relative dead weight prices for beef were: Best ox and heifer beef from 52s. 6d. to 56s., and extra well-fed stall-fed from 57s. 9d. up to 62s. was given.

The demand was slack for sheep, and prices were cheaper and very irregular. Some fine pens of Cheviots sold very well. Messrs. Cuffe got the high price of £4 4s. each for a fine pen of Cheviot wethers. Medium and small hoggets sold fairly well, but heavy sheep—both wethers and ewes—were slack and hard to sell.

Prime wether mutton made from 7d. to 7½d. per lb., ewes 6d. to 6½d., and inferior sheep from 5d. to 6d. per lb. Large heavy sheep were very slow to sell, and cheaper. There were 5,200 cattle and 7,012 sheep exposed for sale in the market.

Veal was scarce, and only prime sorts wanted. Prime veal brought 8d. and 8½d. per lb., and inferior ditto little inquired for.

The demand for milch cows was quiet, and prices easier, though really good springers and newly-calved cows commanded satisfactory prices. Store cattle were selling fairly well, and those sold at an auction which took place in the evening brought good prices. The Dublin pig market was well attended by buyers. At the opening of the market they were rather difficult to approach, but as the day wore on higher prices were the rule. Choice light-weight hogs made 48s. and 49s. per cwt., and coarser hogs 38s. to 40s. Inferior hogs were sold from 36s. to 38s. per cwt.

LONDON.

Central Market, Friday.—Fair supplies and trade very slow, but mutton firmer. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s 2d; shorts, 4s 2d to 4s 6d, extreme 4s 8d; Deptford and Liverpool killed, 3s 2d to 3s 7d; refrigerated hindquarters, best, 3s 9d to 3s 11d; ditto, seconds, 3s 5d to 3s 7d; ditto, forequarters, 2s 4d to 3s 8d; inferior beef, 2s 2d to 2s 8d. Mutton, Scotch wethers, 4s 10d to 5s; ditto tegs, 5s to 5s 2d; ditto ewes, 3s 2d to 3s 6d; English wethers, 4s 4d to 4s 8d; ditto ewes, 3s 2d to 3s 6d; Dutch sheep, 4s to 4s 6d; English lamb, 6s to 6s 8d; veal, 3s 8d to 4s 8d, extreme 5s; English pork, 3s 8d to 4s; Dutch ditto, 3s 6d to 3s 10d per 8 lb.

Islington, Thursday.—To-day's supply of beasts consisted entirely of fat cows and bulls, for which trade ruled slow at Monday's values. Top prices per 8 lb:—Fat cows, 3s 4d to 3s 6d; fat bulls, 2s 6d to 3s. Only ten sheep offered, trade consequently not worth noting. Calf trade slow; best quoted from 5s to 5s 2d per 8 lb.

COUNTRY.

Ashford, Tuesday.—Beef trade very quiet, awaiting the Christmas market next week. Best beasts made 4s 8d with difficulty, and mediums about 4s 2d. Mutton sold better, and small Downs were quoted up to 6s 6d; Kent wethers, 5s 6d to 6s; and good ewes, 4s 2d to 4s 6d. Pork trade very poor; best roasters did not reach 4s, and large hogs made 3s 2d.

Berwick, Saturday.—Attendance of farmers and buyers fair, and trade good. Calves, £5 2s 6d to £6 12s 6d; heifers, £9 10s to £12 10s; stirks, £8 10s to £11 15s; two-year-olds, £12 to £14 5s; three-year-olds, £13 15s to £15 5s; cows, £16 10s to £24 10s.

Birmingham, Thursday. — Good supply of pigs; small supply of beasts and sheep; trade slow. Beef, 5d to 6½d per lb; mutton, 6d to 8½d per lb; bacon pigs, 8s 9d to 8s 10d per score; cutting pigs, 9s to 9s 3d per score; porkets, 9s 6d per score; sows, 7s 4d per score.

Bristol, Thursday.—The Christmas cattle market was held to-day, and there was a plentiful supply of stock, but little demand, and business dull all round. Beef was quiet at 56s per cwt for best qualities and 60s for extra, whilst poorer sorts sold at 52s. Mutton was in moderate supply, but inquiry limited; extra quality realised 9d per lb, prime 8½d, heavy 8d, ewes 6d. Pigs were not numerous, and values unchanged.

Calne, Friday.—Present prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s per score; 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s per score. Pigs outside these limits at their value.—C. and T. Harris and Co., Ltd.

Canterbury, Saturday.—A very small offering of lean stock, and scarcely any demand for the bullocks. Lambs are selling at from 31s 6d to 40s per head.

Carlisle, Saturday. — Buyers were not numerous, and a quiet trade resulted. Wintering heifers, £7 10s to £8 10s; and up to £10 10s stall-feding heifers, to £12 10s to £16 10s; geld cows, £8 10s to £10 10s; horned bullocks to £12 10s each.

Chester, Thursday.—Smaller supplies of stock, with a somewhat quieter demand. At the close a pretty good clearance had been made, prices being about the same as last week. Quotations:—Milch cows, £16 to £22; calvers, £15 to £18; barrens, £10 to £13; heifers, £9 to £15; stirks, £6 to £10; bulls, £11 to £15.

Doncaster, Saturday.—Owing to the storm there was only a small supply, though plenty of

Irish cattle were shown. Trade was slow, and cattle were slightly easier. Milch beasts, £17 to £22; bullocks, £12 to £16 10s; heifers £11 to £16; drapes and stirks, £8 to £12; young stores, £7 to £8 each. Only a few sheep, and prices were a shade lower.

Dorchester, Saturday.—A very full cattle market to-day, this being the second of the great Christmas fat stock sales, when Messrs. Ensor and Son offered a grand selection of prime fat beasts, besides a heavy supply of stores, as well as some choice mutton, at their agricultural repository, at which there was a large and representative attendance of well-known purveyors and graziers, many of whom were present from a distance. The beef, which consisted of only animals of moderate weights, met a very good demand, best heifers making 11s 6d to 12s per score, or from £16 10s to £23 each), and cows £14 to £18 15s (or 10s 6d to 11s); and fat bulls to £17 (or 10s to 10s 6d). Amongst the fat sheep were some nice-quality Down wethers, which made up to 55s each (or 9d per lb). Exmoor wethers 40s 6d to 43s 6d (or 8½d to 9d), and fat ewes to 46s (or 7½d to 8d). Everything suitable for the Christmas trade found buyers. Store stock met a very brisk inquiry, best young barreners realising £23 to £24 per pair, and others £20 to £22. Dairy beasts also commanded extreme rates, heifers and calves making £16 to £21 (from a good hard country), and cows and calves from £23 down to £10 10s each for old animals. In-calvers were likewise in request at about 10 guineas each. Despite the heavy floods and the difficulties stock-owners are put to in finding a dry place for their stock, everything in the same line changed hands.

Dublin, Thursday.—There was a much larger supply of cattle, and with buyers operating more cautiously no improvement in prices can be quoted. Rough beasts met a disappointing trade and many remained unsold. For a Christmas market the qurlity of the beef was not up to the expected standard. Some choice grass-fed heifers fed by Mr Cornwall made the extreme quotations, and the stall-feds consiged by Mr. Satchwell, of Craggs, were much admired, and brought relatively high prices. Sheep in excess of requirement, and in order to effect sales a further reduction had to be made on last week's prices, and even then a clearance could not be effected. Cattle—Live weight (best), 31s to 33s per cwt; exceptional, 35s per per cwt; other sorts, 26s to 30s per cwt. Mutton (dead weight), 6½d to 7½d per lb; fancy mountain wethers, 7¾d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday.—Good demand for best cattle; polled bullocks to £15; horned bullocks to £15; stirks to £11; cows slow trade, shorthorns to £25 10s; crosses to £24; Ayrshires, £18 5s. Sheep fair trade; good supplies; Cheviot dinmonts to 38s; half-bred hoggs to 34s; grey-faced hoggs to 33s.

Glasgow, Wednesday.—There was a smaller show of cattle at the market, and the demand was good for all classes at slightly stiffer prices; top quality, 64s to 66s; secondary, 58s to 61s per cwt. Although rather fewer sheep were penned, trade ruled somewhat slow, while prices generally were nominally unaltered; best mutton, 9d to 9½d per lb; secondary, 8½d to 8¾d per lb.

Hereford, Wednesday.—It was the Christmas fair, and there were large supplies of prime stock. Beef was a heavy supply, but met with a slightly firmer trade than of late. The top figures were £30 10s and £27 5s for the first prize pair of bullocks, fed by Mr. Peter Coats. Apart from the prize cattle, the top price for beef was 6½d. Some prize calves made 8d, others 6d to 7d. Sheep sold well, wethers and tegs 8½d, prizetakers 9d, ewes 6½d. Porks realised 5½d, but bacons went cheap at 4½d to 5d. Store pigs lower than ever. Store cattle dull trade.

Leicester, Saturday.—Small supplies of store stock, and business ruled flat. Good milch cows made £18 to £20; secondary qualities, £14 to £16; and bullocks, £12 to £13 each.

Lincoln, Friday.—An average supply of beasts and a fair trade. Young stock, £9 to £12; strong ditto, £13 to £15; milch cows, £17 to £22. Hogg sheep made 44s each.

Lynn, Tuesday.—The Christmas market was well attended, and prices were up to last year, and the quality of beef was quite as good. Fine show of fat beasts, very short, 9s; others, 7s 6d to 8s 6d per stone. Stores very slow, £6 to £13 each. Show of fat sheep good, and trade firm, from 9s to 10s 6d per stone; few store lambs, from 35s to 42s each.

Manchester, Friday.—Beef: Firsts, 5¾d; seconds, 4½d to 5d; thirds, 3½d to 4d. Mutton: Scotch, 8d; others, 7¾d; seconds, 6¾d to 7½d; thirds, 5¾d to 6½d. Veal: Firsts, 7½d; seconds, 6½d to 7½d; thirds, 5½d to 6½d. Bacon Pigs: Firsts, 5d; seconds, 4d to 4½d; thirds, 3d to 3½d. Porket Pigs: Firsts, 6½d; seconds, 5½d to 6d; thirds, 5½d to 5¾d.

Newcastle, Tuesday.—Trade for cattle was rather better, and prices for first-class cattle and medium weights were up 3d to 6d per stone, Quotations:—Prime heifers, 7s 9d to 8s; second-class, 7s 3d to 7s 6d; prime steers, 7s 6d to 7s 9d; second-class, 7s to 7s 3d; coarse and inferior, 6s to 6s 6d per stone, sinking the offal. Trade for sheep was firmer, and prices a ½d per lb higher, except for ewes and rams. Quotations:—Choice young sheep, 8½d to 8¾d; strong sheep, 8d to 8½d; choice hoggs, 8¾d to 9d; second-class, 8½d to 8¾d; ewes, 6d to 6½d; rams, 5d to 5½d per lb. Trade for calves was fair. Veal, 5d to 8d per lb, a fall of ½d.

Newport, Wednesday.—A very large supply of cattle, and most of the cattle were of the primest quality, and good prices were realised. There was a very large attendance of buyers, and a brisk demand. Quotations were:—Best beef, 6½d to 6¾ per lb; secondary, 6d; cows, 5d to 5½d; best wether mutton, 8½d to 9d; ewes, 7d to 7½d; lambs, 9d to 9½d; calves, 6d to 7d; porker pigs, 10s 3d to 10s 6d per score; baconers, 9s to 9s 6d.

Norwich, Saturday.—A splendid show of fat cattle, but quality was no better than expected. Trade was slow, especially for heavy cattle, nice small making 8s; others, 7s 6d to 7s 9d, and cows and rough sorts 6s 9d per stone of 14 lb. Veal calves sold at 8d to 8½ per lb. Fat sheep, all of best quality, were not a very good show, trade being dull at 8½d to 9d, and slow for ewes at 6d per lb A good show of fat pigs; heavy sorts met a slow trade at 5s 6d to 6s, smaller ones made up to 6s 8d, and sows 5s per stone. Store cattle were 600 short of last week, and mostly second quality beasts; trade was dull, two and three year olds made from £11 15s to £15 10s; yearlings, £8 5s to £9 10s; and smaller ones up to £5 15s per head. Rearing calves were a little dearer at 23s to 24s. An average show of store sheep, which were unchanged at 40s to 50s each. A slow demand for store pigs, and trade bad at 10s to 18s 9d.

Nottingham, Saturday.—Smaller show of stock, which met with a good trade. In-calf cows made £18 to £22; heifers, £15 to £18; and calves to 40s each. Smaller show of stores, strong heifers and steers realising about £14 each. Stronger beasts made about £9.

Preston, Wednesday.—The moderate supplies of beef and mutton proved more than sufficient to meet the demand. Trade was of a dragging nature. Prime heifers made up to 6½d; Irish heifers, 6d; young cows and bulls, 5¾d; heavy and inferior, 5d; prime hoggs and lambs, 8¾d; inferior ditto, 8½d; choice ewes, 7d; inferior ewes and tups, 6d; calves, 8d per lb.

Retford, Saturday.—A smaller show and thinner attendance. Few sales were effected, and prices showed a decline on those of the previous Saturday.

Romford, Wednesday.—Large supply of fat beasts; trade good. Best beasts, 4s 6d to 4s 8d; middlings, 4s to 4s 2d per stone. Cows in fair supply, slow at 3s 4d to 3s 6d per stone. Calves in short supply; prices a little better at 5s 4d to 5s 6d per stone. Sheep in large supply; slow trade; best small sheep, 5s 8d to 6s; larger sheep, 5s 4d to 5s 6d per stone. No store beasts on offer. Milch cows in good supply; prices unchanged. Pigs in large supply; trade better; small porkers, 4s to 4s 2d; large hogs, 3s 2d to 3s 4d per stone.

Shrewsbury, Tuesday.—Owing to the bad weather there was a small supply and sluggish trade. Small attendance of buyers. Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d to 9½d per lb; ewes, 8d per lb; veal, 7½d to 8d per lb; pork pigs, 9s per score; bacons, 8s 3d to 8s 6d per score.

Stockton, Wednesday.—It was the Christmas show of cattle, and some very good animals were on offer. Prices were firm, at 7s 9d to 8s for the best, while in a few exceptional cases 8s 3d was made; rougher kinds selling at 6s to 7s per stone. Hoggs and young sheep made 9d per lb, and ewes and tups 6½ per lb. The pig trade was very steady, small porkers selling at 7s 3d to 7s 6d per stone; mediums, 6s 9d to 7s per stone; strong pigs, 6s to 6s 3d; and sows, 5s 9d to 6s.

Truro, Wednesday.—Attendance fair; business fairly brisk. Fat bullocks, 54s to 60s; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves, 25s to 40s; wethers, 7d to 8½ per lb; ewes, 5½d to 6d; pigs, 3s 9d to 4ls each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4½d to 5d per lb.

Wolverhampton, Wednesday.—Trade slow; supply moderate. Quotations:—Beef made 5d to 6½d per lb; mutton, 6½d to 9d per lb; veal, 6d to 7½d per lb.

HAY AND STRAW.

Birmingham, Friday.—Small supply. No quotations obtainable.

Derby, Friday.—Best old clover, 90s to 100s; new ditto, 80s to 90s; best old hay, 90s to 100s; new ditto, 50s to 70s; second ditto, 40s to 50s; wheat straw, 60s to 70s; pressed 50s to 60s; chop straw, 55s to 65s; peat moss, 36s to 40s per ton.

Hereford, Wednesday. Good quality hay maintained its price, but seconds are very difficult to sell. Straw meets with practically no demand.

Leeds, Tuesday.—An active business is passing in the warehouses, hay and straw ruling firm at the following unchanged prices:—Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—Good supply, but trade was slow, and prices slightly easier. Best hay and straw, £3; inferior ditto, £2 10s per ton on the ground; straw, £1 10s per ton at the stack.

Manchester, Friday.—Hay, 4¾d to 5d; clover, 5½d to 6½d; straw, wheat, 2½d; oat, 2¾d to 3d per stone.

Newcastle, Tuesday.—Old land hay, from £3 5s 6d to £4 4s; new land hay, £4 5s to £5 7s 6d; this year's growth, £3 15s to £4 10s per ton. Wheat straw, from £1 4s to £1 6s; barley straw, £1 1s to £1 2s 3d; oat straw, from £1 1s to £1 3s per load. There were 43 carts of hay and 3 carts of straw at market.

Whitechapel, Saturday.—Large supplies were received and business ruled very quiet at recent prices. Best clover, 84s to 92s 6d; inferior ditto, 72s to 80s; specially-picked hay, 82s 6d; good ditto, 65s to 75s; inferior ditto, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 25s to 31s per load.

SEEDS.

Mark Lane, Monday.—Spring sowing seeds are now moving very freely. In clovers Alsikes are rising in Canadian seed. Whites unchanged. Reds and Trefoils dearer in both English and foreign seed. In grasses, French-Italian is higher, and Perennials and Irish-Italians are making more money. Rape keeps firm. Mustard unchanged. Rye scarce. Peas flat.—John Picard and Co.

POTATOES.

Berwick, Saturday.—Farmers are busy storing turnips, and there is little doing in the potato market. Trade was slow at 75s to 80s per ton.

Borough, Saturday.—Deliveries were of good extent, and a fair inquiry prevailed. Langworthys, 80s to 90s; Up-to-Dates, 90s to 100s; Blacklands, 70s to 80s; Royal Kidneys, 75s to 80s; British Queens, 90s to 100s per ton. French, 3s 3d to 3s 6d; Dutch, 2s 6d to 3s; Germans, 3s 6d to 4s per bag.

Carlisle, Saturday.—Fair supply and a steady demand at 7d to 8d per stone.

Doncaster, Saturday.—Good supply but only a moderate trade, and prices from 8s 6d to 9s 6d per load; top prices, 10s per load of 18 stones.

Goole, Wednesday.—There was a good attendance, and a fair quantity on offer. For the best lots there was a good demand, but a slow trade for inferior. Quotations:—King Edwards, 90s to 92s 6d; Up-to-Dates, 85s to 90s; and other kinds, 75s to 80 per ton.

Malton, Saturday.—Potatoes in small supply, wholesale rates ruling 3s 6d to 4s 3d per bag, retail 8d to 9d per stone.

Manchester, Saturday.—Potatoes: King Edwards, warps, 12s to 13s; ditto Sands 11s to 12s; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per 18 stone; Irish, 5s; German, 4s 6d to 5s per cwt.

Preston, Saturday.—A good clearance was effected at 9s to 10s per load of 240 lb.

Retford—Saturday.—Potato market well supplied. Best home-grown lots made 9s, and other sorts 7s to 8s per load.

Stockton, Wednesday.—Potatoes £4 15s to £5 per ton.

Spitalfields, Saturday.—A poor demand prevailed, and supplies of English were again larger, foreign arrivals being smaller. Langworthys, 100s to 110s; Up-to-Dates, 90s to 100s; British Queens, 90s to 100s; Blacklands, 75s to 85s; Royal Kidneys, 85s to 85s; and Scottish (grey soil), 90s to 95s per ton. German, 3s 6d to 4s; French, 3s 6d; Dutch, 3s to 3s 3d per bag.

Worksop, Wednesday.—Fair supply, which made from 8s 6d to 9s 6d per load of 18 stones.

York, Saturday.—A fair supply met an unchanged trade, which was quiet at 75s to 80s per ton.

LONDON HAY TRADE.

Saturday.—There is no fresh feature to report in the London hay trade, supplies even with the unsettled weather have been coming along freely, although at end of week fresh arrivals have fallen away considerably, but with little or no demand business remains in a state of deadly dulness and depression, with prices nominally unaltered. Nothing seems wantcd, it is the same cry everywhere, and no good to force sales as the consumptive demand has fallen right away. Salesmen console themselves that markets will be better after Christmas, but in the meantime charges have to be avoided and stuff got clear somehow, and needless to say losses on present sales are all round being made To make matters still worse there have been much larger arrivals of foreign into London during the past few days, and as these are being got rid of at slaughtering prices, it makes the depressed feeling doubly bad. The only present redeeming feature of the trade is that straw, owing to the continued wet weather, is in strong request, and although large quantities have been coming to hand a good trade has been effected at top prices.

Prices ruling are about as follows:—English: Best hays, 67s 6d to 70s per ton; good, 60s to 65s per ton; plain hays, 55s to 57s 6d per ton; best clovers, 80s per ton; good clovers, 75s to 77s 6d per ton; inferior clovers, 70s to 72s 6d per ton; best mixtures, 80s per ton; good mixtures, 75s to 77s 6d per ton; plain mixtures, 65s to 72s 6d per ton; seconds hays, clovers, and mixtures, 45s to 55s per ton; wheat straw, 26s to 28s per load; barley straw, 25s to 27s per load; oat straw, 26s to 27s per load. All ex rail London. Foreign: Canadian mixture, none; first quality Dutch hay, 57s 6d to 60s per ton; second quality Dutch hay, 52s 6d per ton. French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

BUTTER.

(Price per lb.)

On Wednesday afternoon a large and representative meeting, convened by the Mayor (Alderman F. Arnold), was held at the Town Hall, Great Yarmouth, to make preliminary arrangements in connection with the visit of the Norfolk Agricultural Association to Yarmouth, in June next. The Mayor, who presided, stated the Association's Summer Show would be held at Yarmouth on June 17 and 18, 1908. The corporation had granted the use of the new recreation ground for the purpose, and would do everything possible to make the undertaking a success. He was exceedingly glad to be able to hear that Sir Savile Crossley had accepted the presidency. Mr. Wm. Shipley was appointed honorary secretary, with the town clerk (Mr. W. E. Stephens), in conjunction; Mr. Chas. G. Orde accepted the position of treasurer, and a very large and influential general committee was formed.

RECEIVED TOO LATE FOR CLASSIFICATION.

TRY DANIEL GILES for Farm Carts, Waggons, Lurries, &c. Best Workmanship only.—Station Street, Bromsgrove.

POTATOES! POTATOES!!—Edward England, Cardiff, Ltd., Importers and Exporters of Potatoes. Head Office, West Dock, Cardiff; also Bath Street, Bristol, and North Dock, Swansea.

EDWARD ENGLAND, Cardiff, Limited, are always buyers of good English Potatoes, for cash on rails.—Address, Head Office, West Dock, Cardiff.

RABBIT CATCHERS, Bird Catchers, Farmers' Sportsman Nets, Traps, Snares, Decoys. Every description Ropes, Tarpaulins, Rick Cloths. Illustrated Catalogue 1d.—Young (M.L.E.), Net Trap Manufacturer, Crewkerne, Somerset.

VACANCY in January for one or two PUPILS on 1,000 acre farm in the Midlands. Large pedigree Shorthorn herd; registered Oxford Down Flock and Shire horses; good hunting; premium; refs. exchanged.—Apply "A. B.," Office of Mark Lane Express

GRAND STOCK TURKEYS.—Heavy weights at reasonable rates; Lord Rothschild's strain.—George Gibbons, Tunley Farm, Bath.

Printed and Published by the Proprietors, at the Offices, 3, Wellington Street, Strand, London, W.C.—December 16, 1907.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The floods have subsided, but owing to the high temperature and saturated state of the atmosphere evaporation from the sodden surface soil is very slow, and the land is for the most part unworkable. In summer high temperature promotes rapidity of evaporation, and thunderrains usually do less harm than appears likely at the moment. In winter, however, cold drying winds are the chief aids to the removal of excessive moisture. These are now wanted round the stacks as much as across the leys and open meadowland. The ordinary autumn sowings of wheat are concluded, but we hear of farmers intending to sow Red Fife in February. If they get 3s. to 4s. per qr. above the average for it they can afford to grow a smaller yield to the acre or to apply a liberal top-dressing in May; it comes to very much the same thing, only the latter is the best policy if the farmer can only afford it. The manure which will raise a crop from 4 qr. per acre up to 5 qr.—*i.e.*, add 8 bushels to the result—never costs the market price of those 8 bushels. The manure merchants give fair credit, and as often as not the non-application of useful stimulants is due to the inability to spare regular labour and the inability promptly to find extra hands. Small proprietors would probably prove a blessing to farmers in this respect, as they would often be willing to lend a hand for a consideration, and would be intelligent workers. The small tenant holder belongs to a different category. Most of the applicants under the new Act are small tradesmen of the country towns and those who already occupy a rod or so of land as small market gardeners, fowl-keepers, and so forth.

The Russian Government has issued a revised report on the crops in that empire. It is the third revision since October, and is in contradiction to the other reports. The maize crop appears to be much more deficient than at first supposed, while wheat, oats, and potatoes are now said to have been equally under-estimated. The effect of these variations on trade is very bad.

The Canadian harvest has resulted in a larger yield per acre of wheat than at first was held likely, but the quality is the poorest for many years, and only a third of the whole is likely to grade up to shipping level.

The Argentine Minister of Agriculture returns the area under wheat at 13,920,000 acres, as compared with 13,340,000 acres last season.

The Board of Agriculture thus report some of our leading markets for wheat:—

London	9s. 0d.,	up on the year.
Norwich	8s. 5d.,	,, ,,
Peterborough	9s. 5d.,	,, ,,
Lincoln	9s. 1d.,	,, ,,
Doncaster	8s. 11d.,	,, ,,
Salisbury	8s. 10d.,	,, ,,

The advance is very uniform. Barley prices show the following changes on the twelvemonth:—

	s.	d.	
London	3	6	advance
Norwich	2	10	,,
Peterborough	3	6	,,
Lincoln	3	7	,,
Doncaster	3	10	,,
Salisbury	3	3	,,

In oats the changes from December to December have been as follows:—

London	1 7	advance.
Norwich	1 9	,,
Peterborough	1 9	,,
Lincoln	1 9	,,
Doncaster	1 11	,,
Salisbury	1 6	,,

The uniform improvement in oats is even more remarkable than that in wheat, though it is much less in extent.

The wheat gradient this week is steeper than it would otherwise be, owing to the fall at Nottingham, which is quite exceptional:—

Mark Lane	35s. 10d. per qr.
Nottingham	32s. 10d. ,,
Range	3s. 0d. per qr.

Over 35s. was made at Cambridge and Reading.

The barley gradient was as follows:—

Canterbury	27s. 10d. per qr.
Reading	25s. 1d. ,,
Range	2s. 9d. per qr.

Oats are the most uniform in price of the three chief cereals:—

Mark Lane	19s. 6d. per qr.
Lincoln	17s. 9d. ,,
Range	1s. 9d. per qr.

The sales of British wheat at the statute markets since harvest have been fair, the price not discouraging:—

This season...	1,056,000 qr. at	33s. 10d. per qr.
Last ,, ...	1,076,000 ,,	26s. 2d. ,,

The sales of British barley at the statute markets have been less than in the corresponding period of last season, the crop having been harvested later than in any year since 1888. Prices show some rise:—

This season ...	2,217,000 qr. at	26s. 4d. per qr.
Last ,, ...	2,361,000 ,,	24s. 6d. ,,

The sales of British oats at the statute markets have been as follows since harvest:—

This season ...	667,000 qr. at	18s. 3d. per qr.
Last ,, ...	523,000 ,,	16s. 9d. ,,

The imports of the United Kingdom last week were:—

Wheat, 361,000 qr.: a fair supply.
Flour, 108,000 sks.: a moderate supply.
Barley, 190,000 qr.: heavy arrivals.
Oats, 60,000 qr.: half an average.
Maize, 251,000 qr.: a large importation.

There have also been considerable receipts from abroad of linseed, of rice products, of haricots, and of miscellaneous dry foods, details of which will not be published officially until the usual completed returns for December.

The price of bread, according to the Board of Trade Returns issued on the 19th inst., is now 6d. the quartern loaf, being a rise of ½d. since the returns of November 19. The highest prices rule in Scotland and the North, in the South-East of England, and in East Anglia; the lowest prices are quoted in the West and South-West of England. No reason is given why bread should cost 1d. per quartern loaf (representing 8s. per quarter difference in the price of wheat) more at Bolton, Cardiff, Hull, Ipswich, Leeds, Plymouth, Portsmouth, Glasgow, and Belfast than at Huddersfield, Oldham, Stafford, and Wednesbury?

Official returns of flour prices are:—

English	12s. 6d.	per cwt.
Foreign	11s. 4d.	,,
Average ...	11s. 11d.	per cwt.

There is very little clue given to the foreign price, but we suppose that a question can be asked in February in the House of Commons. The Government average would not justify a charge of more than 5d. for the quartern loaf of a good half-and-half mixture, but we are bound to say that good American flour is now quoted at quite 13s. per cwt., while Hungarian has touched 16s. per cwt.

The supply of wheat on passage shows some little increase owing to the large shipments from the two American seaboards. But supplies in sight from all other sources show a diminution:—

Californian	755,000 qr.
American	365,000 ,,
Argentine	55,000 ,,
Russian	56,000 ,,
Indian	218,000 ,,
Australasian	300,000 ,,
Various	40,000 ,,
Total	1,809,000 ,,

Of flour 336,000 sacks are on passage, which is above the average. America is now unloading her new flour more freely than British millers like.

The supplies of barley on passage show little change, but those of maize are materially reduced on the week. The actual figures are:—

Maize	380,000 qr, or	140,000 qr	decline
Barley	510,000 qr, or	5,000 qr	increase
Oats	106,000 qr, or	9,000 qr	decline
Linseed	67,000 qr, or	4,000 qr	,,
Cottonseed	43,000 tons, or	1,000 tons	,,
Rapeseed	14,000 qr, or	2,000 qr	increase
Rice	19,000 tons, or	4,000 tons	decline

Shipments last week were large from America, but were practically confined to breadstuffs, actual details being:—Wheat, 523,000 qr.; flour, 172,000 sacks; maize, 76,000 qr. No barley or oats were shipped.

Shipments from Argentina were limited to 10,000 qr. of wheat and 82,000 qr. of maize. No oats or linseed were shipped.

Shipments from Russia were 79,000 qr. of wheat, 56 000 qr. of barley, 60,000 qr. of oats, and 7,000 qr. of maize. Roumania, Bulgaria, and European Turkey shipped 108,000 qr. of wheat, 10,000 qr. of oats, and 170,000 qr. of maize. Roumania shipped 71,000 qr. of barley, but no barley is allowed to be shipped from either Turkey or its dependencies.

India shipped 15,000 qr. of linseed but no wheat, and there were not any wheat shipments from Australasia.

THE BALTIC.

Holders of wheat cargoes are less depressed than they were for North and South American and for Indian, but Russian sorts are against sellers. Transactions have included No. 1 Northern Duluth at 40s. 9d. per 480 lb., Baruso at 36s. 9d. per 480 lb, No. 2 Northern Manitoba at 41s. 9d. per 480 lb., Blue Stem at 39s. 9d. per 500 lb, Red Walla at 38s. 9d. per 500 lb., Victorian at 40s. 9d. per 480 lb., and Odessa Ghurka at 40s. 6d. per 492 lb.

Maize cargoes are dull but not cheaper; on Saturday 24s. 6d. was paid for American, 23s. 3d. for Argentine, 26s. for Galatz, and 25s. 6d. for Bulgarian, all per 480 lb.

Barley cargoes have regained steadiness. Prices made have included Russian at 25s. 6d. per 400 lb., Californian at 36s. 3d. per 448 lb., and Persian 22s. 6d. per 400 lb.

Other cargo sales of the week have comprised white Libau oats at 17s. per 304 lb., Bombay linseed at 43s. 9d. per 416 lb., Argentine linseed at 39s. 6d. per 416 lb., Egyptian cottonseed at £6 13s. 9d. per ton, and Portuguese locust beans at £4 15s. per ton.

The secretary of the London Corn Trade Association announces that the following standards of September shipments have been made up, viz:—Wheat: Plate wheat of Province of Santa Fé, 60 35 lb. at time of discharge. Plate wheat of Province of Santa Fé, 62·65 lb. at time of discharge. Bahia Blanca, Barletta and/or Russo, 61·55 lb. at time of discharge. Buenos Aires Barletta and/or Russo, 62·85 lb. at time of discharge.

Maize.—Yellow La Plata.

The following Californian standards have also been adopted, viz.:—

Wheat.—No. 1 White, Choice Milling, No. 1 Milling.

Barley.—A Brewing, B Brewing, No. 1 Brewing, No. 1 Chevalier, No. 1 Feed (bright). Crop 1907.

The strike at Port Said of coalheavers will cause considerable delay for steamers in transit, and grain cargoes on passage from India and Australia are likely to be a good deal later in arrival than appeared probable a week ago.

The Liverpool Cargo Market, the "Atlantic," will be closed on the 24th, 25th, and 26th, but opens on the 27th. It will be shut on January 1, and so will the "Baltic."

LONDON HAY TRADE.

Saturday.—Again we have to report the London hay trade in a condition of acute depression; supplies have been coming along very freely and a great deal larger than are required for the present very limited demands. The past few weeks seem at last to be feeling the weight of the season's crop. Doubtless the very unsettled weather all during the autumn helped to keep supplies back, yet it was a matter of comment, and set the trade wondering that demand and prices kept up so long and so well as they did, but now we are overburdened with the large quantities of badly got and weathered stuffs, which are more than difficult to get clear of, and although salesmen are willing to take a much reduced figure, there is an entire absence of anything of a demand, and until the present accumulation of stocks are considerably reduced, there seems but little chance of any improvement in the trade. The only redeeming feature is that straw keeps in good request, and top values are being obtained for the fair quantities which are coming to hand.

Prices ruling are about as follows:—English Best hays, 67s 6d to 70s per ton; good hays, 60s to 65s per ton; plain hays, 55s to 57s 6d per ton; best clovers, 77s 6d to 80s per ton; good clovers, 75s per ton; inferior clovers, 70s per ton; best mixtures, 77s 6d to 80s per ton; good mixtures, 75s per ton; plain mixtures, 62s 6d to 70s per ton; seconds hays, clovers, and mixtures, 45s to 55s per ton; wheat straw, 25s to 27s per load; barley straw, 25s to 27s per load; oat straw, 25s to 27s per load.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Wheat.—English firm, and held for 3d to 6d advance, but not active. Whites quoted at 36s to 39s 6d; reds at 35s to 38s 6d. Foreign firmly held at 6d over Monday, but buyers not anxious; 44s 6d to 44s 9d wanted for No. 1 Northern Manitoba, ex ship to arrive; 44s No. 2; 36s 6d No. 1 Durum; 37s to 37s 6d choice white Karachi; 46s Australian landed; and 40s 6d South Australian. Flour firm, and 3d to 6d dearer, but inactive. Hungarians held at 40s to 41s; Iron Dukes at 28s. Maize firm and dearer. Mixed American landed held at 26s 9d; River Plate at 25s 6d; Odessa at 25s to 25s 3d ex ship, landed at 25s 9d. Barley firm, and 3d dearer. Odessa-Nicolaieff, ex ship, held at 23s 6d to 23s 9d; landed at 24s. Oats firm, with an upward tendency. La Plata held at 17s 9d to 18s; South Russian at 17s 3d landed, 16s 9d ex ship.

Mark Lane, Friday.—Wheat: English steady, quiet. Whites quoted at 36s to 39s; reds at 35s to 38s. Foreign firmly held at full prices, but demand limited. No. 1 Northern Manitoba, ex ship, quoted at 44s 6d; No. 2 at 43s 9d; No. 1 Durum, 36s 6d; choice white Karachi at 37s to 37s 3d; South Russian, landed, 40s to 46s; Australian at 46s. Flour firm, quiet. Hungarian held at 40s to 41s; Pillsbury's best at 32s; Iron Dukes at 28s. Maize steady, quiet. Mixed American, ex quay, held at 26s 6d; River Plate, at 25s 3d; Odessa at 25s 3d; Danubian at 25s 6d. Barley firm, quiet. Odessa, landed, held at 24s; Azoff Black Sea, ex ship, at 23s 6d to 23s 9d; Persian, 21s 9d to 22s 3d. Oats steady, quiet. River Plate quoted at 17s 9d to 18s; South Russian, 17s to 17s 6d

COUNTRY.

Appleby, Saturday.—Inquiries for dry samples, which were scarce. White oats (horse corn), 21s to 25s per 26 stones.

Ashford, Tuesday.—Very small attendance and little trade. Quotations remained little affected:—Wheats, 33s to 36s; best English barley, 30s to 31s; secondary, 27s to 29s; foregn grinding barley, 26s; Mazagan beans, 28s to 29s; tick beans, 32s to 34s; maize, 28s; peas, 31s to 32s; oats, 18s to 22s per qr; flour, whites, 36s; seconds, 33s; scaling, 31s per sack.

Banbury, Thursday.—Wheat, white (new), 35s to 35s 6d per qr; wheat, red (new), 35s to 35s 6d per qr; barley, 26s to 30s per qr; beans (new), 28s to 31s per qr; oats, 17s to 20s 6d per qr; peas, 30s to 34s per qr.

Berwick, Saturday.—Moderate attendance; rather smaller supplies of grain. Barley unchanged; oats dull trade, except for finest qualities. Barley, 20s to 33s 6d; oats, 17s 6d to 27s 6d per qr.

Birmingham, Thursday.—There was a fair muster at this market, but trading was of a retail character, purchases being small. Foreign wheat were 6d per qr dearer on the week. English wheats made from 12s 6d to 13s 6d per 186 lb delivered. Bessarabian maize and Galatz-Foxanian were offering at 25s 9d per 480 lb at Sharpness, being 3d to 6d per qr dearer respectively. Grinding barley was unchanged at 24s 3d per 400 lb Sharpness, English oats made 19s 6d per 312 lb, and beans 12s 6d per 196 lb delivered.

Brighton, Thursday.—Quiet trade. English oats 3d and 6d cheaper. Wheat trade slow. New red wheat, 36s to 36s 6d; barley, 28s to 33s; grinding ditto, 25s to 26s; oats, English, 17s 6d to 20s; peas, 33s to 34s; beans, 33s to 34s.

Bristol, Thursday.—English wheat in short supply, unchanged in value. Foreign 6d dearer. Maize 6d dearer. Barley, spot unaltered; forward 6d dearer. Oats unchanged. Rather more inquiry for flour.—Grace Bros.

Bury St. Edmunds, Wednesday.—There was a dull market, with but little wheat on offer. The trade was quiet, but steady, at about last week's prices. Reds or whites, if in fair condition, 36s to 36s 6d; rivets, 35s to 35s 6d per qr. Barley was also a rather quiet trade, especially for the ordinary malting parcels at 30s to 31s 6d per qr; finer malting parcels 32s to 35s per qr. Oats firm at 20s to 22s; old, 23s to 23s 6d per qr. Maize slightly up at 27s for round, and 28s for flat. Feeding stuffs firm at last week's prices.

Canterbury, Saturday.—Trade is in a very healthy condition considering the nearness of the holidays, and best wheats have been making a trifle more money. Choice 64 lb. samples are now selling at 37s 6d, and 63 lb lots are quoted from 34s 6d to 36s per qr. Oats range from 21s for 43 lb. white samples down to 29s; barley from 28s 6d to 34s per qr; grey peas, 30s to 32s; and seed quality up to 34s; tick beans, 31s to 32s; mazagans, 28s to 29s per qr.

Chester, Saturday.—Trade good, and prices of corn dearer. Small supply of wheat offering at recent rates. Oats quiet at last week's prices. Barley dull. Oats favouring buyers. Quotations: Wheat, white and red new, 5s 2d to 5s 4d per 75 lb; grinding barley, new, 3s 10d to 4s per 64 lb; Indian corn, old, 14s 3d to 14s 6d per 240 lb; round corn, old, 14s to 15s 6d per 240 lb; oats, new, 2s 7d to 2s 9d; old, 3s 4d to 3s 6d per 46 lb.

Chichester, Wednesday.—A fair attendance, but slow trade at prices unchanged. New white wheat, 36s to 37s; new red ditto, 36s to 37s; barley, 29s to 35s; grinding ditto, 24s 6d to 25s 6d; oats, English, 19s to 22s 6d; peas, 34s to 35s; beans, 33s to 34s; tares, 5s to 5s 6d; maize, 25s to 27s; flour, 28s to 32s.

Colchester, Saturday.—English wheat firm and a fair supply. Foreign, 6d to 1s advance. Barley, oats, and maize unaltered. Flour a steady trade, about 6d dearer.—Fear, Colebrook, and Co., Ltd.

Derby, Friday.—Wheat was again unchanged in value, but prices were firm at late rates. No alteration in spring corn. Quotations.—Wheat, 36s to 37s; red, 35s to 36s; malting barley, 29s to 32s; grinding, 25s to 27s; new beans, 35s to 37s; old oats, 24s to 26s; new oats, 21s to 22s.

Devizes, Thursday.—There was a very small supply. The prices for wheat and barley show very little change from those realised last week, but the trade is slow. Oats again the turn easier. Blacks weighed off at 40 lb per bushel are worth about 18s 6d per qr. White oats are sold more freely and do not show a corresponding fall in prices. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s; winter oats, 18s to 19s; white Garton oats (330 lb), 18s 6d to 19s 6d; black Tartar oats (320 lb), 18s to 19s; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 38s.

Doncaster, Saturday. — Holiday market. Scarcely any English wheat was shown, threshing having been stopped by the weather, and last week's prices were repeated, top value being 14s per load. Foreign wheat was decidly firm, and was 6d to 9d per qr dearer on the week. Small show of barley; fine samples unchanged, but secondary neglected. Oats about the same. Maize advanced 3d to 6d per qr, whilst beans had an upward tendency.

Dorchester, Saturday. — Although the weather has been very unfavourable all through the week, and the flooding of the lowlands is being attended with serious consequences, it was bright and fine to-day, and there was a fair attendance at the market. Samples, however, were rather short owing to threshing operations having been totally checked; still, in the absence of anything like a demand, there was ample offering to meet all wants, business being generally very quieter. Prices of wheat a little weaker, but no decline can be quoted in values of either English or foreign. Feeding barley maintained, but oats rather favoured buyers, as did maize. Flour trade very inactive. The weather was again terribly wet on Sunday.

Dublin, Friday.—There was a holiday feeling in the Exchange. Forign wheat was firm, but little doing. Maize was steady, with an improved demand. Irish wheat, oats, and barley had a limited trade. Oatmeal was steady, and Indian meal unchanged. Bran and pollard were quiet at late rates. The Exchange will not open next week, owing to the holidays.

Exeter, Friday.—Small attendance, trade quiet. English wheat not very plentiful at last week's full prices. Foreign 6d dearer. Barley and maize unchanged. Oats rather firm. Flour firm. English wheat, [4s 4d to 4s 6d; English barley, 3s 6d to 4s 6d; superfine flour, 31s to 33s; fines, 29s to 31s.

Glasgow, Wednesday.—Moderate attendance at to-day's market. Wheat and flour steadily held at late rates, but trade quiet. Maize and corn firm at last week's prices. Barley unaltered. Oats the turn dearer, with a fair trade passing. Beans pressed for sale at reductions of 3d to 6d per boll on the week. Pease unchanged. Bran unaltered. Thirds 2s 6d per ton cheaper. Oatmeal quiet.—Gibson and Clark.

Glasgow, Friday.—Market quiet, but tending dearer. Prices nominally unaltered. There will not be any market held on Christmas Day.

Gloucester, Saturday.—English wheat firmer; reds, 34s to 35s; whites, 35s to 36s per qr. Foreign wheat 6d to 1s dearer; Plates, 41s to 42s 6d; Russian, 41s to 42s per qr. Plate maize unchanged at 25s 6d, flat 3d up at 26s 6d; Bessarabian unchanged at 25s 9d. Barley 3d dearer at 24s 3d to 24s 6d. Black oats 6d, white 3d easier.

Grantham, Saturday.—Holiday market, with supplies rather small, and prices practically unaltered. Wheat, 35s to 36s 6d; barley, 26s to 34s; oats, 18s to 20s; beans, 28s to 32s; blue peas, 70s to 80s per qr.

Hereford, Wednesday.—English wheats were dealt in solely in favour of buyers. Sellers of foreign wheats were firm, and in some cases asked a slight advance. Barleys very dull, and somewhat easier. Oats also very slow, and practically no buyers. Maize 6d per qr dearer since last week.

Ipswich, Tuesday.—Small supply of wheat, trade steady at about last week's rates, 37s per 504 lb. Good supply of barley, fine samples fetched up to 35s; good runs, 32s to 33s; runs, 30s to 31s. A rather large supply of oats, trade dull at 6d per qr less money. Maize rather firm; beans and peas unaltered.

Leeds, Friday.—There was little doing at the market. English wheat was quoted 12s to 14s per load; foreign in better request at 9d to 1s dearer. Quiet trade in malting barley. Oats, 6d per qr cheaper. No change in feeding stuffs.

Leicester, Saturday. — Good attendance of buyers and dealers, with rather a short supply of home-grown wheats. The samples came to hand in irregular condition. Red wheats, 32s to 38s; white wheats, 36s to 39s per 36 stone. Barley in slow demand, except for bright malting qualities, which fetched 28s to 31s per 32 stone. Fine oats in fair demand at 19s to 22s per 24 stones.

Lincoln, Friday.—Moderate attendance, and a small show of English wheat, which sold slowly at an advance of 6d per qr on the week; foreign met with an improved demand at 1s per qr advance. Oats and beans unchanged. No market next Friday.

Maidstone, Thursday.—As might be expected, lassitude is prevalent, the approach at Christmas tending to that indulgence. The cost of wheat, however, is equal to that of last Thursday, as recent depression does not continue so fully. The quotations must remain as before. Almost all other descriptions, though not at all in brisk demand, are at about recent rates.

Manchester, Thursday.—There were higher prices to note for both English and foreign wheat, the former having advanced 6d per qr, and the latter 3d to 4d per cental. Flour unchanged and steady. Indian corn (European) unchanged; American (mixed) advanced ½d higher. English and foreign barley unchanged. English beans and peas quiet. Oats slow at late rates. Bran, &c., scarce.

Newark, Wednesday.—Fair attendance, with prices about as last week, with a little more inquiry. White and red wheat, 35s to 36s; malting barley, 28s to 30s; grinding barley, 25s to 27s; white oats, 18s 6d to 20s; black oats, 18s to 19s; old beans, 37s to 38s; new beans, 29s to 31s per qr.

Newcastle-on-Tyne, Saturday.—No active demand for wheats at our to-day's market. Holders, however, were firm at rather over last week's quotations. Maize remains steady at late rates with a fair consumptive demand. Oats are in the favour of buyers. Beans and peas remain firm at late rates. Barleys remain steady at last week's prices.—Joseph Pollard and Co.

Newport, Wednesday.—Fair trade passing. Maize about 6d dearer on the week. Barley about the same. Oats quiet demand at late rates. Flour in fair request at about 31s 6d. Fair trade in offals. Bran, £5 15s per ton; sharps, £6 10s per ton.

Northampton, Saturday.—The attendance was very thin, and business was very slack, buyers not being inclined to purchase with New Year so close upon them. Prices remained as last week, barley and oats showing an easier tendency. A good quantity of out-of-condition wheat was sold at very low prices. New wheat, 34s to 36s; barley, 25s to 30s; white oats, 18s to 20s; black oats, 17s to 18s; beans, 30s to 31s; peas, 30s to 32s; flour, 27s 6d to 31s 6d.

Norwich, Saturday.—Wheat was in small supply, and the condition bad, but market 6d per qr dearer: 36s 6d to 38s delivered. Smaller supply; barley prices slightly easier; feeding stuffs demand was very quiet; prices much firmer. Maize and grinding barley 6d per qr advance. Linseed and cotton cakes at late rates.

Nottingham, Saturday.—Wheat, small supply, prices in sellers' favour. Barley, better inquiry, and best samples commanded slightly higher rates. Oats about as last quoted. Beans out of condition, prices irregular.—Robt. Hubbard.

Peterborough, Saturday.—Quite a small market, the little offering made 6d per qr less than last week. Barley a quiet trade. Oats steady. Wheat, 35s 6d to 36s 6d; oats, 18s 6d to 19s 6d; barley, 27s to 34s.—Thomas Hill and Son.

Preston, Saturday.—An improved tone has been manifest in the wheat market duing the week, and prices are 2d to 3d per cental dearer on the week. There was a fair attendance at to-day's market, and prices for farmers' wheat and other grain were slightly exceeded, but there was very little business passing. Quotations:—Wheat, white, new, per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel,

3s 8d to 3s 9d; ditto, new, 3s 2d to 3s 3d; beans, per windle of 220 lb., 17s to 17s 6d.

Reading, Saturday.—There was a fair attendance at the Exchange, but trade was far from being brisk. The supply of grain was, however, pretty plentiful. Prices:—Wheat, 34s to 38s; malting barley, 27s to 34s; new oats, 17s to 22s; old ditto, 19s to 23s; beans, 33s to 37s; peas, 29s to 31s.

Retford, Saturday.—Average attendance, and a fair supply of grain. Wheat trade rather dull, but prices were no lower. Dry samples made 36s to 36s 6d per qr. Brisk demand for the best malting barley, which was scarce, and worth 29s to 32s; medium, 27s 6d to 28s 6d; grinding, 27s to 28s per qr; maize, 29s per qr delivered; new English beans, 30s to 31s; old ditto, 39s to 40s; black oats, 18s to 19s; white ditto, 19s to 20s; good old oats, 26s per qr.

Ripon, Thursday.—Good attendance of farmers, and a fair supply of samples. A quiet business at last week's values. New wheat, 35s to 36s; ditto, foreign, 44s to 46s; barley, grinding, 24s to 26s; ditto malting, 28s to 32s; new oats, 19s to 20s 6d; maize, round, 27s per qr.

Sheffield, Tuesday.—With the approach of the holidays buyers are limited in their purchases, and only a quiet trade is passing. Wheats show a distinct improvement, and are quoted 6d dearer for foreign qualities. Maize is firmer, and about 3d per qr more on the week. Beans, oats, and barley about unchanged. Millers' feeding stuffs slightly in buyers' favour. Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, new, 20s 6d to 21s per 336 lb; peas, grinding, 32s 6d to 36s 6d; ditto, blue, new, 70s to 90s per 504 lb; beans, English, 35s 6d to 36s per 532 lb; barley, grinding, 28s to 30s; ditto, malting, 28s to 32s per 448 lb; Indian corn, small, 27s to 28s; ditto Plate, 26s 6d to 26s 9d; ditto, flat, 29s to 29s 6d per 480 lb; bran, 110s; fine sharps, 110s; broad bran, 125s per ton.

Shrewsbury, Saturday.—Wheat, 15s to 15s 6d per 225 lb; old oats, 16s to 17s per 225 lb; new oats, 12s 6d to 13s 6d; brrley, 18s to 20s per 200 lb.

Stamford, Friday.—Attendance small, and trade quiet. Wheats, 35s 6d to 36s; oats, 18s 6d to 19s 6d; beans, 29s 6d to 30s; superior malting barleys, 29s 6d to 32s, but the general run was from 28s 6d to 30s 6d; grinding barleys, 26s to 27s 6d per qr.

Stockton, Wednesday.—English wheat made from 36s to 36s 6d per qr. There has been a steady improvement in the foreign wheat trade, and prices showed no change. Oats quiet. Maize dearer. Small show of malting barleys, soft grinding barley making 21s., and finest qualities up to 31s.

Tunbridge Wells, Friday. — New white wheat, 37s to 38s; new red ditto, 36s to 37s; barley, 36s to 37s; grinding ditto, 26s to 27s; oats, English, 20s to 22s; rye, 31s to 32s; peas, 34s to 35s; beans, 34s to 35s; tares, 40s to 48s; maize, 27s to 28s.

Warwick, Saturday.—Small supply of grain on offer. Prices about the same as last week, with slight hardening tendency.

Winchester, Saturday.—Wheat firm. Oats, beans, and barley quiet, fair supply, indifferent condition—Colin Taylor, King and Co., Ltd.

Wisbech, Saturday.—A very small supply of grain here to-day. Wheat firmer, 36s to 37s per 504 lb. Barley, 27s to 30s per 448 lb. Oats, 19s to 20s per 336 lb.—James Fletcher.

Worksop, Wednesday. —Small attendance, Fair supply of grain. Trade slow, with a firmer feeling. White wheat, 36s to 37s; red ditto, 35s to 36s 6d; best malting barley, 31s to 33s; secondary qualities, 29s to 31s; grinding barley, 26s to 28s; white oats, 18s to 20s; black oats, 17s to 19s; maize, 28s to 29s per qr.

Yeovil, Friday.—Home-grown wheat of best quality, 37s to 38s; secondary, 33s to 36s; grinding barley, foreign, 24s 6d to 25s; ditto, English, 25s 6d to 27s 6d; malting barley, 29s to 33s; old oats, 22s to 24s; winter oats, 18s to 19s; white Gartons, 18s 6d to 19s 6d; black Tartars, 18s to 19s; Irish black, 18s to 18s 6d; beans, 34s to 36s; flat maize, 27s; round, 25s 6d to 26s; vetches, 6s to 7s per bushel. Flour trade showed some improvement in demand, and on the basis of 30s to 30s 6d for fines. Offals and meals without material change.

York, Saturday.—Dry samples of wheat sell at quite last week's prices, most of the samples being soft. Fine white made 36s 6d to 37s 6d., and red and mixed 35s 6d to 36s 6d per qr of 36 stones. Malting barley was firm, with not much offering. Fine fetches 30s to 32s, good 28s to 30s, and inferior 26s to 28s per qr of 32 stones. Oats were firmer at 20s to 21s per qr of 24 stones. Rye makes 28s to 29s per qr of 36 stones, and old beans 1s a stone.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—There is quite an average demand considering the time of year, and home manufacturers especially anticipating higher values in the near future are disinclined to enter into forward contracts except at an advance on ruling prices. Russian continue in moderate request. East India seed pures are cheaply quoted. Fine seedy Argentine of exceptionally good quality make full prices. London made attract rather more attention.

Cotton Cake.—The trade generally is disappointing, and with some fairly heavy arrivals of Egyptian, quotations remain quiet, while English are fully as dear. Decorticated: London made pures meet a ready sale, but American brands are neglected.

Rape Cakes.—Steady. East Indian unchanged. Ravison none.

Maize Germ Meal.—Good samples of white African meal command an advance on last week, but there are sellers of English on slightly easier terms. Maize gluten feed is in good request.

Rice Meal. — Landed lots of Rangoon are firmly held, with sellers ex-ship terms unchanged.

Locust beans sell quietly.

Dried brewers' grains remain scarce and dear.

Nitrate of soda is without alteration.

Nitrate of soda	11 2 6		

—Pinnock Bros., 30, Mark Lane, E.C.

Liverpool, Friday. — Nitrate of soda is steady at late rates. The heavy rainfall has prevented ploughing and sowing in low-lying districts, and consequently retarded the demand for phosphates and kainit, and though there is a fair amount of business passing, it would be much more so were climatic conditions more favourable. Feeding stuffs meet an extremely slow consumption, and with the mild weather and the near approach of the Christmas holidays no improvement is anticipated before the New Year.

HAY AND STRAW.

Birmingham, Friday.—Fair supply of hay; trade slow. Hay, £3 to £3 10s per ton. No quotations for straw.

Derby, Friday.—Clover, best old, 90s to 100s; new, 80s to 90s; hay, best old, 90s to 100s; new, 50s to 70s; second, 40s to 50s; straw, wheat, 60s to 70s; pressed, 50s to 60s; chop, 55s to 65s; peat moss, 35s to 40s.

Hereford, Wednesday.—Both hay and straw sell slowly without quotable change in values.

Leeds, Tuesday.—A fair trade is passing in the warehouses in hay and straw at the following quotations:—Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—Hay and seeds made rather less money, making from 55s to 60s; straw, 30s per ton on the ground.

Manchester, Friday.—Hay, 4½d to 4½d; clover, 5½d to 6d; straw, wheat, 3d; oat, 2¾d to 3d per stone.

Newcastle, Tuesday.—Old land hay, from £3 5s to £4 4s; new land hay, £4 5s to £5 5s; this year's growth, £4 to £4 15s. Wheat straw, from £1 6s to £1 8s per load; barley straw, £1 1s to £1 3s; oat straw, from £1 2s to £1 3s.

Sheffield, Tuesday.—Moderate supplies on offer at to-day's market. Business on the quiet side at about late quotations, viz.:—Choice old seeds, £4 10s to £4 15s; choice hay, £3 15s to £4 5s; straw, £2 10s to £3 per ton; turnips, 20s to 22s.

Whitechapel, Saturday. — Good supplies were offered, and a good demand ensured at recent prices. Best clover, 84s to 92s 6d; inferior, 72s to 80s; specially-picked hay, 82s 6d; good, 65s to 75s; inferior, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 25s to 31s per load.

CHEESE.

Glasgow, Wednesday.—The arrivals of home cheese were liberal, farmers expecting an extra demand for Christmas and New Year. The demand was improved, especially for Dunlops, and prices were the turn dearer. Cheddars were quoted 62s to 66s per cwt, and Dunlops, 58s to 62s. Canadians were slow at previous level.

Highbridge, Tuesday.—A large attendance of customers and a brisk trade. Best Caerphilly dairies realised up to 69s per cwt; secondary dairies, 63s to 67s; and other dairies, 60s to 62s. A few inferior lots failed to reach 54s. Cheddars, 60s to 64s; truckles, 58s to 62s 6d; doubles, 54s to 58s.

Newport, Wednesday.—A good supply, fair demand, and average attendance. Quotations:—Caerphillies, 54s to 65s per cwt; fancy dairies, 65s to 69s; Derbys, 68s to 70s; truckles, 62s to 66s; Cheddars, 63s to 65s.

POULTRY AND GAME.

Smithfield, Saturday.—Large supplies; demand fair. Surrey fowls, 3s to 5s; Sussex fowls, 3s to 4s 6d; Lincolnshire fowls, 2s to 3s 6d; Essex fowls, 2s to 3s; Irish fowls, 2s to 2s 6d; quails, 10d to 1s 6d; geese, 5s to 8s 6d; country ducks, 3s to 4s 3d; wild ducks, 1s 9d to 2s; feathered pigeons, 7d to 9d; Bordeaux pigeons, 11d to 1s 2d; English hares, 3s 6d to 4s; leverets, 2s; Scottish hares, 1s 6d to 1s 9d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 6d to 11d; live hens, 1s 8d to 2s each; Australian rabbits, 5s to 7s 6d per dozen; pheasants, 5s 6d to 6s 6d; young partridges, 4s 6d to 5s; old, 2s 6d; black game, 3s 6d to 4s per brace; cock turkeys, 8d to 1s 2d per lb; hen turkeys, 5s to 8s 6d each.

HOPS.

Canterbury, Saturday.—There has been a little more demand during the week, owing to the exceptionally low rates now prevailing.

Worcester, Saturday.—Business on the hop market has been quiet in anticipation of the holidays. Holders are firm, and do not offer freely, hoping for a better and improved trade in the New Year. Only 60 pockets have been weighed this week—Charles Faram and Co.

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, MONDAY, 3 P.M.

There was not much doing in English wheat but he market was no worse from the 20th, and prices were fully maintained. American and Russian sales of wheat were the turn lower, and ndian were 6d. cheaper. Other imported descriptions were without change. Maize was well held for delivery between now and December 31. For dates in the New Year the advantage was not with holders.

Barley was an improved trade both for malting and grinding, but the approach of the holidays restricted speculation, and buyers satisfied retail needs at full prices. Oats were firm for English, but foreign sorts were in poor request.

The South African samples are offered at 18s 6d, with buyers at 17s 6d, so that a level of value is in process of being formed for a new supply. Some specially fine peas from Tasmania changed hands at 42s per qr. Beans and rye are steady with some prospect of a better market after Christmas.

CLOSE OF THE MARKET.

THE MARKET CLOSED WITH FIRMNESS DESPITE THE EXTREMELY MILD WEATHER, WHICH OF COURSE WAS ALL AGAINST RETAIL DEMAND.

THE FLOUR TRADE.

MARK LANE, MONDAY, 3 P.M

The tone of trade for London markets was rather firmer from a week ago. American and country sorts were a trifle easier. Hungarian remained scarce. No reductions were allowed in bran pollard or middlings.

Some prices made to-day included 37s. 6d. for English flour made by the Hungarian process, 35s. 6d. for No. 1 supers, 32s. 3d. for best Minneapolis, 31s. 3d. for the best whole meal, and 30s. 3d. for ordinary whole meal. There were no samples on offer so far as we could learn, of Belgian, Argentine, or Russian flour, so that the area of competition with home mills appears to be diminishing.

As Christmastide is a leading time in the oatmeal trade, we may mention that special Midlothian oatmeal was selling to-day at £17 per ton, Aberdeen at £13, Grampian at £13 10s., and Deeside at the same price as Gampian.

Rolled oats made £15 10s. per ton for best Aberdeen; oat flour, £19 10s.; best Midlothian cut groats, £13 10s. for December delivery; and brose meal 34s. 6d. per sack.

THE BALTIC.

MONDAY, 1 P.M.

STATE OF TRADE.

There is not much doing to-day, the principal operators, in fact, will not be in town again for some little while. Oilseed cargoes are a little easier to buy from Saturday, but wheat, maize, and oats are steadily held, and barley cargoes favour sellers.

BUSINESS DONE.

Wheat.—No. 2 Hard Winter, 8s per cental, January shipment; No. 2 Red Winter, 7s 10d per cental, January shipment; White Karachi, 39s per 492 lb, arrived; Red Karachi, 39s 3d per 492 lb, arrived.

Barley.—Californian, 36s 6d. per 448 lb, on passage.

Oats.—Baltic, 17s per 304 lb, on passage.

Maize.—American flat, 5s 6d per cental, on passage; American white, 5s 7d per cental, on passage; Odessa kilndried, 5s 6d per cental, on passage; Argentine yellow, 5s 2d per cental, on passage; Sout African, 5s 2d per cental, on passage.

Linseed.—Argentine, 39s 3d. per 416 lb, on passage; Argentine, 38s 9d per 416 lb, February shipment.

Rapeseed.—Yellow Guzerat, 56s 6d per 460 lb, April shipment; Ferozepore, 52s 3d per 460 lb, February shipment.

Podpyseed.—Bombay, 62s 6d per 877 lb, prompt shipment.

Sesame.—Bombay, 61s per 384 lb, prompt shipment.

Cottonseed.—Bombay, £5 13s 9d per 2,240 lb, prompt shipment; Egyptian, £6 8s 9d per 2,240 lb, arrived.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—During the week flour has been firmer, but the near approach of the holidays interfered with business. Grain.—There is an improvement of 1½d per boll on maize and flat corn on the week. Grinding beans being pressed for sale are again easier. Oats and oatmeal are in buyers' favour. Oilcake unchanged. Mill Stuffs.—2s 6d per ton lower, except for fine thirds, which are scarce. spring wheat patents, 31s to 32s 6d per 280 lb; winter wheat patents, 30s to 30s 6d per 280 lb; American corn, 15s 3d per 280 lb; round corn, 15s 1½d to 15s 3d per 280 lb; grinding beans 17s 10½d to 18s per 280 lb; broad bran, 112s 6d to 115s per ton; medium bran, 117s 6d to 110s per ton; common thirds (sharps), 110s to 112s 6d per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 147s 6d to 150s per ton.—MCKINNON AND MCDONALD (Glasgow).

Arrivals of wheat have been small the past week. The trade is quiet, and prices are unchanged. Flour arrivals are large, and prices are supported. There is no change to be noted in maize, barley, and oats.—COVENTRY, SHEPPARD, AND CO.

Milling offal.—Holiday markets. Prices unchanged.—JOHN BAWCOMB AND CO.

Flour.—Trade to-day has been very quiet owing to the approaching holidays. Prices, however, are very firm, and must be written abont 6d dearer on the week.—T. S. MEDHILL AND SONS, LTD.

TERM MARKET.

Wheat stands at about 8s per cental; maize at about 5s 3d for 1908 deliveries. The latest prices quoted have been:—

Wheat—

7s. 8d. per cental January-February-March delivery.

8s. per cental, April, May, and June delivery.

Maize—

5s. 4d. per cental, January delivery.

5s. 3d. per cental, February delivery.

Both wheat and maize are American, but other sorts can be bought at proportionate differences.

POTATOES.

Berwick, Saturday.—The tendency of the potato trade is a little firmer. Up-to-dates, 80s; Langworthies, 85s to 87s per ton. On the borderland a considerable quantity of grey-soils are being railed at and around 75s per ton.

Borough, Saturday.—A fair demand prevailed for the good arrivals. Langworthys, 80s to 90s; Up-to-Dates, 90s to 100s; Blacklands, 75s to 80s; British Queens, 90s; Royal Kidneys, 80s to 90s; Scottish (grey soil), 95s to 100s per ton. Dutch, 2s 6d to 3s; French, 3s 3d to 3s 6d; German, 3s 9d to 4s per bag.

Carlisle, Saturday.—The supply of potatoes was small, and a quick clearance was effected at 8d per stone.

Doncaster, Saturday.—Good supply but only a moderate trade. Prices unchanged from 8s 6d to 10s per load of 18 stones.

Goole, Wednesday. — Fair attendance of farmers and dealers, and plenty of potatoes on offer. Trade slow owing to the approaching holidays. Prices range from 9s to 10s per load.

Lancaster, Saturday.—Potatoes 9d per stone.

Malton, Saturday. — Potatoes show little change; best, £4 to £4 5s per ton, 4s 6d to 5s per bag.

Manchester, Saturday. — Potatoes: King Edwards, warps, 12s to 13s; ditto Sands 11s to 12s; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per 18 stone; Irish, 5s; German, 4s 6d to 5s per cwt.

Preston, Saturday.—Potatoes made 8s to 9s per load of 240 lb.

Retford.—Saturday.—The potato market was well supplied; best local grown made up to 9s per load; others 7s to 7s 6d per load.

Spitalfields, Saturday.—Good supplies of English were offered, but arrivals of foreign were smaller. Trade proved quiet. Langworthys, 100s to 110s; Up-to-Dates, 90s to 100s; British Queens, 90s to 95s; Royal Kidneys, 80s to 85s; Scottish (grey soil), 90s to 95s per ton. German, 3s 6d to 4s; French, 3s 6d; Dutch, 3s to 3s 3d per bag.

Stockton, Wednesday.—Potatoes £4 15s to £5 per ton.

Whitby, Saturday.—Potatoes 8d to 9d per stone.

Worksop, Wednesday.—Large supply, and very slow trade, with prices varying owing to the disease. Best potatoes, 8s 6d to 9s 6d per load of 18 stones.

York, Saturday.—A fair supply met a quiet trade, the market being of a holiday character. Prices range from 75s to 80s per ton.

TO-DAY'S MARKETS.

CATTLE.

Metropolitan Market, Islington.

	Monday, Dec. 23, 1907. British.	Total.	Monday, Dec. 24, 1906.
Beasts	90	90	130
Sheep and Lambs	120	120	240
Calves	10	10	10
Pigs	—	—	—
Milch Cows	5	5	20

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	...	—	—
Sheep	3 4	5 2	6 0
Lambs	—	—	—
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £— to £—.

British arrivals include as follows:—Scotland, nil; Eastern Counties, 14; Midland, Home, and Western Counties, 76; Devon, nil; Ireland, nil.

We note to day a decrease of 2,540 head in the number of beasts offered for sale compared with Monday last; as usual, on the Monday preceding Christmas Day, buyers were conspicuous by their absence. The few beasts on offer awaited sales in the market lairs, which were very few and far between, therefore quotations are not worth recording.

There was a decrease of 10,090 in the number of sheep penned compared with Monday last. Trade ruled of a dull and dragging nature owing to the scarcity of buyers present, the few transactions made being governed by last Thursday's values. The supply included no Scotch or Irish, and only 20 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	Monday, Dec. 24, 1906. s. d.
7½ to 8 st Downs	5 10 to 6 0	—
9 st. Down Tegs	5 8 to 5 10	—
10 st Halfbreds	5 4 to 5 6	—
10 st Yorkshires	—	—
12 st Lincolns	—	—
10 st Irish	—	—
10 st Down Ewes	3 10 to 4 0	—
11 st Halfbred ditto	3 8 to 3 10	—
5 st Down Lambs	—	—
6 st Halfbred ditto	—	—

Calf trade not worth noting or quoting.

No pigs on the market.

London (Central), Monday.—Market dull, supplies moderate. Beef, English, 3s 4d to 3s 8d; Scotch, 3s 10d to 4s 6d; American, 3s 2d to 3s 8d; refrigerated hindquarters, 3s 4d to 3s 10d. Mutton, English wethers, 4s to 4s 6d; ewes, 3s to 3s 4d; lambs, 6s 4d to 6s 8d; Scotch tegs and wethers, 4s to 4s 10d; ewes, 3s to 3s 4d. Veal, 3s 8d to 5s. Pork, 3s 4d to 4s per stone.

FOREIGN.

Deptford, Monday.—Beasts nil. No market was held here to-day. The next Deptford market will be held on Saturday, December 28.

Liverpool, Monday.—The sepply of cattle on offer was very small, though quite sufficient for the requirements of trade. The few cattle shown were mostly placed at about late rates for their class, while for mutton there was little or no inquiry. Beef, 6½d to 4½d per lb; mutton, 9d to 6½d. At market 533 cattle and 1,182 sheep.

OIL SEEDS.

Mark Lane, December 23.—Prices in the oil seed market remain substantially without change.

Linseed. per 416 lb.	s. s.	Rubsen. per 424 lb.	s. s.
Calcutta	46 to 47	German	71 to 75

French; F.A.Q.	64 to 66	Russian, White.	13 to 14
Yellow Guzerat	61 to 63	,, Black.	12 to 13
Yellow Cawnpre	58 to 59	Sesame. per 384 lb.	
Brown ,,	55 to 56	Indian	61 to 62
Ferozepore	55 to 56	Hempseed. per 336 lb.	
Jamba	46 to 47	Russian	42 to 44

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: With a good trade and owing to slack brewings prices have a firmer tendency, and business has been done during the week at 23s ale, and porter 3s per ton less on rail London. Dried Grains.—Prices continue firm with a steady tendency at 110s for ale and 105s for mixed, bags 6d each. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton. Kiln-dried sea-damaged wheat from 21s per qr, on rail, London and elsewhere.—Hamlyn and Co.

SEEDS.

Mark Lane, Monday.—The spring sowing seed trade is now in full blast in spite of the proximity of the Christmas holidays. In clovers, Canadian Alsikes are still rising. Whites unchanged. Reds and Trefoils dearer in both English and foreign seed. In grasses, French-Italian is dearer, and Perennials, Irish-Italian, New Zealand Cocksfoot, and meadow fescue are realising more money. Rape keeps firm. Mustard unchanged. Rye scarce. Peas flat as is usual at this time of the year.—John Pickard and Co.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 2,942 bales, and from foreign ports, 13,149 bales. There was a quiet trade for bacon throughout the week. Quotations ranged:—Irish, 51s to 55s up to 60s; Danish, 50s to 53s up to 58s; Canadian, 50s to 52s up to 55s. Butter: The butter market was firm. French, 104s to 120s; Danish, 123s to 125s; Russian, 94s to 112s; Irish, 98s to 120s; Victorian, 98s to 118s; New South Wales, 98s to 118s; Queensland, 98s to 118s; New Zealand, 100s to 120s; Argentine, 114s to 118s. Lard.—There was a slow market. Irish, 46s to 58s; Danish, 48s to 54s; American, 43s to 44s 6d.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

Our annual "Great Market Day" at Islington has again been held, this day being generally known as the "Scotch Day," consignments from this country being held back, at any rate the choicest and best for Christmas consumption. The arrivals this year were shorter in number, but the quality showed no decline in point of excellence. Devons, Norfolks, and Runts were all well up to the mark. Herefords, as usual, were in short supply, the season for these being practically at an end. Amongst the Irish arrivals were some of the famous Aberdeen-Angus breed, many of these being prize cattle from the Royal Dublin Show. Trade was very late in commencing owing to the dense fog which prevailed in the early morning, and throughout the day ruled of an extremely slow nature at a decline of 2d. per 8 lb. on last year's prices for Scotch and Devon cattle, whilst Irish in some cases were as much as 6d. per 8 lb. lower compared with last year. Thursday's trade for fat beasts also ruled of a slow nature at a further decline. Fat butchering cows and bulls on both market days shared in the generally slow trade experienced, amongst the latter some very choice cattle being seen.

At Deptford, markets were held Monday, Tuesday, Wednesday, and Saturday, the supply consisting entirely of consignments from the United States, for which trade ruled of a slow nature throughout the week. The total number of beasts on offer at both markets was 5,691, as against 5,585 during the preceding week, consisting of 2,850 British (increase 1,360) and 3,111 (decrease 984). The following were foreign rates obtained per 8 lb. (sinking the offal):—90 to 100 stone Scotch, 4s. 10d. to 5s.; 90 to 100 stone Devons, 4s. 6d., ex 4s. 8d.; 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95-st. runts, 4s. 2d. to 4s. 4d.; 90 stone Black Polled Norfolks, 4s. 4d to 4s. 6d.; 100 stone Dublin Show cattle, 4s. 6d. to 4s. 8d.; 95 stone Irish, 4s. 2d. to 4s. 4d.; 100 stone Shorthorns 3s. 10d. to 4s.; 90 stone States, 4s. 2d. to 4s. 4d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade on this day, as a rule, commences rather later, all attention at first being attracted to the beasts. For all grades of English sheep trade ruled of a slow and dragging nature, prices ruling in favour of the buyer. Scotch and Irish descriptions were also lower. Lambs were in light supply, and shared in the general depression. On Thursday a few sales were made at a further decline. No sheep were offered for sale at Deptford. The total number on offer was 10,530, as against 5,650 during the previous week, showing an increase of 4,880. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 6s. to 6s. 2d.; 8 stone Scotch, 6s. to 6s. 2d.; 9 stone Downs, 5s. 10d. to 6s.; 10 stone Irish, 5s. 2d. to 5s. 4d.; 10 stone Downs, 5s. 8d. to 5s 10d.; 10 stone half-breds, 5s. 6d. to 5s. 8d.; 10 stone Down ewes, 4s. to 4s. 2d.; 11 stone Hampshire ewes, 5s. 8d to 5s. 10d.; 5 stone fat Down lambs, 6s. 10d. to 7s.

Calves only numbered 20. Trade was not worth noting or quoting.

Pigs numbered 30, and met with a slow trade, the best on offer being quoted at from 4s. 4d. to 4s. 6d. per 8 lb. (offal given in).

Trade in the West.

Once again the season of Christmas is at our very doors, and all the preparations for the celebration of the great festival are completed, very little remaining to be told of the business relating thereto, more particularly concerning the fat stock sales, that is not already fully known. Speaking generally of the prices realised for fat cattle, although all the better-most qualities have brought a very fair return — we mean for animals of the very best type—still it must be confessed that the price of secondary beasts has been somewhat disappointing, more so in respect to the price realised than from one of demand. Graziers are very well satisfied on the whole with the price they made for their best bullocks, most of which gave them a return of quite 12s. per score all round, some particularly neat weights touching 13s., which is not a bad price, though it must not be lost sight of that dealers had to pay pretty dearly for the barreners, which they have now for some time past been preparing for the Christmas trade, the best of which have brought them from £22 up to £37 apiece, which is about the outside figure we know to have been reached for anything disposed of in the Western markets. The most disappointing feature has been in respect to distinctly secondary beasts, which have scarcely paid graziers for the trouble taken in their preparation, some of them making only about half a guinea (or 11s. per score), which is hardly what graziers expect to get at this particular season for their beef, and much more has been sold for less. Still one consolation remains, and that is, that scarce any of the beef, whether of the choicer grades or the plainest quality has been left over unsold. Therefore graziers must be thankful for this if for nothing else. Speaking generally of the beef sales this Christmas, all agree that the closing sales of the past week have been attended with much less satisfactory results than those of the sales a week or a fortnight earlier, since which there has been a steady decline in values, due no doubt to the fact that many laid in their stocks at the first opportunity, and have consequently wanted to make but comparatively few purchases since. There has been no such variation in the mutton trade, prices having kept uniformly steady all through, and this has been especially the case with all the choicer grades of tegs and wethers, which have cost purveyors who went in for quality pretty dearly all through, tegs and wethers in some cases making 70s. and upwards for the heaviest, ranging down to 52s. or 53s. for smaller weights, and generally computed to be 9½d. per lb. and over, whilst young ewes have made up to 8½d. for animals of good finish. Older sheep, of coarse weights, have met a decidedly dragging trade at 6½d. to 7d. per lb., little of this being at all suitable for Christmas purposes except in particular districts. Lamb has sold steadily at trifling variation in value, prices, though fairly good, falling somewhat below what we have seen, except in a few special instances, one special lot realising 64s., at previous Christmas sales. Occasionally, when wanted for show purposes, 1s. per lb. (or up to 65s. each) has been realised; but most of what lamb has been wanted this Christmas has been bought at 10d. to 11d. per lb. Veal has kept its value well all through, and the extra demand just at present has forced prices still further up, some of the ripest animals bringing sellers as much as 10d. per lb. (or up to £7 apiece), though 8d. to 9d. is a more general range for the ordinary runs of veal. The pig trade has been nothing like as good as it is some Christmases —in fact, prices have not come up to those realised in the summer; and this is naturally a disappointment to feeders, especially in view of the high price they have had to pay for feeding stuffs. A general run for the best porkers has been 10s. 9d. to 11s. per score for very dainty weights, many selling at 10s. 6d. and even less, whilst bacon hogs range from 8s. 6d. up to 10s. in very special cases; whilst coarse weights sell at 7s. to 8s. Though the demand has, on the whole, been good, leading to a clearance, the trade all round compares somewhat unfavourably with that of last and other Christmases; whether the result of the general depression existing or some other cause we are not able to say.

Trade in Scotland.

The number of fat cattle on offer was very large. Trade throughout has been quieter, and prices on an average about £1 a head lower. Fat cows a very large show, and they participated in a like reduction. Bulls very plentiful and cheaper. There was an average supply of fat sheep, and the general quality satisfactory. There was a fair demand, and prices as nearly as possible without change from last week. Ewes, however, made more money. Fat calves, if of good quality, exceedingly dear, while no change can be quoted in the price of pigs. For the time of year there was a fair supply of store cattle. Anything of a good class got readily and fairly well sold, and at the close a nearly total clearance was effected. Store sheep a large supply. Trade very slow, but a much better clearance effected this week than last. Milch cows a small show, and they met a slow trade. Quotations:—Top price of cattle per live cwt., 38s. 6d.; current, 34s. to 36s.; mutton, 6d to 9d. per lb.—John Swan and Sons, Ltd.

Trade in Ireland.

As usual at this time of the year, trade assumed a holiday sort of character, as there was a decrease of over 2,000 head of cattle and the same number of sheep offered for sale on Thursday last. The trade done was of a very quiet character, and few of the export buyers were present, most of them having purchased their Christmas stock. The supplies of cattle and sheep showed a good reduction, but really there were quite enough, in fact too many, for what were required.

Really nicely-finished bullocks and heifers met with a fair inquiry at late rates, with a slight tendency against the buyer. Middling cattle were flat and not much doing in them. Best ox and heifer beef sold at from 50s. to 55s., and choice from 56s. to 59s. per cwt; second quality beef, 45s. to 50s., and inferior beef from 42s. to 43s. per cwt. Rough beasts, cows, &c., were practically unsaleable, and the bulk of such animals had to be held over by their owners. There were 2,889 beasts in the market—a large falling off from the usual number, but something about what is usually expected at this Christmas market, most of the purchases for the holiday taking place earlier in December.

There were very few shippers in the market, and these only looking for cheap bargains. There was comparatively little business done in the sheep section of the market. The bulk of the sheep sold at in and out prices to speculators. Some nice Cheviet wethers passed to local butchers at fairly satisfactory rates, and mountain hoggets sold well, but outside these things were flat. Prime wether mutton was worth from 7d. to 7½d. per lb.; prime ewe, 6d. to 6½d.; and inferior mutton about 5d. per lb. Large heavy hoggets sold at from 46s. to 56s. each, and small to medium hoggets, 30s. to 44s. each. Some nice lambs were sold, the best large fat ones making up to 44s. each. Veal was in rather slow request, but the best calves sold very freely at 7½d. to 8½d. per lb.; inferior calves brought from 5½d. per lb. upwards.

The Dublin pig market had only a limited supply of stock on offer. There was a full company of buyers, and things moved briskly at dearer rates. Nice seasonable pigs sold freely at better prices, and there was a good trade done in shippers. Pigs suitable for the Christmas market sold very freely, making up to 50s. per cwt. Good shipping hoggs made 46s. and 47s. per cwt. Dublin market next week will be held on Friday the 27th inst., Thursday being a Bank holiday. Buyers have intimated their intention of being present on that day.

LONDON.

Islington, Thursday.—The supply of beasts compared with Thursday last showed an increase of 150 head, amongst which were a good many fat beasts left over from last Monday's market. Very few sales were transacted, so few buyers being present, consequently a fall in value ensued. Top prices paid per 8 lb. as follows:—80 stone to 90 stone Scotch, 4s 8d, extreme, 4s 10d; 90 stone Norfolks, 4s 2d to 4s 4d; 95 stone Runts, 4s to 4s 2d; 100 stone Shorthorns, 3s 8d to 3s 10d. Sheep: An increase of 310 in the number penned in market compared with previous week; here, as in the beast department, very few transactions were recorded, sales having to be forced at 2d per 8 lb less money. Leading pens were quoted per 8 lb as follows:—7½ to 8 stone Downs, 5s 10d to 6s; 9 stone ditto, 5s 8d to 5s 10d; 10 stone ditto, 5s 6d to 5s 8d; 10 stone half-breds, 5s 4d to 5s 6d; 10 stone Down ewes, 3s 10d to 4s. Calf trade not worth noting. Quotations per 8 lb, sinking the offal: Beasts, 2s 6d to 4s 10d; sheep, 3s 10d to 6s. Total supply: Beasts, 220; sheep, 320; calves, 10; milch cows, 5.

COUNTRY.

Ashford, Tuesday.—The Christmas market was extremely disappointing to sellers; beef sold very slowly, but animals in market making 4s 10d, and the cattle show 5s, as quite a top price, while many good animals went at 4s to 4s 2d; mutton sold slowly, best neat Kents ranging up to 6s; while over fat sheep in show sold at about 4s; pork trade improved, best roasters making up to 4s; but large hogs, 2s 8d to 3s 2d.

Berwick, Saturday.—Attendance of farmers and buyers fair, and trade fairly good. Calves, £5 to £Sheifers, £8 10s to £10; stirks, £8 10s to

£11 5s; two-year-olds, £13 10s; three year-olds, £14 5s; Shorthorn bulls, £12 10s.

Birmingham, Thursday.—Good supply of pigs; small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Beef, 5d to 6½d per lb; mutton, 6d to 8½d per lb; bacon pigs, 9s per score; cutting pigs, 9s 3d to 9s 6d per score; sows, 7s to 7s 3d per score.

Bristol, Thursday.—Fat cattle were rather scarce, and demand limited, trade being quiet at last week's prices. Sheep also were not numerous, and business was dull, with values favouring buyers, for whilst Down wethers maintained 8½d per lb, prime wethers fell to 8d, and heavy to 7½d. Pigs were scarce and quotations unchanged.

Calne, Friday.—Present prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s per score; 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s per score Pigs outside these limits at their value.—C. and T. Harris and Co., Ltd.

Canterbury, Saturday. — Graziers having satisfied their requirements, very few lean stock are now being offered. Business during the past week has been mainly in respect of the sales of Christmas cattle, the best of which have made good prices.

Carlisle, Saturday.—Good supplies. A fair demand. Small wintering heifers, £7 10s to £8 10s; better descriptions, to £10 10s; stall-fed cattle, to £14 10s; stripping cows, £8 10s to £11 10s; polled bullocks, £7 10s to £12 10s each.

Chester, Thursday.—Smaller supply of stock and fewer buyers. Business generally was quieter, though most of the lots were cleared before the close. Prices ruled about the same as last week. Quotations:—Milch cows, £16 to £22; barren cattle, £10 to £13; heifers, £8 to £14; stirks, £6 to £9.

Chichester, Wednesday.—There was a fair attendance of buyers, and both fat and store sheep met a steady selling trade at about late rates Fat cattle of nice quality and handy size were in firm demand, but heavy beasts and rough cows met a dragging sale. Good fresh-calved cows and heifers were keenly competed for, and realised fully as good prices as at the last sale. There was only a small entry of store cattle, which changed hands without quotable alteration in prices. There was a good entry of fat pigs and a better trade. Store pigs met rather a better trade. Quotations: Prime Devon beasts, 4s 4d to 5s 4d per stone; prime Shorthorn ditto, 4s 3d to 4s 8d; prime Southdown tegs, 6s 6d to 7s; prime West Country ditto, 6s to 6s 6d; fat ewes, 5s to 5s 4d; fat calves, 5s to 5s 6d; fat pigs, 3s 6d to 4s 6d; sucking calves, 15s to 30s per head; store pigs, 8s to 20s per head.

Derby, Tuesday.—A good supply of fat beasts, but many of them were of inferior quality, and did not sell readily. A good demand for all choice animals. Beasts 6d to 7d; sheep, 8d to 10d; calves, 8d.

Doncaster, Saturday.—There was only a small supply of cattle, but sufficient for all needs. Milch beasts were cheaper, and stores sold slowly. Milch beasts, £17 to £22; bullocks, £12 to £17; heifers £11 10s to £15; drapes and stirks, £10 to £14; young stores, £7 to £10 each. Sheep scarce, but not many inquiries; hoggs, 42s to 48s each.

Dorchester, Saturday —Very limited supplies were on offer of to-day's cattle, both at Messrs. Duke's sale and also at Messrs. Symonds and Sampson's, and largely consisted of stores, purveyors having laid in their stocks at earlier markets, and bought scarcely anything to-day. The beef consisted of a few very plain animals, mostly bulls. Milch beasts formed the chief attraction to buyers, the best of these selling freely from £16 to £21 10s each, and seconds from £15 10s down to £12. Barreners also sold steadily, the best making up to £28 per pair, ranging down to £16. Other things practically unchanged from previous markets. All the low-lying lands around the Dorchester district are terribly flooded, almost more so than for a similar period during the last twenty years.

Dublin, Thursday.—Numbers on offer considerably reduced, but supplies quite sufficient for requirements. Demand slow. Finished beasts did not realise last week's quotations; secondary and inferior sorts difficult to exchange at lower prices, and a clearance not effected. Choice medium and light weight sheep in fair request at last week's figures for home use. Ewes, shipping hoggs, and heavy wethers a dull trade at prices favouring buyers. Cattle—Live weight (best), 31s to 33s per cwt; secondary and inferior sorts, 26s to 30s per cwt. Mutton (dead weight), 6½d to 7½d per lb, fancy Mountain wethers touching 7¾d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday. — Sheep larger supply; cattle considerably down in numbers. Cattle met fair trade at last week's prices; black polled bullocks to £15 10s, and coloured polled bullocks to £14 15s. Sheep were generally a slow demand; half-bred hoggs made to 38s; grey-faced hoggets to 34s; Cheviot Dinmonts to 35s Best Shorthorn cows realised £23 10s, and Irish cows £21 10s.

Exeter, Friday.—Scarcely any fat animals on offer; prices lower. No quotation for cattle, but fat ewes made 6½d, and calves 7d.

Glasgow, Wednesday.—Good show of cattle. Prime classes met good inqury at satisfactory prices; secondary and inferior descriptions in moderate request only. Top, 64s to 66s; secondary, 58s to 61s per cwt. Large numbers of sheep penned; prime young sheep in demand; wethers also sold dear; ewes slow to cash; prices favouring buyers. Best mutton, 9¼d to 9¾d per lb; secondary, 8½d to 9d per lb

Hereford, Wednesday.—The supply of beef was much in excess of the demand, although there was no falling off in the trade. Best quality heifer and bullock beef made from 6d to 6½d. Cow beef was in very little demand. Calves were very few, and good calves sold a bit dearer. Veal made throughout 7d. A short supply of sheep, with trade firm; young mutton made 8½d, and in some instances nice quality realised 9d. Fat lambs were scarce and sold dear. Store lambs were few, and were eagerly sought after. There was a very large supply of porks and bacons, but trade remained unaltered. Porks made from 5½d to 6d, and bacons from 4½d to 5d. Store cattle supply small, and trade dull.

Leicester, Saturday.—Fair supplies of home-bred stock. Trade ruled irregular. Choice milch cows, £22 to £24; good lots, £18 to £20; secondary, £15 to £17; calves, 20s to 38s; Shorthorn bullocks, £11 10s to £14; Welsh cattle, £10 to £12 10s each. Sheep sold freely lamb hoggs making 27s 6d to 38s each.

Lincoln, Friday.—A small show of horned stock and a slow demand. Young beasts £9 to £12; milch cows, £17 to £23. Hogg sheep 36s each.

Lynn, Tuesday.—Fat beasts in very small supply, and trade very slow. A fair supply of store cattle for the time of the year, and trade slow, from £6 10s to £12 each. No fat or store sheep on offer. A few store lambs realised up to 42s each.

Manchester, Friday.—Beef: Firsts, 5¾d; seconds, 4¾d to 5d; thirds, 3½d to 4d. Mutton: Firsts, Cheviots, Scotch, 8½d; others, 8d; seconds, 7d to 7½d; thirds, 6d to 6½d. Veal: Firsts, 7¾d; seconds. 6¾d to 7¼d; thirds, 5¾d to 6¼d. Bacon Pigs: Firsts, 5½d; seconds, 4¾d to 4¾d; thirds, 3¾d to 3¾d. Porket pigs: Firsts, 6¼d; seconds, 6d to 6¼d; thirds, 5¼d to 5¾d.

Newcastle, Tuesday.—A Christmas show of fat stock, and a large attendance of buyers. Trade was steady, and prices up from 3d to 6d per stone. The old style of fat cattle were absent. Quotations:—Prime heifers, 7s 9d to 8s; second class, 7s 6d to 7s 9d; prime steers, 7s 9d to 8s; second class, 7s 3d to 7s 6d; coarse and inferior, 6s 3d to 6s 9d per stone, sinking the offal. Sheep were in larger supply, and trade was firm, but the only prices to show an improvement were for seconds, which went up ½d per lb. Quotations:—Choice young sheep, 8½d to 8¾d; strong heavy, 8d to 8½d; choice hoggs, 8¾d to 9d; second class, 8½d to 8¾d; ewes, 6d to 6½d; rams, 5d to 5½d per lb. Calves were a very small supply for a Christmas market, and trade was fair for veal at 5d to 8d per lb.

Newport, Wednesday.—Large supply of cattle, sheep, and lambs. Good attendance and a brisk demand all round. Quotations were:—Best beef, 6½d per lb; secondary, 6d; cows, 5d to 5½d; best wether mutton, 8d to 8½d; ewes, 7d to 7½d; lambs, 9d to 9½d; calves, 6d to 7d; porker pigs, 10s 3d to 10s 9d per score.

Norwich, Saturday.—Only a few fat cattle were shown, and these were chiefly secondary sorts and fat cows. Trade was not very good, prices ranging from 7s to 7s 6d per 14 lb stone; cows made 6s 9d. The small supply of sheep met an unchanged trade at 8½d to 9d per lb for the best, and 6d for rough mutton. Not many fat pigs, but quite enough for the demand. Trade unchanged. Baconers, from 5s 6d to 5s 9d, and porkers 5s to 6s 8d per stone. A much smaller show of store cattle, but good for the time of year; quality was rather inferior. Trade was slow and dull. Two and three-year-olds, from £11 2s 6d to £15; second quality yearlings, £8 5s; others, £4 15s to £6. Fairly good demand for rearing calves at 20s to 50s. A small show of store sheep met a ready sale at 43s 6d to 51s, and store pigs were a rather better trade at 12s to 22s.

Nottingham, Saturday.—Smaller show of stock. In-calf cows made £18 to £21, and in-calf heifers £13 to £17 10s. Calves, of which was a smaller show, made 30s to 42s each. No sheep were shown. Numbers:—144 beasts and 43 calves.

Preston, Wednesday.—Smaller supplies of cattle, but sheep were plentiful. Buyers were present in good numbers, and cattle met with a ready sale at prices showing a slight advance upon a week ago. The sheep trade was slow, with prices a shade easier. Quotations:—Prime beef, 6¾d; ditto Irish, 6d to 6½d; choice young cows and bulls, 6d; heavy and inferior, 5d to 5½d; prime hoggs and lambs, 8¾d; heavy and inferior sheep, 8¼d; choice ewes, 6¾d; ditto inferior, 6d; tups, 5d to 6d; calves, 8d per lb.

Retford, Saturday.—Fair supply of store stock, and a steady trade. Milch cows, £15 to £20; two-year-old steers and heifers, £10 to £12; yearlings, £6 to £8; calves, 35s to 45s each.

Romford, Wednesday.—The few fat beasts on offer met a slow demand. Best beasts, 4s 4d to 4s 6d; middlings, 4s to 4s 2d per stone. Calves in short supply and dear, at 5s 8d to 6s per stone. Sheep in short supply, trade slower; best small sheep, 5s 8d to 6s; larger sheep, 5s 4d to 5s 6d per stone. Ewes also in small supply, trade about the same, at 4s 2d to 4s 4d per stone. No store beasts on offer. Milch cows scarce, trade better. Pigs in average supply, trade about the same. Large hogs, 3s 2d to 3s 4d; small porkers, 4s to 4s 2d per stone.

Sheffield, Tuesday.—Only a limited number of milch beasts on offer, which met with a fairly good demand, the best lots making from £19 to £22; secondary lots, £15 to £18. No sheep.

Shrewsbury, Tuesday.—Better supply and trade good. Milking cows reached up to £21 10s. Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d to 9½d per lb; veal, 7d to 8d per lb; pork pigs, 9s 6d to 10s per score; bacons, 8s 6d to to 9s per score.

Stockton, Wednesday.—Best cattle were few in number, and the Christmas cattle were from 7s 9d to 8s per stone, trade being slow. Rougher kinds made 6s to 7s. Young sheep sold at 8½d to 9d per lb; ewes, 7d; and tups, 6d. There was a fair trade for small porkers at prices up to 7s 9d per stone, whilst mediums made 7s, and sows 6s.

Thame, Tuesday.—There was a very small supply of stock, which has always been the case after the Great Christmas Market, but what came to hand realised very satisfactory prices. We would remind our readers that there will be no market here on Tuesday next, but the regular one on Tuesday, December 31, for which a number of entries have already been received. Messrs. Bond and Burrows' sale comprised 15 fat beasts, 37 fat sheep, 127 fat and store pigs, 75 fat and weaning calves. Fat heifers made from £16 to £18; fat oxen, £17 to £21 2s 6d; tegs to 58s 6d; and ewes to 54s 6d; fat calves, £3 5s to £5 5s; weaning cow calves, 30s to 61s; bull calves, 15s to 43s; bacon hoggs, £3 10s to £4 15s; porkets, 26s to 38s; store pigs, 10s to 22s.

Truro, Wednesday.—Attendance very good; business fairly brisk. Fat bullocks, 54s to 58s per cwt; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves. 20s to 40s; wethers, 7d to 8d per lb; ewes, 5½d to 6d; pigs, 6s 6d to 35s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 7d to 8d; veal, 6d to 8d; pork, 6d to 8d; pork carcases, 4½d to 5d.

Wolverhampton, Wednesday.—Supply fair in open market. Trade moderate. Beef 5d to 6½d per lb; mutton, 6½d to 9d per lb; veal, 6½d 8d per lb. No market will be held next week.

Yeovil, Friday.—Heifers with calves made from £17 10s to £21; secondary, £14 to £15 10s; cows with calves, £15 10s to £20 15s; secondary, £11 5s to £14 15s; store heifers, £6 15s to £9 10s; yearling heifers, £5 10s to £8; horn wethers, 48s to 54s; horn ewes, 43s 6d to 50s; horn lambs, 33s to 38s 6d; Down wethers, 45s to 52s; Down ewes, 40s to 47s 6d; Down lambs, 34s to 39s; cross-bred lambs, 34s to 38s.

York, Thursday.—Trade for cattle was very slow and dragging. Choice lots of cattle got sold, but prices slighly in favour of buyers. Some of the best three year-olds made up to £16, two-year-olds £10 to £12, and a few stirks about £7 10s. each. A small show of calving and milch cows, but trade was decidedly worse. A few exceptional lots made up to £22, the general run being between £16 and £18 10s. Two or three special lots of twice-crossed hoggs made up to 44s, but the greater number sold at 32s to 38s; Mashams sold up to 25s, but trade ruled very slow. Best shearlings realised 48s; others, 40s to 45s each.

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 10s to £14; half-bred hoggs, £11 10s to £12; ditto wethers, £11 to £11 10s; Kent fleeces, £11 to £11 10s; South Down ewes and wethers, £13 to £13 10s; Leicester ewes and wethers, £11 to £11 5s. Colonial—per lb.—Vic., scoured super., 2s to 2s 2d; scoured, good, 1s 10d to 2s; scoured, average, 1s 8d to 1s 9d; greasy, average to fair, 1s 1½d to 1s 2½d; N.S.W., scoured, average, 1s 8d to 1s 9d; greasy, average, 1s to 1s 1d; S. Aus., greasy, average, 10d to 11d; N.Z., scoured, average, 1s 9d to 1s 10d; greasy, average, 11d

to 1s ; Cape, scoured, super., 1s 9d to 1s 10d; fleece, average, 9d to 10d ; greasy, average, 8d to 8½d ; Natal, scoured, 1s 5d to 1s 6d ; greasy average, 8d to 8½d. Crossbreds — grs.—Vic., good to super., 1s 2d to 1s 3d ; New Zealand fine, 1s 2d to 1s 3d ; medium, 11d to 1s ; coarse, 9d to 10d.

Canterbury, Saturday.—Kent fleeces nominally at 10½d, with lamb wool at 7d.

Halifax, Saturday.—Purchases of wool are restricted within the smallest possible limits, and the general tendency is still slightly downward.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Supplies plentiful and trade brisk. Quotations for English produce: — Grapes. 9d to 5s ; apples, 3s to 10s per half bushel ; cranberries, 9s to 10s per case ; tomatoes, 5s to 6s per 12 lb ; chestnuts (Redan), 7s to 10s ; cobnuts, 4s to 5s per 12 lb ; endive, 1s. to 2s. per dozen ; sprue, 8s to 10s ; horseradish, 10s to 15s per dozen bundles ; celery, 6s to 12s 6d per dozen rolls ; spinach, 2s to 2s 6d ; sprouts, 2s to 2s 6d ; beetroots, 1s 6d to 2s per bushel ; onions, 4s to 5s per cwt ; shallots 2s per 12 lb ; greens, 1s 3d to 1s 6d per bag ; cauliflowers, 6s to 8s per tally ; seakale, 12s to 15s per dozen punnets ; mushrooms, 1s to 1s 3d per lb ; leeks, 1s 6d to 2s ; turnips, 1s 6d to 2s ; parsley, 1s 6d to 2s per dozen bunches ; potatoes, 75s to 100s per ton.

CORN STATISTICS

Imports of Foreign and Colonial Corn.

Statement of the quantities of Foreign and Colonial Corn Imported into the United Kingdom in the week ended Saturday, Dec. 14, 1907 :—

Wheat	1,546,900 cwts.
Wheat-flour	269.100 ,,
Barley	675,500 ,,
Oats	161,900 ,,
Maize	1,073,000 ,,

And in the corresponding weeks of previous years, viz. :—

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Dec. 17, 1907 :—

| | | | | | | | | |

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

There is plenty of land for January to plough, if ploughing in January be deemed advisable, or if the ground be soft enough to allow of it. Ordinarily we must expect the usual hard and more or less frozen soil of mid-winter to prohibit ploughing on this side of Candlemas, in which case February will start with arrears to work off. The growing wheat has benefited by the sharper weather since Christmas Day, and farmere are not, on the whole, disposed to grumble about the season. Threshings are always small in the last fortnight of the year, but what grain has reached the Exchange has been in improved condition. The promise of the growing wheat in three Latin countries is very satisfactory, but it is doubted if in France and Italy the area sown is quite as large as last season. In France the wet October and November were very awkward for field work, while Italy deplores a continuous emigration from the rural districts and increasingly large areas of uncultivated arable.

In Central Europe the weather is the reverse of conditions west of the Rhine, the rains being very heavy from the Baltic to the Adriatic, and the mild Christmas being universally discussed. The Danube has thawed and is now open, and the frost which prevailed at Kustendje and other Euxine ports has given place to springlike conditions. In Russia the temperature is about zero as a night minimum, and say 12 degrees of frost at mid-day. This is cold according to our notions, but is not excessive in Russia, and keeps the snow hard, thereby affording the autumn-sown grain the needed protection.

The final report on the American crops gives the following yields per acre for 1907 :—

Wheat ...	14	bushels, or	1	bushel over average.
Barley ...	26·8	,,	·8	,, ,, ,,
Oats	23·7	,,	6·3	,, under ,,
Maize ...	26·0	,,	2	,, over ,,
Rye	16·4	,,	4	,, ,, ,,

These figures exceed expectation to some degree, but are modified for two crops by the following interesting and remarkable new detail :—

Wheat, average weight per qr. ... 464 lb.
Oats, ,, ,, ,, ... 236 lb.

If these figures are confirmed, and we see no reason to doubt them, then bad quality is probably indicated, for such wonderfully light weight has, so far as we know, never been associated with a fair level of quality. As nobody in England will buy wheat under the lowest recognised weight, which is 480 lb., American export figures will, so far as imports into England go, require to be multiplied by 464 but divided by 480 as the published figures, while oats would require to be multiplied by 236 but divided by 304. America, however, has not shipped any 1907 crop oats, and with a yield 6·3 bushels below the average is not very likely to do so.

Subject to the above important deductions, the United States crops are finally returned as follows :—

Wheat	634,087,000 bushels
Barley	153,317,000 ,,
Oats	754,443,000 ,,
Maize	2,592,000,000 ,,
Rye	31,566,000 ,,

As compared with last year, wheat, maize, oats, barley, and rye all show a decline in the total yield. Areas under cultivation show an increase for barley, oats, and maize, but a diminution for wheat and rye.

The wheat gradient last week was not steep, operators mostly taking the prices previously prevailing for granted, pending New Year developments :—

Mark Lane	35s. 8d.	per qr.
Doncaster	34s. 2d.	,,
Range	1s. 6d.	per qr.

The gradient for barley was more than this, but still quite moderate :—

Canterbury	29s. 7d.	per qr.
Peterborough	25s. 9d.	,,
Range	3s. 10d.	per qr.

Oats have as a rule fetched over 18s. per qr., but there are few exceptions :—

Mark Lane	19s. 4d.	per qr.
Lincoln	17s. 5d.	,,
Range	1s. 11d.	per qr.

The sales of British wheat at the statute markets last week were below the average even for the Christmas period of small supplies. Since harvest the total sales have been rather less than in the like period of last cereal year :—

This season... 1,113,000 qr. at 33s. 11d. per qr.
Last ,, ... 1,145,000 ,, 26s. 2d. ,,

Barley sales, unlike those of wheat, have been large since December came in, but the very small sales of October have caused the total sales since harvest to be a smaller total than in the corresponding period of last season :—

This season .... 2,397,000 qr. at 26s. 5d. per qr.
Last ,, ... 2,488,000 ,, 24s. 6d. ,,

Sales of oats have been as follows since September 1 :—

This season ... 708,000 qr. at 18s. 3d. per qr.
Last ,, ... 555,000 ,, 16s. 9d. ,,

The imports of the United Kingdom last week were below the average, but there was the holiday interruption to consider, and though a great effort is made to get into harbour just before Christmas the getting the grain unloaded is another story. The actual quantities were 308,000 qr. of wheat, 114,000 sacks of flour, 168,000 qr. of maize, 87,000 qr. of barley, 116,000 qr. of oats, and 29,000 qr. of linseed. The receipts since harvest from abroad thus compare :—

	1907.	1906.
Wheat	6,703,000 qr.	6,560,000 qr.
Flour	1,637,000 ,,	1,666,000 ,,
Breadstuffs	8,340,000 ,,	8,226,000 ,,

	1907.	1906.
Maize	4,005,000 ,,	3,779,000 qr.
Barley	2,820,000 ,,	2,909,000 ,,
Oats	1,170,000 ,,	1,497,000 ,,

The supply of wheat on passage is as follows :—

Californian	925,000 qr.
American	460,000 ,,
Russian	90,000 ,,
Indian	190,000 ,,
Argentine	50,000 ,,
Australasian	290,000 ,,
Various	30,000 ,,
Total	2,035,000 ,,
A week ago	1,809,000 ,,

The increase is noticeable, but the present total is still 465,000 qr. below the mean. Of flour, 318,000 sacks are on passage, or 68,000 sacks above the average.

Of maize only 390,000 qr. are on passage, of barley 460,000 qr., and of oats 150,000 qr. With respect to oilseeds, expectations show a notable diminution :—

	Dec. 27.	Dec. 20.
Linseed ..... qr.	55,000	67,000
Rapeseed ..... ,,	5,000	14,000
Cottonseed ..... tons	37,000	43,000

The market for oilseeds at the close of last week was inert, but the influence of these statistics is likely to exert itself as soon as we are in 1908. The Indian crop news is the least satisfactory for a good many successive Decembers.

American shipments last week were 613,000 qr. of wheat, 129,000 sacks of flour, and 111,000 qr. of maize. No barley or oats were shipped, but in their place 10,000 qr. of rye and 45,000 qr. of linseed were exported. The wheat shipments exceeded any previous record for four years, and were thus divided :—

Atlantic ports to U.K.	247,000 qr.
,, ,, Continent...	183,000 ,,
Pacific ports to U.K.	150,000 ,,
,, ,, Continent.....	33,000 ,,
Total	613,000 ,,

Argentina last week shipped 10,000 qr. of wheat, 127,000 qr. of maize, and 9,000 qr. of linseed.

Russia shipped 50,000 qr. of wheat, 56 000 qr. of barley, 60,000 qr. of oats, and 7,000 qr. of maize, while Roumania sent off 67,000 qr. of wheat, 68,000 qr. of barley, 2,000 qr. of oats, and 108,000 qr. of maize. The Roumanian figures include Bulgaria and European Turkey north of the Dardanelles, but do not embrace Salonica and ports on the Mediterranean.

India shipped 11,000 qr. of linseed last week, and Australia 15,000 qr. of wheat. India shipped no wheat last week, and Australia shipped no flour. Small shipments of barley, beans, and canaryseed were reported from Morocco.

THE BALTIC.

The sales of wheat cargoes have been few, as the holiday feeling is still on the market. Nevertheless, the following transactions have been recorded :—Best Russian Winter, 43s. per 4921b, ; Odessa Ghurka, 41s. per 492 1b. ; Hard Taganrog, 40s. per 492 lb. ; Blue Stem, 40s. per 500 lb ; Red Walla, 39s. per 500 lb. ; Victoria, 40s. 3d. per 480 lb. ; and Red Karachi, 39s. 6d. per 492 lb. The latter shows recovery of value. American wheat is freely offered, but buyers do not agree with sellers' views of value, and trade is therefore hardly to be reported. America is offering to ship feeding wheat for poultry at 33s. 9d. per 480 lb., but there are few bids.

Maize cargoes are inclined to favour sellers where delivery is likely to be possible on this side of January 15 or thereabouts. A cargo of Argentine due in a fortnight sold on Saturday for 25s. 9d. per 480 lb., and one of Odessa, also due in about that time, fetched 25s. 9d. also. The Argentine firms are already making offers to ship the new crop to be secured in April, their opening price being 23s. per 480 lb. for June shipment.

Other cargo sales since Christmas include Smyrna beans, at 30s. 6d. per 480 lb. ; Odessa barley, at 23s. 3d. per 400 lb. ; Calcutta linseed, at 45s. per 410 lb. ; and Egyptian cottonseed, at £6 12s. 6d. per ton.

Cargo arrivals at ports of call up to the 27th included 268 wheat, 12 barley, 29 maize, 17 linseed ; also one cargo of beans. These are the figures from January 1 to date.

LONDON HAY TRADE.

Saturday.—With an almost entire stoppage of trade owing to the Christmas holidays, the business doing has been of a most limited character ; the arrivals have been large, and owing to the very poor demand, stocks have accumulated to a heavy extent, while prices again show a lower tendency. It has been next to impossible to get trucks clear off rail ; and salesmen, to avoid demurrage charges, have only been too eager to accept values even much under current market quotations All classes and kinds of stuffs are a bad trade, and although prime and well got qualities are difficult to get hold of, the large bulk of inferior and badly got stuffs pull down the value of the better sorts and make business all round of a very difficult and disheartening character. Straw has been coming along in good supply, but here the demand of the last few weeks shows signs of slackening off, and although prices are quotably no lower the general feeling is more of a weakening nature.

Prices ruling are about as follows :—English : Best hays, 65s to 70s per ton ; good hays, 60s to 62s 6d per ton ; plain hays, 55s to 57s 6d per ton ; best clovers, 77s 6d to 80s per ton ; good clovers, 75s per ton ; inferior clovers, 67s 6d to 70s per ton ; best mixtures, 77s 6d per ton ; good mixtures, 72s 6d. to 75s per ton ; plain mixtures, 62s 6d to 70s per ton ; seconds hays, clovers, and mixtures, 45s to 55s per ton ; wheat straw, 25s to 27s per load ; barley straw, 25s per load ; oat straw, 25s per load. All ex rail London Foreign : 1st quality Dutch hay, 57s 6d to 60s per ton ; 2nd quality Dutch hay, 50s per ton ; French clover, 75s per ton. These prices are by the barge load delivered alongside a London Thames wharf.

FRUIT AND VEGETABLES.

Covent Garden, Saturday. — Fairly good supplies on offer, and demand steady. Quotations for English produce :—Apples 3s to 10s per half bushel ; cranberries, 10s to 11s per case ; grapes, 10d to 5s ; chestnuts (Redon), 7s 6d to 10s ; walnuts (Grenoble), 5s 6d to 8s per bag ; tomatoes, 4s 6d to 6s per 12 lb ; asparagus, 6s to 7s ; endive, 1s 3d to 2s per dozen ; beet-roots, 1s 6d to 2s per bushel ; horseradish, 10s to 15s per dozen bundles ; celery, 6s to 12s 6d per dozen rolls ; seakale, 12s to 15s per dozen punnets ; parsnips, 2s to 2s 6d per bag ; turnips, 2s to 2s 6d ; leeks, 1s 6d to 2s ; parsley, 1s 6d to 2s per dozen bunches ; shallots 2s per 12 lb ; sprouts, 2s to 2s 6d ; spinach, 2s to 2s 6d per bushel ; potatoes, 75s to 101s per ton.

Seven Years Grain Averages.

(OFFICIAL.)

Wheat	28s. 10d. per 480 lb.
Barley	25s. 4d. per 400 lb.
Oats	18s. 11d. per 312 lb.

CORN MARKETS.

COUNTRY.

Appleby, Saturday.—Good inquiries for dry samples, which were scarce. White oats (horse corn), 21s to 25s per 26 stones.

Berwick, Saturday.—Smaller attendance, with moderate supplies of grain. Barley prices practically unchanged. Oats were a little easier to buy, except for finest quality. Barley, 21s to 33s; oats, 16s to 28s per qr.

Canterbury, Saturday.—The level of value appears quite unchanged upon the corn market, though naturally the bulk of business in progress has been much reduced by the holidays. The choicest wheats are still held for 37s 6d per 63 lb; samples have been selling at 36s per qr, delivered. Good average malting barleys change hands at 30s, and the range is from 28s 6d to 32s; oats 19s to 21s; grey peas, 30s to 32s; mazagan beans, 28s to 29s per qr.

Chester, Saturday.—The market was of a holiday character, and the values of English grain remain as last quoted. Indian corn, with smaller shipments, has advanced 3d per sack. Quotations: Wheat, white and red, 5s 2d to 5s 6d per 75 lb; grinding barley, new, 3s 10d to 4s per 64 lb; Indian corn, old, 14s 6d to 14s 9d per 240 lb; round corn, old, 14s to 15s 6d per 240 lb; oats, new, 2s 7d to 2s 9d; old, 3s 4d to 3s 8d per 46 lb.

Colchester, Saturday.—Small supply of all grain at unchanged prices.—Colin Taylor, King, and Co, Ltd.

Derby, Friday. — There was little business done. White wheat was quite as dear as last week; other articles firm and unchanged. Quotations:—Wheat, 36s to 37s; red, 35s to 36s; malting barley, 29s to 32s; grinding, 25s to 27s; beans, 35s to 37s; oats, old 24s to 26s; new oats, 21s to 22s.

Devizes, Tuesday.—There was comparatively little business transacted, and prices remain firm for all descriptions of corn. Best old wheat, 20s to 21s; best new wheat, 18s to 19s; secondary, 16s to 18s; malting barley, 29s to 33s; grinding barley, 26s to 28s; old oats, 22s to 24s; winter oats, 18s to 19s; white Garton oats (330 lb), 18s to 19s; black Tartar oats (320 lb), 17s 6d to 18s 6d; beans, 17s to 18s; fine flour, 31s to 32s; extra fine, 33s to 38s.

Doncaster, Saturday. — Holiday market. There was a scarcity of English wheat, but inquiries were few and trade slow. Prices firm, and up to 14s per load. Foreign wheat was also firm. Only a moderate supply of barley and oats, but sufficient for all needs, and no change. Maize was 3d per qr dearer.

Glasgow, Friday.—Holiday feeling pervaded the market, consequently there was little or no business passing to test values, which remain steady at about late rates.

Gloucester, Saturday.—The market was of a holiday character, and not much change in prices. English wheat was in fair supply, and prices were maintained. For foreign wheat there was a moderate inquiry, and prices were 3d to 6d lower. Feeding stuffs showed an advance of 3d. Plate maize, 25s 9d; flat, 26s 9d; Bessarabian, 26s; Barley, 24s 6d to 24s 9d per qr. Oats unchanged.

Grantham, Saturday.—Very small attendance, the market being a purely holiday one. There were a moderate number of inquiries in each department, but no changes in the quotations were noted from those of last week.

Leeds, Tuesday.—With better weather for the Argentine harvest, the trade has lost some of the improvement of the past week, in addition to which a holiday feeling has supervened. Shipments are moderate, and holders of both spot and forward wheats ask 6d to 1s advance on last Tuesdays rates, trading, however, is restricted. Maize, 3d to 6d dearer. Beans firm. Oats steady.—Dunns and Co.

Leeds, Friday.—Scarcely any business passing. English wheat was quoted at 12s to 14s per load; while foreign remained steady at late rates.

Leicester, Saturday. — Fair attendance of buyers and dealers, with small supplies of home-grown wheats in variable condition. Trade ruled sluggish; out of condition samples were neglected. Red wheats, 33s to 38s; white wheats, 36s to 38s per 36 stone. Malting barley of bright quality steady at 28s to 31s per 32 stone. Fine oats in fair request at 19s to 22s per 24 stones.

Newcastle-on-Tyne, Saturday.—A very quiet market. Wheat holders are firm at fully late rates. Quotations of maize must be quoted at last Saturday's prices. Oats remain steady, and fine qualities slightly in the seller's favour. Beans and peas unchanged. Barley slow sale at unchanged prices.—Joseph Pollard and Co.

Northampton, Saturday — There was no improvement in attendance, it quite came up to expectations, following directly as it did upon the holidays. Business done was of very small dimensions, and not enough to test prices, which remain as last week. Wheat, 35s to 36s; barley, 25s to 30s; white oats, 18s to 21s; black oats, 18s to 20s 6d.; beans, 30s to 32s; peas, 31s 6d to 35s 6d.

Norwich, Saturday.—A very small supply. Wheat trade firm, at last week's prices, 37s 6d to 38s. Feeding stuffs—Holiday market; trade slow; very small supply. Barley—Prices unaltered.

Nottingham, Saturday.—Holiday market. Where sales are made last week's prices are taken for all grain.—Robt. Hubble.

Peterborough, Saturday.—We have had quite a small holiday market, and but little corn offering. Wheat firm at late rates. Spring corn quiet at unaltered prices. Wheat, 36s to 36s 6d; oats, 18s 6d to 19s 6d; barley, 27s to 34s.—Thomas Hill and Son.

Preston, Saturday.—A moderate attendance, with practically nothing offering from farmers. Prices of local-grown produce remain as last week. Quotations:—Wheat, white, new, per windle of 220 lb, 15s 6d to 16s; ditto red, 14s 6d to 15s; oats, old, per bushel, 3s 8d to 3s 9d; ditto, new, 3s 2d to 3s 3d; beans, per windle of 220 lb, 17s to 17s 6d.

Reading, Saturday. — The attendance was scarcely an average one, and very little improvement was shown on the business of the previous Saturday. The following represent the prices of sales and parcels held:—Wheat, 34s to 38s; malting barley, 27s to 35s; new oats, 16s 6d to 21s 6d; old ditto, 19s to 23s; beans, 32s to 36s; peas, 29s to 31s.; flour, 26s to 29s; straw, 28s to 34s per load.

Retford, Saturday.—Thin attendance, and small supply of all kinds of grain. Rather a firmer trade for wheat, which was worth 36s to 35s per qr. Malting barley sold well, especially the best samples, which made 30s to 32s; secondary qualities, 28s; and grinding barley, 27s per qr; maize, 29s per qr delivered here; black oats, 18s; white ditto, 19s; and old oats, 26s; new English beans, 30s; and old ditto, 40s per qr.

Sheffield, Tuesday.—Very little business passing. Quotations:—Wheat, white, new, 38s to 38s 6d; ditto red, new, 38s to 38s 6d per 504 lb; oats, new, 20s 6d to 21s per 336 lb; peas, grinding, 36s to 36s 6d; ditto, blue, new, 70s to 90s per 504 lb; beans, English, 35s 6d to 36s per 532 lb; barley, grinding, 28s to 30s; ditto, malting, 28s to 32s per 448 lb; Indian corn, small, 27s 6d to 28s 6d; ditto Plate, 26s 6d to 26s 9d; ditto, flat, 29s to 29s 6d per 480 lb; bran, 110s; fine sharps, 140s; broad bran, 125s per ton.

Stockton, Tuesday.—There was no farmers' wheat showing. Foreign wheat steady and unchanged. Maize 3d dearer. Oats unchanged.

York, Saturday.—Not much wheat offering, but dry samples sold readily at last week's prices: Fine white, 36s 6d to 37s 6d; red and mixed, 35s 6d to 36s 6d per qr of 36 stones. Malting barley was without change; fine, 30s to 31s 6d; good, 28s 6d to 30s; and feeding barley, 26s to 27s per qr of 32 stones. Oats steady, and from 19s to 21s per qr of 24 stones. Old beans, 36s; rye, 29s to per qr of 36 stones.

FEEDING STUFFS.

Mark Lane, Monday. — Linseed Cake.—There is little new business to report, the market having been closed during the past week. Nevertheless country orders show a slight improvement, and values are, if anything, inclined to harden. Russian remain cheaply quoted. East India seed pures may be bought to come along. Exceptionally fine quality Plate make last week's full prices. London continue in moderate request. Cotton Cakes.—The trade is disappointing, and although best Egyptian are obtainable at a relatively low figure, there is only a poor demand, while English sell slowly. Decorticated: London made pures move off freely, with American brands quiet. Rape Cakes. — Dull. East Indian unchanged. Ravison none. Maize Germ Meal.—White African meal is still available, but English makes are more reasonably offered. Maize gluten meal sells steadily. Rice Meal.—Landed lots of Rangoon are firmly held, while for arrival quotations are irregular. Locust beans are attractively offered. Dried brewers' grains remain scarce and dear.

—Pinnock Bros., 30, Mark Lane, E.C.

Hull, Tuesday.—Linseed has been almost neglected. River Plate spot just arrived sold at 43s, December-January, 39s; January-February, 38s 9d sellers. Riga: Prompt shipment offers at 40s 6d. Cottonseed.—The market has shown little change during the past week and only a moderate business done at £6 8s 9d to £6 10s spot and afloat, £6 12s 6d to £6 13s 9d January, and £6 17s 6d February-March, which are to-day's values. Bombay on passage made £5 14s, and December-January done at £5 13s 9d. Oils.—The market is quiet. Linseed oil: 21s 7½d spot, 20s 6d January-April, 19s 6d May-August. Cottonseed oil: 19s 10½d spot, 20s 6d January-April. Crude oil: 18s 10½d spot. Rape: Brown Jamba, 31s spot. Oilseed cakes.—Linseed: Quiet, but steady. Cotton: Unchanged.—Keighley, Maxsted and Co.

Liverpool, Friday. — Nitrate of soda is unchanged in value and quiet in demand as usual at this date, and autumn fertilisers are only in moderate request. As usual at this holiday period, feeding stuffs are in slow demand, but, notwithstanding this, there is some inquiry, and should the present cold weather continue it will stimulate the consumption, which for some time past has been very limited in extent. English linseed cakes are firm, present values of cake and oil, in comparison with the price paid for seed, are reported to be unremunerative to the crushers, and Americans are dearer.

—H. Jones Langar and Co.

HOPS.

Canterbury, Saturday.—Planters much discouraged by low rates offering for hops, and curtailment of acreage is proceeding on an exceptional scale. The low level of values is firmly maintained.

CORN STATISTICS

Imports of Foreign and Colonial Corn.

Statement of the quantities of Foreign and Colonial Corn Imported into the United Kingdom in the week ended Saturday, Dec. 28, 1907 :—

Wheat	1,135,700 cwts.
Wheat-flour	265,300 ,,
Barley	377,200 ,,
Oats	225,200 ,,
Maize	523,400 ,,

And in the corresponding weeks of previous years, viz. :—

TO-DAY'S MARKETS.

THE CORN TRADE.

MARK LANE, MONDAY, 3 P.M.

There was not a large trade doing this morning, neither was there a large attendance, but the holders of English, Indian, and Australian wheat were very firm, and while American and Argentine were not so strong no price change was made. Maize was 6d. dearer from before Christmas, with a sound retail inquiry for all those of the leading sorts. The South African samples about hold their own with the better-known descriptions. Small white grain is preferred.

Barley was 6d. dearer for Persian, and a very steady trade both for English brewing and for Russian feeding descriptions. For oats former prices were not always to be made, but the sorts which showed some reduction were the light 304 lb. kinds which Russia and Argentina offer in keen competition with one another. Bucharest sold rather well, and beans, peas, and tares all experienced the freshening effect of the recent cold weather. The market for dari, dholl, and millet was strong, but canaryseed was offered at extremely reasonable prices.

CLOSE OF THE MARKET.

THE MARKET CLOSED FIRMLY, BUT POOR LIGHT WAS AGAINST BUSINESS.

THE FLOUR TRADE.

MARK LANE, MONDAY, 3 P.M

After the close of the market on Monday last the London millers reduced the credit and delivery price of flour by 6d per sack. This usage is peculiar but convenient. It does not interfere with transactions actually booked on the Monday before the market closes at 3.15 p.m, but it governs business from the next morning, and enables such operations to be put through by telephone from office to office, from bakery to mill.

The cash prices which we quote herewith are of course unaffected by these credit terms. For country flour to-day rather more money was made, and American sorts maintained the prices of the 23rd. Nothing was done in Hungarian or Australian as far as we could learn. The extraordinary price of wheat in Hungary, 44s. or thereabouts, makes it unlikely that cheaper Hungarian flour will be in sight with the new year. Flour made in London of strong red wheat by the Hungarian processes is obtainable in small quantity at 38s. to 39s. per sack, but our labourers are said to dislike the work, and the supply of such flour is always trivial. The flour itself is, of course, mainly a confectionery requirement. The prices of meal were unchanged to-day, but sales were more frequent than a week ago.

THE BALTIC.

MONDAY, 1 P.M.

STATE OF TRADE.

Although several leading operators do not return to town till Thursday, and demand is lethagic, the actual tone of cargo business is firmer from the close of last week.

BUSINESS DONE.

Wheat.—No. 3 Manitoba, 41s per 480 lb, February shipment; Australian, 39s 6d per 480 lb, prompt shipment; Argentine, 36s per 480 lb, February shipment; White Walla, 39s 6d per 500 lb, prompt shipment.

Maize.—American, 25s 6d per 480 lb, on passage; Roumanian, 26s 6d per 480 lb, on passage.

Barley.—Kustendje, 25s 3d per 400 lb, prompt shipment; Californian, 26s 6d. per 448 lb, prompt shipment.

Oats.—White Lisbon, 17s per 304 lb, prompt shipment; Black Lisbon, 16s 9d per 304 lb, prompt shipment; White Konigsberg, 18s per 320 lb, prompt shipment; South Russian, 16s 6d per 304 lb, prompt shipment.

Linseed.—Argentine, 38s 9d per 416 lb, January shipment; Riga, 40s 3d per 416 lb, January shipment; Libau, 40s per 416 lb, January shipment; Bombay, 44s 6d per 416 lb, February shipment.

Rapeseed.—Yellow Guzerat, 56s 6d per 416 lb, April shipment.

Cottonseed.—Egyptian, £6 11s 3d per ton, January shipment.

Sesame.—Indian, 61s per 384 lb, January shipment.

GRAIN AND FLOUR FACTORS REPORTS.

Flour.—The market keeps firm, but there is not much disposition to buy until after the holidays. Grain.—The slight improvement noted last week in prices of Indian corn and maize has not been maintained. Another arrival of beans enables buyers to meet their requirements on favourable terms. There is a poor sale for all kinds of oats, except fine Scotch. Barley full. Oilcake quiet. Mill Stuffs.—Bran and thirds steady. Spring wheat patents, 31s to 32s 6d per 280 lb; winter wheat patents, 30s 6d to 31s per 280 lb; American corn, 15s 3d to 15s 4½d per 280 lb; round corn, 14s 10½d to 15s per 280 lb; grinding beans 17s 10½d to 18s per 280 lb; broad bran, 115s per ton; medium bran, 107s 6d to 110s per ton; common thirds (sharps), 110s to 112s 6d per ton; fine thirds, 137s 6d to 140s per ton; American oilcake, 150s per ton.—McKINNON AND McDONALD (Glasgow).

Milling offal.—Colder weather make prices firmer.—JOHN BAWCOMB AND CO.

Wheat arrivals are small. Trade steady, prices unchanged. Flour dull at late prices. Maize 3d. dearer. Barley and oats unchanged.—COVENTRY, SHEPPARD, AND CO.

OIL SEEDS.

Mark Lane, December 30.—Prices will not be modified until about January 6, as the great operators are away. It is, however, fully anticipated that the very poor Indian prospects will induce a very firm opening of trade for 1908.

DAIRY PRODUCE.

London, Friday.—Butter.—The demand for Colonial butter from Australia and New Zealand continues good (shipments from Canada ceased two months ago), and prices remain firm. Shipments from Australia this week are 35,000 boxes in the *India* and 1,900 boxes in the *Star of Ireland*, so that Australian shipments are not increasing to the extent anticipated when the announcement of good rains were cabled. Arrivals from Australia this week total 24,678 boxes, and from New Zealand 26,242 boxes. The total imports of butter from all countries for the two weeks ending December 21 shows a deficit of 68,118 boxes, compared with the same period last year, of which shortage 61,066 belong to Colonial. The market for foreign butter remains strong, with a firmer tendency in prices. French butters are especially dear. Cheese.—The holidays have cast their influence over the market, and little business has been transacted. Prices remain unchanged.—W. WEDDEL AND CO.

TO-DAY'S MARKETS.

HAY AND STRAW.

Derby, Friday.—Clover, best old, 90s to 100s; new, 80s to 90s; hay, best old, 90s to 100s; new, 50s to 70s; seconds, 40s to 50s; straw, wheat, 60s to 70s; pressed, 50s to 60s; chopped straw, 55s to 65s; peat moss, 35s to 40s.

Lancaster, Saturday.—Meadow hay 6d, clover 7d, wheat straw 4d, oat straw 3½d per stone.

Leeds, Tuesday.—The approaching holidays and the cold and foggy weather have stimulated business in the warehouses, an active business being transacted in hay and straw at the following quotations:—Old clover hay, 7½d; ditto meadow hay, 7d; best new clover hay, 7d; ditto meadow, 6½d; wheat straw 5d; oat straw, 5d; and rye straw (retail), 7d to 8½d per stone.

Lincoln, Friday.—Hay and seeds, 55s to 60s per ton on the ground; straw, 30s per ton at the stack.

Manchester, Friday.—Clover, 5½d to 6½d; straw, oat, 3d per stone.

Newcastle, Tuesday.—Old land hay, from £3 7s 6d to £4 4s; new land hay, £4 10s to £5 5s per ton; this year's growth, £4 to £4 15s. per ton.

Sheffield, Tuesday.—Very poor supplies, and small business. Choice seeds made £4 10s to £4 15s; secondary ditto, £4 to £4 5s; meadow hay, £3 15s to £4 5s; straw, £2 10s to £3.

Whitechapel, Saturday.—Limited supplies were received, but trade ruled slow at current prices. Best clover, 84s to 92s 6d; inferior, 72s to 80s; specially-picked hay, 82s 6d; good, 65s to 75s; inferior, 55s to 63s; mixture and sainfoin, 70s to 82s 6d; straw, 25s to 31s per load.

WOOL.

London, Saturday.—English—per pk. of 240 lb.—Fleeces, South Down hoggs, £13 10s to £14; half-bred hoggs, £11 10s to £12; ditto wethers, £11 to £11 10s; Kent fleeces, £11 to £11 10s; South Down ewes and wethers, £13 to £13 10s; Leicester ewes and wethers, £11 to £11 5s. Colonial—per lb.—Vic., scoured super., 2s to 2s 2d; scoured, good, 1s 10d to 2s; scoured, average, 1s 8d to 1s 9d; greasy, average to fair, 1s 1½d to 1s 2½d; N.S.W., scoured, average, 1s 8d to 1s 9d; greasy, average, 1s to 1s 1d; S. Aus., greasy, average, 10d to 11d; N.Z., scoured, average, 1s 9d to 1s 10d; greasy, average, 11d to 1s; Cape, scoured, super., 1s 9d to 1s 10d; fleece, average, 9d to 10d; greasy, average, 8d to 8½d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8d to 8½d. Crossbreds—grs.—Vic., good to super., 1s 2d to 1s 3d; New Zealand fine, 1s 2d to 1s 3d; medium, 11d to 1s; coarse, 9d to 10d.

Canterbury, Saturday.—Growers still decline to sell at rates offered. Values remain nominally at 10½d for Kent fleeces, and 7d for lamb wool.

HOPS.

Borough.—The holidays having finished there is some business passing, chiefly in low-priced hops suitable for copper purposes, the current value of such being sufficiently tempting to induce some consumers to stock up.—W. H. and H. Le May.

Worcester, Saturday.—No business has been done this week owing to the holidays. The official return gives 18,115 pockets of 1907 hops weighed up to date, compared with 11,464 pockets weighed up to December 31 of 1906 crop.—Charles Faram and Co.

CATTLE.

Metropolitan Market, Islington.

	Monday, Dec. 30, 1907. British.	Total.	Monday, Dec. 31, 1906.

Calves	10	10	5
Pigs	—	—	—
Milch Cows	30	30	40

Quotations per 8 lb. (sinking the offal).

ENGLISH.

	Inferior. s. d.	Second. s. d.	First. s. d.
Beasts	2 10	3 6	4 10
Sheep	4 10	5 8	6 2
Lambs	—	—	—
Calves	—	—	—
Pigs	—	—	—

Milch cows, per head, £16 to £23.

British arrivals include as follows:—Scotland, 20; Eastern Counties, 195; Midland, Home, and Western Counties, 531; Devon, 10; Ireland, 24.

We note to day an increase of 690 head in the number of beasts offered for sale compared with Monday last, the majority of the supply being drawn from the Eastern Counties. Scotch descriptions, as usual, commanded our top quotations, amongst these being a few beasts that were left over from the Christmas market. For all grades of English fat cattle trade ruled of a firm and steady nature at good money. The supply from Ireland was a very small one, consisting entirely of Waterfords; these shared in the better trade experienced here to-day. Fat cows met with a steady demand, and were in small supply, consequently rates ruled 2d. per 8 lb. in favour of the seller. A clearance is expected to be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day. s d	s d	Monday, Dec. 31, 1906. s d	s d
Scotch	4 8	ex 4 10	4 8	to 4 10
Devons	4 6	ex 4 8	4 4	to 4 6
Herefords	4 4	to 4 6	4 2	to 4 4
Norfolks	4 4	to 4 6	4 4	to 4 6
Runts	4 2	to 4 4	4 2	to 4 4
Lincolns	4 0	to 4 2	3 10	to 4 0
Irish	4 1	to 4 3	3 10	to 4 0
Canadian	—	—	—	—
Fat cows	3 6	ex 3 8	3 4	to 3 6

There was an increase of 3,920 in the number of sheep penned compared with Monday last. For all descriptions of wethers a firm and steady trade ensued at fully late values, in a few cases an advance of 2d per 8 lb was obtained, ewes were also firm and steady. The Scotch and Irish season is now practically at an end, consequently no consignments were received at market from either country. Lambs were conspicuous by their absence. The supply included 1,517 from the Eastern Counties. The prospect of a clearance being made is somewhat doubtful.

Undermentioned quotations are at per 8 lb. (sinking the offal) and are for the best of each class penned:—

	To-day. s. d.	s. d.	Monday, Dec. 31, 1906. s. d.	s. d.
7½ to 8st Down Tegs	6 0	ex 6 2	6 0	to 6 2
9 st. Downs	5 10	to 6 0	5 10	to 6 0
10 st Halfbreds	5 8	to 5 10	5 6	to 5 8
10 st Yorkshires	—	—	—	—
11 st Hampshires	5 8	to 5 10	5 8	to 5 10
10 st Irish	—	—	—	—
10 st Down Ewes	4 0	to 4 2	4 4	to 4 6
11 st Halfbred ditto	3 10	to 4 0	4 2	to 4 4
5 st Down Lambs	—	—	—	—
6 st Halfbred ditto	—	—	—	—

Calf trade not worth noting or quoting.

No pigs on the market.

FOREIGN.

Deptford, Monday.—Beasts 1,245. To-day's supply consisted of 545 from the United States and 700 from Canada. Trade ruled of a firm and steady nature, the best States on offer being quoted at from 4s 2d to 4s 4d; seconds, 4s to 4s 2d; Canadians, 3s 6d to 3s 8d per 8 lb. (offal given in). 1,700 Canadian sheep were withheld from sale. On Saturday 1,124 beasts from the United States were offered for sale, and met with a firm and steady trade at from 4s 2d to 4s 4d per 8 lb.; seconds, 4s to 4s 2d.

Liverpool, Monday.—The supply of cattle was smaller than expected, the inclement weather in some degree accounting for it. Demand good, and prices rather higher. Sheep supply also very small; trade good, and an early clearance was effected at advanced rates. Beef, 6¾d to 4½d per lb; mutton, 9½d to 7d. At market 827 cattle and 2,365 sheep.

FEEDING STUFFS.

Mark Lane, Monday.—Linseed Cake.—The holidays have interfered somewhat with the trade, but with the advent of present cold weather an improvement in the demand may be looked for. There is no chaage to report in prices. Cotton Cake.—Quiet and unchanged. Linseed.—The market has hardened during the past week, and a good trade doing in the feeding sorts:—

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were:—From Ireland, 1,345 bales, and from foreign ports, 10,636 bales. The market was steady for bacon last week. Prices ranged:—Irish, 54s to 55s up to 60s; Danish, 50s to 55s up to 58s; Canadian, 49s to 51s up to 53s. Butter: The butter market was firm to-day. French, 104s to 122s; Danish, 123s to 125s; Russian, 100s to 112s; Irish (factory), 104s to 112s; Victorian, 98s to 118s; Queensland, 98s to 110s; New South Wales, 98s to 116s; New Zealand, 112s to 120s; Argentine, 112s to 119s. Lard.—There was a quiet market. Irish, 46s to 58s; Danish, 48s to 54s; American, 42s to 43s 9d.

SEEDS.

Mark Lane, Monday.—The Old Year is finishing up with a lively trade in spring sowing seeds at rising prices. In clover, reds and trefoils still creep up in price in both English and foreign seed. Canadian alsike is extremely firm. Whites unchanged. In grasses, French-Italian, perennials, Irish-Italian, New Zealand cocksfoot, and meadow fescue are all firm to rising. Rape keeps firm. Mustard unchanged. Rye scarce. Peas flat, as usual at this season.—John Picard and Co.

WET AND DRIED GRAINS.

Mark Lane, Monday.—Wet Grains: Prices remain about the same with a slightly easier tendency owing to the holidays, and business has been done during the week at 22s ale, and porter 3s per ton less on rail London. Dried Grains.—Prices continue unchanged at 110s ale and 105s mixed per ton, bags 6d each, but the tendency is firm, and an advance is confidently anticipated for the New Year with the advent of colder weather. Best Java Molasses.—Concrete 70 per cent. sugar, in baskets, 85s per ton. Kiln-dried sea-damaged wheat from 21s per qr, on rail, London and elsewhere.—Hamlyn and Co.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

At the Islington Cattle Market during the week very little business was transacted; the principal market day, namely, Monday, fell very close to Christmas Day, consequently retail buyers were too busy to attend. The supply was an extremely small one, consequently neither trade nor quotations were worth noting. On Boxing Day a few cattle were held back in the lairs, but were not sold. At the Foreign Cattle Market, Deptford, no market was held until Saturday, when a consignment of States beasts were offered for sale, and met a firm and steady trade at from 4s. 2d. to 4s. 4d. per 8 lb. The total number on offer at both markets was 1,238, as against 5,961 during the preceding week, consisting of 114 British (decrease 2,736) and 1,124 foreign (decrease 1,987).

The sheep trade was confined to the Islington market, and was also a very limited one on both days. On Monday and Thursday a few sales were made at the previous week's values. The total number penned at Islington was 166, as against 10,530 during the preceding week, showing a decrease of 10,364. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 10d. to 6s.; 9 stone Downs, 5s. 8d. to 5s. 10d.; 10 stone Downs, 5s. 6d. to 5s 8d.; 10 stone half-breds, 5s. 4d. to 5s. 6d.; 10 stone Down ewes, 3s. 10d. to 4s.

Calves numbered five; trade, therefore, not worth noting.

No pigs on offer.

Trade in Ireland.

The Christmas holidays interfered with the Dublin market, and it was not held until Friday, December 27, instead of on the previous day. The supply of stock was very limited, there being only 1,818 cattle and 1,898 sheep offered for sale. But local buyers attended in force and bought up the cattle very freely; there was not much demand for the sheep. The extreme rates were available for cattle of good quality, but middling and inferior beasts were very slow. Cows were not wanted. Well finished stall-fed bullocks and heifers sold well at from 33s. to 34s., and occasionally up to 35s. per cwt. (live weight); some grass-fed beef made from 29s. to 30s. per cwt. The approximate dead-weight price for beef was:—Best ox and heifer beef from 52s. to 56s., and for extra quality up to 59s. and 61s. 9d. per cwt.; good second-class beef, 47s. to 50s.; and inferior beef, 42s. 6d. to 45s. per cwt.

Trade for sheep was very slack, there being few buyers, and the bulk of the sheep on market did not suit the requirements of purchasers. The trade done was small, but limited as the supply was it was quite sufficient for the demand. Prime wether mutton sold from 7d. up to 7¼d. per lb.; good ewe mutton, 6d. to 6¾d. per lb. Veal very scarce. Store cattle a very short supply and wanted. Milch cows a limited supply and very slow trade.

Quite a holiday in the Dublin pig market; few sellers attending. Plenty of buyers, but not enough for them to buy. Good business, and early over. Choice light-weight pigs, from 46s. to 50s. per cwt.; coarse, 40s. to 44s. per cwt.

Trade in the West.

Business during the holiday interregnum is completely at a standstill, and consequently there is very little indeed to write about either in respect to fat or store stock, prices of which remain practically the same as those current before the country gave itself up to a week's feasting and holiday-making. Nearly every market of any importance has been temporarily suspended, and at the one or two that have been held during the holiday season the business transacted is not worth recording, buyers and sellers being both alike supremely indifferent what is passing just for the time being. Once the holiday feeling has again been shaken off, and the elements show a kindlier feeling towards stock-owners and agriculturists generally than they are doing at the present time, where almost every tract of land lying a bit low is submerged to an abnormal extent such as has not been experienced for the last fifteen or twenty years, we may expect to see a revival of activity in the stock markets greatly in contrast to the general inactivity now so conspicuously apparent all over the country.

The milch beast trade is almost, if not quite, the only one thing that remains unaffected by the national holiday making, this being conclusively demonstrated by the avidity shown wherever any dairy beasts are offered for sale, to acquire every milker possible—not only animals of the best type, for which they readily pay all prices, ranging from £17 or £18 apiece up to £23 or £24, but equally so the more ordinary runs at all prices, according to the quality and character of the animal ranging from as much as £16 down to £9 or £10 apiece for animals that are of very little further use except to turn out for grazing. In-calvers are an equally good trade at from £9 up to £15 or £16 apiece for heifers coming into early profit. Young stock for wintering in the open attract but little attention, the weather being hardly of the kind to stimulate sales.

With the opening of the New Year, and it is hoped, a favourable change in the weather, the barrener sales are beginning again, so that those who failed to get their requirements met in the autumn will have an opportunity of augmenting their stocks, as there are considerable numbers waiting for disposal once business is resumed, many of the drafts being of considerable promise and admirably calculated to meet the needs of graziers. Business in store sheep may be described as nil, as it may be said of equal truth of every other class of stock except that on which we have been commenting.

Purveyors bought so extensively preparatory to Christmas that they have found but little necessity for supplementing these purchases since; consequently butchering stock has been at a serious discount for some days past, the unfavourable weather being very detrimental to sales, and also making it bad for butchers, who, in many cases, have had to clear their stocks at a considerable sacrifice, or to incur the more serious risk of having their meat spoilt by keeping it too long. We fear, therefore, that this Christmas has been by no means a profitable one for the butcher, who, after having to pay a high price for his beef as well as other fat stock, has had to dispose of very considerable portions at considerably less value than he paid for it in the open market. The consumer, therefore, has been the gainer this time. Mutton has not been so seriously affected as beef, but veal and pork have both suffered from the effects of the "muggy" weather which interferes so seriously with the butcher's Christmas trade and often involves him in losses which it is extremely difficult to avoid, trade as carefully as a man may ever do. Happily many of our leading purveyors have made a fairly good price of most of their best joints. Still it has been anything but a season of big profits for the butchers as a class, as many of them will readily and honestly confess, the Christmas trade this year, bearing very unfavourable comparison with many of its predecessors when the air has been keen and frosty as the purveyor likes to see it, instead of the damp murky atmosphere which has hung like a pall over Christmas this season.

LONDON.

Central Market, Friday. — Fair supplies and trade slow, but prices fairly well maintained. English beef, 3s 4d to 3s 8d; Scotch sides, 3s 10d to 4s; shorts, 4s 2d to 4s 4d; Deptford and Liverpool killed, 3s 4d to 3s 8d; refrigerated hindquarters, best, 3s 7d to 3s 10d; ditto, seconds, 3s 5d to 3s 6d; ditto, forequarters, 2s 4d to 2s 8d; inferior beef, 2s 4d to 2s 8d; mutton, Scotch wethers, 4s 8d to 4s 10d; ditto, tegs, 5s to 5s 2d; ditto, ewes 3s to 3s 4d; English wethers, 4s 6d to 4s 10d; ditto ewes, 3s to 3s 4d; Dutch sheep, 4s to 4s 4d; veal, 3s 8d to 4s 8d; English pork, 3s 8d to 4s 4d; Dutch ditto, 3s 8d to 4s 2d per 8 lb.

COUNTRY.

Berwick, Saturday.—Attendance of farmers and buyers small, and trade dull. Calves, £5 to £6; heifers, £8 to £10 10s; stirks, £8 10s to £10 15s. Other kinds of animals were a blank.

Calne, Friday.—Present prices of pigs:—In lots of not less than ten, on rail within 100 miles, 1s. per pig extra for delivery by road. Prime stores, 6 sc. 10 lb to 8 sc. 10 lbs, 9s per score; 8 sc. 11 lb to 9 sc. 10 lb., 8s 6d per score; 9 sc. 11 lb to 10 sc. 10 lb, 8s per score Pigs outside these limits at their value.—C. and T. Harris and Co., Ltd.

Carlisle, Saturday.—Small supply of cattle, and buyers were scarce, and trade was practically at a standstill. Wintering heifers, £8 to £11 10s; geld cows, £8 10s to £10 10s each.

Doncaster, Saturday. — Exceedingly small supply of cattle, chiefly young stores, with a few milch cows. Moderate attendance, and not much trade done. Milch beasts, £18 to £22; bullocks, £12 to £17; heifers and drapes, £10 to £15; stirks, £8 to £10; young stores, £6 to £8 each. No sheep.

Dublin, Friday.—Numbers in market: Beasts, 1,818 (decrease, 1,069); sheep, 1,898 (decrease, 2,966); calves, 8 (decrease, 13). Owing to the very large reduction in numbers of cattle trade ruled brisk at higher prices, especially for choice finish, and an early clearance was effected. The decrease in the number of sheep had little or no effect on prices, as the export demand was almost nil, and home wants very few, which left a large proportion unsold. Cattle—Live weight (best), 31s to 33s per cwt; Aberdeen-Angus crosses, 33s 6d to 34s 6d per cwt.; secondary sorts, 28s to 30s per cwt. Mutton (dead weight), 6½d to 7½d per lb.—Ganly, Sons, and Co.

Leicester, Saturday.—Small consignments of home-bred stock, and business ruled dragging. Choice milch cows were in active demand at £19 to £20; good medium lots, £17 to £18; ditto secondary, £14 to £16; calves met a slow sale at 15s to 35s each.

Lincoln, Friday.—Not sufficient horned stock on offer to test prices.

Lynn, Wednesday.—Quite a holiday market, with a very small show of store beasts. Other animals not sufficient to justify a quotation.

Manchester, Friday.— Beef: Firsts, 5¾d; seconds, 4¾d to 5¾d; thirds, 3¾d to 4¾d. Mutton: Firsts, 8d; seconds, 7d to 7½d; thirds, 6d to 6½d. Veal: Firsts, 7¾d; seconds, 6¾d to 7¼d; thirds, 5¾d to 6¼d. Bacon pigs: Firsts, 5¼d; seconds, 4¼d to 4¾d; thirds, 3½d to 3¾d. Porket pigs: Firsts, 7d; seconds, 6½d to 6¾d; thirds, 6d to 6¼ per lb.

Norwich, Saturday.—Not many fat cattle on offer. Quality was not very good, but trade was sharper, the best making 8s per 14 lb stone; heavy cattle from 7s to 7s 9d, and cows 7s. Fat sheep were a small show, and met an improved trade: Downs made 9½d, crossbreds 9d, and a few fat ewes 6½d per lb. Fat pigs were quite a holiday market, but trade wasbetter, porkers making from 6s 6d to 6s 9d, and heavy pigs 6s to 6s 6d per 14 stone. Store cattle, sheep, and pigs were unquotable. A few rearing calves were shown, and met a fairly good trade at from 20s 6d to 48s per head.

Nottingham, Saturday.—Short supply of stock, which met with an average trade. Best in-calf cows £18 to £22, and heifers £12 to £19 each. Small show of stores, realising rather less money than last week. Strong heifers and steers made up to about £13 10s, and younger animals to £8. Small show of calves, which sold slowly, and made about £2 each.

Preston, Friday.—There was a moderate supply of cattle, and trade was very quiet. Cows, £12 to £19; heifers, £11 to £15 10s.

Retford, Saturday.—Limited show of store stock, and a small attendance of buyers. Very little business done at recent quotations.

Shrewsbury, Tuesday.—Quotations:—Beef, 6d to 6½d per lb; mutton (wether), 9d per lb; veal, 7d to 7½d per lb; pork pigs, 9s to 9s 6d per score; bacons, 8s to 9s per score..

Stockton, Tuesday.—A holiday market prevailed. There were forward 30 cattle, 17 sheep, and 150 pigs. Best cattle were quoted from 7s 9d to 8s per stone, and rougher kinds 6s to 7s. per stone. There was practically no demand for sheep, but pork pigs found a market at 3d per stone down, while others were 6d down on the week.

POULTRY AND GAME.

Smithfield, Saturday.—Short supplies were in fair request. Prices:—Pheasants, 5s to 6s; young partridges, 4s 6d; old, 2s per brace; geese, 5s to 6s 6d; country ducks, 2s 9d to 3s 6d; Surrey fowls, 3s 6d to 4s 6d; Sussex fowls, 3s to 3s 6d; Lincolnshire fowls, 2s 6d to 3s 3d; Essex fowls, 2s 3d to 2s 9d; Irish fowls, 2s to 2s 6d; wild ducks, 1s 9d to 2s; snipe, 8d to 9d; woodcock, 2s; quails, 1s to 1s 4d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 11d to 1s 2d; English hares, 3s 6d; leverets, 2s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 8d to 10d each; cock turkeys, 9d per lb; hen turkeys, 4s 6d to 6s 6d each; Australian rabbits, 5s 6d to 7s per dozen.

POTATOES.

Borough, Saturday. — Good offerings were accorded fair support. Langworthys, 80s to 90s; Up-to-Dates, 90s to 95s; Blacklands, 80s; British Queens, 80s to 90s; Royal Kidneys, 80s to 90s; Scottish (grey soils), 95s to 100s per ton. French,

3s to 3s 6d; German, 4s; Dutch, 3s to 3s 6d per bag.

Berwick, Saturday.—Potato trade fairly good at 70s for Langworthys, and 75s to 80s per ton for Up-to-Dates. There is still a large amount of foreign potatoes on the market.

Carlisle, Saturday. — A fair supply, and a good demand was experienced at 8d to 9d per stone.

Doncaster, Saturday.—Good supply but only a quiet trade. Prices unchanged at 8s 6d to 9s 6d and up to 10s per load of 18 stones.

Goole, Tuesday.—Holiday market, and a small attendance. What little business was done in potatoes was at late rates—viz., 9s to 10s per load.

Lancaster, Saturday.—Potatoes 9d per stone.

Malton, Saturday.—Potato trade about the same as last week. Supplies small but equal to the demand. By auction potatoes brought from 2s 6d per bag upwards.

Manchester, Saturday. — Potatoes: King Edwards, warps, 12s to 13s; Sands 11s to 12s; Cheshire, 8s 6d to 9s 6d; Lincoln, 11s 6d to 12s 6d per load; Irish, 5s; German, 4s 6d to 5s per cwt.

Preston, Saturday.—Potatoes made 8s to 9s per load of 240 lb.

Retford, Saturday.—Market well supplied. Best locally grown lots made up to 9s, and other kinds 6s to 8s per load.

Spitalfields, Saturday.—Consignments were somewhat smaller, but a quiet demand ensued. Langworthys, 100s to 110s; Up-to-Dates, 90s to 100s; B'acklands, 80s to 85s; British Queens, 90s to 95s; Royal Kidneys, 85s to 90s; per ton. French, 3s 6d to 3s. 9d; German, 3s 6d to 4s; Dutch, 3s 3d to 3s 6d per bag.

Whitby, Saturday.—Potatoes 9d per stone.

York, Saturday. — A somewhat improved demand. Common potatoes were about the same as last week, making 75s per ton; Up-to-Dates, 80s.

West Country Notes

GLANCING back over the past year, one cannot regard it as a bad one in all for the agricultural community. The seemingly perpetual dampness which characterised the summer over a great portion of the country, making the expenses of harvesting greater than usual, and causing a shortage in some crops, did good in other ways, and the balance is probably pretty even.

THE hay crop was a very heavy one, and those able to save it in anything of condition were fortunate in finding prices all right when—if they were able to sell off—the time came for its disposal.

THOSE who were bound to consume at home had no cause for dissatisfaction, and even where the quality was not tip-top, owing to the unfavourable conditions for harvesting, there was an abundance of second-rate produce for use at home.

THE open weather right up to Christmas day, with a late bite of grass, favoured the stock keeper, who found his cattle doing fairly well. The produce for dairy purposes was somewhat above the average, and the butter and milk trade showed no falling off but rather an enhanced value in many instances. Cheese prices were below the previous year's level, but the extra quantity made helped to compensate for this, even if it did not actually turn the scale on the advantage side, as we think it must have done in many instances.

GRAIN crops, by the more rosy results of the markets, helped to compensate in the same way for the many drawbacks.

THE potato crops worked out profitably at the start, and the slump that affected the second earlies did not last long enough to be serious, and where the late crops were gathered in all right they paid well. There was some loss from disease and the effects of the season; but though locally these were serious, they were not altogether general, we are glad to think.

GREEN crops for the markets were on the whole profitable and plentiful, though perhaps there was not enough of sunshine to bring out the best quality in all cases.

SOFT fruits suffered considerably, and the outlook at one time was really serious for those who ventured largely on this branch of culture; but even here there was some recovery, and the extension of the season made the deficit on the year a smaller one than anticipated.

APPLE growers were amongst the most hardly hit of any who go in for fruit, and the season's shortage affected the bulk of cider made, and this at rather a critical time, when it was important that the growing demand should be met by the continued production of a good article, and when the Board of Agriculture have taken those very wise and shrewd steps for the securing of purity of the beverage.

ONE pleasant feature about the cider incidents of the year is the exchange of courtesy between the colonies and the West of England. The New South Wales Government representatives sent down to the West of England cider show a sample of the make of the orchards from "down under," and the cider makers of the west reciprocated by forwarding to the Wagga orchard, where this sample was produced, a case of the prize ciders from their show. In the course of a few days these will, no doubt, be sampled with keen interest by the boys at Wagga.

PLUMS were remarkably prolific during the past season, and the growers of these were most fortunate in their trees and the returns they yielded. Probably never before has the production of this fruit been so great since the present facilities have been available for distribution, and therefore the returns should have been correspondingly good.

STOCK has well maintained its level in price during the year, and though at the Christmas markets the enormous prices which in a few exceptional cases prevailed in the past, were not equalled, the returns to the farmer were probably better, as with the smaller sizes demanded, the cost of production was proportionately reduced.

ONE curious result of the "wet season" was to be found in the almost uniform success which attended the agricultural gatherings of the year in the West. Nearly all the shows were favoured with dry weather, and the country folk being keen to secure what diversion they could out of doors, rallied to the shows in greater numbers even than was usual.

ANOTHER feature of the year has been the well-considered—and in many cases, so far, successful—attempts to resuscitate old fair fixtures, and to improve the market capacity of old agricultural centres. Especially has this been the case in Devonshire, and to almost equal extent in Cornwall. Some of these movements have been particularly interesting as showing a thorough appreciation of their agricultural neighbours' custom by the townspeople.

CO-OPERATIVE work amongst farmers is slowly advancing. The Western Counties' Association report that it has made considerable headway, and there are other works of like character for the distribution of goods raised on the land. For instance, poultry societies are moving ahead, and also fruit-producing and marketing associations, in some portions of the West.

ONE hesitates to call a natural product like peat an agricultural crop; yet after all there is little trouble taken to secure a good crop of the moss which turns to fuel and bedding material so readily. The rise in the price of coal has affected this commodity, and the dwellers and workers on the turbaries are a little the better off for the year's work, though at the present moment so much of their land is under water.

THE pony rearers of the moors of Devonshire are waking up to possibilities of enhanced profit by a little help given to Nature, and the forthcoming year will see developed a scheme to which a start has been given, which ought to have a far-reaching effect in improving the breed of the ponies.

CATTLE breeders in Devonshire are also advancing their interest, and at the forthcoming Bath and West particularly are calling attention to the good milking properties of the Devons, which it is claimed is apt to be overlooked from the general recognition of their special advantages as beef producers. They throw their net wide, do to these Devon breeders, and travel right to St. Albans for next year's president—Mr. Charles Morris.

DURING the year the Dominion of Canada has been welcoming various West of England visitors, with a view to bringing the agricultural advantages of that country under the notice of English rural dwellers. They made, however, the mistake in a good many instances of not seeing that these people (excellent men as they were) were in actual touch with the agricultural community. Probably in the future such an error, having been pointed out, will be avoided. They have also, in common with other Colonial Governments, been sending experts to the West to find out how things are managed at home, and where wrinkles can be picked up. Some of our Continental rivals have been doing the like, and in the latter cases I have noticed they have sent keen students, who will go back home and put into practice the knowledge they have gained.

December 27, 1907.

Lord Londonderry on Small Holdings.

In the course of a speech at the annual dinner of the Darlington, Durham, and North Riding Chamber of Agriculture on Monday, Lord Londonderry said he believed the Small Holdings and Allotments Act, if it carried out what it intended to do, would be a joy to everyone who had anything to do with it. He considered the Bill, in principle, not by any means a controversial matter. Being now the law of the land, he thought he might say a few words of warning with regard to its administration. They all hoped that the Bill would be the means of retaining on the land those who were racy of the soil, who had been bred and born agriculturists, and who, for reasons best known to themselves, had migrated to the towns, to the misfortune of agriculture.

He hoped that the question of small holdings might be taken up and induce many to return to the land. They should endeavour to impress upon the authorities that they should act with great caution, inquiring into the character of those whom they proposed to benefit under the Act. Let them make themselves sure that the men they benefit were in a position to understand how to make a small holding pay.

Let them also carefully consider whether it was wisdom to extract the eyes out of a farm owned by a substantial man, who thoroughly understood farming, and who had made a model farm, and done justice to it. It would be disastrous if this care was not taken. He was prepared to give every assistance to encourage small holdings, but he did think, in the interests of all three, landlord, tenant, and small-holder, and in the interests of agriculture itself, that precaution should be taken, and therefore he uttered these words of caution.

The balance-sheet presented at the annual meeting of the Mansfield Agricultural Society showed that financially the year had not been a very successful one, as the balance of £78 19s. 9d. had been reduced to £11 12s. 7d. Subscriptions amounted to £194 19s. 6d.; entry fees, £37 4s.; gate receipts, £93 14s.; stand, £15 5s.; rent, £22 10s., &c., making a total of £411 19s. 7d. The prize money totalled £221 8s. 6d. The assets of the society amounted to £71 3s. 7d. It was stated that the loss on the year, if the money spent on matters connected with the removal to a new ground were excluded, was £37. It was decided to hold the next show on Whit Monday.

RECEIVED TOO LATE FOR CLASSIFICATION.

TO MANURE MANUFACTURERS.

THE CENTRAL CORNWALL FARMERS' MANURE ASSOCIATION invite TENDERS for the Supply of Manures for the coming season.

Tenders to be received before January 9, 1908. Particulars can be had from Secretary,

Mr. Noel Truscott,
Wadebridge.

BEDFORD Champion Strawberry Plants for Sale, 5s. per thousand; one of the best Strawberries grown for shape, flavour and colour; grown from stock that cost £30 a thousand two years ago.—Apply Edwin Vinson, Highcroft Hall, Swanley, Kent.

Improved **POTATO SEPARATOR.**

Sorts Potatoes in 3 sizes, and delivers into bags. Strong, simple, and easy to work. Capacity 2 tons per hour

The new Sorting Platform attached to above, as illustrated, will be found invaluable where potatoes are badly diseased.

Price Lists on application to—

COOCH & SON, Implement Makers,
NORTHAMPTON.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by "PEPITA"

Danties for Tennis Teas.

At this season there is usually an unlimited call on country housewives for tea dainties for tennis players, and, whether it is at her own home or on the club ground, where a few lady members give a tea in turn, the same difficulty arises—that is, to provide variety without undue expense.

First, we will take sandwiches, as they are always appreciated—by the sterner sex, at any rate.

The self-evident ham, tongue, and chicken sandwiches are agreeably varied by:

Lettuce Sandwiches.—Cut thin white bread-and-butter, pull apart small lettuce leaves, dip them in a good mayonnaise, and place between the bread. These are very good.

Cucumber and Tomato Sandwiches, are prepared by slicing the same very thinly; add salt and pepper, and put them between long fingers of brown or white bread.

Mustard and Cress, can be made in the same way. It should be chopped very finely, add salt; if liked, use plain milk biscuits, buttered, instead of bread.

Hard-boiled Eggs thinly sliced or chopped and a little mustard, between rounds of Hovis bread, are liked by most people, or the pounded yolks of hard-boiled eggs, mixed with a little butter and anchovy.

If finely-chopped meat is to be used, the seasoning, sauce, and melted butter should be mixed, and spread all at once on the bread, as the flavour is so much better.

Cakes.

Tennis Cake.—6 oz. of butter, 6 oz. of sifted sugar, 1 oz. of flour, ½ lb. of raisins (stoned and chopped), 4 eggs, 2 oz. of candied peel, 2 oz. of blanched almonds (cut in small pieces), 4 oz. of currants, 1 teaspoonful of baking powder. Beat the butter to a cream, add the sugar, and then the eggs (well beaten), sprinkle in the flour, next add fruit, almonds, and peel. Beat all well and put into a tin lined with oiled paper.

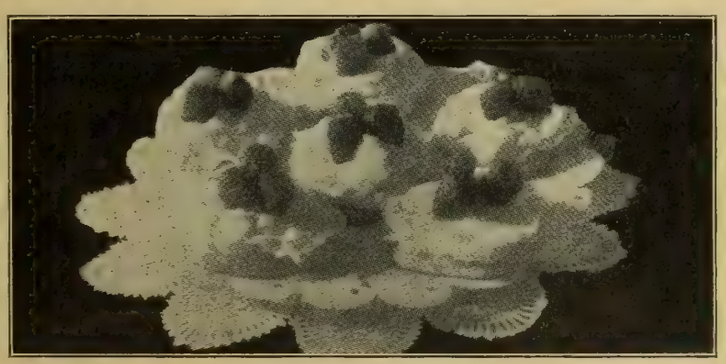
Almond Sponge Cone.—1 teacupful of fine white sugar, 1 teacupful of flour, 1 teaspoonful of baking-powder, 4 oz. of chopped almonds, 4 eggs, and a pinch of salt. Beat together eggs, sugar, almonds, and salt for 20 minutes, then stir in flour and baking-powder. Put the mixture into a greased tin, dust a little sugar over, and bake for 20 minutes.

Iced Genoese Pastry.—4 oz. of butter, 4 oz. of sugar, 5 oz. of flour, 3 eggs, ½ a teaspoonful of baking-powder, 1 lemon-rind. Beat the butter to a cream, add sugar, beat well, and add eggs gradually; mix in flour, baking-powder, and lemon-rind. Turn into a tin lined with oiled paper, and bake in a moderate oven ½ an hour. Remove it from the tin, and when cold, ice with the following:—Whisk the whites of 2 eggs to a stiff froth, mix in icing sugar until quite stiff, spread over the top of the cake with a knife frequently dipped in boiling water. When nearly set, sprinkle with coloured hundreds and thousands.

Sweethearts.—Roll out some good pastry, to cover flat oven-sheet, spread with raspberry jam, and cover with another layer of pastry. Mark with a knife in narrow strips, then allow the cold water from tap to run over it (this prevents it rising in a blister), sprinkle thickly with sifted sugar, and bake. Divide into long fingers when dished.

Vanilla Cuts.—Take 2 strips of good pastry, alike in size and rather thin; make a custard with the yolks of four eggs and the white of 1 egg, 1 oz. of flour, 1 gill of milk; flavour with vanilla. When cool, spread half the pastry with the custard, lay the other half on the top, and ice with soft icing, and dry in a cool oven. Cut into narrow strips.

Soft Sugar Icing.—Strain the juice of a lemon into 2 tablespoonsful of water, and boil in an enamelled saucepan. When boiling, pour it over one pound of icing sugar. Mix with a wooden spoon till smooth, and spread over cakes while warm.



Cocoanut Macaroons.—½ lb. of prepared cocoanut, ½ lb. of castor sugar, 4 whites of eggs. Mix a little of the finest cocoanut to a paste with the sugar, and whites of 2 eggs, then add the remainder of cocoanut and eggs, mixed to a stiff froth. Line a well-oiled tin with wafer-paper, drop on the mixture, and bake for 20 minutes.

Queen Cakes.—2 oz. of butter, 2 oz. of sugar, 3 oz. of flour, 1 teaspoonful of baking-powder, 3 eggs. Beat the butter to a cream, add the sugar and 1 egg; beat a little, then add the other egg. Stir in lightly the flour, baking-powder, and lemon flavouring. Grease 8 small cake tins, sprinkle a few currants at the bottom of each, pour in the mixture and, bake in a quick oven for 10 minutes.

Pleasant drinks are always appreciated, and if served in small champagne tumblers, will go a long way.

Beverages.

Pineapple Cup.—Take a tinned pineapple, pour off the juice, cut the pine into small pieces into a punch bowl, pour over a quart of boiling water. When cold, add the juice, and sugar to taste, with 2 bottles of lemonade.

STRAWBERRY WHIP.

Summer Champagne.—To 4 parts of seltzer-water add 1 part of hock or Moselle; put a teaspoonful of powdered sugar into the glass, pour in the mixture. A change takes place, and you have an agreeable champagne.

Milk Lemonade.—Pour 1 pint of boiling water over ¾ lb. of loaf sugar; mix 1 gill of lemon juice and 1 gill of sherry, then add 3 gills of cold milk. Stir well, and strain.

Practical Recipes.

Strawberry Whip.

Cut sponge sandwich into small rounds; then heap strawberry whip on top, and in centre place large fully-ripe berries. For the whip, drop 1 egg white into a deep bowl and add 6 large berries, 1 cupful of sugar, and ¼ teaspoonful of salt; whip until the mixture will keep its shape when dropped from the whipper. If the berries are not tart, a few drops of lemon juice should be added while whipping.

Fried Whiting and Maitre D'Hotel Butter.

Fry the whitings in bread-crumbs, and serve with maître d'hôtel butter, made thus:—Mix 2 oz. of fresh butter with the juice of half a lemon, a dessert-spoonful of chopped parsley, a pinch of white pepper and half a saltspoonful of salt.

Eggs, with Mushrooms.

Poach the required number of eggs, place on squares of fried bread or toast, and pour over each a tablespoonful of sauce, made in the following manner:—Stew some small mushrooms in milk, and season with pepper and salt. Cut them into a coarse mince, and then stir in a tablespoonful of milk, with which a raw yolk of egg has been mixed.

Eggs, with Shrimp Cream.

Poach the eggs, and lay on slices of fried bread. Cover with a sauce made of ½ oz. of butter, ½ oz. of flour, and a little milk; stir in enough potted shrimps to thicken the sauce, and season with salt and black pepper.

Fried Fish a L'Indienne.

Fry the fish in a batter made as follows:—Beat up 2 raw eggs in ½ pint of milk, thicken with pea-flour, and a saltspoonful of turmeric, a saltspoonful of ground ginger, and the same of salt and white pepper, mixed.

Buttered Eggs, with Tomatoes.

Fry a finely-sliced large shallot in ½ oz. of butter, and when beginning to turn a golden colour, empty into it 6 sliced tomatoes, ½ teasponful of coarsely-ground black pepper, and a saltspoonful of salt. Continue stirring over the fire for about 10 minutes. Make a bed of these tomatoes on a hot dish, and spread the buttered eggs upon it.

Fish Fritters.

Make a batter with the yolks of 2 eggs, 2 tablespoonsful of beer, 1 tablespoonful of salad oil, and 5 tablespoonsful of water, and sufficient flour to bring the mixture to the consistency of cream. Mix with this the remains of any cold white fish, such as whiting, fresh haddock, cod, or plaice, etc. Fry in boiling fat, and serve very hot, garnished with half slices of lemon.

Eggs in Bread Sauce.

Make bread sauce by boiling a pint of milk with a chopped onion, then adding the breadcrumbs. Butter a large baking dish, and spread over it a layer of dry bread-crumbs, seasoned with salt, pepper, and pounded mace. Put the dish into the oven to heat, then take out, and break carefully on to it 6 eggs, place a thin dusting of bread-raspings over, and return to the oven just long enough for the eggs to set.

Whitings au Gratin.

Prepare some whiting to lie flat on the dish, not curled round in the manner generally adopted by the fishmongers. Butter a baking-dish, and spread over it a sprinkling of salt and white pepper, and about 2 tablespoonfuls of bread-raspings. Brush the whiting on one side with egg, and sprinkle some finely-minced mushrooms, then ½ oz. of melted butter, a layer of chopped parsley, and lastly a layer of raspings. Set in the oven for 10 or 12 minutes.

Fish Pudding, with Rice.

Take ½ lb. of any cold fish, and mix with it ¼ lb. of boiled rice, 1 hard-boiled egg, and seasoning of spiced pepper, salt. Moisten with any fish sauce, or milk, with 1 well-beaten egg. Put the mixture into a buttered mould, and steam for 40 minutes. A white sauce, flavoured with anchovy, makes a nice addition.

In cases of inflammation of the stomach and bowels, try cloths wrung out of hot water in which a tablespoonful of turpentine has been put.

Packing Case Furniture.

In the article on "Week-end Cottages" that appeared in our "Supplement" for May 13th, reference was made to furniture that could be economically arranged at home, by utilising boxes anl cases, that otherwise would probably be broken up for firewood

The following suggestions and illustrations will serve to show something of what may be done in this way, and to set the ingenuity of our readers, to work in devising other contrivances, for their special needs and fancies.

Fig. 1, represents a really roomy and commodious dressing-table, constructed of two Tate sugar-boxes, and a board for the top. Grocers, are generally glad to supply these boxes at 6d. or 8d. each, the covers should be secured, as they can be made into shelves, to divide the inside of each box in half, the boxes, of course, standing on end. It will be noted in Fig. 1, that a space is allowed in the middle, this is a most comfortable arrangement, giving room for the knees of anyone sitting at the toilet-table, but in a small cottage, such luxury might be dispensed with, and the sides fitted close together, in the centre. In this case, the top board would not be necessary, a covering of ordinary cheap oil-cloth, is quite sufficient to form a smooth surface for the toilet-cloth.

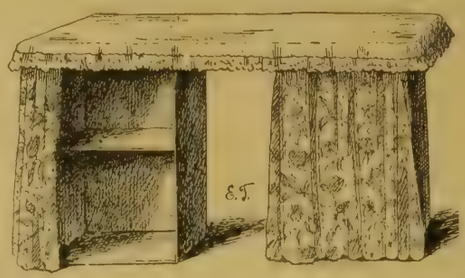
The rough boxes, must be covered in some way, firstly, to stop up cracks and holes that would admit dust, also to protect the hands from scratches, secondly, to give a smarter appearance. The insides require nothing stouter than paper, and brown paper, is as serviceable as may be desired. For the outsides, the very best thing, is American cloth, tacked on with brass-headed nails. What is known as "oil-baize", can be substituted for American cloth, it is cheaper, but does not wear so well, nor, is such a choice of colour available in it.

Two short brass-rods, curtains, of material matching other draperies of the room, fitted with rings to draw easily aside, finish the improvised toilet-table for all practical purposes.

As small cottages are not usually provided with a box-room, and the luggage of week-enders, has consequently to abide in the bedrooms, a contrivance to keep the portmanteau or hold-all off the floor, and yet to utilise the space taken up, is likely to be well appreciated.

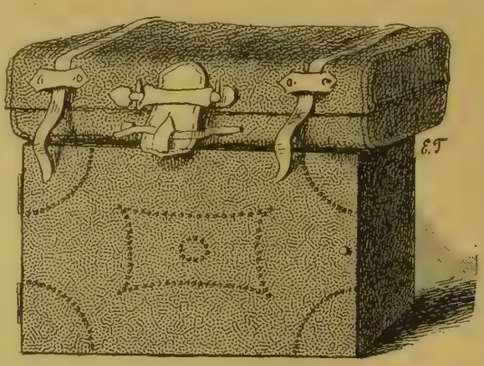
Fig. 2 illustrates how the idea may be carried out, viz., by turning a box on its side, hinging a board, cut to fit the front, and make a door, thus forming a small cupboard to hold boots and shoes, straps and luggage, covers or other such odds and ends, that are apt to litter a small room hopelessly. The little cupboard will be quite presentable, if neatly covered in American cloth, of a suitable colour, and the door decorated with some simple design, in nail-work, as shown in the sketch.

GARDENING IN JULY.



WEEDS.—The heavy downpour of rain all over the country, has been the cause of an abundance of weeds. No one seems to have found a cure for this undesirable intruder in our gardens, not even our cousins on the other side of the Atlantic. They are recognised as a wonderfully inventive people, but I fail to discover that they have been able to invent a weed killer, either in liquid or powder form.

The "Eureka" weed killer is considered the most satisfactory, and if applied to walks once or twice in the year, it will help to keep them clean. So far as my own experience goes, I have come across nothing better than Natures' plyers for this intolerable nuisance and labour producer. Pull them up by the roots before the bloom forms into seeds. It is a sure remedy, and a most effective safeguard against increasing labour.



If you apply powders or poisonous liquids, there is the fear of tampering with flowers and vegetables we wish to save from the strangling convolvulus chick-weed and groundsel. When either of the above-mentioned weeds gets possession of a neglected garden, it takes years to clear the ground. Some gardeners suggest digging in to a depth of two feet. I examined only this week, a plot of land where the suggestion had been put to the test, but the result was deplorable, and the work rendered necessary to clean the ground, was heart breaking, as the buried seeds of former years must have remained in the earth, only waiting to receive light, to enable them to put forth life, and millions of all kinds of weeds have come up among a splendid crop of potatoes during the recent heavy rains.

It is useless to attempt moulding or earthing up until the weeds have been collected and thrown aside for the fire, when dried sufficiently to burn. When engaged on weeding in the vegetable garden, it is advisable to thin some of the potato tops by cutting them off, instead of pulling out some of the leaders. The roots are best not disturbed. This method was adopted by me over an acre of potatoes for four years, and my crops were abundant of the main-crop variety. I used the tops as poultry food, and the fowls devoured them as eagerly as they would have done young lettuce.

PRIVET HEDGES.—These should be well cut back and pruned into shapely form. The rapid growth should be checked, in order to give light to the lower parts and to encourage thickening. I only cut my privet once a year, generally in July, but recently I inspected a privet hedge in front of two town houses, which had been run over weekly for the last three months with a pair of large scissors. I may add that it only occupied 10 yards, but it interested me very much to notice the evenness and shapely form which had been brought about by this example of patience and perseverance. It was as close as a door mat, and presented a very neat appearance.

IVY ON WALLS.—I simply wish to draw attention to the golden leaf ivy as it is now to be seen at its best. Ivies thrive so well in towns, that I often wonder they are not more freely planted, as they have the advantage of being evergreens. The golden leaf is very pretty, and is a free grower. It should be planted in September or October. I have mentioned it now, because of the opportunity at this particular time to compare it with the common kinds. It is an error to suppose that ivy injures property by causing damp walls. This is pure prejudice. It protects property, produces a most pleasing effect, and hides and softens the bricky bareness of walls, besides adding to the beauty and improvements of the house.

There are many variegated varieties such as madareusis variegata, canariensis, japonica variegata, and if application were made to any of the noted nurseries, no doubt samples of the various variegated sorts would be sent gratis, when it would be seen what a decided advantage this climber has over other clinging plants, which are not evergreens.

VEGETABLE PEAS.—These may still be planted, and I would suggest Ne Plus Ultra for those who can afford tall stakes, and Stratagem. This is the best dwarf pea; it produces long pods well stocked, and of fine flavour. The present weather is favourable, and I think we may rely upon a late summer to ripen them in time for use in September. The late pea is quite as enjoyable as the early ones, so do not hesitate to plant a row at once.

ASPARAGUS.—Beds of asparagus which have been cut over up to the last fortnight, should be allowed to run to seed, and a dressing of well decayed manure should be applied in the early autumn.

G. W. THOMSON PRICE.

The Model Women of Fifty.

A society matron was in the police court, bringing a charge against her chauffeur.

"You are over twenty-one," said the officer politely, as he took down her name and address.

"I am forty-eight," retorted the lady with dignity, and something like pride—because forty-eight to-day is an enviable age instead of one to be ashamed of. The modern woman has at least upset all the old ideas about age.

The length of life is steadily increasing. The age of mental and physical maturity has advanced from five to seven years. Twenty-five used to be the full blossoming time of womanhood. Now it is conceded to be thirty and after.

It was only the very exceptional woman of fifty, who was ever heard of in the past. To-day the woman of fifty stands at the head of almost all the big educational and philanthropic movements of the time. Our greatest women artists have passed the boundaries of forty-five, and great woman philanthropists are also nearing the age, but it is in the ordinary, every-day, average woman that the greatest change can be seen.

Can you imagine your great-grandmother at the age of fifty, wearing anything but black or lavender, with a little bit of white lace or muslin? Can you picture her in a French Bonnet, with her grey or white, or brown curls beautifully dressed, and her well corseted figure moulded into the smartest of tailor-made suits? Our great-grandmothers at the age of fifty donned their caps and shawls, took to the great arm-chair, and for the most part, resigned themselves to old age and approaching death.

There is no such thing as old age, for the woman who feels and thinks herself young, no matter what the date in the family Bible may register.

The grandmother of to-day, has more leisure than her predecessor, and she puts it to better advantage. Her mental activity is greater than it ever was, and she does not hesitate to begin a new study, and to compete in art or science with younger women. If she has money, she studies the art of entertaining, making herself more interesting, than ever before, and she even follows the prevailing "fad"—whatever it may be.

Women who would once have been called middle-aged, are enthusiastic physical culturists, and owe their superb health to the fact, that they have studied the laws of hygiene, and know how to take care of their bodies.

"I have greater need of health and of personal charm, than any of those young people," said a matron, "because they all have the fascination of youth; but I find that age has its compensations, for I know and take heed of every one of my blessings, and am grateful for them all, while the young people scarcely know what they are enjoying."

This particular woman says that there is only one thing to remember, one thing to forget, if you want always to be young. The first, is the power of right thinking, which can rebuild and remodel one's life and character, and the things to forget are—"regrets." Nothing is so truly useless, or such a handicap as regrets of any kind, and it is the first thing one must learn to eliminate, if one wants to be fifty years young.

Alcohol will remove candle grease.

A pinch of salt added to the coffee will improve its aroma.

In a civil action on money matters, the plaintiff had stated that his financial position was always satisfactory. In cross-examination he was asked if he had ever been bankrupt. "No," was the answer. Next question was: "Now, be careful; did you ever stop payment?" "Yes," was the reply. "Ah," exclaimed the counsel, "I thought we should get it at last. When did that happen?" "After I paid all I owed," was the answer.

Moths do not like printer's ink, and there is no more secure way of disposing of the winter clothing than to pack it away in newspapers. The articles, whether woollen or fur, should be well beaten in the open air, to make sure that no egg is deposited already, then folded carefully and pasted closely in newspaper, so that there shall be no crack into which the insidious little insect may creep. By packing carefully in this way you will not need camphor, moth balls, pepper or tobacco, or any of the moth preventives so frequently recommended.

THE NEWEST FASHIONS.

This is the time of the year when the most fascinating of gowns make their appearance, and when dressmakers have the best oppertunities for the display of their taste and skill. Small wonder is it, then, that new styles make their début, new fashions pass in review, to be condemned or applauded, while even the most eccentric and startling of ideas can be most carefully considered, and dispassionately judged by contrast with the more conservative or better known effects.

* * *

It would seem as if this season any and every colour is popular, and that no one marked fashion holds supreme sway. One of the leading houses, one that has always advocated the extreme of Empire styles, still proclaims its belief in the fashion, and most exquisite examples of the period does it send forth. The long, drooping shoulder line, with the kimono sleeve effect, the full, graceful skirt falling in long, loose lines, and the general appearance of the entire gown, that of the most exaggeratedly artistic, can here be noted in full perfection, while the smartest and most severe of the tailor made costumes, according to the Parisian conception of the tailor made, is in delightful contrast.

* * *

This same tailor made costume that is at present thought so smart has either a pleated or circular skirt just short enough to clear the ground. The coat, three-quarter length, is on the same lines as a man's cutaway coat, fitted, and, like the new fad in men's coats, bound with braid. There is always a waistcoat, and the waistcoat is most elaborate, braided or made of richest brocade. With this is worn the simplest of shirt blouses, finished at the neck with a high linen collar, not a turned down one, with a plain, high, mannish shape. This is fastened with a jewelled collar button of large size, while another button holds it at the back of the neck. Charmingly incongruous with this collar, is the full jabot of lace fastened under the collar button, and long enough to fall down over the waistcoat. The correct hat to wear with this costume is a large, flat brimmed shape with quantities of flowers and ribbons. The mixture of the masculine and feminine in this outfit is charmingly attractive, but the danger is in the copying of the original model, for, as can readily be understood, the possibilities of exaggeration are many, and the pitfalls for the unwary are in consequence to be dreaded.

* * *

With the exception of these tailor finished costumes, which should be made in light weight cloth, serge or mixed cheviot, there is no hard and fast rule as to the materials to be worn for race costumes. The most costly of silks and laces are worn, while all sorts of novelties in materials here make their first appearance. The entire costume with coat to match and the finished gown with separate wrap are alike fashionable. Costumes of light weight cloth, and gowns of lingerie and laces are all in evidence, until one feels that the fashions for the entire year must surely be passing in review, so many and so varied are the models displayed.

* * *

Extremely graceful are most of this summer's gowns, and although the loose, semi-fitting effect given by the big shoulder seams and kimono sleeves was not in its first rendering becoming, except to the most slender of woman, a careful modification of the design has made it not only possible, but becoming to stout woman also. Voile, soft silk, and all thin materials are effective in these gowns, and plain, flowered, or striped designs are equally popular. Striped voiles and chiffons are considered extremely smart, and when black and white stripes are chosen, a touch of colour in the girdle is most effective, and very fashionable.

* * *

Bands of Liberty satin or taffeta are most popular this year as trimmings are used in all sorts of different fabrics. India silk and pongee gowns are immensely improved by bands of taffeta, whilst the lustre of Liberty satin bands on an embroidered or lace gown, or even on plain chiffon, is remarkably good. These bands are on the bias and must not be doubled, but left in the single fold, and are in graduated widths when put around the skirt. When put on in horizontal lines, they are so arranged as to be much narrower at the waist than at the foot of the skirt. Velvet ribbon bands are still to be noticed, but just at present, the satin folds are considered smarter.

The charming French model gown shewn in the illustration on this page can be carried out in pink and white striped voile. The pink is a very soft delicate shade. The smart bodice is trimmed with wine coloured velvet, and the vest and collar are of white embroidered muslin.

A SMART VOILE GOWN.

Despite all the arguments to the contrary, in nine cases out of ten a long coat, whether loose or fitted, is more becoming than a short, necessarily shapeless, jacket. Fashion may decree the Eton, bolero, blouse, or reefer, and, needless to state, her wishes will be followed out consistently through the season at least. But long jackets never seem to entirely disappear, even though they may not be pronounced openly to be the prevailing mode.

* * *

For afternoons, a cloth costume at this time of year is really better with a little fanciful bolero, than with a long fitted coat, which is bound to be uncomfortably heavy; and yet, the newest models for autumn designs, show unusually long fitted coats fastened all the way down the centre, with silk or braid frogs, the rest of the coat being sometimes quite plain, and again rather elaborately braided. All the boleros this year are decidedly elaborate, embroidery and braiding being the favorite mode of trimming. Last spring the fashion was introduced of wearing a wrap of some sort with every outdoor costume, whether a simple walking dress or an elaborate reception gown, and this year the idea has become firmly established, so that the ingenuity of all the leading modistes is being severely taxed, trying to invent some style of hot weather wrap, that will make an attractive finish to a gown without adding the slightest appreciable warmth. One of the best results, or rather solutions, of this question is seen in the long lace coats, and those formed of lace and net and ribbon, that are made up over a foundation of chiffon or mousseline de soie are delightfully light, most attractice, and give an exceedingly effective finish to any gown.

* * *

Already there are numberless different and totally unlike models from which to select in purchasing a loose lace coat, and as the fashion grows in popularity, new designs will be made up by the score. As yet, a long three-quarter length coat, hanging loose from the shoulders or from a fitted yoke, is one of the favorite models, but in a week from now some other design may be infinitely more popular, so fickle are the minds of fashion's followers. Some of these coats are well fitted into the figure in the back, others are half-fitted and loose in front, but all are mode up over a transparent foundation, so as to give clearly the good lines of the figure. A princess dress is best for this style of thin wrap, and an Empire model can also be smart if cleverly handled, but it is difficult to make a two piece gown, with its wide belt, to look as well and give as good lines under the coat, as a dress that more closely defines the natural lines of the figure. It must be remembered, that this lace coat is in no way a wrap that is intended to give warmth, but is designed wholly as a smart and effective finish for the gown with which it is to be worn. Lace wraps are also exceedingly fashionable, but they are made in a different style, and have a light lining—one that is intended to give real warmth and protection.

———o———

ROUND ABOUT NOTES.

Norway consumes the least alcohol *per capita* of any country in Europe, and Finland stands second.

* * *

Belgium does not let women vote, but Ghent has just appointed twelve women on the police force.

* * *

Any one in Denmark who pays the State £6 10s. when he is twenty-one is entitled to an annuity of £13 when he becomes sixty-five. But if he dies before that time, the State gets all the money.

* * *

A woman angler, Miss J. M. Wheeler, who lately gained a silver medal for landing a huge skate weighing 127 lbs., has just captured another monster of 144 lbs. at Ballycotton. It is believed to be the largest fish ever caught by a woman in the British Isles.

* * *

Madame Paderewski, wife of the famous pianist, is a great poultry-fancier. She is president of the Poultry Club of Switzerland. On her big poultry farm at Morges, by Lake Geneva, she keeps fourteen varieties of choice fowls.

* * *

Miss Margaret A. Hanna will be one of the attachés to accompany the United States delegates to the second Hague conference, the first woman, it is said, to hold such a position. Miss Hanna is private secretary to Second Assistant Secretary of State Adee, and has a wide knowledge of international law and precedents. Her appointment is a recognition of the ability she has displayed in handling diplomatic matters which have been assigned to her in the department of State.

* * *

An informing article of "Women Inspectors under the London Borough Councils" is the special feature of "Women's Employment" for June. The word "sanitary inspector," the writer points out, is very comprehensive. In London the woman inspector may, among other duties, visit workshops and workplaces, which include restaurant kitchens and laundries and offices where women and girls are employed. This latter inspection, by the way, only obtains at the present time in the City of London and in Kensington. She may inspect the homes of out-workers, tenement houses, and model dwellings, with a view to seeing that they are clean, sanitary, and not overcrowded. The investigation of the deaths of infants under one year and the visiting of infants after birth and giving advice to the mothers as to feeding and general arrangement may also be the work of the woman sanitary inspector.

Bullion Embroidery.

Fortunate indeed is the woman who has an heirloom in the shape of a Chatelaine top, for she can make a hand-bag at comparatively small cost if she be anything of a needlewoman. The bag is fashioned from a square of heavy black satin, having the corners cut off, so that two straight sides, when folded, will fit into the top, which will be gold plated or oxidised to be almost black. The decoration is cloth of gold appliqued on by gold bullion thread, as shown in the detail illustration, the stems being of the bullion couched on with sewing silk the same colour. The bag should be lined with a light-weight suede leather or heavy satin.

There is a revival of bullion embroidery,

DETAIL OF BULLION EMBROIDERY.

and the glittering thread is introduced into all sorts and styles of decoration. In the last illustration a most effective scroll design is given, which can be outlined by means of a large reel, for with the centre and circumference designated the intervening lines can be easily followed. The bullion thread should be carried through the material, and well fastened on the under side.

Infant's Crochetted Shoes.

Use spinning wheel yarn (one half skein makes a pair) and a bone hook.

First make a chain of 20 stitches.

1. One double in third stitch of chain, 1 double in each of the next 18 stitches, 3 doubles in last stitch down the other side of chain, the same, putting 3 doubles in last stitch, and fasten in the top of double with single, making 38 doubles in all.

2. Chain 2, 1 double in each double of previous row.

3. Same as second.

4. Same as third; break the yarn and fasten securely.

Piece for the Instep.

1. Chain 4, 1 single in each of the 4 stitches.

2. Chain, 1 single in chain 1, single in each of the 4 singles. Repeat 6 times, making 8 rows and 9 singles in the last one.

Now take the foot part; count 9 doubles each side of the one at the end, and crochet in the instep, leaving the fulness at the toe.

5. One double in each of the singles and doubles all the way around for the ribbon.

6. Pass 2 doubles, 6 doubles in next double, pass 2. 1 single in next double. Repeat all around, making 6 groups of doubles.

7. One single in top of 6 doubles, 6 doubles on single. Repeat all around.

Repeat seventh row 4 times, making 6 rows of shells. Complete by putting ribbon through the last row of doubles over the instep.

Origin of the Thimble.

The custom of wearing a thimble originates from Holland, the first one used for the protection of the finger being made as far back as 1684, and was presented to one Anna Van Weedy, the second wife of Killien Van Rensselaer, by Van Benscoten, who, in offering his usual gift, begged her "to accept this new covering for the protection of her diligent fingers, as a token of his esteem." Before that time the thimble was a thumb-bell, worn on the thumb.

Mosaic China Work.

This pretty but antiquated china patch-work looks really difficult, but in reality it is extremely easy, as well as fascinating, to those who are fond of making useful and pretty things out of next to nothing.

The first thing to be done is to collect all the dainty pieces of broken china, glass, etc. The easiest way to get a varied selection, is to ask your friends to save their broken ware for you. You can also ask the assistants of the china shop you usually patronise to put by bits for you, the owner of the shop will, no doubt, be only too glad to get rid of them. You must then decide what you intend making. Large drain pipes look famous for umbrella-stands, and for standing grasses in for the corner of a room, or to fill up an ugly corner in a staircase. Jars look very pretty for standing pots of ferns or flowers in. When you have chosen the article you mean to decorate, you must purchase some good, soft putty, and put a layer of it over the

BAG IN BULLION EMBROIDERY.

jar or drain pipe, about half an inch thick, then break your china up into small pieces in different shapes and sizes. Take one piece at a time, put it on the putty, and press the china into it; now choose another piece that matches fairly as regards colouring to the bit already stuck on, press it about a quarter of an inch away from the latter. When you have embedded it fairly well, give it a gentle push towards the other piece of china, a tiny smooth roll of putty will then stand up between the bits of ware; continue thus until you have completely covered the article in hand. Place it to dry where it will be free from dust for a week; then paint the little rolls of putty with some common yellow paint, leaving the china just as it is; when this is dry, cover the yellow paint with a coat of Judson's gold paint. The object of putting the common yellow paint first, is to keep the gold from sinking into the putty. When finished, you will be astonished to find your handiwork looks so well and costs such a small amount.

There are several things that can be made to look really well with a covering of china mosaic work.

Starching and Ironing a Shirt Blouse.

Careful attention to a few details will result in making a shirt-blouse as fresh and attractive as ever. If there are any unwashable buttons or trimmings, remove them, and throw the shirt into clear cold water for an hour. If afraid of the colour running, add a handful of salt. After washing in warm suds and drying it, make starch by dissolving a tablespoonful of dry starch in a quart of water. Thick cambric blouses should be starched only at the collar and cuffs and down the front hem. To the starch should be added half a teaspoonful of gum arabic, dissolved in water with a little borax. Wring the shirt dry out of the rinsing water, and hold it by the back of the neck. Gather up collar, cuffs, and front hem, and work in the starch, after which wring these parts in a towel, and rub thoroughly; roll up tightly, and leave them for half an hour, at the end of which they are ready for ironing.

In the case of gingham or any half-transparent material, dip the entire shirt into hot starch and wring it between a towel. Two tablespoonsful of raw starch into a quart of boiling water, with a dash of gum arabic, form the proper thickness. Use the starch as hot as possible, and when the shirt is wrung dry, clap it between the hands until it is thoroughly cleared of the starch. It must then be ironed as quickly as possible.

Select the oldest, smoothest, and cleanest iron, polish it well with a wax cloth, and test its heat with a piece of white paper before beginning to iron. First the yoke, then the collar, inside and outside, then the back, front, and last of all the sleeves and cuffs.

A shirt board and sleeve board are very helpful, and, indeed, the latter is a necessity. It should be half an inch thick, five inches wide, and graduated so that it may fit any sleeve. This should be covered all over with flannel and again covered with white muslin, sewn on firmly.

Catching Cold.

A great deal of lung trouble, consumption, and throat difficulties are chargeable directly to the habit of laughing and talking on going out from heated audience rooms. People sit for hours in warm rooms, then go out suddenly into the cold air. They are in high spirits, and naturally inclined to chatter and laugh, often keeping this up for a long time. The sudden reducing of the temperature of the lungs by the enormous inhalation of very cold air is productive of congestion and chills innumerable. It is declared by a physician who has made a study of this subject that if people could be induced to keep their mouths shut on going out of heated rooms into a cold atmosphere there would be fewer pulmonary and throat troubles and fewer colds and coughs. People should gradually accustom their lungs to the cold, rarely speaking for the first few minutes of their out-door trip. To the thoughtless this looks like a small matter, but on it may depend health, happiness, and long life.

A SCROLL DESIGN IN BULLION THREAD.

COOKERY.

Pickles and Preserves.

To town-dwellers pickling and preserving are fast becoming lost arts. So much is done by wholesale houses in this way, and often very well done, and storage room is often so limited that the general feeling seems to be "sufficient unto the day are the provisions thereof!" But in country districts more forethought is necessary. Shopping must be done not more than once or twice a week at most, and yet provision must be made for unexpected calls on the larder. And not only so, but in every well-stocked garden or farm there will be home-grown products, which may very profitably be preserved for home use, and the housewife's harvest must be garnered as well as the farmers'.

A Good Pickle for Red-Cabbage or Cauliflower.

Take 1 oz. black pepper-corns, ½ oz. of bruised ginger, ¼ oz. of all spice, and 1 qt. of vinegar. Boil well together, and let it get cold.

The cabbage should be thoroughly cleaned and cut into narrow shreds, strewn thickly with salt, and covered over. After 24 hours, drain the shreds thoroughly and shake in a soft cloth, place them in a deep jar, and pour the cold vinegar over them. Store in a dry place, but do not keep very long, or both colour and flavour will deteriorate. It will be ready for use in ten days.

The cauliflower when cleaned must be stripped of leaves, and broken into small pieces. Soak 48 hours in brine, dry, and pour the pickle over hot.

Shallots

when quite ripe should be peeled and immediately dropped into a perfectly dry jar and covered with cold vinegar, using 2 tablespoonsful of allspice and 3 teaspoonsful of whole black pepper to each quart of vinegar. Tie down with bladder. They will be ready for use in about three weeks' time.

Nasturtium Pickle to use instead of Capers.

Gather the young nasturtium seeds on a dry day and wipe clean. Place in a glass bottle with ½ pt. of vinegar, ½ oz. of salt, and 3 peppercorns. Cork firmly, and seal with bees' wax, and keep for 12 months before using.

To Bottle Fruit for Winter Use.

Gather the fruit in warm, bright weather when there is neither rain or dew on it. Take off the stalks, and place in clean and dry wide-necked bottles, put in some new corks, and place them in a copper with cold water up to the necks of the bottles. Hay should be twisted round the bottles to prevent them touching each other. Light the fire, and bring the water gradually to the boil, and keep it simmering about half an hour for gooseberries, currants, or raspberries, or about one hour for plums or greengages. Rake the fire out and leave the bottles in the water till quite cold. Then tie moistened bladders over the corks, or dip in hot resin—store in a dry place.

To Keep Mushrooms in Brine.

Take some button meadow mushrooms, wipe them with a piece of flannel, and measure after the stalks are removed. For each quart of mushrooms take 2 quarts of water, ½ lb. of common salt, a dessert-spoonful of peppercorns, 2 blades of mace, and a piece of bruised ginger, boil for 5 minutes, and take off the scum. Throw in the mushrooms, and boil gently for five minutes, pour them into well scalded wide-necked bottles, and let them get quite cold. Pour a little good salad oil on the top of each bottle, cork with new corks, and tie down with bladder. When wanted for use, soak in a little warm water to remove the brine.

Damson Jelly.

(Or may be made with any good red plum.)

Place the fruit to stew in a jar, either overnight in a cool oven or in a stew pan of water, till the juice is all extracted. To each pound of juice allow 1¼ lbs. of good apples, pared, cored, and sliced. Boil these together, for half an hour, stirring well. Add 14 ozs. of sugar (for each pound of juice), stir till dissolved, and boil for ten minutes more. Should be run into small moulds and turned out when wanted for use.

To Make Black Currant Jam.

To each pound of black currants allow 10 ozs. of sugar, but before adding this, boil the fruit for ten minutes, then take half the fruit out of the juice, draining it well through a colander to extract all the liquid portion, throwing away only the skins and pips. Add the sugar, and boil for another 15 minutes before placing in pots.

Black currant tea—made by pouring boiling water over jam, is an exceedingly useful drink for colds on the chest and sore throats, so that a good supply of the jam should always be made.

CREAMED ASPARAGUS.

Blackberry Wine.

As for all preserving, the berries must be gathered in dry weather and should be fully ripe. Put the fruit into a deep jar, and cover with boiling water. After it has cooled a little mash it well with a wooden spoon, cover it over, and let it stand for three or four days. Strain off the liquid and measure. To every gallon allow 1 lb. of sugar. Put it into a cask to work for about 10 days, being careful to keep the cask well filled, and take off carefully the scum that rises. When it has ceased to work, bung it down. In from 6 to 12 months the wine may be bottled.

Rhubarb and Blackberry Jam.

To each 2 lbs. of blackberries, allow 1 pint of water, and stew for 10 minutes. Mash thoroughly with a wooden spoon, and strain through a hair-sieve. To each pound of blackberries allow 1 lb. of rhubarb cut into very thin slices, over which sugar has been sprinkled, and allowed to lie over-night. To each ¾ pt. of juice and to each pound of rhubarb allow 1 lb. of sugar. Boil for 15 or 20 minutes (till it sets), and cover the jars after a few days. This will be found an excellent and most economic preserve.

Mary Lovell.

Creamed Asparagus.

After cooking the vegetable, drain it free from water, and arrange 6 stalks on toasted bread thinly buttered; then place a tablespoonful of sauce on top and cover with the sifted yolk of hard-boiled egg. For the sauce, place in a saucepan 2 level tablespoonsful of butter, and when melted stir into it 2 level tablespoonsful of flour; when incorporated, add 1 cupful of milk, ¼ teaspoonful of salt, ¼ teaspoonful of pepper; stir until creamy.

The Flower Garden.

Garden Paths.

When the after-dinner wit is dull, and conversation flags at country house-parties, the hostess is always able to fall back upon the topic of flowers, and the invitation to "come and see the garden" is always welcomed by the guests, who are delighted to leave the dining room for a wider space under the canopy of a resplendent evening sky. The lawn is perfectly even and true, as the turf has been recently mown. The flower beds are filled with exquisite plants, and the air is deliciously fragrant, as it is the month of July, when the perfume contributed by the flower in bloom should please the most fastidious person.

Unfortunately, owing to the heavy rain showers, the garden paths are soft and cloggy, and the pleasure of a visit out of doors is marred by reason of the mud which adheres to our "party" shoes. How necessary, therefore, it is to pay a little attention to the paths. The construction of garden paths is a subject which has been neglected, and I feel sure that readers will not be averse to a word of advice upon the question.

I wish it to be distinctly understood that I am writing from a personal experience of my own in this connection, and propose to give an exact description of the walks made by me in a garden where the subsoil was of a decidedly clayey nature. Nothing more than a few cinders had ever been applied by the former occupants of the house and grounds, and I was quite perplexed to know how to set about the construction of the paths. In wet weather they were always muddy, and when only partly dry were absolutely dangerous to walk upon on account of the greasiness of the surface; narrow escapes from falling were frequent, so I resolved to alter matters.

As soon as I had pegged out the directions of the paths, the subsoil was removed to a depth of one foot or more, and as a foundation I laid about six inches of clinkers. These I obtained from the gas works very cheaply, and covered them with a layer of ashes and crushed red sandstone rock.

After this had been well hammered down, I laid a further supply of fine sandstone again, and finished the job with a covering of about two inches of gravel. This was repeatedly rolled on wet days, the surface being kept true and even, like the lawn, as I do not consider it an advantage to neatly round walks with a foundation of the description given above. The surface is sufficiently porous to admit of surface percolation, and the drainage so often adopted is not needed at each side in order to carry away water. To my mind the garden paths should be level and as true and even as a bowling green, and my method proved most satisfactory; my paths were always admired. They became, in the course of time, solid, dry, and clean, and could be used in any weather.

I also made my fowl runs in the same way, but took the precaution at all times not to throw green food, such as cabbage leaves, etc., down for my poultry, but hung it up. I could sweep over my runs, and afterwards scatter a few shovelsful of oyster shells and sand over; the runs always looked well and clean, and my poultry was thoroughly healthy and profitable. Nothing creates a more unpleasant mud than fowls droppings, and decayed vegetable matter.

G. W. Thomson Price.

Household Hints.

An Excellent Iron-stand.—Use a clean fire-brick instead of the ordinary iron-stand, and your iron will retain its heat much longer. The usual iron-stand not only admits the air to the bottom of the iron, but it conducts the heat from it. The brick, being a non-conductor of heat, retains the heat in the iron much longer.

To Make Lime-water.—Put 2 oz. of freshly prepared slaked lime into a stoppered jar. Add 1 gall. of cold water, shake thoroughly, leave for several hours, then strain off carefully to keep free from sediment. Bottle and use as required.

RENOVATING OLD PETTICOATS.

The prevailing fashion that insists on a petticoat to match each costume, and of equal pretensions to style so that its harmonious blending may delight the critical eye when the dress skirt is daintily uplifted over muddy streets, is plunging all beruffled femininity into woeful expenditure, simply because the perplexing edict is met with the purse and not with the brain.

Women, as a multitude, are not intentionally extravagant, but the dress accumulations of the season generally end in the proverbial rag-bag after their time of usefulness is spent; yet deft fingers and a little ingenuity could evolve many dainty articles of apparel from figurative "scraps" and the despised remnant, did they possess the cunning.

Diversity in petticoats is more than one of fashion's essentials, for it is merely conforming to hygienic principles and the unwritten laws of cleanliness as to personal linen; but beyond some half-dozen selections in all, embracing the cambric ones of the summer-time and taffeta or practical sateen or moreen for winter's rigorous demands, the average woman cannot afford to acquire more, and one silk skirt generally has to suffice for "best" wear, no matter what the colouring of the gown it accompanies.

In wearing a petticoat, it is always the flounce which first exhibits the telling ravages of time, especially in the taffeta models. Then there is a natural dissolution at the seams next, where the silk stitching cuts through. If the petticoat be a dainty white one, which luxury is a prevailing midwinter as well as mid-summer style, associated with the cloth or velvet costume, it is the flounce, with its perishable embellishments of foamy lace and

EMBROIDERED FLOUNCE.

sheer transparencies of embroidery, which soils first, while the main body of the skirt is sufficiently fresh to stand repeated wearings.

Aside from the economy of equipping one petticoat with removable flounces that may be worn or discarded at will, and its practical argument, one can thus, at a purely nominal outlay, secure seemingly a distinctive, separate petticoat for every gown, and the accompanying illustrations show the intention of the skirt, in detail, with the overlap that conceals the attachment, which is made with buttons and buttonholes.

A discarded silk petticoat of a past twelvemonth, in any fair state of preservation, may, by a few minutes' application, be transformed into a garment of actual beauty that successfully vies with the bewildering creations of the shops, and the gratifying results more than reward one for the outlay of time and patience.

In remodelling a much-worn silk skirt, attention must be paid to the condition of the gores and the seams, for if the latter are worn and frayed, as generally is the case with the "ready-made" variety, do not make the mistake of ripping them, but cut along the seam with a sharp pair of scissors, closely following the edge of the stitching. Freshen the material by sponging with warm water, into which a few drops of ammonia water have been mixed, and press between newspapers, being careful not to allow the hot iron to come in contact with the silk, as it will destroy its natural qualities and body. Baste the gores in exact position, tape all seams, and stitch with cotton thread of the same colour. Silk thread should never be employed as a stitching for seams in silk, as it pierces the fabric and breaks the weave, where the cotton holds it securely. Finish the top with a casing run through with tape, and at the lower edge, which should be cut off in an even line below the knees, allowing for the depth of the flounce, sew on a fly provided with buttons, and complete the bottom of the petticoat with a hem that conceals it.

The foundation being in readiness, the subject of appropriate flounces must be considered, and the same treatment accorded the remodelling of a silk petticoat should be directed to those in sateen, or other material that requires refreshening. In white skirts, the upper portion is usually entire; if not, it would be a waste of labour to attempt to mend it for this purpose.

New goods throughout may be used, and if one is not limited in expense, this is per-

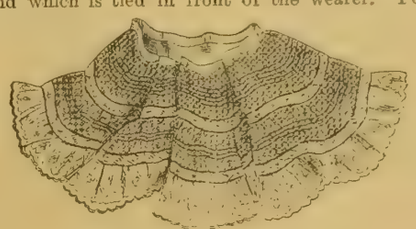
THE COMPLETED PETTICOAT.

haps the more commendable plan, as it insures a petticoat that will be in perfect condition for a stated period, at least. If the cost of a silk top is impossible, there are many pretty "near silk" substitutes available, at minimum prices, and if warmth and comfort enter into the requirements, French flannel or cashmere are recommended for their protective qualities, the latter textile being a favourite for the most charming underskirts, which allow a free indulgence of ribbons and lace. These woollens are much superior to the bulky, heavier goods formerly considered so necessary to health; and jersey tops or knitted designs may be employed also, as this portion is simply the invisible "body" of the petticoat, from which the graceful, elaborate, or plain flounce-appendages depend.

In these accessories, one is allowed unlimited latitude in the display of individual taste and originality, and a prodigal use of fancy

THE FOUNDATION.

stitches, French knots, lace braid or baby ribbon applied in the inimitable true-lovers' knot, so characteristic of the Watteau period, or any favourite embellishment may be summoned into requisition, and the result is more than gratifying.



Colours that will not fade or readily show the dirt should be selected for the flounces of petticoats intended for practical street wear with sensible walking skirts; a wise suggestion is to select a plaid in one of the subdued Tartan patterns, or the familiar checked silks. Ruchings, tucks, cording, narrow ruffles, accordion-pleatings; these are many of the conceits that are alternated with baby velvet ribbon for the decorative device. There is more latitude permitted in flounces that are to be devoted to dress purposes, or the diaphanous summer frock or evening gown.

A pretty variation is the incomparable broderie Anglaise or English eyelet embroidery, according to its more familiar cognomen, and in deep flouncing, with a band of beading in a similar pattern employed as a finish at the top (and incidentally to cover the band underneath on which the buttonholes are worked for fastening the flounce to the skirt), it makes a beautiful adjunct for the white petticoat. Washing ribbons may be threaded through the openwork of the beading, and knotted in a graceful bow or rosette at the left side. An original conception would be in Persian lawn tucking applied in oval-shaped medallions on washable Brussels net, and frills of German Valenciennes lace would afford a fluffy decoration. Since the main object is bouffancy and the securing of an effective, pretty distention for the lower edge of the dress skirt, numerous artifices are resorted to for this result, one ingenious method of producing the needed fulness being obtained with ruchings of crinkled satin ribbon, applied in innumerable rows, and alternated with lace *entre deux*.

Lace bowknots introduced on a taffeta flounce in one of the pale evening tints—blush pink, baby blue, or hyacinth—infuses a Frenchy suggestion, that is modified to the proper degree by fringed ruchings applied in a fantastic circular design, the centre of which contains the lace motif. One idea of originating fanciful designs for thus perpetuating the flounce in silk and lace readily follows another, and their elaboration and inception will afford much entertainment for idle hours.

Jewellery for Girls.

The newest necklace for young girls is of seed pearls, the tiny strands being twisted together into a rope in a fashion that was popular many years ago. For older women, there has been revived the seed pearl rope, ending in tassels, and which is tied in front of the wearer. For

NET AND LACE FLOUNCE.

the young girls, however, this fashion is too elaborate. The seed pearl rope, which may be either quite heavy or very slender, is made into a short chain, which is worn without a pendant. Strands of tiny crystal beads are also twisted into these same slender ropes, as are also small pink or white coral beads. These must be very tiny, however, to be attractive, as otherwise a rope made of several strands would be too clumsy and conspicuous.

Gold beads are no longer very fashionable, but the single strands of pink, red or white coral, rather small turquoise beads, jade, lapis lazuli, and the pale green Amazon stone are very fashionable still, although they have been worn some time. Less becoming than these to most girls, but exceedingly popular and newer, are the strands of amber beads, in all sizes and many different shades. These may be considered the most fashionable necklaces for young girls just at present, after the seed pearls.

Fine gold charms are worn with pendants, and, as in the case of jewellery of all sorts just at present, the most fashionable styles are those which imitate the antique. Happy the girl who possesses a fine old-fashioned gold chain which was made by hand in the days when the goldsmith's work was a more finished art than it is to-day. These chains may be worn rather short, with small pendants. The pendants are frequently made over from old-fashioned earrings or small old-fashioned brooches. Little pieces of fine goldsmith's work, set with coral, small pearls or turquoises, are charming for this purpose. Small crosses in the semi-precious stones, and hearts in rose quartz, moonstone, jade, etc., are also popular. Gold tassels, old-fashioned trinkets or the imitations of these when finely made, are also very charming for pendants.

This completes the list of the young girl's permissible trinkets. Even such trinkets should be worn only when they are necessary to finish the costume. Bracelets are not becoming to a young girl, earrings are quite impossible, and the fewer rings, pins and chains she wears the better.

ROUND-ABOUT NOTES.

According to Consul J. C. Covert, of Lyon, the uses of soie de chardonnet, or artificial silk, are increasing. He states that several manufacturers in and around Lyon, are employing it in the manufacture of light goods for summer wear, and one company states that the exports to England, Belgium, and the United States, are holding their own, and in some countries are marked by an important augmentation. It is being used in some factories in combination with the natural silk. In mousseline de soie the warp is made of natural silk, and the woof of chardonnet. In some houses a thread of chardonnet and a thread of natural silk are passed alternately on two different shuttles.

* * *

A great difficulty that the manufacturers of goods from artificial silk have had to contend with, is that the stuff could not stand exposure to dampness or the least rain. I am told that in blending the artificial with the natural article, this difficulty is very largely overcome. It is also said that by combining a thread of chardonnet with a thread of natural silk, the former adds a very desirable brilliancy to the finished material, which adds to its value as used in laces, passementerie, mousselines, ribbons, gauzes and anything used in trimmings.

* * *

It is a great thing to possess the "saving grace" of humour. It lifts one so easily over the rough places in life. The unconscious humour of children, always appeals to me irresistibly, and I often think that an amusing handbook of jokes, might easily be compiled from the humorous sayings of the little ones. The little daughter of a friend of mine, has the habit of eating out the soft part of her bread and tucking the crust under the edge of her plate. The other evening she was detected in this, and her mother said: "Edith, how often have I told you about leaving your crusts? There may be a day you will be glad to get them." "Yes, mamma," replied Edith promptly, "that's what I'm savin' 'em for."

* * *

The birthstone suitable for those born between June 21 and July 22, say those who claim to know, is the diamond; others equally adept give the ruby, with the water lily as the flower. However one may regard the subject, it seems fitting that each individual should select as her favourite, some special gem, flower and perfume. It may be the lily, the rose, the violet, and the turquoise, the cornelian, the amethyst, or the opal. The latter, by the way is no longer considered to be the omen of ill-luck. English royalty has so declared, hence in Britain, it is once more the fashion.

* * *

Summer is the time to buy winter furs, because prices for furs are greatly reduced during the summer season. Never has there been so great a demand for fur garments as during the five past seasons, and as a result, prices in all departments of furs have gone up by leaps and bounds. It will astonish most of our readers, writes Agnes Laut, in a recent number of the "World's Work," to be told that on the American side of the Canada line, the volume of the fur trade is the largest ever known in the United States—greater than in the days when the buffalo and beaver had the whole continent as a stamping-ground. Buffalo as a fur yielder has been exterminated. Beaver in most of the States, is practically extinct. Sea otter, from yielding 100,000 pelts a year, now gives at the most, only 400, at the least 200, for the trade; and the fur seal is on the way to extermination, falling from 100,000 a year, to 10,000 and 11,000. But other furs have taken their place. There is more money going to trappers to-day for skunk and muskrat and fox, than was ever made out of beaver and sea otter and seal and the rare furs. The swamps of New Jersey and Delaware alone yield millions of muskrats a year.

* * *

In spite of the scientific progression of the twentieth century, it sometimes seems as if superstition is as rampant as in mediæval times. Charms, medals impregnated with virtue by ecclesiastical benediction, and so-called electric and galvanic belts, pads, rings, brushes and other appliances are sold by thousands, and patent panaceas, compounded of drugs brought from strange lands, or discovered in some unusual way, are brought and used by millions of credulous and afflicted persons in all parts of the world.

* * *

"Beauty as a means of health" was the subject of a lecture recently delivered to a Working Girls' Club by Doctor Louise Bryson. The doctor affirmed that systematic efforts to be beautiful will secure a fair degree of health. Proper breathing was the first thing to cultivate. The chest should be enlarged by full, deep breathing, and not by muscular action from without. "Inflate the lungs upward and outward," she said, "as if the inflation were about to lift the body from the ground. Hold the shoulders on the line with the hips, and stand so that the lips, chest, and toes come upon one line, the feet being turned out at an angle of 60 degrees." Tight shoes were condemned as impeding the circulation, and producing a bad complexion. The skin should be cared for by bathing, and the expression by preferring the higher thoughts to the lower. A good circulation is gained by proper pose and breathing and the care of the skin, and good blood by sunshine and open-air exercise, as well as by indoor work. Dr. Bryson sums up her gospel as follows:—Moderation in eating and drinking, short hours of labour and study, regularity in exercise, relaxation, and rest, cleanliness, equanimity of temper, and equability of temperature. "To be as good-looking as possible, and to be physically well, one must in general be happy."

THE NEWEST FASHIONS.

Shantung and pongee dresses are very much in evidence this year. The different grades and kinds of pongee—for rajah, Burmah and a number of other such weaves can be classed with pongee suitings—are all used for a great variety of purposes, from the simplest shirt blouse walking dress to the most elaborate afternoon gown of some light colour handsomely and expensively embroidered. For out of town wear, pongee is seen in attractive coat and skirt costumes in white, pale blue, mauve, pink, green, and in all the delicate shades so peculiarly appropriate to this time of year, while for the town three piece costumes are the most numerous, and these are seen in all shades, from black to palest pink or blue, depending upon the exact use to which the gown is to be put. A three piece pongee costume is an excellent possession. The dress may be made without any lining at all if such a style is becoming to the figure, and if not it may have a light lawn lining cut low at the neck and left out of the sleeves altogether, for a heavy sleeve is one of the most uncomfortable parts of a dress in warm weather. Then a reefer or bolero jacket for this dress will make it possible to do away with a cloth costume, even for travelling, when a jacket of some sort is sure to be necessary, but the lighter it is the better.

* * *

In the three piece costumes there are a great variety of models from which to select this year. Some are made on noticeably severe lines, with just a little lace at the neck and sleeves of the bodice, while one or two bias folds are considered all sufficient trimming for the skirt. The jacket is also decidedly simple finished off with an inconspicuous design in soutache braid and a soft silk tie at the neck. The long pongee coats have bands of embroidery or plain silk, with a touch of lace at the collar and cuffs. Pretty lingerie and lace collars and cuffs, however, are seldom seen this spring, although the fashion is such an exceedingly pretty one. Upon the simple costumes there can be expended very nearly as much time and money as the elaborate dress calls for, and as the simpler a model the more perfect it must be in detail, one can rarely save anything in the price of the costume, but there is always the consciousness of the innate worth of the gown, which is sure to be an unspeakable solace to any one who can afford to have expensive gowns, and to whom only severe lines and apparently simple designs are becoming.

* * * *

There is no material which so quickly shows good results from just a little embroidery as does pongee, and this year there is more handwork of this kind to be seen on the rajah and pongee dresses than on any of the other silk fabrics. Almost all the embroidery is placed upon the bodice and jacket, for trimmed skirts, while always to a certain extent fashionable, are certainly not obligatory in this year's fashions, and after all it does seem wiser to have the greater part of the trimming where it is going to show up to the best advantage, and assuredly this is not about the end of a skirt. Bands of embroidery sometimes worked upon another material, as silk or satin, instead of upon the pongee itself, are seen more than the embroidery direct upon the material, and to a certain extent this is the same on the coats, although the bolero embroidered all over in different tones of silk is far too effective to be considered out of fashion. The new style of bodice, with bodice and sleeve in one, formed by a wide surplice of silk or of the material itself bordered with silk, gives an excellent opportunity for an effective display of embroidery, and these flat bands of silk are also generally laid upon other parts of the bodice and sleeve.

A PRETTY WALKING GOWN.
Paper Pattern 1/6½ Post free.

Long coats of pongee are most of them quite loose and have considerable trimming of lace, embroidery and bands of silk. Over a reception gown of light-coloured pongee a long, loose wrap of the same shade and material not only saves the gown tremendously but makes an infinitely handsomer style of costume than when the dress has to depend upon itself alone.

* * *

Black and white and grey and white stripes are worn just now in various kinds of materials. The pretty walking gown in the illustration is made in woollen material of light weight and fine quality. In this case the stripes are light blue on a cream-coloured ground. The smart coatee is finished off with strapped bands and dark blue velvet ribbon.

o

Neatly Dressed.

There is an exquisite charm about a neatly-dressed woman. She does not wear her hair loose, as if it is just about to fall on her shoulders. Her gloves are not ripped at the seams, nor are any buttons missing from her boots. Her veil does not reveal a hole over her chin, nor does the binding of her skirt show ragged in places. Not many women show their tidiness in these details, but the well-groomed woman considers that neglect in those little things is full of shame to womankind. Note the well-dressed tailor-built woman. Her cloth gown fits her without a crease, and there is neither speck nor spot on it. Her linen collar and cuffs are snowy white, and remain properly fixed in their places. Her gloves do not wrinkle, but button smoothly over her wrists, her shoes are dainty and polished. Her bonnet or hat is pinned on straight, and her hair is neatness itself. She is the picture of delicate finish and wholesome order. Would that we could come across her somewhat oftener!

Three Thousand Year Old Bank Note.

The oldest bank notes in the world are the "flying money," or convenient money, first issued in China in 2897 B.C. One writer tells that the ancient Chinese bank notes were in many respects similar to those of the present day, bearing the name of the bank, the date of issue, the number of the note, the signature of the official who issued it, and its value in both figures and words. On the top of these curious notes was the following philosophic injunction:—"Produce all you can: spend with economy." The note was printed in blue ink on paper made from the fibre of the mulberry tree. One of these notes, bearing the date 1390 B.C., is still preserved in the Asiatic Museum at St. Petersburg.

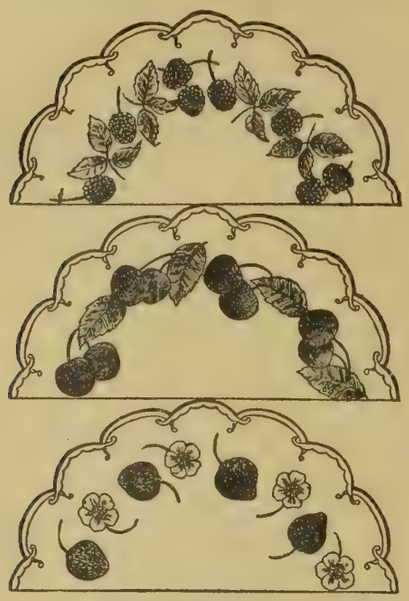
— — o — —

Removing Stains.

Coffee.—Lay the stained portion of the the cloth over a bowl and pour boiling water through it.

Fruit.—Boiling water as above: if ineffectual, rub with a solution of oxalic acid, and rinse in warm water.

Ink.—Dip in boiling water, rub with salts of sorrel, and rinse well.



Blood.—Soak in cold water. For ticking and thick goods, make a thick paste of starch water; leave till dry, and brush off.

Scorch.—Dip in soapsuds and lay in sun; if fibres are not much injured, dip repeatedly in saturated solution of borax, and rinse.

Mildew.—Wet with soapsuds and lay in sun; spread with a paste of soap and powdered chalk and sun it; soak in buttermilk, and sun.

ARTISTIC EMBROIDERY.

The demand for artistic embroidery designs has led us to present this week a collection of special drawings, and we will give a description of colouring and working for each, as well as some useful hints in the art of embroidery.

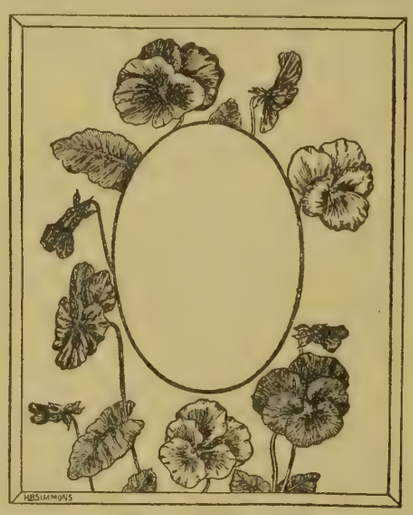
DESIGNS FOR DOYLEYS.

The designs for fruit doilies are unique, and most appropriate for use under the finger glasses which should appear with the dessert, laid upon a fruit plate.

The great variety of shades of silk admits of very artistic work, and with care and a little exercise of good taste, embroidery can be made as attractive as other branches of art. The drawings are shaded to guide in a way the use of the different shades of silk. For strawberries, one needs at least three shades of red for successful shading, and they should be so grouped as to give a roundness to the berry, much as the light strikes objects, giving them light on one side or point, and shadow on the opposite. Many use a too brilliant yellow for the seeds of the strawberry, which are more of a straw colour, and should not be so prominent as the bright yellow makes them. Use a cool green for the stems and leaves, and do not attempt to vein the foliage.

The blackberries can be worked in knots, if one desires, but the flat work will be more beautiful, provided the needlewoman will use judgment in the colours. The necessary deep purples are obtainable in most silks.

Remember that all berries are not ripe, and it will be well to work a few sections of some of them in deep red and straw colour. This will give variety in colouring, and look less like the work of an amateur than working the berries all alike. It is a great mistake to stint your silk, as often it is most necessary, as in the case of the blackberry, to work the silk through on the back about as it is on the front of the work. This will have a tendency to raise the work a bit from the linen. Use three shades of cool green for the stems and foliage.



The cherry doily will be very brilliant if one is careful to select the rich, deep tones of the blackheart, or again the whiteheart cherries, which are in the yellows, with a red cheek, will be pleasing. Work the stems in the same greens as the other doilies. The borders of these doilies should be in cream white or a very pale shade of yellow. A very delicate green will also harmonise with the fruit.

The pansy picture frame is a most suitable gift, as all know that the sentiment of this flower is "thought." These beautiful flowers grow in such a great variety of colours that one cannot make a mistake in the working of the shades. We should advise working them in yellow, and violet shades, or they may be pink and yellow, or pink and violet.

A very satisfactory way is, to secure the natural flowers and match the shades to them, following as closely as possible their shading, when working. That is what one would do in paint, and there is no reason why it should not be done in embroidery. Think of your work as a piece of colour instead of a piece of needlework.

The poppy set consists of a small centrepiece and a frame. This popular flower grows in different colours, and may be either yellow, pink, or red. The brilliant red variety is very effective, and there are many rooms furnished in red at present. You shoud consult, in a way, the taste and surroundings of the persons to whom you intend making a gift, before working it. These frames sell well in shops, and can be so neatly made that they do not look in the least like home work, but quite professional.

There are forms sold at the shops all ready for covering with the linen. These are nine and three-quarters and seven and three-quarters in size. Dainty corners are supplied which slip over the back and glass, holding them

PHOTOGRAPH FRAME.

firmly together. Another very popular way of making the frames is in passe-partout style, which can be done at home as follows:—Cut two pieces of quite heavy pasteboard seven and three-quarters by nine and three-quarters inches in size. Out of one piece cut an oval the proper size to show a picture, then ask your glazier to cut a piece of clear white glass the same size as the pasteboards. It will perhaps be well to have the glass cut first, and conform the pasteboards to it. Next cut a slit in the back piece of pasteboard, to enable one to slip the picture into position.

This slit should be about three-fourths of an inch from the bottom of the frame. Now cut some strips of nice white paper the length of the frame and about one and one half inches in width, and bind the edges neatly with the strips, gluing them well. Start with the glass front first, laying the strips of paper evenly on the glass, as the front of the frame must show the same width of binding all round, then draw it over the back.

The poppies should be worked in at least three shades of colour, and the foliage should be worked in very cool greens. Poppy leaves have almost no yellow in them. Use the long and short stitch almost invariably for petals and leaves of flowers.

The border of the centrepiece should be in cream white or very pale green. One should be most careful to have a set of hasps tight enough to keep the linen from slipping during work. This is a very necessary adjunct to good work.

Everyone knows that embroidery must be carefully washed with the purest soap. Do not wring the embroidered linen to dry it, but lay it in a towel, and pull it into shape as you dry it with the towel. Never press the linen on the right side, but on the wrong; and this must be covered with a piece of clean white cloth before applying the iron, which should only be heated to a moderate temperature.

As a rule, filo is used for embroidery, as it gives a smoother effect than heavier silk. Embroidery is now running into large artistic pieces. The centrepieces are made twenty-four inches in diameter very often, and some thirty-three inches. We advise the study of flowers during the season, as one should be familiar with the flower she is embroidering to make it appear natural when finished.

This will serve as a pleasant pastime as well.

Borders are invariably finished with a buttonhole stitch on the edge, to prevent raveling, as almost all borders are irregular and require cutting out.

———o———

Polishing Furniture.

It is a comparatively easy task to restore the mirror-like surface of old furniture and that of its metal trimmings if one has the proper materials. These are a bottle of the polish used in piano manufacturies for the wood, a brightener for the brass, some scouring material for the steel, and a half-dozen pieces of cloth. Soft old silk or cashmere are best, but cheese cloth will do.

The piano polish may be prepared by anyone. The formula given here was obtained from a dealer in old violins, and is the same as that used in piano warehouses, and will not injure the wood, but will rather preserve and beautify it. In a clean bottle put eight teaspoonsful of sweet oil, the same quantity of spirits of turpentine, two teaspoonsful of lemon juice, twenty drops of household ammonia, and a few drops of the oil of cloves to overcome the smell of the turpentine. Shake the mixture actively until the oil is cut, and always shake well before using.

Have the furniture to be polished free of dust. Apply with a bit of cloth; then with cloth No. 2 wipe away the extra polish, and with cloth No. 3 rub the surface briskly, when it will shine like a mirror.

When the wood is clean, the brass handles, railing, or other finishings will clamour for a going over. A teaspoonful of salt dissolved in two teaspoonsful of vinegar, applied with a cloth to the brasses, will remove verdigris and stains; a little whiting or silver polish briskly rubbed on will restore to brightness. If the trimmings are those known as gilt brasses, do not use the salt and vinegar, but use carefully silver polish only. Nickel trimmings may be brightened with silver polish.

———o———

To clean decanters. Put a spoonful of salt in the decanter, moisten with vinegar, shake well, and rinse.

To clean plate-glass. A soft cloth wet in alcohol, is excellent to clean French plate-glass and mirrors.

CENTREPIECE AND PHOTOGRAPH FRAME.

THE COLLECTOR'S GUIDE.

Bow China.

(Figures.)

By H. W. Lewer.

"There were some clever men who modelled for the Bow concern, and they produced several spirited figures."—"Nollekens and his times."

The earliest porcelain factory in this country is ascribed to Bow, which dates back to 1741, if not earlier. The works, although named Bow, were in the parish of Stratford Langthorne, Essex, not in Bow, which is on the opposite side of the River Lea. The exact site of the factory was discovered in 1867, when excavations were being carried on, quantities of broken moulds and fragments of china being unearthed. These fragments have been of great service in assisting in the identification of many doubtful pieces of Bow china. Another name for the factory was "New Canton," as it was supposed to have been built from a model of a Canton factory, but this requires verification.

It is not known who were the first proprietors, but Edward Heylin, a merchant of Stratford-le-Bow, and Thomas Frye, a painter of West Ham, in Essex, had some interest in it; this information being gleaned from the patents taken out by them in 1744. Nothing definite is known as to the ownership till 1750, when Messrs. Weatherby & Crowther entered into partnership, and appointed Frye as manager of the works. Frye's individuality seems to have been lost or merged, as only a few pieces bear his initials, T. F., and even these have been disputed by some collectors. Heylin we hear of no more, except in the account books, where small amounts were occasionally entered up to him till 1758. From this date till the close of 1776 the factory had a chequered career. In the latter year the plant and moulds were sold to William Duesbury, the proprietor of the Derby China Works.

It is not necessary here to enter into the merits of the so-called artificial or soft paste porcelain and that of the true or hard paste china. The former was the pride of Bow, Chelsea, Derby, Worcester and others, and to the collector of English china its value has been as much appreciated as well as its praises have been sung. The true porcelain of the Oriental factories, and its imitators at Bristol and Plymouth, have indeed their merit, but cannot surpass the softness of tone, the brightness and adaptability of receiving the rich enamel colours which we notice in the paste of the artificial porcelain—forming its greatest charm and excellence.

The production of Bow china included the making of figures, and the fine modelling and colouring of these figures and statuettes have contributed to the difficulty of attempting to identify many pieces of Bow and Chelsea. The well-known figure of the actress, Kitty Clive, as the "Fine Lady in Lethe," was for many years attributed to Chelsea, but is now claimed as the production of Bow, is a case in point. Research work, the discovery of the moulds and fragments of porcelain in 1867, the business books of a John Bowcock, who was employed in the factory, having come to light by the assistance of Lady Charlotte Schreiber in 1869, have helped to a better knowledge of the fabrique that was produced at Bow. Although in the notices of the sale of Bow china no mention is made of "Figures" being for disposal till that inserted in the "Public Advertiser" of April 15th, 1757, yet there is every reason to believe that figures and groups were made from the commencement. The difference in the modelling of the early figures and the later productions is so marked that at least some period of time must have elapsed. It was a question of time and development which led to the finished figure of later date, rivalling in its excellence many of the best pieces of Chelsea.

The most conclusive proof as to the early making of these figures is an advertisement which was inserted in "Arrs's Birmingham Gazette" for November 5th, 1753, by the proprietors of the Bow factory, where it states "a person is wanted who can model small figures in clay neatly."

The first production of ware at Bow was in the white, and the early figures, groups, and statuettes were in the white, being followed by more ornate work. This is an exact parallel to that of Chelsea. These early figures were small not more than a few inches in height crude in execution, and the base on which they stood being little more than a lump of clay, square or round, so as to form a solid flat stand. Later, the figures were larger, reaching a height of a foot or eighteen inches, with rococo bases. It is interesting to note that the stand or base of many of the *later* Bow figures has a "hall-mark" of its own, which enables the collector to distinguish it at once from a Chelsea figure. The base has a heavier appearance, and is not so well modelled; it also shows signs of having what has been called "little feet" where the scrolls are carried down at the corners. Another distinction is the colouring of the *later* Bow figures. The three favourite pigments being a sealing-wax red, a brownish-red, and a blue of a cold, pale tint; and the dresses of the figures often have crimson or canary colour, with gold foliage. The effect of the rich enamel colours never appear to have been obtained at Bow as was

A BOW FIGURE.

the case at Chelsea, although both copied from each other, and both were inspired by the work of Continental factories.

Another little difference has been noticed by Mr. Burton, who records in his "English Porcelain" that Bow figures have "a little dab of red" in the middle of the cheek, while at Chelsea this "little dab of red has been softened off and stippled down to the white with the greatest care and nicety."

The figures produced at Bow included classical subjects, actors and actresses in their favourite characters, animals, birds, such subjects as a fiddler, sportsman, harlequin, Dutch dancer, Pierrot or clown, and toys of all sorts. Some of the small figures and groups had a square hole at the back of the base. These were utilised for the insertion of a metal stem to support nozzles for candles.

The factory at Bow had a short period of existence, but considering the little knowledge the pioneers had of the art of making porcelain we cannot but look with wonderment at the proficiency gained in a few years. Was it the work of our own countrymen, or were they assisted and inspired by workmen and artists who drifted to this country from Continental works On this point history is silent.

o

To test nutmegs. Prick them with a pin, and if they are good, the oil will instantly spread around the puncture.

Domestic Pets.

Canaries.

By "Alba."

Song.—The "Hartz" canary is the singing bird *par excellence*, and, according to their mode of singing, the birds are divided into different classes. As much care seems to be taken in the training of canaries in Germany as in the case of a prima donna. The young birds, learning by imitation, sometimes acquire bad singing methods, and much time is devoted to breaking them of bad habits or correcting faults. The art of the breeder lies in his being able to discover the slumbering talent in the bird at an early age, and developing it to its highest pitch of perfection in its particular line.

For the information of amateurs Dr. Karl Russ, in his exhaustive book on "Canary Birds," gives a list of the technical terms current among breeders and connoisseurs for the indication of the separate melodies, and enumerates the inferior and finer turns which distinguish the pitiful screeching of the untrained songster from the masterly melody of the "noble" bird; but those who can appreciate the varieties of rolls, trills, glucks, and gurgles are few, and we need only record his opinion that, "as regards delicacy of the voice and a noble tone, the most proficient 'gurgirg-bird,' or a fine 'hollow-rolling' canary, surpasses every other songster of the air." Some birds show an especial talent for trilling, while others are remarkable for the beauty and variety of their "gurgles." They are divided into classes, and kept in separate rooms under proficient "teachers." Dr. Russ goes very minutely into the education or training of young birds by means of "models," and the means employed in the shape of singing cupboards or boxes and darkened cages, and those interested in the finer points of canary singing would do well to study this exhaustive work, which also deals with the training of nocturnal singers, speaking canaries, free-flying canaries, etc.

In a general way all noisy or chirping birds should be banished. Canaries, being of the finch order, are naturally prone to chirp like sparrows, and birds brought up within hearing of the "feathered rat" get into bad habits of imitating them. Bad habits seem as easily acquired by canaries as by bipeds, and where the old bird employed as a teacher for young ones is not an excellent singer the young learn nothing, but rather corrupt the old bird.

A darkened cage of small dimensions placed within hearing of a first-class songster, but out of sight, is the best method of education. Birds which are hung immediately below one another will mostly sing exactly alike.

The size of the cage influences singing, and, strangely enough, a narrow prison is most productive of music.

On the face of it there may appear a good deal of cruelty in confining the bird in such a narrow space, so that the bird cannot see others of his tribe, nor be deterred from "studying" by any absorbing influence, and many think there is, but Dr. Russ says that "a closer observance of the bird will show that the vocal artist is very comfortable, and devotes himself contentedly, nay, enthusiastically, to the perfecting of his song; in an uncovered cage, on the contrary, the young bird will often become a vociferous screamer instead of a delicate singer, and this will be particularly the case where many young birds are kept together." Canaries which warble popular airs are the latest novelty. The birds are taught by the aid of a musical box, which is made to repeat the same air day after day. Some trainers use a flute instead of the musical box, maintaining that birds so trained have a richer contralto note. At first the canary only listens, but after a few days it picks up the notes one or two at a time, and finally renders the tune perfectly.

As already stated, it by no means follows that the possessor of perfect points is also a good singer, and taste or fancy generally influences the choice between the two, while to the average canary keeper the bird is simply a pet on which a good deal of affection is centred, and feeding and management best calculated to preserve health are of more importance than show points and musical education or niceties of note.

o

To keep cheese, wrap it in a clean, fresh cloth that has been wetted in vinegar and then wrung out as dry as possible; wrap it in a paper bag and put in a dry place. If prepared in this manner the cheese will not dry out or mould for a long time.

ROUND-ABOUT NOTES.

Here are two motor stories which, if not true, are at any rate *ben trovato*. A highwayman held up a motor car on the outskirts of Rome with a shot in the air. Then he ran forth from the tomb that had concealed him—the hold-up happened on the Appian Way—and found, to his surprise, only a woman in the little car. "Where, madam, is your husband?" he demanded sternly and suspiciously. "He's under the seat," she answered, flushing. "Then," said the highwayman, "I won't take anything. It's bad enough to have a husband like that without being robbed into the bargain." A stranger in London, was crossing a crowded street when he saw a big motor bearing down on him. He tried to get out of the way, by stepping to one side, but cars and carriages made the motor swerve towards him. He tried again, but once more it came for him. Finally he gave one last desperate effort and dived on the sidewalk, landing on his neck. The motor car sped on down the street, and the man slowly arose and brushed his clothes. When he had caught his breath again, he turned to a man near by and said: "It would seem that you have but two kinds of people in London." "What kinds do you refer to?" asked the other. "Why, the quick and the dead," was the man's reply. "A person has to be one or the other."

* * *

That a letter should have travelled more than one hundred miles in an hour long before railroads were built seems surprising. But the fact is chronicled, and has been told with a good deal of appreciation for the man who was clever enough to accomplish the feat without the aid of steam, electricity, automobiles or balloons. More than a century ago, two noblemen made a wager, one that he could arrange to have a letter travel one hundred miles in sixty minutes and the other that he could not. This is how he managed it, and won a handsome wager, the exact amount of which history has not recorded. He put his trust in twenty expert cricketers, whom he stationed at certain distances apart, to form a circle of one thousand yards circumference. Then he had the letter enclosed in a cricket ball, and the ball began its quick journey from one player to another around the circle, until it has passed a given man more than six hundred times. To be exact, the letter covered a distance of 120 miles inside of an hour.

* * *

Strangely enough, it is in America—the land of matter-of-fact commercial enterprise—where fads reign supreme, and one occasionally finds in the United States, as well as in secluded nooks of the Old World, regions in which superstitious medical practices, handed down from father to son for no one knows how many hundreds of years, not only survive, but also show an astonishing degree of vitality. Such a region, writes Dr. John Hawkins, in the "Popular Science Monthly," occurs in the central part of South Carolina. If the practice of the South Carolina "users" of the present day could be witnessed by Egyptian physicians of four thousand years ago, by Druid priests from the Gaul described by Caesar, and by American Indian medicine men from the time of Columbus, it would no doubt appear to all of them a perfectly natural and philosophical method of treatment, however unintelligible the language of the formulae might be.

* * *

There is everything in the angle of the hat. You can put your hat on to look rakish or to make you look sedate and stiff; you can wear it at an angle which deprives it of every bit of smartness with which the milliner originally endowed it, or you can perch it where it will impart a dash and youthfulness to your whole appearance, and you can tilt the brim so that years are added to your real age, and you will look as commonplace as though you never gave a thought to the impression your costume produces. In short, the hat can make or mar the *tout ensemble* of your toilet, and all by the way it is worn. Therefore if a woman has any desire to look her best and smartest (and who of them does not?), she considers the hat question one of paramount importance.

* * *

Some women are helpless about knowing the best way to secure a hat on the head. They complain that no matter how many pins they use the hat will slip to one side or over the face, any way but the way it should go, and though they start out on a shopping tour or to make visits with every angle right and every ribbon bow or quill or flower in the position it ought to occupy, they are horrified a little later to find that they present a ludicrous and ridiculous appearance on account of a queer tilt their hat has assumed, and of which they have been wholly unaware until suddenly brought face to face with their mirrored reflection. This is no uncommon experience of the gentler sex, and it is one each, and all, would gladly forego. There is a way to keep the hat straight on the head, or anchored at the proper angle with a single hatpin. That is by thrusting the pin in from the middle of the back to the front on a straight line. If the pin is put in securely, it will prevent any tilting of the hat, and will keep it from sliding in any direction. To keep it doubly secure, however, in case of sudden gusts of wind or jostling in a crowd, it is wise to fortify the hat with a second pin struck through from one side to the other. When fastened on in this manner, it is absolutely impossible for a hat to get awry.

* * *

To the plain woman who is a wife her want of beauty is sometimes a grief. She fancies she might have secured a more perfect allegiance if she had been like some more fortunate woman, dowered with beauty. She does not realise that the women who are most ardently and lastingly loved by men are seldom very beautiful women. Prettiness wins admiration; something much deeper and more suitable inspires and retains affection. No woman need be ugly. If there is a soul in her body it has but to begin betimes to show through. From her earliest girlhood the thought she thinks, the feelings to which she gives way, the tones she utters, the wishes she indulges, are sculpturing lines in her face, that are capable of making a beauty all her own—lines whose writing will remain when bloom fades and sparkle fails.

"PEPITA."

Home Hints for Warm Weather.

AROMATIC VINEGAR.—Dissolve 1 oz. of camphor in 1 lb. of the strongest acetic acid, and add 1 oz. of oil of cloves, 1 oz. of oil of lemon, and 1 oz. of oil of lavender.

MEAT, when slightly tainted, can be rendered safe, and the taint can be removed, by the use of common charcoal. Cover for a few hours, or put a few pieces of charcoal into the water in which it is boiled.

ECONOMICAL GINGER BEER.—1 lb. of cream of tartar, 1 oz. of sliced ginger, 2 lbs. of lump sugar. Put all together, pour on 2 gallons of boiling water. Let it stand for 6 hours, then add 2 spoonsful of yeast, and allow to stand for 6 hours more. At the end of that time, strain through a fine sieve, put into stone bottles, tie down the corks, and in 24 hours it will be ready for use.

COOLING DRAUGHTS.—Six drachms of carbonate of soda, 1 drachm of finely-powdered ginger, 1½ oz. of loaf sugar. Rub these well together, with 10 drops of essence of lemon, and divide the whole into 12 blue papers. Then divide ½ oz. of citric (not tartaric) acid, into 12 equal portions, to be folded in white papers. Keep in a dry place. For use, dissolve the large powder (blue paper) in ⅔ of a tumblerful of water, and when perfectly dissolved, add the acid. Stir smartly, and drink during the effervescence.

NICE LEMONADE, is made by adding the juice of 3 large lemons to a quart of water, and ½ lb. of loaf sugar, pieces of which have been rubbed on 2 lemons, until all the rind is rubbed off, and the sugar has absorbed all the oil from the lemons. When the sugar is perfectly dissolved, strain through a sieve, and add the white of an egg.

TO KILL FLIES.—Here are two efficient recipes:—(1) Add 2 oz. of ground pepper, and 4 oz. of brown sugar, to 1 pint of infusion of quassia. Quassia can be obtained from either herbalist or chemist, and is cheap. Mix well, and leave about in saucers. (2) Pour a little simple oxymel (to be obtained at the druggist's) into a common tumbler glass, and place in the glass a piece of paper, made into the shape of the upper part of a funnel, with a hole at the bottom, to admit the flies. Attracted by the smell, they readily swarm into the trap, and the goodly number collected, prove that they have not the wit or the disposition to return.

STEEL GRATES, and fireirons, if dusted over with unslaked lime after they are cleaned, will keep from rust during the summer months.

IT is a good plan to keep a dish of charcoal in the larder during hot weather, to keep food sweet and pure.

OLD ARTIFICIAL TEETH BOUGHT.—To secure the best price, call or forward by post; utmost value per return, or offer made. MESSRS. BROWNING. Manufacturing Dentists, 83, Oxford Street, London, W. Established 100 years. (Opposite Rathbone Place).

THE NEWEST FASHIONS.

The fashion so popular this summer of the silk coat or wrap is a most practical one, now that it is considered essential to have gowns made as thin and transparent as possible, for with the transparent yoke and sleeves there is not sufficient warmth to the gown excepting in excessively hot weather; consequently, the little wrap proves of the greatest service, as it affords all the protection needed, and at the same time gives a most charming finish to the costume. With a gown of transparent striped voile, two shades of grey, the skirt trimmed with bands of taffeta, the coat of taffeta is the daintiest and most becoming of garments, and has a touch of individuality about it that marks it instantly as the newest of models. There is no hard and fixed rule as to the model to be followed in these coats; in fact, they are always more or less distinctive, for even when there is a suggestion of the mundane pony coat it is most cleverly suggested rather than defined, while the lines are adapted to the individual wearer.

* * *

Light and bright colours are extremely fashionable this season, and while all white gowns are considered very smart, the coloured linings are most popular, and not only are pink, blue, and such colours worn under the transparent white fabrics, but most dainty and fascinating tones of grey. With a coloured lining the belt and the trimming on the hat may carry out the same colour, and also the parasol. The plain chiffon gowns also afford a splendid opportunity for colour schemes, and the leading artists in dress-making have been quick to take advantage thereof. A bright pink chiffon with a sash of blue is an instance, while a pale blue with mauve girdle and a yellow with a bright blue sash are also instances of the contrasts in colour. In the description, these sound crude and startling, but, in reality, they are merely smart and effective to a most fascinating degree.

* * *

Black and white this year is especially fashionable, and the combinations thereof are endless. Besides the black and white striped materials there are the white lace and embroidered gowns with the black trimmings, while that most becoming of styles, the black hat with the white gown, has again been revived most successfully, and black gowns with white lace guimpe and sleeves have apparently taken a new lease of life, so varied are they in design. A touch of gold embroidered filet lace is introduced most cleverly, too, into the black gowns with white, and makes them look entirely different from anything that has been seen heretofore.

* * *

Entire costumes of taffeta silk are absolutely new in design and colouring, and in most instances are extremely smart, while never before have there been so many different models of soft silk gowns with a satin finish; pongee also is to be noted in the rather vivid colours, while satin finished crêpe de Chine is made up in all light colours and an unlimited space for the exhibition of exquisite hand embroidery on the material itself. No gown, however, this year would be considered complete without some hand embroidery on it either in the bands that trim it or worked in the fabric or displayed on the waistcoat or fronts of the coat.

* * *

Light weight cloth gowns in summer are not the most practical investments, but none the less are they absolutely requisite many a day, and a smart cloth costume is always in good style. The weight of cloth most fashionable is deliciously light and soft, and lends itself most perfectly to the present styles. The long plain skirt of circular design requires the skill of an artist at dressmaking to be turned out to perfection, but the result is so satisfactory that the cost of such service does not seem excessive. There is a suggestion of the princess and also a hint of the Empire in most of the cloth gowns, although the soft, draped folds on the bodice do away with the hard, crude lines of the princess gown in its accurate copy, and the influence of the Empire is revealed only in the short-waisted lines caused by the skirt coming so high above the true waist line.

* * *

The pretty gown shown in our illustration this week is of Shantung silk, in a soft green shade; the loose bodice is trimmed with bullion embroidery. With this gown is worn a hat of burnt straw, trimmed with green silk rosettes and a black ostrich plume.

A GRACEFUL VISITING GOWN.

The Veil and How to Wear it.

By the time the English woman has learned the trick of adjusting her veil to bring out her good points and conceal any bad ones, and incidentally to put it on with as much grace as a Parisienne, then she may be said to have mastered one of the most important problems of the fashionable costume.

* * *

There is no habit that has a stronger hold on the fair sex than the one of wearing a veil. Young girls escape it, for their fresh, smooth skins and bright eyes require no toning down, no half concealing. Besides, young girls do not realise the possibilities of those delicate, web-like screens which have been an allurement of the sex ever since the wardrobe of womankind increased to several articles. But it is the woman who has found out for herself the multitude of defects a veil will hide, the power it has of enhancing her charms, and the confidence it gives to her that the veil becomes all important. And that being the case, why is it that few of them understand the art of adjusting it properly? About one out of every twenty—nay, fifty—wears her veil with an attempt at an artistic and neat effect. The other forty-nine twist it on the hat in a manner that proclaims loudly that very little time has been bestowed upon its arrangement. The result is that the veil is unbecoming, it suits neither the face nor the hat of the wearer, and it bulges and droops and sags and pulls and has loose ends, instead of being just right. You can always recognise a woman who dresses in a hurry. Her veil tells the story, for it is impossible to put on a veil properly in a few seconds.

* * *

Before going into the details of adjusting the veil, it might not be amiss to say something on the subject of the various kinds of dots and meshes and styles of veils that are worn, and which are the ones for certain types to choose. The fashionable veil of the moment is the thin mesh close Chenille dotted veil. The fabric is, indeed, sprinkled bountifully with dots no larger than a good-sized pin head, and they are placed about half an inch apart. For the reason that fashion has approved this veil every woman, whether she be dark or fair, of brilliant colouring or pale, of striking or delicate features, insists upon wearing this kind of veil, and that is one of her greatest mistakes. What is becoming to one type of woman will not always be becoming to her opposite, despite the assurance of the suave shop-girl who holds the

mesh before her own face to let you see how much better it will look before your own.

* * *

Good colouring is the one essential to the woman who wants to wear the closely dotted veil. It need not be brilliant colouring, for the veil has the happy faculty of enhancing the red of her lips and cheeks and the brightness of her eyes. A dark woman or one of medium complexion will find this veil exceedingly becoming, but her blonde sister—no. She should cling to more delicate meshes and dotted effects, those that do not help to conceal but rather reveal the fairness of her skin and hair and eyes.

* * *

Wrinkles disappear as if by magic when a fairly heavy veil is put on. A medium mesh and a close dot combine to save the appearance of many a woman who looks wonderfully attractive and young on the street. Apparently she has not a line or sign of age in her face, and if there are any grey hairs, a thing that few women possess nowadays, for there are many ways of keeping them hidden, they are completely concealed by the veil. A woman whose hair shows the first signs of turning grey should avoid wearing veils of white, or white and black mixed. This blending frequently gives a very grey tinge to the hair.

* * *

Lace veils with fancy spots and patterns should be selected with unusual care. They are as apt to make a woman look grotesque as *chic*, and unless they are adjusted with considerable art they will exaggerate a double chin, magnify wrinkles, and dull the brightest of eyes. The woman afflicted with a double chin has more than her share of trouble when it comes to wearing a veil. If she fastens it close under her chin and around her throat she enlarges its apparent size and circumference, while if she wears her veil so that it comes just to the top of her chin this particular feature seems to grow more prominent than ever. Her salvation lies in having her veil come just below the curve of the chin, so that the full part of the throat in front is thrown in shadow and partially obscured.

* * *

With the large hats that are fashionable now—the mushroom shapes—it is no easy task to adjust a veil. A yard and an eighth is required to go around the brim, and with the centre of the upper edge of this length held up against the centre of the front of the brim the ends should be brought to the back with both hands and pinned to the hat when the lower edge has been made to come to the desired depth over the chin. Many people make the mistake of trying to fasten the lower edge of the veil first, or, possibly, both ends together. After the upper sides of the ends are pinned securely to the brim in the back and a pin has been thrust in in front it is well to slip the veil up over the edge of the brim at the sides, where it is apt to come down too far. Then the lower ends are drawn to the back and up to the brim so that they come almost together over the hair. When they are carefully fastened in place the attention is directed to the veil at the sides, where it probably draws in under the brim, instead of making a very nearly straight line from brim to throat. This sag spoils the lines of the hat and imparts a slovenly look to a head that would otherwise appear smart. So in order to get rid of the sag the veil should be drawn up over the edge of the brim until it is taut and practically straight and then pinned again. The dip at the chin, which is another distinguishing mark of the carelessly veiled, can be got rid of by drawing the edge toward the back and fastening it to the hair with an invisible hairpin.

* * *

The way of wearing a veil is, however, always a fad of the moment, and there are certain little touches that can be acquired only by careful study of effect and by practice. Every woman has to try this for herself, and her individuality, or lack of it, shows itself in the way she puts on her veil just as much as it does in the way she carries her head or in her manner of speech.

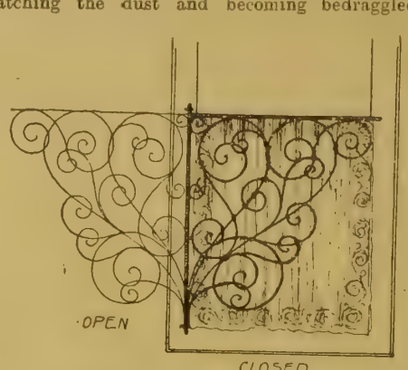
Silken Gowns of Long Ago.



In the olden times silk was a sign and symbol of rank reserved for the nobles and the king; and the burgher's thrifty wife, in her decent coif and wimple, like Joan and Gammer, in their woollen skirts and close-fitting hoods, might wear none of it. Reserved for those in high places, it took rank with ermine and balas rubies, with golden ouches and sown 'broidery of seed-pearls. It was foremost among the catalogued bequests of rich proprietors to favourite inheritors; and silken garments passed from father to son, from mother to daughter, together with pictures by "Signor Rubens," or string of pearls and carcanets of diamonds.

The silken dresses of famous men and women in certain important moments of history were conscientiously recorded by grave chroniclers, just as now the daily press describes the ball gowns and bridal dresses of our fashionable ladies. But the difference between the stately gorgeousness of then and the more fleeting prettiness of now covers all the way between aristocratic exclusiveness and democratic catholicity. Where one great lord was celebrated for the splendour of his attire in the king's train or the queen's escort, the dress of 1,000 only semi-elect or wholly undistinguished ladies is minutely described to-day, to be forgotten to-morrow. But in all these records of the wardrobe, silk bears the most distinctive part, and precious jewels themselves are not chronicled with so much loving exactitude as were the colour and adornments of my lord's velvet pour point, or the cut and make of my lady's satin petticoat.

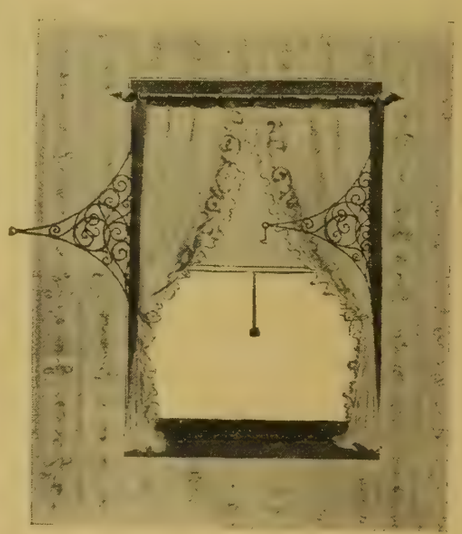
A Curtain Holder.



It is a great eyesore to a careful housewife to see pretty lace or sash curtains blowing out of the windows or against the screens, catching the dust and becoming bedraggled.

HOLDER FOR SASH CURTAIN.

And yet one must have open windows in warm weather and nearly all the year round, for ventilating purposes.

A clever home-made curtain holder is shown herewith, which will do away with all such annoyance, and which will prove exceedingly attractive as well. It is made of grilles or wire bent into scrolls with pliers and the fingers. As will be seen in the illustration,

A NOVEL CURTAIN HOLDER.

the curtain holder hooks together to keep the curtain in place.

This useful device may also be utilised for a sash curtain in a bath-room, where the window is narrow and it is desirable to fold the curtain back against the wall when the window is open.

——— o ———

Quite a lucrative business, it seems, is done in Japan in the exportation of frog skins for purses. The works controlled by a Tokio merchant have exported as many as 130,000 skins in less than a year.

The Flower Garden.

Fuchsias.

Fuchsias are quite a striking feature among the other flowering plants to be seen at this time of the year in Hyde Park. The blooms are unusually large and almost all the best varieties are cultivated in the open, where the carpet bedding is laid out on Park Lane grass slopes.. At the Palm House, Sefton Park, Liverpool, fuchsias are grown under glass with a temperature of 50 to 60 degrees. The double varieties are not much in evidence, as they do not bloom so freely as the single varieties. This explains to some extent the reason the double fuchsias are not so often seen in displays at public collections, where a profusion of continuous flowers are a necessity. The ratepayer must have plenty for his money. The fuchsia is indispensable for greenhouse embellishment, and gives grace and beauty to every house.

The variation of colour at the Palm House is prettily arranged and the combination an education to an amateur possessing a greenhouse. Nurserymen are advocating the culture of the fuchsia, as these charming plants produce more bloom with a minimum of labour than any other flower. The fuchsia is easily grown from cuttings, and requires little attention. The soil should be a mixture of two parts loam, and one each of well-decayed manure and sand, placed near the glass and in a gentle heat. Syringe freely on bright days to induce growth and prevent insects.

As soon as rooted, reduce heat, and repot in same mixture of soil, pinch all side shoots till bushy plants have been secured. The single type is not so largely grown as the double form. This may arise from the fact, that the doubles are more attractive. The perfect flower is the single bloom, as in this we can invariably find the true and perfect formation. Double flowers are cramped, heavy, sometimes quite unnatural, and not by any means artistic.

There is a craze for new shapes and colours in flowers, and the perfect flower of plants in their original imported state has changed so much in recent years, that they no longer resemble their natural and artistic character. A great deal of the beauty of imported single flowers of every description is being lost sight of, and we are constantly introduced to novelties. Growers are getting enthusiastic in this direction, and if we were to try and trace the original forms, features and characteristics of some plant, it would be well nigh impossible to do so. Many of the favourite flowers of our forefathers have been forgotten, and we have to accept mongrels which are the outcome of ingenuity and propagation.

What is more pleasing to the eye than the single little wild hedge rose and honeysuckle? The former produces clusters of lovely little pink and white flowers, simplicity itself in form, and handsome buds when half open, beautifully scented. Its long branches carry abundance of bloom. They extend in every direction, unrestricted till the hedges are pruned. The child coming to the country sees no flower so sweet and dear to its heart as these wild roses. It gathers them eagerly and disregards the thorns which tear its frock and scratch its tiny arms and hands. Why, then, should we crave for double flowers? Visitors to such places as the Isle of Man and Wales often mention the wild fuchsia to be met with in the hedges, and they gather the bloom as readily as the child does the wild rose and honeysuckle.

G. W. Thomson-Price.

The Sultan's Screen.

There is a story told of a famous and curious screen which occupies a prominent place in the menage of the Sultan of Turkey. It is made, so rumour hath it, of human skin, perfectly tanned and elaborately tooled and embossed, and it has been in the Royal quarters for more than two centuries. This remarkable screen is not an evidence of cruelty or barbarity on the part of Turkey's ruler two hundred years ago, but is a memorial to twelve faithful servants of a former Sultan. At one time during the Sultan's reign, two hundred years ago, a wing of the palace caught fire, and during the conflagration a much-loved member of the Sultan's family was rescued by twelve servants. The twelve servants perished, some of them dying later of their wounds and burns, so his Majesty had their skins removed by an expert and had them preserved in this touching though remarkable manner. The screen is now looked upon as a part of the ruler's inheritance, and it is said that every Sultan cherishes it almost as he would his own Royal skin.

THE COLLECTOR'S GUIDE.

Silver Lustre.

By H. W. Lewer.

"Intent on high designs, their fabrile souls
To shapes unfashioned now direct their tools;
With daring aims, irregularly great,
To raise their art from its degraded state."
—*Shaw.*

In many farmhouses during the latter years of the last century there could be seen varieties and forms of the old silver lustre so much prized in its time, and afterwards relegated, like the old oak coffers and chests, to the lumber-room, or disposed of to the cottager. Forgotten, untreasured, and overlooked by the collector till the last few years, these examples of the potter's art have once more come into "fashion"; so much so that the genuine article is now being imitated by modern additions from home, and from abroad. It is the curse of a craze, that although it increases the value of the object, it produces almost automatically the creator of forgeries, and in collecting silver lustre the wheat has carefully to be separated from the chaff.

The history of English silver lustre dates back to the middle of the eighteenth century, and its appearance coincides with the introduction of Sheffield plate. The uniting of copper and silver must have turned the potter's thoughts to considering whether some form of silverware could not be produced on the plastic clay. By experiments, Thomas Bolsover discovered the art of making the so-called Sheffield plate, in 1742. This being perfected, it was carried into practical effect at Sheffield some years later by one Joseph Hancock. Curiously enough it was a namesake—John Hancock—who was the inventor of silver lustre or earthenware.

The exact date of its introduction is not known, but it could not have been long after the first production of Sheffield plate. There has been much dispute as to the inventor of silver lustre, but John Hancock, in a letter to the "Staffordshire Mercury" (1846), written a year before his death, wrote to correct a statement that a Mr. John Booth was the introducer, and he emphatically states: "I was the original inventor of lustre . . . and I first put it into practice at Mr. Spode's manufactory for Messrs. Daniell & Brown." Shaw, in his history of "The Staffordshire Potteries," mentions that Hancock "appears to have made the process of lustring of little value to himself, for the recipe could be obtained from him by any person for a small sum of money."

No protection appears to have been granted for the use of lustre till 1810, when Peter Warburton, of the New Hall factory, was granted a patent for his "new invented method of decorating china, porcelain, earthenware, and glass, with native, pure, or adulterated gold, silver, platina, or other metals, fluxed or powered with lead or any other substance."

The manufacturing process of silver lustring was obtained by dissolving or melting silver or platinum, which was then applied to the earthenware as a glaze, by brush or by dipping—the latter, in all probability, was most common. The metal being in solution would cover a large surface, and be thinly applied. The body of the ware was of a deep cream, red, or chocolate colour. With regard to the fluted, pearl, and other ornamental designs, these must have been dipped, as a close inspection of an example shows that every detail has been evenly covered with the silver glaze. Early pieces of silver lustre were perfectly plain in shape. These were followed by more ornate examples, such as the fluted and pearl patterns, of which we have already spoken. The elaborate floral, fruit, birds, and other patterns were known as "Resist" lustre ware. These we trust to deal with in a separate article.

Nearly everything that could be produced in earthenware was adapted to the use of silver lustre, and included not only tea and coffee sets, jugs, goblets, and ewers, but even figures and busts were moulded, and coated with this silver glaze. In addition, for household service, there were salt-cellars, spice-boxes, toast-racks, mustard-pots, pepper-boxes, inkstands, candlesticks, tankards, etc. These were all made in imitation of the patterns of the silversmith's craft. Many of the best specimens were planed or turned, so as to give a more finished effect. Later pieces often show a blistered or pimpled appearance, and this decay of the art seems to have set in during the early years of the last century.

Most of the Staffordshire potters were makers of silver lustre, and the two who stand out prominently are Wedgwood and Spode, although the Ridgeways of Shelton must not be overlooked. The Spodes were noted for their tea and coffee services, plain and fluted; Wedgwood included the making of figures in addition to the services. A favourite pattern for these services was an imitation of Queen Anne silver, and the result is very pleasing and effective.

SILVER LUSTRE FLUTED TEAPOT

It is exceptional to find any mark impressed on this ware, but in some examples the potter's initials have been found.

The collector should be on his guard against modern imitation of silver lustre which is now for sale in many dealers shops. It is somewhat difficult to detect, but, roughly speaking, it has a heavy and coarse appearance, and when placed by the side of a genuine specimen the difference is at once noted. Garish, as this silver lustre is to some collectors, yet, like old pewter, it has a depth of colour and tone which silver

AN OLD ROMANY LAMP.

or Sheffield plate never attain. Especially is this so in the fluted patterns, where the charm of light and shade reflected on the surface is very effective.

Silver lustre should stand alone on a shelf or cupboard made of old oak or mahogany, but nowhere better is its presentment than on a high mantleshelf over an open hearth in some Tudor or Jacobean farmhouse or cottage. True, it is hard to find such a home where modern furniture, tawdry pictures, and hideous ornaments are not known, yet there are still left in this country some small dwellings where the inmates look with pride on the handwork of their fathers, and love with reverent care the simple heirlooms that have been handed down to them.

An Old Romany Lamp.

The old brass and iron lamp, shown in the illustration, called by some "Old Romany Lamp," was picked up in a cottage in Ireland. Going back, as it does, to a period before the days of the tallow dip, which flashed its brightness on the splendour of the "best room," it is interesting to note the steps from that time up to this, when by pressing a button the king of lights, electricity, is revealed.

Domestic Pets.

Canaries.

By "Alba."
(*Concluded.*)

Cages.—Opinions vary as to the merits of cages of different shapes. One authority says: "the shape of your birds' house is quite a matter of taste, but its size is a matter of principle," but Dr. Russ makes an exception in the case of round or "tower" cages, on the ground that all birds are uncomfortable in them, and many even become giddy and dazed. Moreover, these round cages are not easily hung up everywhere, especially against walls, so that the bird can only be hung in one place, and the song heard in immediate proximity.

With reference to size, the larger the dwelling, the less music will its occupant provide, and the bird will think more of skipping and jumping about than singing, particularly if things are quiet, and there is no rival near. On this point Dr. Russ says:—"Nothing is important for the well-being of each bird as its dwelling and the inner arrangements of the same, although, if we consider that in the shops of bird-sellers, young canaries may be kept well and healthy in the very small Hartz-cages (in which they are also transported, often hundreds of miles), we marvel at the pliant nature of these birds. Yet, a true friend of nature will not allow unfavourable conditions to develop into a system, but will, on the contrary, endeavour to arrange the dwellings of his pets as comfortably as may be feasible."

The canary may sing less vigorously in a roomy cage than in a pokey little prison, but it provides quality, if not quantity; and no one wants a bird to be singing from morning till night. This is often unpleasant, and sometimes positively unbearable. It is much more pleasurable to the average canary keeper to see its joyous skipping about than to listen to ear-splitting singing all day long, and it is fair to allow caged birds the use of their limits in return for the music of their throats.

The cage for the single canary should be from 12 to 20 inches high, 12 to 20 inches long, and from 8 to 11 inches deep. The most appropriate are those where everything is of metal except the perches—not of brass or painted wire, but of plain tinned wire or lacquered zinc. Brass cages are very handsome-looking, but the moisture which the bird spills while drinking or bathing affects the brass, and may easily produce verdigris, and thus cause poisoning.

Perches should be of wood that is not too hard, and should neither be too thin, nor too accurately rounded. A suitable thickness is about half an inch, so that the bird's foot can only just clasp it. A thin perch placed above and two thicker ones below, facing each other, is considered advisable.

The perches should be kept clean by scraping when the cage is cleaned out, and the floor covered with coarse sand. Facility as regards cleaning out should, however, be secondary to the provision of "grit" for the purpose of digestion.

The seed and water vessels should hang outside the cage, or there will be much waste of seed and splashing of water. These should be replenished daily, small quantities of seed being given at a time. About two teaspoonsful is sufficient for a day's consumption. That some is left over is not necessarily evidence that it does not want changing, but may be due to its being dead or dry, and not to the bird's liking. Give fresh water every day, and so arrange the drinking vessel that the bird is unable to use it for a bath. If the bird is tame, provide a bath outside the cage. This may be given every afternoon in summer when the sun is shining brightly, but at longer intervals in winter. A breakfast saucer makes a good bath, but in order to avoid a mess about the room, a small bathroom has been constructed for temporary attachment to the cage. The bath is more esteemed by the canary than the cadjer, but it should be denied to sitting hens and during moulting.

Cookery.

The Stock Pot.

One thing that makes an everyday housewife shun soup-making is, I think, that she fancies it involves a deal of labour, which is a mistaken idea that has grown perhaps from the perusal of elaborately concocted cookery books. A thorough knowledge of soups ought to be possessed by every capable housewife, whether her home is in the city or country. The first thing is to extract all the goodness and nourishing qualities from the meat, and having seasoned this extract properly, to serve it in its liquid form. This is what is called stock, and once made it will serve as a basis for half-a-dozen different sorts of soups. For instance, if you add to it bits of macaroni that have been boiled in salted water, then cut short, you have macaroni soup; if you add carrot, turnip, and other vegetables, you have a good Julien soup; a cupful of barley gives you barley soup, or if you want a good consomme, simply clear the stock and serve it plain. Do not buy a good bit of meat that is suitable for roasting or stewing to make soup of; choose the coarser, heavier parts, with a good deal of bone in them. The way to get all the strength from the meat is to put it, after cutting it in small pieces and cracking the bones, into a kettle, and covering it with cold water, let it stand a little while on the back of the stove, then bring it forward where it will heat slowly.

For a good stock, you will want the following ingredients:—Two pounds of the hind-shin of beef, 2 quarts of salt water, 6 whole cloves, 6 peppercorns, 1 bunch of sweet herbs, 1 blade of mace, 2 teaspoonfuls of salt, 1 small onion, ½ a carrot, ½ a turnip, and a sprig of parsley. Let this simmer for 5 or 6 hours, and when thoroughly cooked, strain it through a fine strainer into which you have laid a bit of strainer cloth. Then set the stock aside to cool. When you wish to use it, take off the hard cake of fat that has formed on top and you will find underneath a rich, thick jelly, which is the basis of any soup you choose to make.

How to Make Tea.

Compared to the unfermented green tea, the partially fermented black tea, while quite as rich in theine, the characteristic alkaloid constituent of the prepared leaf, and as charged with aromatic oils, contains, as a rule, somewhat less tannin. But according to the experts, the brew from either sort, after fresh boiling water has been poured over the leaves, should not be allowed to stand on the leaves more than two or three minutes. The time is enough to extract the theine and oils; further, steeping simply brings out more and more of the objectionable tannin, and makes the tea bitter and unwholesome. Once made, the infusion should be separated from the leaves by pouring into a fresh pot. Then the stimulating, quickening, uplifting effect of the theine upon the nervous energies and mental faculties, the gustatory and olfactory enjoyment of the flavour and bouquet of a properly made brew, can be had at their best.

How to Boil Rice.

Wash the rice and put it into a saucepan half-full of cold water, stir occasionally to prevent it sticking to the pan, and as soon as the water has boiled up, pour it off and put on the same quantity of cold water as before. When this has boiled pour off again, and for the third and last time fill up with cold water, and after watching it until it boils, rapidly pour the rice into a warm colander to drain; place a plate under the colander and another over the rice, and let it stand either in the oven (which should not be too hot) with the door open, or near the fire, until all the water has drained off the rice, when every grain will be found separate. It is necessary to let the water actually boil every time, otherwise it might be found that the rice was not quite cooked enough when the process is finished.

A Simple Strainer.

In order to strain jellies so as to ensure their being perfectly clear, muslin strainers are much handier, and more effective, than the ordinary flannel bag. They are cleaner, and from their perfect nicety, when properly kept, then cannot impair the most delicate flavour. They should be large, as it is often necessary to fold them to a quarter of their original size to make them sufficiently thick to clear juices or jellies. Before using a muslin strainer, lay it in hot water, and afterwards in cold water. This should be changed once or twice if, when wrung from it, the muslin is not absolutely transparent.

ROUND-ABOUT NOTES.

Giving evidence recently before the Select Committee of the House of Commons appointed to inquire into the conditions under which home-work is carried on, Mrs. Irwin, secretary of the Women's Council in Scotland, stated that the tendency was for wages to get lower, but the sanitary conditions under which the work was done was improving. Referring especially to Glasgow, she said that she had found that the average amount paid for the making of a dozen shirts was 1s. 2½d. to 1s. 5d. The rate paid per hour worked out at from 1d. to 1¾d., and in the trouser finishing trade she had even come across the case of a woman who had worked two hours for a halfpenny. Flannelette shirts were finished throughout for 8d. per dozen, and cotton shirts for 1s. 9d. a dozen.

* * *

One of the most hopeful signs of improvement in the general taste for dress and ornamentation is found in the disappearance of costly jewels from the ordinary street attire of the lady of wealth and fashion. The blazing diamond ear-rings, pins, and bracelets, which formerly vied with the glory of the sun at noonday have been relegated to their proper place and use for my lady's evening and full dress toilettes, and although some of the most complete jewel caskets in the world are owned by wealthy women, no one sees their contents except those who frequent grand dinners, balls, receptions, and operas. Costly gems, like fine lace, add very much to the toilette of a matron, but are decidedly out of place on a young maiden, whose ears should be kept free from such barbaric splendours, and her hands reserved in the purity of exquisite care for the single engagement jewel, which is the accepted emblem of young love's coming fulfilment.

* * *

The remarkable peculiarity of the moonstone is that, while in all other gems internal seams are called flaws, and detract from their value, in the moonstone they are called "magic mirrors," because those favoured mortals who are gifted with the illumination of the astral light are supposed to be able by its aid to read on those surfaces of milky white the reflections of the past and the promises of the future.

* * *

For an engagement ring from the wealthy lover the solitaire diamond will always remain in favour, but the suitor whose purse will not afford such a costly gem should avoid all garish designs, combining mock pearls and coloured stones, and content himself with offering the fair one of his choice a well-selected, simply-set moonstone—a stone which has from time immemorial been regarded as having talismanic virtues. The setting of this beautiful but inexpensive stone should be the same as that of a solitaire diamond, and its effect is chaste and pleasing.

* * *

To possess a single fine jewel many women would have to deny themselves nothing except the indulgence in numberless cheap and meaningless trinkets which, in a few years' time, aggregate a cost equal to that of a gem which would be a life-long and cherished possession. My advice to women is always to avoid what is cheap and showy in jewellery, and save, and still save the cost of the cheap articles which one is tempted from time to time to buy, until the means have been acquired to purchase a single satisfactory ornament. One never realises how many shillings are worse than thrown away in the purchase of trash until one has begun the system of resisting minor temptations for a special object.

* * *

Anyone who has spent a long enough time in the Hawaiian Islands to make friends among the foreign residents there is sure to be decorated in true Hawaiian style when she boards the steamer going home. It is a custom there to twine garlands and necklaces of flowers around the fair voyager's neck until she looks like a luxuriantly blooming tropical plant. These necklaces are long enough to reach almost to the feet, and, though they have a Hawaiian name, they suggest the growing and clinging lyiane, which is a native of the tropics and with its delicate embroidery joins tree after tree in its vinelike meshes. Flowers and shells, as well as bright coloured beans and seeds, are strung in these long chains, and wound round the passenger's throat, each necklace being strung with good wishes for a pleasant journey home and a return to the little island in the Pacific.

Conducted by "PEGITA"

THE NEWEST FASHIONS.

Light weight cloth gowns are still in vogue, and there are many days in summer when a cloth gown is most comfortable to wear—cloth in these days having attained such a marvellous degree of perfection in weave that it is as light as linen or silk. Light shades of colour and white are the most in demand, and the different shades of white are many this season, so it is possible to have a variety of gowns in all white. Braiding is extremely effective on the white, the narrow soutache braid and the two widths of Hercules both being effective. Bands of tucked chiffon with medallions of lace, either Valenciennes or Cluny, are also thought an extremely smart trimming for cloth, and it gives so much lighter appearance than anything else.

* * *

Bands of lustrous silk or satin are also fashionable in trimming cloth gowns, and oddly enough the plain bands are for the moment preferred to the embroidered, for the braiding or embroidery is worked on the material itself. This does not for a moment imply that the bands of coloured embroidery are not in style, for they are still in demand. A most charming grey cloth gown is made with plain skirt, but the bodice is trimmed with the most exquisite bands of embroidery and has an embroidered waistcoat, embroidered in three or four delicate shades of blue, yellow, pink, and mauve combined in indescribably artistic fashion.

* * *

Velvet bands on lace or thin materials are fashionable this season, and a black lace or net gown made up over white or coloured lining is immensely improved by the band of black velvet, preferably ribbon, around the foot. As a rule the satin finish is used on cloth, and velvet on the transparent or thinner fabrics, but there is no hard and fixed rule that has to be followed. Velvet on silk is extremely effective, but combining two kinds of silk is smart, and perhaps more practical for summer. However, the practical element does not play a very large part in the clothes' question of the moment.

* * *

A pale mauve cloth in light weight is popular for gowns to be worn on cool summer days, while an exquisite shade of coral pink and one in blue are most effective. Olga cloth has come into notice again, for its satin finish and lustre make it extremely well adapted to the long, graceful lines that are a feature of this year's styles. The plain skirts that are so becoming show off to the best possible advantage any fine material, and the colours take a light and shade that are most artistic in the soft folds. These afternoon gowns for the summer season are in truth a delight to any one who loves clothes for clothes' sake. They are not the essentials of the wardrobe, but the luxuries that enable a woman to attain her ambition of being always correctly gowned.

* * *

The three charming gowns in the illustration were designed by a Parisian dressmaker.

PARIS MODEL GOWNS.

The one on the left is of pale green voile, with vest, sleeves, and insertion of canvas. The lace is heavy Guipure with tassels. The waist-belt is of dark green velvet. The lady in the centre is garbed in a chic gown, vieux-rose faced cloth of very fine quality. The bolero is of pastel cloth, beautifully embroidered with point lace, and edged with bands of the vieux-rose material. The gown on the right is of wedgwood blue cloth of very light weight. The skirt is perfectly plain, but the loose bodice is trimmed with bands of velvet of a slightly darker shade. A pretty lace blouse and jabot are worn with this gown. The designs have been specially obtained for the "Mark Lane Express Supplement."

Fashions in Bathing Caps.

Two things are required of a bathing cap—it should protect the hair, and it should be becoming. The first is easy to manage, now that shops are offering various kinds of rubber affairs which run the gamut of styles and, one must admit, of ugliness, for the ordinary bathing cap designed to fill the first requirement seldom fills the second.

* * *

Bathing caps, like bathers of the gentler sex, are divided into two classes—those that really go into the water and get wet, and those that are for merely dilettante bathers. For the latter any sort of a creation will suffice, and it need not be designed with any idea of water ever touching it. Usually hats are preferred by the dilettante. Hats provide shade, and a dislike for sunburn goes with this unwillingness to get wet and being active in the water. To this half of the bathing world the head covering problem is quite simple, and the very fact that it is so easily and often smartly solved is a thorn in the flesh of those who have not been able to make themselves look smart and get the full enjoyment of the sport.

* * *

For swimmers nothing has been found more satisfactory than the bandana. True, this kerchief, worn cornerwise, is not a new arrangement for the hair, but it has the advantage of being an excellent protection for the hair. Besides taking up little room either on or off the head, it fits so smoothly that there is no chance for the wind or water to play havoc with it and get it awry. One fault has always been found with the bathing bandana, and that is its smallness. Neither the silk nor cotton ones used to wind around the hair are large enough to make smart bows. This season, however, a new silk square, designed originally to be worn under a broad sailor collar, is serving in another rôle, and it has been found to exactly meet all requirements for bathing purposes. These squares are a full yard, and they are made of light weight silk in almost every colour. The scarlet, blue, white, and crimson are best liked. No matter how sober the bathing suit may be in its tone and trimming, there is a fancy for having a dash of brightness in the cap.

* * *

To adjust the silk square, it is first folded cornerwise and put around the head, so that the ends come to the front, where they may be knotted in any of a dozen or more ways. The simple sailor knot is less used, perhaps, than any other, for the reason that the new silk square is too large, or rather the ends are too long, for this kind of bow. An Alsatian knot is both jaunty and becoming, and even if the silk does get drenched with the spray and waves it does not lose all its prettiness. After the two broad loops are made they should be fastened down to the cap with two tiny safety pins, and then one need worry no more about one's headgear.

* * *

A gipsy knot which becomes certain types has been much admired at one of the fashionable beaches. It was originated by a slim, dark-haired girl whose sun-burned skin and dashing air were just the thing to set off the gipsy cap. A yard square piece of silk was used for the cap, and instead of having it brought to the front and tied, the corners were knotted one at the left side under the ear and the ends permitted to hang loose. Silk balls give a finish to the corners of some of these squares, and they are more serviceable than one would imagine.

* * *

Twin bows worn at either side of the head are original. The ordinary yard square piece of silk is a little cumbersome for this cap arrangement. A better way is to cut the handkerchief in two pieces diagonally and hem the raw edge, or else use a triangle of silk to match the trimming on the bathing suit. The piece of silk is folded around the head just as it would be for an ordinary bandana, and then the ends are crossed over the front and fastened in two knots above the ears. The easiest way to manage this kind of a cap, and to have it always ready to put on without any bother about getting the bows in their proper place, is to have the bows made and attached to the ends of the three-cornered piece of silk, and then have a hook on each with an eye sewed on the side of the cap where the knots come. In this way the cap is even simpler to adjust than the ordinary bandana. Very often this simplicity is an important factor with girls who have a limited time in which to take their daily swim, and who want to spend as much of it as possible in the water instead of in getting ready.

* * *

There are other styles of caps, many of them very popular, because they slip on without even the bother of tying, but the great objection to them lies in the fact that they are not as trim as the bandana arrangement, and the rubber bands which hold them close to the head soon lose their elasticity. Thus far few ready-made bathing caps have survived a second season among women who insist on having appropriate and becoming covering for their hair.

* * *

When silk suits are worn the cap is made of the same material, and usually matches it, though a striking colour contrast is always good against the deep blue of the sea and sky and the pale yellow sand. There is a fancy for bright reds and blues with any of the dark suits, and even when the blue or black mohair costume is trimmed with braid or bands of some other colour a contrasting cap is liked.

* * *

Under the bathing cap is worn a close-fitting rubber skull cap, which is water-tight. Various styles of rubber caps are to be found in the shops, ranging from a few pence upward, but the most practical are those which fit without any wrinkles or fulness. They cover the hair, and they do not interfere with the cap or bandana. Some of pleated crowns to accommodate more hair than the average woman possesses, make a bandana or silk cap bulge out around the crown of the head, and really spoil the effect of the arrangement. Before going in bathing it is a very good idea to put up the hair, especially for this occasion. Wire hairpins and combs are sure to puncture the thin silk rubber cap and then the hair gets wet. The best way to dispose of the hair is to plait it in two sections, starting at the crown of the head. Make the plaits very loose, and then coil them flat around the head, pinning them with a few hairpins having blunt ends.

EMBROIDERED COVER OF OLD PINK LINEN.

DETAIL FOR TABLE COVER.

Embroidered Table Covers.

Since the stand-table is finding its way into nearly every room of the house the problem of giving it a suitable covering is no small one, for its decoration must be in harmony with the other furnishings. When used in the hall the small table usually has a handsome though plain centrepiece laid over it to protect its polished surface from marring. In the living-room the cover is frequently of linen, embroidered in colours, as shown in the illustration, while in the library a mat of leather generally adorns the top. In the dining-room, as in the bedrooms, the table cover matches the other linen scarves, whether embellished with drawn work, lace, or embroidery. Some exquisite cloths are shown inset with Cluny lace. A fine quality of Torchon, set in above the hem, looks very pretty, and has the added attractiveness of practicality, since it launders well. For the dining-room, particularly, nothing wears quite so well (even with more than one significance to the word "wear") as all white, yet where one has several such covers it is a pretty fancy to have different colour schemes carried out in sideboards and buffet scarves, serving-table covers, and centrepieces. In the bedroom's furnishings one's fancy may have free rein, for sets can be had, not only in different colourings, but in a variety of material, from the sheer lawn done in coloured shadow work, or scrim worked in Bulgarian shadings, to outlined cretonne, which matches window and bed drapery. Very effective scarves have a simple braiding pattern outlined with coronation braid, and the newer embroidery consists in tracing the principal design with rick-rack braid and embroidering the lighter lines. For the woman who enjoys embroidery, however, there is no other style of needlework quite so fascinating as the working of a pretty pattern. The one on the cloth pictured, while very effective, is really quite easy of accomplishment, as shown by the detail. The leaves are filled in with a simple satin stitch and the edges finished with the outline stitch. The stems are covered with two rows of chain stitching. The pattern is very effective when worked in only one shade in dull blue, red, or green; but with careful manipulation of the shadings is much richer when developed in three, or even four shades of one colour. In the latter event the long lines should be of the dullest tint used.

As to the material which may be used for small table covers, a wide variety is possible. Linen in various weights and meshes, and both white and coloured, is, perhaps, with tapestry and velours, the most popular. A good medium quality of linen can be had in beautiful blues and old pinks; and a clever woman has perfected a process by which white linen may be toned to any tint desired, using several shades of one colour in a piece. Very dainty covers to match bureau and bed sets are constructed from four linen hem-stitched handkerchiefs embroidered, set together with lace beading. Of course, the handkerchiefs must be of the same pattern. Such a cover, however, usually has the lace edge omitted, unless the hems of the handkerchiefs are very narrow. In that case lace not less than three inches wide is used, and preferably wider. The lace is put on with just a suggestion of fulness, except at the corners, where sufficient must be used to prevent its drawing. As with other accessories, the important thing is to have the table cover in harmony with the other furnishings both as to material and colouring.

Exceedingly dainty lunch cloths are shown in the Japanese hand embroidery, one with delicate pink and white apple blossoms worked round designs of drawn thread being especially lovely. In plain white, shamrock and ribbon combine in a decorative device of exceptional charm.

(To be continued.)

Oriental Rugs.

"Oriental" is the name now given to rugs made in Persia, Turkey, India, and various contiguous countries. We first heard of Turkish rugs years ago when these famous foreign rugs began to be popular in England. They were then presumed by the uninitiated to be products of Turkey. Some were, and most were not. More of them, and the best, were made in Persia, but they reached this country by way of Constantinople, hence they were called by the general name of Turkish rugs. To-day the Persian rug is known as widely as the Turkish rug, and is perhaps even more popular. We often hear the name "antique" applied indiscriminately to all Oriental rugs, but this is a misuse of the term. A genuine antique rug is an Oriental rug that has been made a long time, and in quality, design, and colouring shows the work of generations ago. One reason why such a rug is prized is that its great age is a guarantee of its genuineness in fibre, colouring, and workmanship. It is an assurance that it was made by hand process, and that only the best of materials were used in it.

After Oriental rugs had been sent to this country and sold as Turkish rugs for a time, we began to hear of Smyrna rugs. But they were not all Smyrna made, any more than those sold as Turkish were made in Turkey. Smyrna rugs became very popular for a time, but the true Smyrna differs materially from the Persian or Turkish rug and fabrics of that general nature. Another reason for their decline in popularity as Smyrna rugs is that they have been imitated in this country in cheaper material and make, and have become so "common" as to lose much of their attraction to persons of means. The English Smyrnas are serviceable rugs often, and handsome in design and of good colours and lasting material. They are, however, of entirely different construction from the true Oriental rug.

We are not disposed in this brief article to enter upon a detail description of the numerous varieties of these Oriental rugs. To-day they are known by many names. There are numerous Persian rugs, such as Shiraz, Teheran, Tabriz, Shirvan, Ispahan, Sultanabad, Kirman, and many others equally well known, all deriving their names from the city or district where manufactured. North of Persia, in Turkestan, are made some of the best Oriental rugs of to-day, such as the Bokhara, Samac, and Khiva, and others. Back there in the mountains near the boundary lines between Russia in Asia, Turkestan, and Western China, nomadic tribes of men and women, wandering from place to place with their families, make rugs of the finest material and with pure dyes.

Two things are essential to a good rug. First, fine wool taken from live sheep; second, genuine vegetable dyes, carefully mixed. After these comes the consideration of workmanship. Given good wool and pure dyes, the question is how many knots to the square inch, and how firmly are they tied? In order that the reader may understand this, perhaps a few words on the peculiar construction of an Oriental rug are essential. They are not woven, as most modern fabrics are, from long threads, in and out between a warp. If you will examine an Oriental rug, say a Teheran specimen, you will find that the principal part of it is composed of short threads pushed up between the warp, one end of the thread on either side, and tied in a hard, firm knot. In other words, an Oriental rug is made of a series of little knots, with just enough of the nap or pile to give body to the rug. If you examine one of these rugs closely you will see that there is first, the warp and woof. The warp threads are made fast at either end to a rude frame, and drawn tight. If a Persian rug is being made, the weaver takes his different coloured threads and puts the ends up around the warp, one end on either side of it; draws them close and ties a knot on the upper side, and cuts the thread closely. This process is repeated until a knot has been tied around each thread of warp. Then a thread of woof, which may be of wool, linen, or camel's hair, is woven into the threads of warp, and pushed down close against those little knots to hold them in place. This form is repeated until the entire rug has been made.

ANATOLIAN PRAYER RUG.

Cookery.

Dainty Salads.

A crisp, appetising salad, daintily served, adds much to any meal.

Below are given a variety of salads, all of which are wholesome and easily prepared:—

Mayonnaise Dressing.

Put the yolks of 2 fresh eggs in a cold bowl and beat with an egg-beater. Add a small ½ teaspoon of salt, and ¼ teaspoon of mustard; beat again, and add a few drops of cider vinegar, beating constantly. Then add slowly, a few drops at a time, about ½ pint of salad oil, continuing to beat until it is thick; then add the juice of a small lemon and a dust of cayenne pepper.

Potato Salad.

Boil half a dozen potatoes until tender, but do not let them cook so they will fall to pieces. Boil 4 eggs for 5 minutes and drop them into cold water. When cold, peel and slice potatoes and eggs, and pour over them a mayonnaise dressing.

Tomato Salad.

Peel medium-sized tomatoes and chill them on the ice. Scoop out a little of the top and serve the tomatoes on lettuce leaves. Pour over the top of each a heaping teaspoonful of the following dressing:—

Beat the yolks of 2 eggs light, add ½ teaspoon of salt, ¼ teaspoon of mustard, 4 tablespoons of melted butter, and 6 tablespoons of vinegar very slowly, and all the time beating. Cook in a double boiler until it thickens; then add the well-beaten whites of 2 eggs and remove from the stove. Chill on ice, and before serving add 1 cup of whipped cream.

Egg Salad.

Boil hard 8 or 9 eggs, drop into cold water, and when thoroughly cool peel and cut in slices. Arrange so that the slices lap over on lettuce leaves in a pretty flat salad dish, and pour over them a thin French salad-dressing to which has been added a spoonful of chopped parsley.

French Dressing.

One tablespoon of Tarragon vinegar, 3 tablespoons of olive oil, ½ teaspoon of salt, and a dust of black pepper. Mix the salt and pepper and slowly add the oil, then the vinegar, and stir rapidly for 2 or 3 minutes.

Toilet Tips.

An Unrivalled Cosmetic.—If your skin is inclined to be rough and coarse in texture, or sallow in appearance, you cannot do better than use a cosmetic made from horseradish. Well scrape and wash some horseradish roots, cut into very thin slices, or scrape as if for horseradish sauce; pour over about half an ounce of the roots a pint of boiling milk, cover it closely, and leave to infuse until quite cold. Strain with pressure, and the decoction is fit to use. First wash the face with soft water and a good soap, rinse, and dry thoroughly, and then bathe the skin with the horseradish infusion. The process may be repeated two or three times a day.

A Rosemary Wash for Children's Hair.—Boil a double handful of the leaves and tops of rosemary for 10 minutes; strain, and add ½ a teaspoonful of Californian borax. This should not be used if the hair is naturally very dry.

A Remedy for Sunburn.—Often in exposed situations, as at the seaside, the skin may become not only sunburned, in the ordinary sense of the word, but irritable and inflamed. A cooling, sedative wash for the skin is then very needful. I have found the following preparation answer admirably in numerous cases:—Milk, 20 oz.; powdered borax, ½ oz.; glycerine, 1 oz. Another very good remedial wash is composed of oatmeal water, ½ a pint; buttermilk, ½ a pint; borax, ¼ oz. It is also necessary to use an emollient cream at night to soothe the heated surface of the skin, and heal any soreness which may result from its cracking or peeling. Toilet-cream for this purpose may be made from glycerine, 1 oz.; lanoline, ¾ oz.; white petrolatum, 2¼ oz. Mix the lanoline and petrolatum, and then incorporate the glycerine. Add a few drops of otto oil or ylangylang.

Keeping the Hair in Curl by the Seaside.—The continual limp state which most people's hair insists in retaining when at the seaside is one of the bugbears of holiday existence. However carefully the hair may be curled in the morning, a few sharp breezes from the "briny" generally succeed in reducing it to a straggling, moist, and almost perfectly straight condition. Some women's hair seems to defy the salt atmosphere, but in most cases this antagonistic attitude of one's tresses is a real trouble. The best plan for keeping the hair in curl is to employ a good curling fluid, taking care however, that the hair is thoroughly free from grease before applying it, as otherwise it will have no effect. An invisable net should also be rather tightly drawn over the fringe, and the veil may be adjusted over the hair inside the brim of the hat. The following recipe makes a very good curling fluid:—Californian borax, 2 oz.; gum arabic, 1 drachm; hot water (not boiling), 1 quart. Stir, and as soon as the ingredients are dissolved, add 3 table spoonsful of strong spirits of camphor. Wet the hair with this liquid every night before rolling up the curlers. I do not advise the constant use of curling fluids, as they are very apt to cause the hair to become dry and brittle, and to induce dandruff.

Beauty in Dress.

Many women dress as if the face were the only consideration, never heeding if they be tall or short, stout or slim.

Of course, the complexion is greatly to be studied if you would dress well.

The method to tone down any tint that is excessive in the face is to bring a strong colour of the same tone in close proximity to it, although even this rule is not always to be followed; for rules cannot always be relied upon, but they are a guide.

Pink and white seem only suited to the young and fair, yet how much white is used by even the old, whose complexions are often yellowed by time.

Blue suits the blonde and enriches her golden tresses, but it is apt to bring forward any tinge of yellow there may be in the skin. Now gold in some form will hide this, and while in contact with the face subdues the ill-effect of the blue, and preserves its good ones.

Fur is the most softening to every complexion of anything that can be worn.

Therapeutic Value of Pineapple Juice.

During the last few years we have been learning of the medicinal effects of fruit juices, particularly as aids to digestion. No fruit has more value for this purpose than the pine-apple, and many experiments with its juices prove it. A freshly-cut slice of the fruit laid on a piece of beefsteak will in surprisingly short time cause softening, swelling, and partial digestion of the meat for a considerable depth from the surface. It is stated that bromoline, the active principle of the pineapple, has been used in the preparation of the well known Masquera beef jelly.

The reputation of the pineapple has suffered because it has been eaten in too large quantities at a time, and the fibrous part has been swallowed with the juice. To obtain the full digestive value of the juice one quadrant of a slice half an inch thick is ample at one meal. It must not be cooked, and should be just ripe. The preserved fruit has practically no digestive power.

Another use other than digestive is in cases of diphtheria, for the juice has a strong solvent action upon plastic exudation, such as the diphtheria membrane. When it is applied to it on a swab or spray its time of contact is not enough to cause solution, but it is of material service in softening the sticky and stringy exudations so as to admit of its easy detachment. It also softens horny epidermis in the same way as, though more slowly than, salicylic acid. If a thin slice be kept in close contact with a corn for eight hours it will be softened so as to be readily removed.

Health Notes.

Inflammation of the throat may sometimes be cured by the steam from a lump of resin over which boiling water has been poured. Place a lump of resin the size of a walnut in an old teapot, pour boiling water over it, cover and place the spout to the mouth.

"Feed a cold and starve a fever," is an adage as old as time itself. A severe cold usually runs its course, though such simple treatments as hot lemonade at bedtime, or even hot broth, sipped before retiring, is often sufficient to break a cold.

When bread is given to children under a year and a-half old, it should be sliced very thinly, buttered lightly and given in small quantities.

If troubled with large, or varicose, veins in the lower limbs, do not stand much in one position, but move about or sit down whenever opportunity affords.

A thorough but gentle rubbing with a soft chamois skin will remove dust and dirt from the face, and this practice is better than numerous washings during a day.

To make oatmeal water place a tablespoonful of coarsely ground oatmeal in a pint of water; simmer gently for an hour; then add sufficient water to make it measure one pint again.

Don't neglect to take a ten minutes' rest during the day, with the feet raised. It gives the whole body a sense of repose and works wonders in smoothing out the lines on the face.

When there is excessive pain in the head or upper portion of the body, put the feet in a very hot bath to draw the blood down from the head. In case the patient is in bed, use the hot water bag at the feet.

Be sure that the hair is thoroughly dry after shampooing before dressing it, or a musty odour will result, and the hair will seem sticky and heavy. Headaches and backaches often result from doing up the hair before thoroughly dry.

When a child has swallowed any poisonous substance or liquid, the stomach should be emptied immediately. Ipecac is splendid to induce vomiting. The dose should be from a quarter to a teaspoonful, according to age of the child.

Light from Sugar.

A phenomenon, the cause of which has not yet been satisfactorily explained, was recently observed by a Government scientist during the course of certain experiments.

Disks of loaf sugar were mounted on a lathe and rapidly rotated while a hammer played lightly against them. An almost continuous radiation of light was thus produced from the sugar. It was shown that the light did not arise from heating of the sugar, and it is believed to have been caused by some change taking place in the sugar crystals. The act of crystallization is known to be sometimes accompanied by flashes of light. The practical bearing of these experiments is on the question of the possibility of obtaining artificial light by methods as yet untried.

ROUND-ABOUT NOTES.

Now that the holiday season has commenced, many people who suffer from "mal de mer" are seeking remedies for seasickness. Though seasickness has made voyagers miserable for centuries, the physicians have never been able to fathom the mystery of it and find an infallible cure. According to one authority, "Seasickness seems to be a functional disorder of the central nervous system. Those who attempt a more precise explanation usually experience that hopelessness which is the constant accompaniment of the disease." A noted French physician claims that the use of oxygen will effect a cure of this distressing disease. It is easily obtainable in compressed iron cylinders, and when taken in large quantities, say thirty pints, removes the strain from the breathing apparatus, and thus prevents the paroxysm. Another authority claims to have effected a cure by giving two grain powders of petroleum every ten minutes till three have been taken.

* * *

But the strangest remedy of all originated with the Italian Ambassador at Washington, Baron des Planches. Acting on the theory that seasickness is largely a complaint of the nerves, he swung a mirror over his face as he lay in his bunk, and by watching his reflection in the glass he became better and finally recovered, in spite of the fact that the voyage was a rough one. The explanation is that by gazing in the mirror the eye rests on an unchanging surface, and so the sense of motion gradually becomes less, and the brain is soothed and restored to its proper equilibrium.

* * *

It would hardly enter the head of a person looking at the tangled masses of seaweed which are washed up on the beach at the seashore that it could have any commercial value. On the British coast alone, however, four hundred thousand tons of this weed are collected each year. It is burned into kelp, from which chemists manufacture iodine and bromine, besides valuable chlorides and silicates. A great deal of it is carted inland and used for manure, hundreds of acres of cauliflower in Cornwall being grown yearly with no other fertiliser. Thousands of Japanese and Chinese live on seaweed. France collects eight million pounds of the alva yearly, and uses it for stiffening mattresses. On the Irish coast the carrageen moss affords a rich harvest to the poor peasants yearly, and is made by them into a valuable jelly. Bandoline and other preparations for the hair are also made from the same material, and a size essential to hat manufacturers in the making of straw hats is made from carrageen. Two million pounds weight is the yearly crop. Another valuable product of the seashore is shell. Wherever chalk is not naturally abundant the shells are collected and burned into lime for making mortar and cement, and are also used as valuable fertiliser for heavy clay soils. Certain shells are also burned into enamel and used for enamelling clock faces.

* * *

Though butterflies and moths are found widely distributed all over the globe, they are by far most abundant in the tropics. For instance, Brazil can show to the collector not less than 700 different species within an hour's walk of Para. There are not half as many in all Europe. In Britain there are 67 species, and in all Europe there are 390 different kinds. They are found as far north at Spitzbergen, on the Alps to a height of 9,000 feet, and on the Andes up to 18,000 feet. As there are some 200,000 species, it is easy to see why butterfly hunters are great travellers.

* * *

Mr. J. Collier is authority for the statement that there are no less than five thousand distinct languages spoken by mankind. The number of separate dialects is enormous. There are more than sixty distinct vocabularies in Brazil, and in Mexico the Nahua language has been broken up into seven hundred dialects. There are hundreds in Borneo. The complexities are beyond classification in Australia, and generally the number of dialects decreases with the intellectual culture of the population. If there is an average of fifty dialects to every language, we still have the enormous total of 250,000.

Silver Lustre.

(Continued.)

"Resist" Pattern.

"For prettiest stuffs let Ireland first be named;
And for best fancied silks let France be famed;
Do thou, thrice happy England, still prepare
Thy clay, and build thy fame on Earthenware."

Hanbury Williams.

The introduction of the resist or pattern lustre is of a later date than ordinary silver lustre, and certainly was not manufactured before the later years of the eighteenth, or early years of the nineteenth century. As to the potter who introduced it, much controversy has arisen, but there is little doubt that Robert Wilson, of Hanley, somewhere between the years 1787 and 1793, began the manufacture of "resist" lustre ware, and more especially that branch of it called "platinum lustred ware." He also made copper and bronze lustre ware. Spode, Wood, Wedgwood, John Aynsley, and others, also were producers of lustre during the early years of the last century.

The method of manufacturing the so-called "resist" or pattern lustre apparently suggested the name by which the process has been called. It consisted in covering the body of the ware with a luscious glaze, on which the pattern was painted. This was done by a brush, with a solution of shellac; the piece was then coated with the metallic lustre of silver, copper, or bronze, as the case may be, and on being fired the pattern was destroyed, leaving the design. In some examples the design bears colour ornamentation under the glaze, a peculiar orange-red tint being a favourite colour. By some experts little differences in the process of manufacture can be noted, which enables them to state the county of their origin. An example with a thick glaze free from crazing is generally credited to Yorkshire, while those of a lighter glaze, with raised ornamentation, are "hall-marked" as Staffordshire. The process of manufacture was costly, and it must have been so when the so-called copper or bronze lustre owe their rich colouring not to copper, but to gold. In all cases, as Professor Church states, "the operation of lustring is based on what chemists call a 'reducing' action by which the metal concerned is set free from its combination."

TEAPOT OF "RESIST" LUSTRE WARE.

The film of precious metal was so thinly applied that its colour was affected by the hue of the earthenware beneath, which, as has already been stated, was of a reddish or yellow colour.

Judging from the dates on many pieces of "resist" lustre ware which are still extant, it appears as though the ware reached its height of prosperity between the years 1810 and 1825. Certainly, its manufacture was not carried on much later than 1830. The reason of this was the heavy cost of its manufacture, and the corresponding cost to the buyer. Few people could afford to pay the relatively large sum required for a piece of "resist" lustre ware, and when electro-plating came in a few years later, the need for it was gone.

The illustration is a good example of "resist" lustre ware. The teapot is of a dark copper lustre, with a band of blue enamel round it, on which, in relief, are full blown pink roses, with leaves and buds of copper lustre; the handle is decorated with a moulded dragon.

With the decadence of the art, slip or applied ornamentation was used, taking the form of so many of the Staffordshire patterns of that date. Roughly executed work of a child with a pet lamb, with the usual background of trees with red-brown spots, is one that may be mentioned out of many that come under the collector's notice. It may be taken as a general axiom in earthenware or porcelain that over-ornamentation is the last stage of its artistic existence. If the artist would only copy nature, and observe that the glorious autumn colouring of the trees is obtained not by the increased production of foliage, but got by the beauty of the deeper colouring and varied tints of the same leaves which came with the magic touch of spring.

In addition to the process described as "resist" work, the lustre pigment was utilised at many factories for the decoration of earthenware and china. The well-known Sunderland ware made use of the lustre as a minor decoration, and the Spodes, the Copelands, and others made a feature of it. Deep splashes of silver colour in the shape of vine leaves, grapes in purple, edgings of gold and silver to the cups and saucers of tea and coffee services. Even jugs with hunting scenes, or sportsmen with gun and dogs, were marked in lustre of copper and bronze, with the addition of other strong colours.

Few pieces of "resist" lustre ware were dated, and those that are extant bear dates from the early days of the nineteenth century down to 1825. By 1830, or a little later, as has already been stated, the industry was dead.

At the time lustre ware was being manufactured in this country, the art of making earthenware had become a large industry, and in Staffordshire alone there were nearly one hundred and fifty manufacturers in 1802, each endeavouring to excel in some particular form of production. Lustre ware was confined to a few potters, and the excellence of their products can be seen in the pieces that are now in museums and private collections. Despised as the silver and "resist" lustre ware was held in early and even later Victorian days, the beauty and variety of its form and decoration has once more been re-established, and to-day a collection of it is much prized. Its charming variety of designs, its rich colouring and wondrous beauty of metallic glaze is appreciated by the connoisseur, and the collectors of it are an ever increasing number.

Lustre ware bears no comparison with our English porcelain, but should be judged on its own merits, not forgetting to take into account the little knowledge many of the potters had of the technicalties of the art, and the want of what may be called the scientific side of its manufacture.

———o———

"Now, Thomas," said the bishop, solemnly, after taking his servant to task, "who is it that sees all we do and hears all we say and knows all we think, and regards even me in my bishop's robes as but a vile worm of the dust?" And Thomas replied, "The missus, sir!"

NOTES ON PRACTICAL GARDENING.

In my former notes upon cuttings, I dealt only with calceolaria, pansy, and antirrhinums, not mentioning the bedding geraniums as owing to the cold and unsettled state of the weather this summer, geraniums of every variety have practically made no progress since they were bedded out. Still, the question of cuttings of this plant must come under our special notice at the end of the month, if we are to obtain plants next year.

It will be a somewhat difficult matter to secure a sufficient quantity for stock. I would suggest that they be obtained by degrees and every available shoot taken as soon as they come along large enough to strike, placing them in a green house near the glass with a temperature of about 50 degrees. I have visited several nurseries, and find that all the best varieties have been dearer this summer than ever before, but it is quite possible that a higher price will prevail in 1908. The kind I would suggest as the most attractive are the following:—Henry Jacoby, Mrs. Leavers, Vesuvius, Scarlet King, Mrs. Pollock, King Edward VII., Queen of Whites, Marshall McMahon, Flower of Spring, West Brighton Gem. Those amateurs who do not possess these will be wise to purchase a few large plants and cut them away as far as possible. They may cost one shilling each, but then the expense of laying out beds next year will be minimised if cuttings are raised.

I am quite convinced that geraniums will be very scarce in the spring, and nurserymen will be able to command their own price for the best flowering and one of the most useful and needful of the amateur gardener's bedding plants. I shall procure one or two dozen of each sort mentioned above, with the hope of a nice display next year. The cuttings should be planted in a soil composed of a rich, sandy loam, with a good mixture of leaf mould, which should be well rotted, and a small quantity of turf loam, which will act as a stimulant. This should be well pressed round the cutting and carefully watered. To the lovers, or even to the admirers of flowers—and who may not be included in the latter category?—the season for propagation by cutting is of interest.

Carnations should at once be layered, using freshly-prepared soil into which only the strongest and healthiest shoots should be secured. I have personally examined every one of the following varieties this week:—Duchess Consuelo, this plant bears a soft canary yellow bloom, very large, and is without exception the finest yellow carnation at present cultivated; Enchantress, very fine white; Mrs. Leopold Rothschild, beautiful pale pink, good form; Prince and Princess of Wales, these are crimson scarlet, and showed lovely blooms, which attracted my attention at once. The Blush Malmaison, a white, lovely flower; Lord and Lady Rosebery, rich, rosy crimson, and very beautifully formed blooms; Lady Grimston, blush pink-marked bright rose, very large, beautifully scented flowers; Mrs. Trelawney, dark salmon; Trumpeters, very large dark crimson, sweetly scented; Florizel, a new shade to me of a distinct beautiful rose. It is very difficult to know which variety to leave unmentioned.

The flowers I have mentioned I inspected in a large palm house, so that as the plants were on exhibition I was able to learn the names and see the blooms to the very best advantage. The atmosphere was decidedly against the blooms, as carnations soon spoil and lose their attractiveness if the air is not dry and abundant ventilation is not at all times given to them. I raised a question with the caretaker as to the layered plants, and he kindly told me that all the kinds exhibited were from layered

plants; he was most emphatic in his views that layering was the best method of getting good strong carnations. They throw out a perfect thicket of shoots. This is the opinion of an intelligent person, and layering should be done at once. He mentioned that cuttings satisfactorily managed made good stuff, but do not produce more than two to three flowering stems, and consequently only a little grass.

Successful layering needs a good, sharp knife, and the cut should be just below the joint. Water them fairly well at first, and a little of the grass should be cut away. They should not be exposed to a hot sun for at least four to five weeks, after which time, give them as much sun and air as possible, and look forward to the coming year with bright hopes of a magnificent show of sweet and lovely flowers. I am rather inclined to think that gardeners who go in for cutting blooms for sale would do well to cultivate the carnation, as it stands well in a vase and brings sweet perfume into the house. The best variety of Malmaison blooms fetch 1s. to 1s. 6d. each in a London shop with a rich connection of customers.

G. W. Thomson Price.

Needlework.

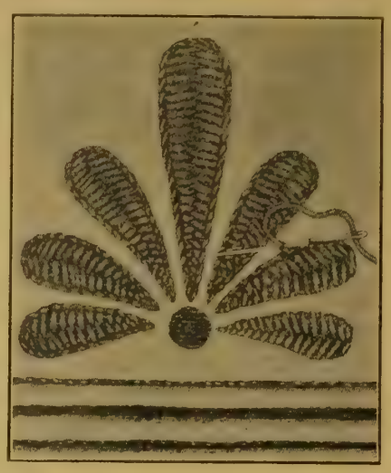
Embroidered Table Covers.

(*Concluded.*)

A serviceable but handsome cloth, suitable for covering the dining table for occasions when it is desirable to remove the linen cloth, is shown decorated with the simple but effective Bulgarian work. When done in three shades of one colour, with the dot in black, it is very striking. For instance, on écru or natural colour linen three shades of dull red or blue are used, though when worked in four shades of wood browns (omitting the black) the effect is very pleasing. A heavier floss is used to outline the middle border line. When used for a library or hall cover the pattern may be worked in true Bulgarian fashion; that is, using all the colours mentioned in each figure. For instance, the two lower leaves will be light blue, the ones above dull green, the next ones red, and the centre one dark blue, with the dot black outlined with gold.

Where a washing cover is not specially desirable, one of broadcloth with the Bulgarian work is to be recommended.

Even when fashioned of washing material embroidered pieces should never be washed in hard water. Use lukewarm soft water with a pure white soap, making a lather before the goods are put in, as soap should never be rubbed on the piece. Wash but one piece at a time, lightly squeezing and lifting it through the water till clean. Do not twist and wring, but gently press the water out; rinse in two lukewarm waters, the last one very slightly blued. Dry by pinning over a sheet to the line (in the shade), or lay between thick, soft cloths, and roll up for ten minutes. Put a thick blanket over the ironing sheet, covered with a clean cloth, lay on the embroidered piece wrong side up, and stretch into proper shape. With a moderately hot iron begin to press in the centre, iron till perfectly dry.



Cretonne is still much used for covers, but the cretonne of to-day is vastly different from that of even ten years ago, being made in lighter weight and a greater variety of designs. For many purposes, however, what is known as art linen is more in favour. This fabric is about the weight of cretonne, but has more of a twill shown. It is especially serviceable for cushion and upholstery covers, but lends itself equally well to straight casement curtains. For covering chests and boxes it is exceedingly smart, since colour effects can be well carried out by its use. Cretonne and art linen are taking the place of corduroy in covering window seats, whether the cushions alone are covered or if there is a flounce to hide the shelves underneath. A light weight of either cretonne or art linen is used to cover made-up articles such as letter, glove, kerchief, and tie boxes.

Clover Leaf Crochet Edging.

For this edging crochet as follows:—

1. *Twenty-one chain, 1 double on the sixteenth of these, 5 chain, 1 double on the last double; 5 chain, 1 double on the last double; fasten to the same stitch of the 21 chain on which the first double was crocheted, 1 single, 1 short double, 9 doubles, 1 short double, 1 single on the sixteenth to the twenty-first of the 21 chain, one single on each of the two following 5 chain, 1 short double, 9 doubles, 1 short double, 1 single, then 5 singles on the fifteenth to the eleventh of the 21 chain and repeat from*, but in every repetition fasten the middle of the 9 doubles crocheted on the sixteenth to the twenty-first chain to the middle of the 9 doubles of the preceding round which were worked last on 5 chain.

2. *One single on the middle double of the middle point on the next figure in the preceding round, 9 chain, 1 double on, the next vein in the hollow between 2 figures side by side, 9 chain. Repeat from*.

DETAIL OF BULGARIAN WORK.

3. Five singles on the next 9 chain in the preceding round, twice alternately 1 picot (consisting of 5 chain and 1 single on the first of these), 3 singles on the same 9 chain on which 5 singles have already been crocheted, then *twice alternately 3 singles, 1 picot on the next 9 chain, 5 singles on the same 9 chain on which the last singles were crocheted, 3 singles on the next 9 chain, 5 chain, fasten to the third of the 5 singles worked previously, 3 singles, 1 picot, 3 singles on the 5 chain worked last, 2 singles on the same 9 chain on which 3 singles were last worked, twice alternately 1 picot, 3 singles on the same 9 chain on which the last singles were worked. Repeat from*.

TABLE CLOTH IN BULGARIAN WORK.

4. (On the other side of the foundation). Always 1 single on each stitch of the first round.

5. Always alternately 1 double on every second stitch of the preceding round, with 1 chain between.

6. Always 1 single on each stitch in the preceding round.

Needlewook Designs from Nature.

A piece of embroidery will be doubly interesting and precious to the worker if she has designed, or rather drawn and composed the design in which it is worked, from nature. Dandelions in their various stages of growth, from bud to seed-puffs, are easily drawn, and the manner of their arrangement should be somewhat conventional; for instance, they may be drawn in a somewhat stiff, up growing row in their various stages of development. A few of the winged seeds floating off in space as if suggesting a faint breeze, give a very pretty result.

Summer Dishes.

Purée of Lettuce.

Blanch some lettuce, mince, and toss them in a little butter until tender, then add some good stock, in which a little flour and butter have been smoothly mixed; let it all boil up, then pass it through a sieve, adding enough stock to bring it to the proper consistency, flavour to taste, and re-heat the soup. Just before serving, the yolks of two eggs, strained and mixed with a little milk or cream, should be stirred into the soup. Serve with tiny *croutons*.

Currant Salad.

Pick over a pint of red currants and place them in the centre of a compote dish; then pick over a pint of white currants, and arrange them in a border round the red ones; outside of these arrange another border of black currants. Take a pint of good cream, sweeten, and add gradually a tablespoonful of brandy and one of curacoa. Pour the cream over the salad, and drop fresh raspberries all over each

Salt Fish.

Cut 4 or 5 onions into dice, fry them brown in a stewpan, add ¼ oz. of caralline pepper, 1½ oz. of creme de riz, a little thyme finely chopped, the juice of 2 lemons, ½ teaspoonful of extract of meat, and a pint of fish stock. Mix together, and bring to boiling point; then add 3 tomatoes, rubbed through a sieve; let all simmer until the onions are tender, and add some cold cooked salt fish, carefully removing skin and bones. Shrimps and oysters may be added, but are not absolute necessaries. Heat the fish in the sauce, and serve with boiled rice.

Hungarian Salad.

Take some small potatoes, boil them, peel them while still warm, slice very thin. To every pint of potatoes mince 1 small onion, 1 pickled beetroot, 1 fresh cucumber sliced, a Dutch herring, 4 sardines, and 1 spoonful of cold boiled ham. Mix all together and pour over it 1 teacupful of vinegar. Garnish with pickled walnuts.

Seasonable Recipes.

Damson Jelly

may be made now with advantage. Carefully pick the fruit; put into a stone jar, and set in the oven. Strain through a sieve, and to every pint of damson juice put a pound of loaf sugar. Boil it until it will set, and pour into jars. The fruit must be gathered when dry, and all that is unsound must be rejected.

Damson Cheese.

Gather the damsons when fully ripe and dry. Put into a jar with a quarter of a pound of loaf sugar to every pound of fruit. Bake in a moderate oven until quite soft, then rub through a hair sieve. To every pound of pulp add half a pound of loaf sugar, and boil on a slow fire, stirring all the time, for half an hour. Put into fancy shapes, and cover over until wanted. It is fit for use by Christmas.

Imitation Preserved Ginger

Use either garden rhubarb or the stalk of lettuces going to seed. Strip off the stringy part, and cut the stalks into pieces about two inches long. Put them into a saucepan with 5 pints of water, 1 lb. of sugar, and 2 tablespoonfuls of fresh ground ginger. Boil slowly for 20 minutes, set the preparation aside, and later on boil again half an hour, and repeat the process a third time. Make a thick syrup by boiling together 1 cupful of water, 1 lb. of loaf sugar, and 1½ ozs. of ginger for every pound of stalk, and when cold, put the preserve in jars, and cover closely. It will be ready for use in a fortnight. One pound of rhubarb will make one pound of preserve.

Damson Trifle

is a dainty little dish, and easily prepared. Stew 1 lb. of damsons with ¼ lb. of lump sugar until the fruit is soft. Place them in a glass dish, and pour over them a rich custard. Put some Savoy biscuits edgeways on the custard, and when ready to serve pile some whipped cream on the top, above which, at the last moment, sprinkle chopped almonds.

THE NEWEST FASHIONS.

Not only a hat for every gown, but a number of hats for each costume, to change the effect and give the appearance of great variety in the outfit, is to-day the accepted decree, and when it is taken into consideration what an all-important part of a costume is a smart and becoming hat it is not astonishing that each year it becomes necessary to have this part of the trousseau as generously supplied as the income will allow. Unfortunately the price demanded for smart millinery does not decrease proportionately with the increased number of hats sold per season, but rather the reverse; and whereas formerly it was considered in better taste to wear an inexpensive hat with a simple walking costume this is far from being the case to-day, and now frequently much of the style of the dress is left to depend upon the effectiveness of the hat; nor, comparatively speaking, is it possible to economize to any extent upon a hat.

* * *

There are astonishingly few women who can trim their own hats successfully, and unless one has a decided knack in that direction there is no use in attempting to obtain it. The chief difficulty in trimming a hat is in acquiring a good frame or shape, and for some unknown reason it is well-nigh impossible to get the newest shapes already made up. It is not difficult to make a good wire frame if one has really learned how to do it, and if one cares to take the trouble there are plenty of places where this art can be taught; then it is an easy matter to build a good shape on the wire frame. For summer hats it is less difficult to find a good Leghorn, crin or chip straw, and, trimmed simply with a wreath or clusters of flowers and rosettes of ribbon, a most attractive hat can be fashioned. A great many women can copy where they cannot create, and summer hats are infinitely easier and less intricate to put together than the velvet, fur and felt hats, so it is well to practise first on the straw shapes, and flowers for these trimmings are much less expensive—quite a considerable item.

* * *

The sailor shape is a very popular one, and this year is no exception to the rule. For boating, tennis, golf, etc., no style of hat is better than a plain sailor of rough straw, and black and white are about equally fashionable. White sailors change in size and height of crown and width of brim in accordance with the prevailing mode, still there is always enough variety in the shapes for one and all to be suited. It is true that the Panama hats, with their soft, wide brims and crush crowns, are so much more comfortable to wear than the sailors that they are perhaps more fashionable at present, but still the stiff brim looks so neat and trim that there is much to be said in its favour. For town, however, and for all times when a Panama cannot be worn—and the Panama and plain sailors are only appropriate with a shirt blouse and skirt costume; the so-called trimmed sailor is most useful. This sailor is often a decidedly elaborate affair, trimmed with flowers, ribbons, and wings, but its lines are kept severe, and the general style of the hat denotes that it is for a simple morning gown. The brim is not necessarily of even width, but at present is a trifle wider in the back and on the left side and is worn tilted up slightly on the left. The large cachepeigne of tulle or ribbon has disappeared, and frequently one sees this style of hat fitting down close to the hair, the brim not filled in at all.

* * *

An exceedingly smart model of this order was of white crin faced with black taffeta, the silk also making a narrow binding on the straw. The crown, which was of medium height in size, was encircled by a sort of wreath formed of soft white and black pigeon breasts, while on the left side was massed a large cluster of stiff white wings, which came out just a little beyond the edge of the brim. The hat was about even width all around and rested quite flat on the hair, an excellent model for a linen or silk shirt blouse or for a white serge or linen suit.

* * *

All lace hats are attractive, and many of them exceedingly pretty, but the lace must be of a fairly good quality, and is perhaps more effective if used over a white straw frame. One attractive model was in white straw, with a large Tam o' Shanter crown of white lace, a ruffle of which fell down over the straw brim. Wreaths of tiniest pink rosebuds were laid about the crown over the lace ruffle and at the back was a large pink bow, which fell down just a little over the brim. This last made a charming hat for a light summer gown of lace, lingerie, or flowered mousseline.

* * *

The pretty voile gown illustrated this week is in a pale shade of heliotrope, with narrow fancy ribbon of the same shade. The blouse is cream crèpe de chine with appliqué lace and the Kimono bodice is relieved with a waist belt and folded edge of purple velvet.

A PRETTY VOILE GOWN.

Secrets of Beauty.

Every woman is bound to make herself as presentable as possible. A great many physical defects can be remedied, or, at any rate, made less observable. You will often notice that those who have bad complexions never wear veils. Now, a pretty veil, with a small spot so placed as not to be dazzling, is often very becoming, and adds a general finish to the bonnet or hat. Marks on the neck or throat can be very effectively concealed by ruffles, and those who have scars of any kind on their skin should wear soft laces, chiffons, or some such becoming arrangements round the neck to hide the objectionable marks. Again, women with thin necks and long chins should always wear a soft frill or ruche, instead of the high, stiff collar, which has the effect of bringing into greater prominence their bad points. Hands, whether beautiful or ugly, should be well cared for; the nails should be nicely kept, and if the hand is very large and not of a pretty shape, gloves should fit especially well, and when possible be of a dark colour.

It was a Frenchman who said that a pretty woman with bad teeth was never lovely, and an ugly woman with good teeth was never plain. Teeth are more remarkable in some people than in others. Well-cared-for teeth add much to the good appearance of anyone. Well-arranged hair is always attractive. If it has come out from ill-health or other causes, then wear a little false hair. In these days all kinds of arrangements are made so that the dreaded wig is avoided, and even when indispensable it is now made much better than it used to be. Far better do this than offend the eye by patches of baldness.

Sunburn.

Sunburn may be treated by applying two or three times a day a sedative wash made in the following way:—Finely shave 3 drachms of curd soap and dissolve it with gentle heat in 8 ozs. of rose-water; add 2 drachms of powdered Californian borax. In another jar dissolve 3 drachms of white wax in 2½ ozs. of oil of sweet almonds by means of gentle heat. Mix the solutions and shake together, and when nearly cold add 12 ozs. of glycerine, 6 drachms of pure alcohol, and 2 ozs. of rose-water. Perfume with a few drops of otto of roses and shake well until cold. When finished it should be of the consistency of a thick cream, and should be kept in a well-corked bottle. It should be gently rubbed over the face with the hand twice a day. The proportions I have given are for a large quantity, but they can, of course, be reduced.

A preparation partaking more of the nature of a lotion than a cream is made from eau de Cologne, 1 oz., glycerine, 1 oz, borax, ½ drachm, elder-flower water, 4 ozs. Shake all well together.

A little pure rice powder may be dusted over the face after the application of the cream or lotion. The effect is most refreshing and cooling when the face is burning and scorched by the sun.

When the skin is hot and irritated from sunburn never wash the face in cold water, but bathe very carefully with warm—not hot—water, then dry with a soft towel.

The Earth's Future.

Project yourself into the future, if you can, and imagine this Earth as it will be some millions of years hence. At that remote period its mountains will have been levelled; its fertile areas will have shrivelled to arid deserts; its gases will partly have floated away, and its atmosphere will consequently have been impoverished and attenuated; its weather will have become so wearisomely unvaried, its skies so monotonously serene that the passage of a cloud will be chronicled by historians; its seas and its lakes will have dried up utterly; its oceans will have poured through cracks and caverns into its interior; and all the water that now covers four-fifths of its surface will have dwindled to a small plain of ice and snow deposited about each Pole. That image of the Earth's future plight may be considered a fairly accurate picture of the present condition of Mars, as it has been unfolded by the more recent discoveries.

On a planet so withered and aged that its water is confined to the frozen seas at its poles, the annual melting of the snow and ice would be an event of vital moment if its inhabitants would save themselves from certain extinction—so vital, indeed, that the one absorbing problem would be the task of leading the polar water to those thirsty regions about the Equator which would still blossom if properly nourished. In a word, irrigation on a stupendous scale would be attempted, involving not merely the few hundred thousand acres of an American alkali desert, but an entire planet.—THE WINDSOR MAGAZINE.

Hot Weather Health Hints.

Don't hurry; don't worry.
Dress lightly and loosely.
Do not over-eat.
Eat what your appetite calls for in the way of good vegetables.
Exert yourself as little as possible.
Avoid violent exercises in the sun, such as bicycling or tennis.
Do not drink iced water.
Do not stand or walk in the sunlight bareheaded if you can avoid it.
Above all, beware of alcholic beverages, such as beer, whiskey, ale or brandy.

Every season of the year has its special risks in the matter of health. Hot weather is quite as dangerous in its way as cold. To avoid overheating, a regular course of rules should be followed as far as possible.

We live in a rushing, hurrying age, everybody is on the fly, as it were. We are in a constant stew and bustle. We rush home for our meals, and hurry them through as fast as possible. In short, we live at a pace one-third or one-half faster than we should.

Therefore, the first hot-weather rule that we should follow is:—Don't hurry. Live as slowly and as calmly as you can.

Drink plenty of pure cool water, to make up for the loss occasioned by excessive perspiration. The evaporation of this perspiration tends to keep you cool, so do not quarrel with it.

It goes without saying that you should drink nothing containing alcohol. Such drinks cause engorgement of the heart. It works faster under the pressure of alcohol and raises the temperature to an uncomfortable degree.

Dress suitably to the day. Wear loose, thin clothes adapted for comfort, and avoid tight bands or collars about the throat, so that the blood may circulate freely.

Eat no food that has been exposed to the dust, and do not eat in excess of any kind of food.

Over-exertion, both physical and mental, is another fault to be avoided. It stops the natural secretions of the stomach and causes other functional troubles.

The drinking of iced water should be avoided. It drives the blood from the stomach. When the stomach recovers from the shock the blood rushes back, causing congestion.

To live regularly is another essential hot-weather rule. Eat regularly and sleep regularly, so that your strength may be maintained.

A Rubenstein Story.

An amusing story is told with reference to the great Rubenstein. Once he visited Marienbad, and, being asked to give a concert for the benefit of a hospital, he requested that a pianoforte should be brought to his room, at the hotel, in order to practise upon it. This he did at once, and so annoyed a certain countess whose apartments were exactly over his, that she wrote a peremptory note, remarking that if he would persist in practising, at least he might not play so many wrong notes. Rubenstein sent a courteous reply, and signed his name. The lady's consternation at learning the identity of the musician can be better understood than expressed.

The Sampler.

'Twas "Hannah Smith's—her sampler,"
She worked it long ago,
When bloomed the damask roses
Or fell the winter snow,
The alphabet in colours
Of faded red and blue,
Above a row of numbers
Now dim and dingy, too.

Within a cluttered window
Where antiques court the eye
It lies to wait the pleasure
Of any who will buy;
A chapter from the volume
Of long forgotten years,
It tells a simple story
Too short for sin or tears.

A patient little maiden
With hair of flaxen gold,
She stitched the tedious letters
In quiet days of old.
No doubt she pricked her fingers
And often wished to play
When birds and bees and blossoms
All beckoned her away.

The date is in the corner,
'Twas 1646;
Still in the final figure
A rusty needle sticks.
It points to vanished kingdoms,
Wrecked towers and ruined fanes,
While still the shabby sampler
Of Hannah Smith remains.

ROUND-ABOUT NOTES.

The Roumanian Department of Education is extending its field of warfare against the corset. Some time ago, it was decreed that none might attend the public schools who wore corsets. As might have been expected, there were loud protests, but the Minister of Education stood firm, and with the State to indorse his action he carried his point. Education is compulsory, and since none might attend the public schools who wore corsets, it resulted in the practical abandonment of this article of dress among the girls. Careful watch was kept upon the young women, and as the result of a table of statistics recently submitted, it has been declared that the standard of health among the school girls has been very materially improved. Now it has been ordered that all directors of private educational establishments must see to it that their pupils also eschew the corset, and a fresh discussion has been started, since the new decision sharply affects the children of the wealthy, who regard the corset as being essential to the production of a proper figure. The Minister of Education has announced his intention of seeing that his decree is rigidly enforced, and his inspectors are cautioned to pay particular attention to this decree.

* * *

The Japanese as a race are fearless. This is evidenced by the hazardous occupation of the little brown men who earn a living far from the rocky coast lines of the islands. One of the chief articles of diet in Japan is fish. To secure it for the market the Japanese go many miles from land in their tiny craft, which to those who do not understand their strength and buoyancy look as though any ordinary wave would capsize them. These Japanese go two and three hundred miles at sea to catch fish. Each year the shores of the islands are strewn with wreckage from the boats, while the sea gives up the bodies of the brave men who were caught in the fearful typhoons which sweep around this corner of the earth. Then, again, the ocean liners take the lives of many of these doughty Japanese. There is never a diminution in the numbers of the fleet.

* * *

In the Transvaal may now be seen many beggars who disdain to walk, and travel over the country on excellent bicycles. A Belgian writing from the Transvaal to a friend in Brussels, says:—"A certain proof that we are civilised here is the fact that our beggars ride on bicycles. I often see them alight from their wheels, which are of a high grade, and ask persons for alms in the coolest possible manner. The other day, a strong, healthy, good looking young woman about 20 years of age got off her bicycle as I was passing by and asked me for some money, telling me that her parents were very poor, and had 14 children, whom they found it very difficult to support."

* * *

Apropos of the heat wave, Death Valley in southern California is usually referred to as the hottest spot on earth, but it isn't quite that. This rather unpleasant distinction belongs to a portion of the shore of the Persian Gulf, at, and in the vicinity of Bahrin. Statistics prove that the mean annual temperature of the Persian Gulf furnace is 11 degrees higher than that of Death Valley, and the aridness of both places is about on a par. Yet, while Death Valley is inhabited by practically none, and permanent life there is deemed wellnigh impossible, Bahrin has a population of several thousand people, and has had an existence as a village for many centuries. Of course, the people are stunted mentally, and to a slightly less extent physically, a fact, due to the fearful conditions under which they live; but they do live there, and are probably the nearest approach to salamanders in the human family.

"PEPITA."

School for Aeronauts.

Arrangements have just been completed to establish at Chemnitz a training school for aeronauts and constructors of airships. A similar school has been in operation in Paris for a year past. The Chemnitz institution will be the second enterprise in the new pedagogical field. A one year's course is contemplated for the present, the school to be opened this month. This course, at the outset, is limited to the construction and use of balloons. It will be enlarged so as to include aeroplanes as soon as practical working types have been developed.

THE NEWEST FASHIONS.

The three-quarter half-fitting lace coat is an intensely becoming style to a tall, slender woman, and at the same time the lines can be satisfactorily adapted to a larger size; only care must be taken to have sufficient width at the sides. The modern corset, of course, aims and generally succeeds in banishing the exaggerated hip, but there can be no absolute doing away with all avoirdupois by the aid of mere corsets, and the hip measure of many a woman who is apparently rather slender is rather surprising. Consequently, there must be sufficient width in any semi-fitting coat to prevent the too clear defining of the hips. Most of the coat backs are curved in at the waist line, or perhaps it would be more strictly correct to say that many are so fashioned, for there is still a strong prejudice in favour of the charmingly becoming style that hangs loose from the shoulders, yet indicates a waist line by the imperceptible curve in at the sides. A coat of this order, but long enough to reach almost to the hem of the skirt, can be made of white or black lace or net or of embroidery, or, although this is not by any means so new, of pleated chiffon.

* * *

A thin lining of chiffon, mousseline de soie, or China silk is considered the correct lining for these coats, and there is really quite a little warmth in them, so that the protection they afford is by no means imaginary. One of the smartest, and incidentally the most costly, of these coats is made of the finest cut jet beads sewn into a network of black. A deep border of yellow lace appliqué finishes the coat around the hem, and the wide flowing sleeves and collarless neck are outlined with the same lace. This is a most fascinating and becoming garment, with the utmost simplicity of line that seems but to accentuate the beauty of the materials and the artistic draping.

* * *

Lace and braid are often combined as trimming on silk, linen or cloth, and this is shown to perfection in the coats. It would seem as though women might be satisfied with lace itself, beautiful in texture or design, but, on the contrary, it is considered most desirable to improve (?) upon the lace, to embroider it with silk work, and to outline it with braid in narrow lines beside the edge of the lace where it is sewn on to the material. Jetted, embroidered, and spangled laces seem really better suited to evening gowns than to any sort of wrap, and yet it must be confessed that as a trimming, provided too much of it is not used, bits of this trimming are remarkably effective, but, then, the workmanship must be of the best.

* * *

Irish lace coats with embroidered batiste medallions are not so new as the heavy embroidered linens and open-work embroidery combined with some one of the Cluny or heavy fancy laces that are to be had now in so many different patterns. The work on these coats, whether they be made short or long, is of the finest, and they certainly are a delightful possession for anyone.

* * *

The embroidered linens finished with just the edge of Irish lace are rather severe, but extremely smart, and the severe lines are quite done away with by the full jabot of lace and lawn that is still fashionable, while the transparent lace stock collar, worn with the lingerie blouse under the embroidered coat, also helps to make the wearer look well.

* * *

A fashion of long ago that is occasionally seen, put forward tentatively perhaps, is the three-quarter length fitted lace or embroidered coat with the half-fitting fronts. The lace is of the heavier quality, softened by lighter lace ruffles at the wrists and in the inevitable lace tie or jabot. These coats are certainly extremely smart, but require to be worn by a slender figure to have the desired lines, so that the fashion is not destined to become too popular, like the pony and box coats, which have been such a godsend to the world of women at large.

* * *

A most charming gown of white serge has an absolutely plain skirt, but so perfectly is it cut and does it hang that it challenges attention and admiration at a glance. The jacket has a loose back—indeed, is loose fitting back and front—and yet it is shaped to indicate the lines of the figure, and is in the sack coat order. Quite short, it yet hides the waist line, and is slashed at the side seams. It is trimmed elaborately with braid of the same colour, unless a dark colour like a dark blue be chosen for the gown, in which case the braiding can be in black. This model, however, looks best made up in white or some light or bright shade. The new reds are attractive, but the grays and different tones of white are the most fashionable of all. This model was originally made up in cloth, but has been copied both in silk and linen, and has been immensely successful in both. It is capital in linen, for so much braiding and lace insertion can be employed to make it more effective.

* * *

The illustration in this issue shows a chic gown in chiffon taffeta silk of golden brown, trimmed with appliqué lace. The hat is of brown crinoline, with cream ostrich feathers shading to golden brown.

A CHIFFON TAFFETA GOWN.

Moths.

Some Methods of Destroying Them

Name of dread to every housewife! Who does not recollect some choice treasured article, which had been put away for a time, that on being brought to the light and unfolded was found to have been eaten and spoiled by these infamous insects? The moth is a cowardly creature, as all of his work is done in the dark, and the first intimation one has of his presence comes from the discovery of his depredations.

It is a little difficult to say where the life of a moth begins or ends, or rather to get a starting point from which to give his history. He is hatched, generally speaking, about the first of June, and immediately begins to eat and make free with the choicest fabrics, woollen cloths and furs being his favourite articles of diet. If not discovered and punished for his habits (and he is so small as to be very hard to detect), he continues to eat his way through the summer and autumn, till cold weather comes on.

He then becomes torpid and harmless till spring, when he changes with the coming of warm weather into a chrysalis, and in about three weeks emerges with a pair of wings suited to the size of his reconstructed diminutive body. He—that is, she—flies about evenings, keeping out of sight during the day, till May or June, in various dark and obscure places, lays quantities of eggs, so small that they can only be discovered by the use of a microscope or the exercise of very sharp eyesight, then dies, having done quite enough mischief for one semi-visible pest.

There is no certain way of preventing the ravages of moths, or rather their entrance to a house, since they can so easily intrude themselves, and are so hard to detect. It should be remembered that they work only in darkness, and that where a flood of light can be admitted during the day they are not likely to appear. It is to the obscure nooks, therefore, that attention is to be directed—to the edges and corners of carpets, the contents of drawers, chests, and presses, the woollen felting of office desks, and the like.

All woollen goods which are in danger of being infested should be brushed and beaten, hung in the sun and air if practicable, then be carefully wrapped in thick, unbroken paper before being laid away. The moth miller cannot get inside the paper to lay her eggs, and the young moths cannot penetrate it after they are hatched.

The fumes of camphor, as is pretty generally known, are fatal to moths, and in putting away winter clothes and furs, wrapping with them, or placing in the enclosure, a small quantity of camphor gum, is a pretty certain preventive of moth ravages. Tar is also repugnant to them, but for manifest reasons it cannot be very extensively used. Tar paper for lining uses may sometimes be advantageously employed. Turpentine, insect powder, and finely-ground pepper are also fatal to the little pests, if they can be brought together.

One method of treating carpets, desk upholsteries and the like, which cannot be readily reached in any other way, may properly be called the steam bath. The process consists of wetting the goods supposed to be infected, then laying over them two or three thicknesses of cloth thoroughly wet, and going over the whole with a very hot flat-iron. As soon as the iron changes temperature sufficiently to render its work uncertain, another should be substituted. If this plan is thoroughly carried out, the destruction of both moths and eggs is certain.

———o———

Trout Fishing for Women.

The accomplished feminine follower of Izaak Walton is rarely found. Women do not generally fancy fishing. Why, it is difficult to state; perhaps it's the worms, or perhaps it's the death throes of the fish themselves. These reasons come to my mind because trout fishing among women has more followers than any other kind of angling, and as flies are substitutes for wriggling worms and the struggles of the trout are hidden in a covered basket, I draw my conclusions.

But of late fishing has found more feminine followers, and this summer it has become a sort of cult to go into the country and pursue the gamey trout in his favourite brooks and streams, and a more delightful, exciting, health-giving sport cannot be imagined. The sunny spring skies call sweetly, the little breezes allure, and the bursting freshness of all Nature sets one in an ecstasy of delight. The gurgling brooks, the song of birds, the perfume of tender wild flowers, the lights and shadows, all bring a peace and rest to the busy mind that is marvellously refreshing, and moreover trout fishing is the one form of sport that need not entail over fatigue. The fisherwoman can fish when she likes, have lunch when she likes, rest when she likes, and go home when she likes. The whole day and its doings are as much under her control as a day and its doings can be. And fancy the pride and delight of sending to one's friend a hamper of speckled beauties caught on one's own hook and fly! And, after all, fishing is so simple a matter, and the only grace needed is patience, for without that one may never hope to be an accomplished fisherwoman.

When one sets out for a well-stocked trout stream, let her carry the right things, so that her trip may prove as fruitful as possible. The rod should be a ten-foot greenheart rod, with not too much weight at the top. Do not permit the sporting goods man to inveigle you into buying a cane rod with bright nickel joints; that is the kind they invariably try to induce women to buy, for, although they look very smart and fetching, they make the fishes laugh, for those nickel joints cast betraying reflections in the water, and trout are very wise creatures, as the amateur fisher soon learns, and everything fanciful and decorative should be avoided.

The tapered trout line should be twenty-five or thirty yards long, and the tapered end must be wound last on the reel. A generous number of trout casts must be carried by beginners, and a lot of flies, and an experienced fisherman should give one instructions as to just how to tie them on, and be sure to soak the catgut in water before tying. It is well

TROUT FISHING FOR WOMEN.

to practice casting on the lawn without a hook before going a-fishing, as the inexperienced is apt to hook all parts of her own anatomy, to say nothing of the trees and shrubs, and anything else that may be near.

(To be continued.)

Flowers for the Garden.

The Syringa.

In some private grounds in which I was walking recently, I came across a very beautiful specimen of the syringa tree The bloom was snow-white, and in abundance on every branch. The delicate fragrance of the plant was accentuated by the clearness of the air and a soft southern breeze from the sea and mountains of the locality. There are a great many varieties of this plant. The best known are P. Coronarius, P. Grandiflorus, P. Hirsutus, P. Lemonini, and P. Gordonianus. The finest is P. Grandiflorus, having pure white flowers resembling orange or bride's blossom. It is a native of the Southern States of America. The small branches or twigs of the syringa were at one time used for pipe stems. The pith or heart is easily removed, and it is from this that the name was derived. There are a great number of various flowering plants in this family. There seems to be no dividing line between the syringa and virburnum, although the habits of these two varieties differ considerably. The common species, Syringa Vulgaris, are vigorous, graceful shrubs, with large violet or lilac-coloured flowers. It is universal in gardens, and is well known by sight throughout the United Kingdom, but it is too powerfully odorous for many persons. It flowers from April to June, according to locality. It makes an excellent game cover, and is easily propagated from layers or cuttings. It is a native of Southern Europe, but is to be found flourishing in exposed gardens in the Northern Highlands of Scotland. In some parts of Scotland it is called the May Oak, because it flowers during that month.

The Syringa Alba Grandifloria is a splendid variety, with its pure white large trusses. It is not quite so hardy as the common sorts, although it is to be met with in nearly all ornamental grounds where it is not exposed.

White lilac (Syringa Alba), and other varieties too numerous to mention, are propagated by means of grafting on young stocks of lilac raised from seed, as they are less likely to send up suckers. Mode of grafting:—Shield budding with a dormant bud in July, and a pushing bud in April, ordinary relaying or cleft grafting in March, and with herbacious branches in June, close to the ground, or as a standard. When grafted on the ash or privet it does not live long. Every measure should be taken to prevent the growth of suckers by destroying the latent buds on the roots before planting. Should any spring up afterwards, clear away the soil around the root, and cut off at the base. The varieties with slender wood, such as S. Varin, S. Sanget, S. Persica, and Linenas Carnea, should be crown grafted on tall standards of common lilac or some vigorous kind by the intermediate process, while strong wooded kinds, such as S. de Trianon, Charles Glorie de Manlius, Carnea, Duplex, Ville de Troyes, Pilemon, these and many others may be grafted close to the ground. They soon shoot up and form a stem. The Philadelphus, or mock orange, is one of the finest garden and woodland flowering shrubs we have got in this country. Its cultivation is fairly general all over the British Isles, in parks and in private large gardens, but we seldom see it in small areas, although the flower is so sweet and useful for cutting. When laying out even small gardens of an acre in extent, there is ample room for this shrub.

Java's Bounteous Rice Table.

In Java, as in most really warm countries, it is customary to rise early and to take a cup of tea or coffee, together with a biscuit and some fruit, immediately on leaving one's bed. This is followed by a more substantial breakfast; but the first really serious meal is served at half-past twelve o'clock, and is the equivalent of the French "dejeûner à la fourchette," or the Anglo-Indian tiffin. This meal is called rice table—"rystafel"—from the principal dish, a very elaborate curry, in the preparation of which the Malay cooks are especially skilful.

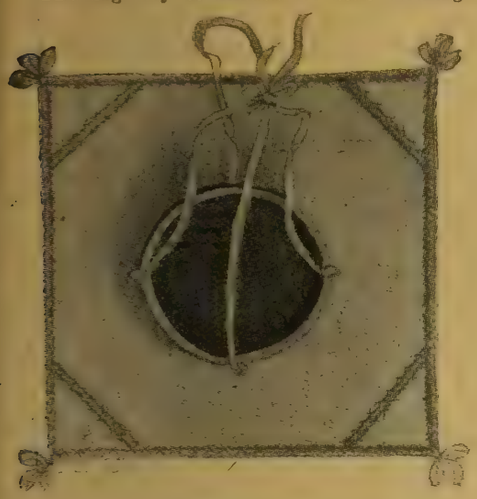
The peculiarity of the rice table consists in the number and variety of dishes presented. From these dishes the guest has to select the materials which, together with the rice upon the soup plate before him, are to constitute his curry. It is also as well to know beforehand that one is not required to lunch solely on curry, but that the rice table is succeeded by courses of ordinary luncheon dishes. It is a case therefore of "embarras de richesses."

There are two dangers to be avoided. In the first place, it is quite possible, in spite of the number of the dishes presented singly, to say nothing of an octagonal tray containing a separate chutney in each of its nine compartments, to get no lunch at all. For nothing is easier than, after saying 'nein" to a succession of frivolous compounds, to dismiss the one solid and palatable dish capable of sustaining an Englishman until dinner time.

The second danger is that of making up one's curry "not wisely, but too well," and leaving neither appetite nor capacity for the beefsteak or for any of the other solid dishes which subsequently appear, and which under these circumstances only produce a feeling of mingled horror and consternation. It is then that one suddenly realises that the rice table is merely a sort of tremendous "hors d'œuvre."

Needlework.

A Collapsable Bag.



This bag is made of ticking, bound and trimmed with fancy tape and feather-stitching.

Cut two pieces of ticking twelve inches square, bind the four sides together with fancy tape, and put on with feather-stitching.

In the centre of one of the pieces cut an opening about five inches in diameter. Bind with tape and run in a whalebone. Fasten at four equal distances around the opening a piece of tape twelve or fifteen inches in length, and tie in a bow knot at the top.

Across each corner featherstitch tape, the same as around the sides. Decorate each corner with a knot of tape, also in the centre of back piece.

This bag may be utilised for dolls' clothing

A COLLAPSABLE BAG.—TOP WHEN FOLDED.

(or for any other purpose), and is most convenient in a nursery or sewing-room. It can be folded neatly in a square, and when opened out always looks fresh.

On leaving for the country on a summer holiday, the children can always be sure of a nice, convenient place to hold all their dolls' clothing when away, and not have it, as is so often the case, lying around the room. The ticking in this particular bag has been in use for over fifty years, a good bit of German ticking. A family brought it to this country on leaving Germany, and now good pieces of it are still left, and doing duty in ornamental as well as useful articles, such as this collapsable bag.

Ladies' Knitted Bed-shoes.

When finished they look like straight pieces up and down, but when pulled over the foot they look very nice.

One skein of white three-fold Saxony, 1 skein pink or blue three-fold Saxony, 1 pair of steel needles No. 13, 1 pair of steel needles No. 17, 1 fine bone crochet hook No. 1.

With colour cast 60 stitches on No. 13 steel needles, purl 1 row, knit 1 row, purl 1 row, knit 1 row. With white knit 1 row, purl 1 row.

Repeat from first to sixth row until there are 32 coloured ribs of purling and 32 white ribs of knitting.

For the toe:—With colour, 1 plain row, 1 purl row, 1 plain row, 1 purl row. Next row, narrow every fourth stitch, then knit 1 row, purl 1 row, knit 1 row. Next row, narrow every third stitch.

Knit 1 row, purl 1 row, next row narrow every second stitch. Purl 1 row.

Next row narrow every stitch and bind off. Then with white and No. 17 steel needles pick up 108 stitches along the side, picking up 2 stitches in coloured ribs and 1 in white ribs, knitting them as they are picked up narrowing in every other row at the toe to shape the toe, purl 1 row, knit plain 1 row.

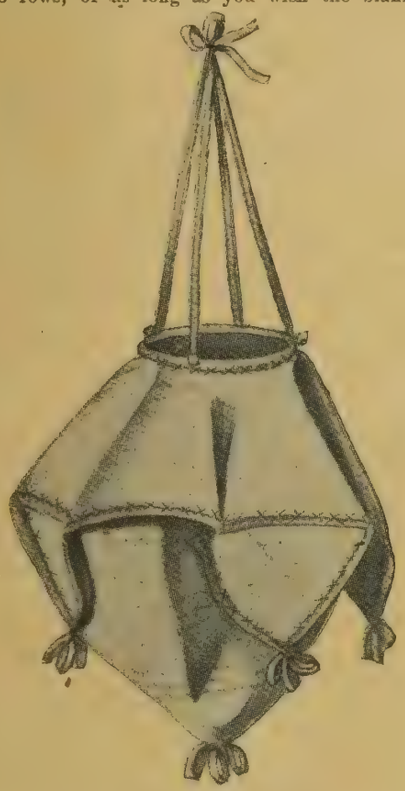
With colour purl 1 row, knit plain 1 row.

With white purl 1 row, knit plain 1 row.

With colour purl 1 row, knit plain 1 row.

Leaving the stitches on the needle, pick up the same number of stitches on the other side, and knit in the same way. With colour bind off the stitches, taking 1 stitch off each needle; draw the wool through the stitches at the toe, draw together, break off wool and fasten on wrong side.

Around top of sock with colour make a row of double in every third stitch, with 1 chain between. Crochet a row of shells with white.



3rd. Row.—With colour 1 single in space between the double of shell; (*) chain 3, 1 single in next space, and repeat from (*) around top. Run in ribbon to tie top, and put on a bow at toe.

Knitted Blanket for Baby.

Instead of binding, knit a hem. Use Germantown wool for a bath blanket or Spanish yarn for a crib.

If Spanish yarn is used, one and a-half skeins of white and one of pink will be required. With the pink, knit 150 stitches on to medium-sized rubber needles. Knit and purl alternate rows for 9 rows.

10th Row.—Over, purl 2 together, repeat to end of row. Then knit and purl alternate rows for 9 rows. Hold the work through the open line so that the smooth side of the work will be the right side, and with each stitch on the needle, knit a stitch of the first row, thus forming a hem. Break off and put in white. Work next row by throwing yarn over needle and purling 2 together. Knit 27 rows of plain knitting, using the white yarn. Then put in the pink and in the next row throw yarn over and purl 2 together all across. Knit and purl across alternate rows for 9 rows, working so that the smooth side will be the right side. Break off the pink, and with white make a row of open work as before; then knit back and forth in plain knitting for 90 rows, or as long as you wish the blanket

A COLLAPSABLE BAG.

to be between the end borders. Knit a pink band with open work each side like the first end, then 27 rows of white, then another pink open work row, then 9 rows alternately knitted and purled, so that the smooth side is on the right side. Then another row of open work and 9 more rows alternately knitted and purled. With the last row knit 1 stitch for the first row of pink with each stitch on the needle, thus forming a hem; then bind off loosely.

Careers for Girls.

Government Inspectors and Health Visitors.

By Josephine Bullen.

One of the careers opened to women within the last 20 or 30 years is that of inspecting factories, workships, etc., under the Government or the Local Government Board; and closely connected with it is another to which the name of Health Visiting has been given.

The work of both appeals to women especially, for while one has to do with the care of those often powerless to aid themselves, the other aims at helping handicapped mothers to make their homes healthier and to bring up their children as well as possible under their difficult circumstances.

Women inspectors hold office under the Home Office, the Education Office, and the Local Government Board. At present there are about nine women amongst the 153 factory inspectors appointed by the Home Office, but there is little doubt that their numbers will increase in the future, for their work is acknowledged to be a great improvement in the administration of factory laws. Girls often will not complain to a man inspector of some inconvenience which is detrimental to their health; whilst a woman, with perhaps also quicker perception, will soon find out from them if anything is wrong.

The woman factory inspectors appointed by the Secretary of State for the Home Department are subject to a probation of two years. They are obliged to retire on reaching the age of 65, and, except under special circumstances, at marriage, and are entitled to pensions on Civil Service conditions.

The salaries paid them are higher than those in most other careers open to women. Beginning at £200 a year, for junior inspectors, they rise, by annual increments of £10, to £300, and senior inspectors begin at £300 and rise to £400; whilst the chief lady inspector earns from £400 to £500 per annum.

They are called upon to travel a good deal, but their travelling expenses are paid; they must live, too, in any part of the United Kingdom most convenient for their work.

The examination for a Government Inspectorship consists of English composition, arithmetic, sanitary science as it applies to factories and workshops, and the Factory Acts. In addition, one of the three following subjects must be taken, viz.:—

Elementary Physics and Mechanics; History of Industrial and Social Legislation in the United Kingdom; Chemistry, chiefly inorganic.

The work of a factory inspector is trying, and the incessant travelling necessary increases its hardships. No one lacking good health and physical strength should attempt it. But it is full of interest and variety, for all kinds of industries—from a fish-curing factory to a West End milliner's—come into its scope.

It should be remembered, however, that the qualities most needed for this post are those least capable of being acquired. Tact, sympathy, firmness, discretion; the completest grasp of factory legislation or sanitary science will not make up for an absence of these. The girl thinking of taking up this work should make sure that she is gifted in some measure at least with these important qualities.

Under the Education Office "a few" women are appointed as inspectors of schools. There is no definite regulations as to their appointment or qualifications, but a good degree is an essential. They have the same regulations for leave, sick leave, and pension as other higher division members of the Civil Service,

A COLLAPSABLE BAG. BOTTOM WHEN FOLDED.

and their salary begins at £200 and rises by £15 yearly to £400. They may be called upon to inspect elementary, secondary, or technical schools, or training colleges. Probably also here, in the future, an increasing number of women will find an opening.

By far the largest number of women inspectors hold office under the various local government boards or local authorities. They are usually termed sanitary inspectors, and their principal duties are the inspecting of factories and workshops, tenement houses, the houses of "home-workers," and hotels and restaurant kitchens and the investigation of infant deaths and cases of infectious disease.

Beyond reporting suspected defects in drainage to the medical officer of health, the woman inspector has nothing to do with the disagreeable part of sanitary work. Her duties lie in the direction of the cleanliness and ventilation of the places she has to inspect, and the provision made for the health of the women employed in them

She must, of course, know thoroughly all the requirements of the factory laws, and see that they are properly carried out; that each worker has her 250 cubic feet of air, that the rooms are cleaned at certain times, that there is proper sanitary accommodation for the women employed, etc. She must also keep a regulating eye on the dustbin and the drinking-water supply, and, in laundries, note whether the floors are adequately drained, and how the irons are heated.

She has a right of entry under the Public Healths Acts to the factories and houses she visits, and has the power to serve notice for abatement of any nuisance she finds in her visits. Should this notice be neglected and legal proceedings become necessary, she represents in the law courts the authority under which she holds office, and, as she often has to be her own counsel, clearness, decision, and firmness are qualities she should cultivate.

In visiting tenement houses the sanitary inspector has a very large scope for useful work. Not only has she to report upon the condition of the house and its degree of cleanliness, but she has also to investigate into cases of infant mortality. Hers is the responsibility, in cases of infectious disease, of seeing that, if notifiable, due notice of it is given to the authorities, and, if non-notifiable, that adequate measures are taken to prevent it spreading. Sometimes such diseases as phthisis, though not infectious, have to be visited by her, and the condition of the patient's surroundings advised on and reported.

A very large proportion of workers do their work in their own houses instead of at a factory, and there is urgent need of supervision of the conditions under which it is done. These "home-workers," as they are called, are therefore visited and reported upon by the sanitary inspector.

It is easy to see that such house-to-house visiting as the above duties entail calls for certain qualities in the inspector. She may quite unintentionally give offence, and create an antagonism that will make her task very difficult if she does not go about it in the right way. Therefore, tact and geniality are indispensable to her. Plenty of common-sense and observation, added to patience and cheerfulness and backed by real kindly interest, will help her not only to get through her work pleasantly, but to be of practical use to those she visits.

The necessary training for the career of sanitary inspector is neither expensive nor long. There is a preliminary examination held by the Sanitary Inspectors' Examination Board in English (writing, spelling, composition, and dictation), and arithmetic, including fractions, proportion, weights and measures, the metric system, and the mensuration of rectangles, etc. Candidates are exempted from this who have passed the Oxford or Cambridge Junior Local, the Third Class College of Preceptors, the Junior Certificate of the Central Welsh Board, the Local Examination of the National Union of Teachers, and other equivalent or higher examinations. This passed, the candidate must face the Technical Examination, which demands a certificate of instruction showing that she has attended at least 32 systematic lectures and demonstrations given by either the Royal Sanitary Institute, the National Health Society, Bedford College, or King's College.

The courses given are in the following subjects:—Building construction, municipal hygiene and duties of sanitary inspectors, elementary physics and chemistry, and are supplemented by interesting visits to water works, laundries, hospitals, factories, etc. In addition, the National Health Society gives courses of lectures on elementary anatomy and physiology, first aid nursing, and elocution, for which a diploma can be obtained; the latter is valuable to those candidates applying for lectureships under the County Council.

The salary of women sanitary inspectors under local boards starts at £80, and rises to £150—in some cases to £160 or £180.

The training mentioned above lasts, as a rule, three months, and costs twelve guineas. For the diploma three months longer, and three guineas extra are required. Books, etc., would be an additional outlay. At King's College and the Royal Sanitary Institute the cost of training would be less than the sum just quoted.

Health visitors, although working on much the same lines as sanitary inspectors with regard to house-to-house visiting, are on a different footing. They hold office only from a local authority, have no right of entry, and must only report nuisances to the sanitary inspector instead of themselves serving the notice for abatement.

Their salary also is lower, varying from £50 to £160 on the average, although in some towns they are paid £180 per annum.

ROUND-ABOUT NOTES.

There is a large profit coming into the Ceylon government from pearl fishing. As nearly every one knows, the gems that are gathered from the waters around this island are of great beauty and value, and pearl fishing has become an important industry there. It costs the government a little less than £15,000 for the lease and all expenditures incurred by the fishery last year, while the profits netted more than four times that amount.

* * *

What is believed to be the toughest wood in the world has been found recently in South-Western Australia. Until these late tests were made the yate tree was considered of no great value, but since it has been discovered that the wood is about as strong as cast-iron, some of it even equalling wrought iron in strength, the price promises to soar.

* * *

If report is true there are vast sums of money to be made in the cultivation of flowers in the Riviera. In one season alone £200,000 worth were shipped away to foreign countries, and, oddly enough, the majority were sent to England. It is a long journey for delicate blooms to make, but they are so perfectly packed and kept *en route* that they reach their destination in excellent condition to gladden the hearts of and adorn England's fairest women.

* * *

In Italy to grow straw employed in making hats the wheat is sown as thickly as possible, in order that the growth of the plant may be impoverished, as well as to produce a thin stalk having toward the end from the last knot the lightest and longest straw. The wheat blooms at the beginning of June, and is pulled up by the roots by hand when the grain is half developed. If allowed to remain in the ground a longer time the straw would become brittle. About five dozen uprooted branches, the size of the compass of two hands, are firmly tied together into little sheaves, and stowed away in barns. Then the straw is again spread out to catch the heavy summer dews and to bleach in the sun. After additional bleaching the straw is put into small bundles and classified. Finally, it is cut close above the first joint from the top, and again tied up in small bundles containing about sixty stalks each, and delivered to women in almost every private dwelling of the lower classes, whose chief livelihood is straw plaiting.

* * *

Since more boys than girls are born in the countries of Europe, the proportion being 1,040 to 1,060 boys to every 1,000 girls, how can we account for the fact that there are more women than men in these countries? To this question M. de Varigny, a French scientist, replies at length in a leading Paris paper. "Since there are more women, although more men are born," he says, "we must conclude that more men die than women because they are not as healthy. There is no other solution, and, moreover, all the obtainable facts point in the same direction. More boys are born than girls, yet there are almost always more girls alive than boys. Many persons think that the principal reason why more men die than women is because they lead intemperate lives, but, though there may be some truth in this, it cannot be the sole solution of the problem, as the mortality among males is greater during their early years, before they know what intemperance means."

* * *

For fourteen years women in France have been working to get married women the control of their earnings. A Bill to grant them this right has reached the second reading, and it is believed that success is in sight. As things are now, if a married woman earns a shilling in washing or five hundred pounds by writing a successful novel, every cent of it belongs to her husband. If she secures the money and puts it in the bank she cannot draw it out without an order from him, but he can draw it and spend it as he pleases. It is not very many years ago since a similar law was in force in England. The Married Women's Property Act of 1882, however, gave married women a legal right to their own money.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by "PEPITA"

THE NEWEST FASHIONS.

For the cool days, of which we have had so many this summer, it is advisable to have in the outfit a medium weight gown of silk and crêpe de Chine, messaline or foulard which will look fresh and attractive, and while possessing some degree of warmth will still be appropriate to the time of the year. This is quite distinct from the costume intended for tennis matches that call forth so much interested enthusiasm at this season, and should be well classed among the house gowns for afternoon wear. White linen and muslin dresses are now so generally worn in the country from early spring until late autumn that it is a real relief to change to a light silk dress when one intends to spend the rest of the day at home, and, then, too, the evenings are cold enough to make a silk gown feel decidedly pleasant.

* * *

Foulard silk is an excellent weight texture for summer, and this season it is being made use of in all styles of costumes for morning and afternoon, from the simplest walking dress to a decidedly elaborate gown suitable for whatever afternoon entertainments there may be at this time of year. For a rather severe gown for home wear foulard is especially good, as it will stand any amount of wear, and while the dark shades seem to soil less readily than any other known silk, the light colours can be cleaned time after time, without becoming shabby and rubbed.

* * *

Just at this season it is possible to buy most attractive silks for remarkably low prices, and there is a great variety of both colours and qualities from which to select. A soft messaline is now one of the favourite silks both for trimming and for entire costumes. A plain colour always requires more trimming and elaboration than a striped or figured material, but this year there is very little trimming on the skirts, while the bodices are frequently formed entirely of lace, with just some bands of medallions of the silk to bring out the colour. Instead of all lace a figured, striped, or plain net or marquisette may be used, and this, finished with bands of the silk and relieved by a large lace jabot and lace ruchings in the sleeves, makes an exceedingly pretty bodice for a plain silk skirt.

* * *

Embroidered voiles and chiffons are much in vogue for a rather elaborate style of afternoon dress, and at present, embroidery is used so much on every kind and condition of dress that it is not considered inappropriate even for a shirt blouse dress which is fashioned with the sole end of simplicity. For a house gown, therefore, that may be fashioned in any way that most pleases the wearer, any amount of embroidery may be used, provided the dress does not turn out to be unsuitably handsome. The fine grades of voile and true nun's veiling are excellent for house gowns for this season of the year.

* * *

Figured, striped, check, and plain voiles are all used, the fancy surface being more in demand than the plain. A deep yellow voile, the bodice made with a little vest and jabot of lace, and a round collar of silk, with bands of the same colour as taffeta, forming revers and cuffs for the sleeves, and three bias strips of the silk laid about the skirt, which was otherwise full, but quite plain, made an attractive dress for informal wear. The dark voiles made up over white and the light shades laid on a silk of their own colour are all fashionable. If the dress is required to be really useful, then a dark green or a Japanese or navy blue made up over white is, of course, more serviceable than the light shades, which, however, are excellent if the trousseau can be fairly large. The striped voiles are exceedingly pretty, and a fine line of black and white made up on a while silk foundation is most attractive. A piping of pale blue on the bodice will make this last more youthful if that is desired, but black and white are no longer considered inappropriate, even for quite young girls.

* * *

Chiffon and all the gauze materials are even more in vogue than usual this season. Striped gauze in two tones of the one colour made up over silk, preferably of the lighter shade, is always attractive. Many of the very transparent materials have a satin or satin-finished foundation, and if it is desired to make either of the colours more prominent satin will show up much better than any dull silk.

* * *

One of the most popular of the transparent textures is crystalline, and this is seen in all shades from white to the deepest tones of pink, blue, and mauve. An exquisite crystalline gown was of deep watermelon pink, the bodice handsomely embroidered in different tones of pink, while the sleeves and tiny Dutch yoke were of white lace embroidered in gold. The skirt had wide bands of gold and pink embroidery running down each seam to within a few inches of the hem. There was a fitted girdle, with long sash ends finished off with sewing silk tassels for the dress, and this belt was of dull Japanese blue, a favourite combination this year, and one which if carried in just the right shade of the pink and blue is most artistic as well as being delightfully unusual. The exaggeratedly high, stiff collars which have lately been decreed have done much to bring back the collarless Dutch yokes, for where a high collar must be worn with every style of outdoor dress a comfortable collar or a collarless bodice is more than ever welcome in the house gown.

* * *

Not so very different in effect from the painted and printed chiffons are the figured mousseline, and for summer nothing can be prettier than a white French mousseline with a large rose pattern in deep pink, with just a little green in the leaves and stems. A white material is always best, made up over white, unless there is any rare embroidery that will show to better advantage over a colour. It has always been thought that pale shades require the added colour of a slip the exact shade of the material, but lately, there has been a number of chiffons, voiles, crystallines and mousselines in the pale, delicate shades that have a white silk lining and are most attractive, apparently, in consequence of this very thing.

* * *

A smart visiting gown is shown in the sketch on this page. It is made in Wedgewood blue-faced cloth with Kimona sleeves, and the bodice is hand-embroidered with blue silk and bullion gold cord. The hat is of cream straw trimmed with blue chiffon, and white and blue ostrich plumes.

A SMART VISITING GOWN.

The Growth of Corsets.

Corsets are not an invention of modern days, as many people fancy, but were adopted by the ancient Greeks and Romans, if in a slightly different style from those of the present period.

We hear of Mark Antony wearing a corsage to repress his tendency to stoutness, for in those days men wore them as well as women. The name "corsetus" began to be used about the time of the Renaissance, and Catherine de Medici is accredited with the first introduction of whalebone. From that period until the French Revolution the stiffest corsets were worn, but under the Empire a change was effected, and waists began to assume more natural proportions. As in all other customs, their use became abused for a while, until the novelty wore off, and the happy medium was reached, which fortunately prevails at the present moment.

Trout Fishing for Women.

(Concluded.)

As for the fishing basket, one may suit one's self, for there is a vast variety to choose from. But one generally makes a big catch when one has a small basket; this is Fate's idea of a joke—one of the few that are really amusing. Have a fly-book and a pair of small scissors, also a small tin to hold the casts, and a landing net, and the outfit is complete, although one may not be a "complete angler."

For the matter of dress, you must be very sensible indeed, and wear plain, sturdy clothes. To be sure, it is a great temptation to go fishing by the brooksides in a fetching hat with bows and flowers and a jaunty shirt blouse, but it is not practical, for such a garb scares the fish, and the feminine disciple of Walton soon learns that a garb of neutral tints is the thing for fishing. A woollen shirt blouse and a comfortable jacket or sweater should accompany the short wool skirt; top off with a dull-coloured cap and rubber or boiled-oil leather boots to the knees, for one has sometimes to wade, and besides in the spring the waysides and brook edges are damp and mucky.

And now for the real angling.

Of course, one must know that there really are trout in the stream, for all brooks are not trout brooks. Now stand a few feet from the edge of the stream (to stand too near may entail a fall and an ignominious rescue), take the rod in your right hand, and be careful that the line is free and not clasped too tightly to the rod. Cast with a short line at first, letting it out a little longer every time, until it is a suitable length. Never try too long a line, or you will get hopelessly muddled, the flies will catch round rod or line, and the terrible tangle created in a second will often take you half an hour of patient toil to undo.

You should remember that when casting, the first thing that should alight on the water is the fly, and not portions of the line, which in all probability will be the case at first, and the fly must alight in the same delicate way that a real fly would do—no splashing, no carelessness of any sort; and do not stand too near the edge. It is no use approaching the fish in an open, free and easy, hail-fellow-well-met fashion. Hide behind a friendly bush—stalk them, as it were; drop your fly gently, gently draw it through the water, and do not let it drift aimlessly, and do not swish it along. Perhaps you may rise a fish without being able to strike it; try another cast or two over the same spot, and, if you fail then, go on fishing higher up. Later on return to the same spot and you may be successful. Trout, especially the bigger ones, will stay in one spot for a very long time. You can see the same trout, or apparently the same trout, in the same place for days. If you succeed in landing him, the next day you will probably see another there. A big trout allows no interlopers, looks upon a certain spot of the river as his own, and very often stays there for a considerable period, unless he is ousted by a bigger one.

Do not over-fish any one particular spot, work slowly up stream if the wind is not too strong against you to make that impossible. With practice you will soon be able to see if you rise a fish, and you must strike quickly, but not so vigorously that you tear the hook out, nor so feebly that the fish gets off with a little wriggle. When first winding the line on the reel care should be taken that it is wound on in the way you would naturally turn the reel when winding in, and also be careful, when fixing the reel to the rod, that it is placed so that you can wind in with the hand most natural for you to use. Some people when they strike a fish change the rod to the left hand, and play and land their fish with the right. You will have found out by practising on the lawn which hand comes easiest for you to use.

Suppose now we imagine one has with luck or skill hooked a fish; it will probably be with luck at first, as with this meagre advice one's preliminary efforts will probably not be productive of much skill. As soon as one has struck a fish, it will most likely want to go straight up stream; let it go, do not hold on to the line and shout as a youthful beginner usually does. After the first mad rush, the fish will probably call a halt, when you can wind him in, as you must never allow any slack line, but let the line run out again as soon as he makes another determined dash for liberty—always keep the point of the rod well up, and do not be too hard on your fish, but tire him out, and finally draw him gently toward you, slip the landing net under him, and the fish is yours. Sometimes he is not yours, he gets off at the last second; but an occasion of this sort is far too serious to be spoken about lightly, better not mention it at all. In this often sad and gloomy world why dwell on the tragedies that can befall a sportswoman.

Of all sport, fishing is the one in which luck plays the smallest part; it is principally skill. That accounts for the agony of mind when a fish gets away, and, oh! the flatness of life when the line suddenly slackens and you wind in—nothing; the thrill of joy when you behold the gasping, shiny victim of your skill lying safely at your feet!

Nothing will make one a good fisherwoman unless one has the instinct that goes to the making of such. Experience, observation, and intuition will teach you the likeliest spot to get a rise. Do not be disheartened if the fish will not rise at first; they may not care for the flies. Change them, but give each change a fair chance. Sometimes fish will only feed during an hour or two in the day, but the sport afforded during this hour will make up for the "weary whipping of the water" that may have preceded or followed it. Take note of the predominating colour of the land through which the river runs, and use a fly of as much the same tone and colour as possible, that being what the fish are used to, and it is well to imitate nature as closely as possible. When you first go out you will probably hook a few trees, or an inquisitive cow or two. These little contretemps generally happen to beginners when fish are rising well, which induces a state of excitement bordering on insanity.

All this is meant only for beginners, for nowadays so little is written for them, and every one is supposed to know the rudiments of all sports. And there are so many women to whom a little trout-fishing would be beneficial. To take country walks in the pursuit of health accompanied by the thoughts and worries that have caused temporary ill-health and brain fatigue is a process not always calculated to restore nervous energy. With rod in hand, wandering by the side of a river, even though the result of a day's fishing be not evidenced by a basket of trout, the mind will be so occupied that all sorts of worry will be in abeyance, and, apart from sport, there is, by a river, so much to charm and hold the fancy, that the thoughts that fill the mind will be only the refreshing ones.

A GOOD CAST.

How to Mount Seaweeds.

People visiting the seaside invariably pass by the tangled bunches of seaweed that lie upon the sand. Surely there is no beauty in them as they lie there. Huddled together, twisted and torn, they present anything but a pleasing appearance. But take one of the bunches and place it in a basin of water; let it remain over night; and what a transformation in the morning! Each delicate frond is swaying gracefully in the water. A series of pleasing colours greet the eye. The hidden beauty reveals itself in all its glory.

Now procure some drawing paper, disentangle a piece of the weed, and place the paper under it in the water. Float the weed around in the water until each tiny branch is free, and carefully lifting the paper over the edge of the basin, you have it transferred to the paper in all its graceful outlines. By means of a needle the weed may be so picked apart as to resemble a piece of the finest lace. On some varieties the use of the needle may be prolonged indefinitely.

After having arranged the specimen, place face downward upon blotting-paper. When quite dry put between pieces of blotting-paper, and subject to pressure. An old book is good for this purpose. Put the specimen between the pages, and place a heavy weight upon the book. Some varieties will be thoroughly dried in a day; others will require more time.

To remove the seaweeds from the paper, a needle is used. Some dexterity must be exercised in doing this. Insert the needle under the main branch and carefully work out to the ends of the fronds. In some of the coarser varieties no needle is required. They may be easily removed with the fingers.

Sometimes the same paper upon which they are pressed is bound into a portfolio. But the paper usually is warped and discoloured from the water, and the specimens have a rather flat appearance. A more satisfactory way is to remove them from the paper to which they were transferred, and mount them upon other. In this way they may be gracefully grouped, the arrangement being entirely to suit the individual. A variety of pages is pleasing. Upon some put specimens of a feathery nature, upon others, coarser varieties, and upon others, combine the two. Very often a single piece will be found large enough to fill a page. If possible, beneath each specimen write the botanical name, place where found, and date.

There are several ways of attaching seaweeds to the pages of a portfolio. They may be sewn, pasted, or made to adhere by means of very narrow strips of gumpaper. The first process is not to be commended, because the reverse sides of the pages do not present a neat appearance. The second process is not entirely satisfactory, as the specimens cannot be removed in case the pages become discoloured with age, or an accident of some kind befalls the book. The third process is really the most satisfactory. If the strips are cut very narrow, they barely show. When it is desired to remove the seaweeds, all that is necessary to do is to cut the strips.

After having been pressed, one need not be so careful in handling seaweeds, as they are then quite tough. Of course, in the very fine varieties, handling is apt to break off the ends of the fronds, and they are robbed of much of their beauty.

A King Nine Times.

The most betitled monarch in the world is Emperor Francis Joseph of Austria. Without his imperial crown, which is the identical tiara of Charlemagne, he is nine times a king, twice a grand duke, once a grand prince, twice a prince, four times a margrave, and the multitude of his title as count and so forth is past enumeration.

The total of his titles of sovereignty and nobility exceeds a hundred. In addition, as King of Hungary, he bears the title of "Most Apostolic," which is one of the four honours bestowed by the Pope. Were the sovereigns of Europe to meet in a council, there is no doubt that the premier place would be conceded to Emperor Francis—alike by reason of his hereditary prestige and of his representation of the ancient Holy Roman Empire.

Cookery.

Some Fish Recipes.

Fish may be boiled (or steamed, which is superior to boiling), baked, broiled, fried, and stewed. The small fish termed pan fish are usually fried.

FRIED FISH.—Clean well, removing the head, and, if quite large, the backbone also. Slice the body crosswise in five or six pieces, season with salt and pepper. Dredge with flour, brush each piece with beaten egg, roll in breadcrumbs, and fry in hot lard or dripping. Be sure to have the fat hot, as it will not be absorbed so quickly. When the fish is browned, turn carefully, to avoid breaking, and brown the other side. Garnish with slices of lemon.

BROILED SALMON.—Cut slices 1 in. thick, dry them in cloth, season with salt and pepper, dredge with flour, and broil on a gridiron rubbed with suet. Serve with anchovy sauce, adding a few chopped herbs if desired.

BROILED HALIBUT.—Slice the fish, salt and pepper, and lay in melted butter one ½ hour, allowing 1 tablespoonful of the butter to 1 lb. of fish. Then roll in flour and broil for 20 minutes. Serve hot.

BAKED FISH.—A fish weighing 4 or 5 lbs. is a good size to bake, and should not be cut more than is necessary to clean nicely. Make a dressing of breadcrumbs, butter, salt, and a little salt pork, with chopped parsley and onions if desired. Mix the dressing with 1 beaten egg. Fill the body, sew it up, and place in a dripper, with some strips of salt pork for flavouring. Put one cup of water in the pan. Bake 1½ hours, basting frequently. Take up the fish and thicken the gravy remaining in the pan to pour over it. Serve hot.

STEAMED HALIBUT.—Take a 3-lb. piece of white halibut, cover it with a cloth, and place in a steamer. Set the steamer on a dish of fast-boiling water, steam for 2 hours, remove to a hot dish, garnish with parsley, and serve with egg sauce.

STEWED CODFISH.—Take a thick piece of the salt fish; lay it in cold water for a few minutes. Shred it in very small bits, put over the fire in a stewpan, with cold water, let it come to a boil, turn off the water and add 1 pint of rich milk to the fish. Place again over the fire and boil slowly for 5 minutes, add a piece of butter, a little pepper, and a thickening of flour in a little cold milk. Stew a little longer and stir in a well-beaten egg. Nice for breakfast.

SPICED MACKEREL.—Take one half-dozen small mackerel, nicely cleaned. Mix together 1 teaspoonful each of cinnamon, allspice, and cloves. Open the fish and sprinkle in the mixture, then sprinkle with salt and close tightly, place in an earthenware dish, cover with vinegar and bake 1 hour in a moderate oven.

BAKED SMELTS.—Wash thoroughly, dry in a cloth, arrange in a flat baking-dish, after buttering both fish and dish. Season with salt and pepper, and cover with breadcrumbs. Place a piece of butter on each side, and bake 20 minutes. Garnish with parsley and lemon.

Method of Making Beef Tea.

Beef-tea is one of the most important in the list of invalid dishes. It is used to stimulate and nourish when the system has need of quick recuperation. The first of the methods here given makes surely a genuine extract of beef, containing all the strengthening properties and the full nourishment of the meat. If the stomach of the invalid is quite weak this extract is not given in its full strength, but it is diluted with hot water until it is of the strength desired by the physician. In making this tea or extract, always select the juiciest part of the beef quite without regard to its tenderness. Indeed, the tenderer the meat is the less juicy it will be found. The lower part of the round is usually found to be the best for beef-tea. It must be absolutely free from fat, only the lean meat being available. Cut the beef into quarter-inch dice-shaped pieces, and put them into a wide-mouthed bottle, and set on a stand of some kind in a kettle of cold water. This is to raise the jar and let the water under it, so that the glass will not be on the hot bottom of the kettle, as it would almost to a certainty break unless it was thus protected. Set the kettle over the fire and heat it gradually. When it comes to a boil keep it gently simmering for several hours, until the meat is perfectly white, looking like pieces of india-rubber, all the juice being extracted. Then strain out the juice, press it all out from the pieces of meat, and season to the taste with salt. In making the tea this way, you see that you will get the actual juice of the beef and nothing else; every particle is extracted, so that the nourishing properties are all obtained.

But this is a slow way if you want the tea in a hurry, and there is a quicker way in which you may prepare it to use while the extract is in preparation. To make the tea more quickly, cut one ½ lb. of the juicy round freed from all fat into small pieces, season with a saltspoonful of salt press it with a wooden potato-masher, and let it stand in a covered bowl for ½ hour. Pour off the juice, and heat, but do not boil it. Serve it immediately without straining. The salt will draw out only a portion of the juice from the meat, so a beef-tea may be made from the meat after the juice has been poured off the first time by adding 1 cupful of cold water to it and letting it stand for 2 hours; then strain off the water, pressing the meat to get out all the juice; heat it, and you will have a very palatable cup of tea a little less strong than the first, but good notwithstanding.

Practical Recipes.

CINNAMON CAKE.

Cream, ½ cup butter, and 1½ cups sugar, then add 1 egg and beat until creamy; now add 1 teaspoonful cinnamon, ¼ teaspoonful each of cloves, allspice, and mace, 1 cupful stoned raisins, floured, 1 cupful sour milk, 2 cupfuls whole wheat flour, and ½ cup white pastry flour, into which sift ½ teaspoonful baking soda; beat thoroughly, and bake in a loaf about ½ hour. Decorate with iced almonds.

CINNAMON CAKE.

LAMB CUTLETS A LA FRANCAISE.

Trim the cutlets neatly, beat up an egg, mix some ham and parsley with breadcrumbs, and fry the cutlets after dipping them in the mixture. Put a tiny frill on each, arrange round a dish with sauté potatoes, piled up in centre.

SAUTE POTATOES.

Cut the potatoes like sippets of an orange, put them into cold water, bring to the boil, and drain. Fry a golden brown, sprinkle with parsley, a little pepper and salt.

MAYONNAISE SCALLOPS.

Cut meat into small dice. Boil an egg hard, then make a mayonnaise sauce. Fill in the shells of the egg with the mixture, decorate each with the yolk and white of egg, parsley, and a few capers.

CUCUMBER IN MILK.

This combination appears novel, after being accustomed to seeing cucumbers used only as a salad. It is, however, an appreciated dish by those who have given it a trial. Pare the cucumbers, cut them in small squares, and place in a saucepan over a slow fire. Add a little salt and water, and cook until tender, using only just enough water to keep the cucumbers from burning. Put a pint of milk on the fire, and when it boils add 2 tablespoonfuls of flour, which had been made into a smooth paste with some of the milk. When it has the consistency of cream, add the cucumbers, drained from their cooking. Sweeten slightly, and serve.

Bird and Flower Study.

This is just the season of the year when birds are at their best. Has any girl ever tried to study them and see how very interesting they are? I don't mean by that to sit down for two or three hours a day and learn about them, but at odd times when in the garden reading, or sewing, to make a point of noticing them.

A good plan is to get a good bird book and keep it in some handy place, so that if any birds catch your fancy you can look them up, and find out all about them. Their colour, when they migrate, the call in anger or pleasure and their little domestic traits, besides so many more things that it would be impossible to think of them all.

Another plan, to make them very tame, and also to be able to see them better, is to have a shallow dish of water at one end of the porch, and every morning dust some crumbs around for them to eat and you will see how they will come to this place, in spite of people sitting around and talking. In this way you can watch them close by. Two girls I know combined so many interesting things this way last summer. They started out to learn something about birds and soon got ten other girls interested in their scheme, which was to meet once a week for about an hour at different girl's homes and each girl had to tell some interesting thing she had learned about birds in the last week while the others did some sewing. You have no idea how entertaining it was, and how much they learned, besides accomplishing a great deal in the way of sewing, as most of the girls took this time in which to do their week's mending, and I can assure you their mothers quite approved of the plan.

At the end of the summer these girls were quite familiar with the different kinds of birds, and they could easily distinguish them by their song. Each girl that cared to, gave a shilling, and with the money they had little bird houses put up for the birds during the winter.

Another very nice thing for a girl is to have a flower garden. No matter how small a place you have, you can always have flowers, even if they are only in a wooden box, and they will always repay you in their beauty and fragrance for the trouble which you take with them.

Let the girl who has not much to do start out with the idea that the flowers around her cottage, or in her flower boxes, will be prettier than anyone else's. Flowers really need very little care; good earth, and water once a day is practically all. Flowers should never be watered while the sun is on them, as it shrivels them up. Sweet peas are always pretty and grow well; if they are planted now they will be in bloom about August, if not before. They are particularly good for window boxes, as they grow up to quite a good height, and if you put sticks for them to climb on, in about three weeks they will make a very pretty screen. Pansies also grow well, and transplant very easily; in fact, it is almost better to buy plants than seeds. Although seeds are very good, the beauty of pansies and sweet peas is that the more of them you pick, the more they grow. Nasturtiums are always effective, and need no care at all, as they are very hardy and grow in any place. If you happen to have an ugly rock or stone in your garden which you could not remove, plant some nasturtiums around it, and in less than no time you will never know there is a rock there, as they hide it so completely.

Lavender Sheafs.

A correspondent writes on the subject of pretty uses to which lavender may be put. She says:—"When I was a young girl I used to make wheatsheafs in lavender, in the following manner:—Take about nine pieces with good heads, each about 8 or 9 in. long; tie them with green cotton round the stalks, just under the flowers, and about 2 in. from the bottom; then tie a narrow sarsanet ribbon round, to hide the cotton. Three of these bundles make a wheatsheaf, and a pleasing variety is afforded by tying each little bunch with a different coloured ribbon, that will harmonise. Then tie the three bundles together in the centre, and pull them into the form of a wheatsheaf, the lower parts of the stems standing outwards. These sheafs make a pretty addition to a table, one placed at each corner, and are certainly a pleasing novelty."

Dainty Perfumes.

Sweet Scents.

It is pleasant to have all the accessories of the toilet daintily scented, and although very strong scents are not considered to be in good taste, it is perfectly permissible to have one's gowns, veils, gloves, etc., delicately perfumed. Peau d'Espagne is a lasting perfume, and may be obtained either in the form of the skin or leather for inserting in the linings of dresses, or in sachet-powder or essence.

How to Make Peau d'Espagne.

The peau d'Espagne is very expensive to buy, and only a very small piece can be obtained for five shillings, so that no doubt my readers will appreciate a very valuable recipe which has been in my possession many years, and which I am going to present to my friends. Take of oil of rose, oil of neroli, and oil of santal each half an ounce; oil of lavender, oil of verbena, and oil of bergamot each a quarter of an ounce; oil of cloves and oil of cinnamon, each two drachms; in this dissolve two ounces of gum benzoin. Now steep in this some good pieces of chamois leather for a day or two, and dry it over a line. Prepare a paste by rubbing in a mortar one drachm of civet musk with one drachm of grain musk, and enough gum tragacanth mucilage to give a proper consistence. The leather is cut into pieces about four inches square; two of these are pasted together with the above paste, placed between two pieces of paper, and weighted or pressed until dry. It gives off its odour for years.

The Montpelier Scented Cloth.

Another valuable recipe for scented cloth (which answers the same purpose as peau d'Espagne) has, I believe, never before found its way into print. You must take a good-sized piece of light woven linen cloth; wash the cloth in several waters, then spread it out to dry, and afterwards steep it for twenty-four hours in sweet-scented water—half angelica and half rose-water. On removing the cloth from the water, gently squeeze it, and hang it up to dry in the open air. Then prepare the following composition:—Orange-flowers, dried, ¼ lb.; roots of elecampane, ¼ lb.; florentine orris, ¼ lb.; yellow sanders, 2 oz.; residuum of angelica-water, 1 oz.; rose-wood and sweet flag, each ½ oz.; gum laudanum, ¼ oz.; cloves, ¼ oz.; cinnamon, 1 drachm. Grind all these ingredients into a powder, and make them into a paste with mucilage of gum tragacanth dissolved in angelica-water. With this paste rub your cloth hard on both sides, leaving on it the little bits that may adhere, because they render the surface more smooth. Afterwards hang up the cloth, and when half dry again rub with a sponge wetted with angelica-water, to render the cloth still more smooth; afterwards dry it thoroughly and fold it up. It should be enclosed in a covering of silk. It answers splendidly for lining veil, handkerchief, or glove sachets, or for lining the collars, yokes, and cuffs of dresses.

Scenting Gloves.

Would you like to know how to impart a lasting scent to your gloves? Then take ambergris, 1 drachm; civet, 1 drachm; orange-flower-water, ½ oz. Mix these, and rub well into the inside of the gloves with fine cotton wool, pressing the perfume into them. Another way is to take essence of roses, ½ oz.; oil of cloves, 1 drachm; oil of mace, 1 drachm; frankincense, ¼ oz. Mix them, and lay them in papers between your gloves. Being hard pressed, the gloves will take the scent in forty-eight hours, and retain it until they are worn out.

Scented Bags for the Pocket.

Half-a-dozen little scented bags for carrying in the pocket would make a charming present for your special friend. Of course, the bags should be made very nicely of good silk or satin, and the monogram should be artistically worked on them in coloured silks. When the bags are ready, prepare the composition for scenting them as follows:—Florentine orris, ½ lb.; rose wood, 3 oz.; calamus aromaticus, ½ lb.; yellow sanders, ¼ lb.; gum Benjamin, 1½ oz.; cloves, ¼ oz.; cinnamon, ½ oz. Grind all to a fine powder, mix thoroughly, fill the bags, and sew them up.

Persian Leather Scented Bags.

Persian leather scented bags, to be used for the same purpose as the silk ones, should be made of about four inches wide. Rub the insides slightly with a little civet, then fill them with coarse powder à la Maréchale, or any other odoriferous powder, to which may be added a few cloves, with a little yellow sander beaten small.

ROUND-ABOUT NOTES.

The preparations for London's great Costume Exhibition next year are well forward. All the leading London and Continental houses will be represented at the Dress Exhibition, which is to bring together the most dazzling display of millinery creations that has ever been grouped under one roof. The classic modistes of Paris and Vienna will vie with the smartest London and New York firms in moulding the season's fashions, and £100,000 will barely cover the cost of the trappings of this Temple of Femininity. The exhibition buildings at Earl's Court will in all probability be the venue of the international Dress Market. The exhibition will be open for a fortnight, and it is to be held in February next. If it is realises the exceptations of its promoters, it is to become an annual event.

* * *

A Woman's Mining and Stock Exchange was opened last month in Los Angeles, California, with twenty-eight members. The president, Mrs. Clara Shortridge Foltz, believes that in a city where so many women have made fortunes in business an organisation of those interested in mining will be of benefit. Mrs. Foltz, has been practising law in Los Angeles since she left San Francisco immediately after the earthquake. This new venture will not in any way interfere with her professional activities. She had the honour of being the first woman admitted to the bar on the Pacific coast, and was the first woman to serve as trustee of the State Normal School of California.

* * *

Two working men were discussing serious subjects. Quoth the younger, "I say, Bill, what are these 'ere joint-stock companies?"—"Well, I'll explain it to yer. You and Jim, and 'arf a dozen more of our mates, puts up a penny each and buys two ounces of 'bacca and a clay. Then I calls myself the managing director, and I sits down and smokes that pipe and that 'bacca. D'ye see?" "Yes, but where do we come in?" "Oh! you're the shareholders. You get the ash."

* * *

Among the varied uses of peat that for the production of gas is perhaps the least known. It has been used for this purpose, however, for the last thirty years in the steel works of Notala, in Sweden. From 13,000 to 16,000 cubic yards of peat are thus used yearly. It costs rather more than coal gas, but has the advantage of containing scarcely any sulphur or phosphorus. In several places in Europe, peat gas is used for heating and in glass melting furnaces.

* * *

The aigrette so often seen in a lady's hat is the crowning beauty of an egret mother. The collector seizes the bird while she is on her nest, with the young just hatched, and tears off her plumes and wings, leaving her to die beside her little ones, who, deprived of her fostering care, also die, victims to woman's vanity.

* * *

There is probably no other race in the world so enthusiastic over religion and who enter so heartily into its forms and ceremonies as the negroes. They seem to lose all thought of their surroundings and throw themselves body and soul into their own peculiar forms of worship. They are not content with modified observances, but must, in some countries, do things after their own fashion.

* * *

In Jamaica there is a very large religious sect called, after their leader, Benardites. Four times a year the followers of Bernard are baptized in the waters of the River Mona. Hundreds of these religious enthusiasts meet on the banks of the river before daybreak, and as many as 600 have been "dipped" in a single morning. The price of a dipping is 1s., so that the income to the leader and his church is a tidy little sum. After the baptism the freshly-cleansed and purified of sin form a line, and with gold embroidered banners and silken streamers waving above the long line of men and women, they march, singing, to the church, which is situated a short distance back from the river. Hundreds of these negroes make up the long swaying and winding procession, which sings as it moves and eventually enters the church doors or distributes itself outside near windows and doors.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by "PEPITA"

THE NEWEST FASHIONS.

In frocks for young girls this season there are a great many attractive materials to choose from among the thin fabrics, and chiffon net, gauze, marquisette, and all the novelties of the season furnish almost an unlimited choice, without mentioning the fascinating washing materials that are so extremely dainty. Crêpe de chine is also allowed for some frocks, and is without question a most valuable and economical investment, for it wears so well, but it is not for the moment so smart as something more perishable. The chiffon, plain, in all light shades, and also in white, is quite as much in demand in young girls' frocks as for older women's, and is trimmed and made up in very much the same styles. The most elaborate models have some embroidery on the material itself, but this is apt to make the frocks look rather old, and the tucked and pleated skirts with full soft bodices without any trimming excepting the lace guimpe and sleeves or a lace-edged fichu are far more youthful.

* * *

Accordion pleated skirts are so invariably becoming to young girls that it is not remarkable the style continues popular year after year. Bands of embroidery or lace entre-deux can break the monotony if so desired, but the pale colours in the pleats have so much that is attractive in effect that the extra trimming is by no means essential. The skirts this season are all full, and measure much more around the hem than last year, but the fulness is arranged rather differently, and the modern skirt is not so easy to accomplish as might be supposed, for it must look full and at the same time not have any unnecessary fulness over the hips, which result can only be obtained by a most careful fitting of the skirt. The embroidered robes present a snare to the unwary. Fortunately, there are few patterns that are simple enough for the young girl. These robes must be most carefully draped and hung, and gathers or pleats at the sides will be required to give the fashionable swing to the skirt. As a rule, the skirts of the pattern robes are so long that they can be lifted up, and this will give the right fulness.

* * *

Fichu effects are becoming to young girls, for the folds can be arranged to give either a wide or slender effect, and the breadth of shoulder makes the waist seem smaller. Too small a waist is not becoming, especially if it is attained by tight lacing, but with breadth across the shoulders and the belt a sash carefully fitted and the lines of it well arranged, the waist line will look one or two inches smaller than it is in reality. The baby bodice, as it has been known from time immemorial—the full bodice gathered around the shoulders and drawn in at the waist—still exists in the popular fashions of the day, is in fact one of the integral parts thereof. It can be made over a fitted or toned lining; it can be unlined if the wearer is slender, and it affords a basis for all sorts of trimming; the bertha or the fichu finishes it equally well; the square cut with bands over the shoulder and the guimpe, or yoke of lace, or not—all are possible with the baby bodice.

* * *

The batiste and lawn frocks with the entre-deux trimmings of fine embroidery of lace are most becoming to young girls, and are made in all pale colours as well as white. The underslips of batiste are considered more appropriate than when made of silk, and certainly do give a little more dainty effect. White frocks are, as a rule, more costly, for they apparently require more trimming, and yet there are some most attractive models that have little or no trimming except on the bodice.

* * *

Our illustration this week shows a smart demi-saison gown in a very fine quality of blue serge. It is trimmed simply with bands of braid and fancy braid buttons.

A PRETTY DEMI-SAISON GOWN.

From Falmouth.

By Eliza Turck.

Just off the narrow, tortuous, but busy main street of this interesting old Cornish town is a quiet, retired little court, wherein stands the fine seventeenth century house from which our illustration is taken. The granite pillars shown in the photograph support two projecting gables in a style that may be seen elsewhere in the delectable duchy, and also in Brittany. There is a notable example at Mousehole, near Penzance, dating from 1595, the pillars square and massive, the walls of the house of immense thickness, characteristic of the age in which it was built.

Although Bell's Court, the subject of our photograph (which, by the way, is unique, none other of this particular view being in existence), is unable to boast of such remote

BELL'S COURT.

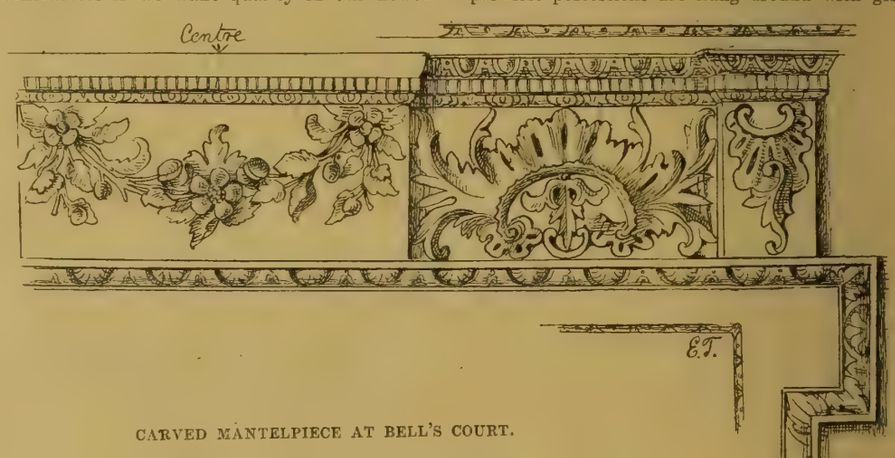
antiquity, it possesses interests and attractions of its own, in a good staircase with well carved newels, a panelled room, two really fine mantelpieces, and a remarkably quaint and uncommon range. Fig. 2 represents one of these carved mantelpieces, and, it is hoped, should prove of use to amateurs of wood-carving as a suggestion of most effective treatment for a fireplace. Curiously enough, very little can be gleaned of the history of the house, neither the exact year when it was built nor the name of its founder are known; some brick chimneys on adjacent roofs, and evidently of the same period, bear the date 1679, and thus give the clue to its age. In 1747 George Bell inhabited the dwelling, and the whole Court has kept his name ever since. Those were the palmy days of the foreign packet service from Falmouth. Bell was the agent till 1775, and a personage of no small importance in the town. But the introduction of steamships caused the decline of Falmouth's prosperity, the old sailing packets were gradually discontinued, and by 1850 the mail service was entirely transferred to Liverpool and Southampton.

Bell's Court by degrees also descended from its high estate as the domicile of one of the most distinguished of the town's inhabitants. It is now the headquarters of the Working Men's Club, and modestly withdrawn from the stir and bustle of the one long street of this delightful watering-place, with its magnificent harbour, filled with yachts and craft of all sorts and conditions, and its three charming sea beaches. Falmouth may have lost much of its former prosperity as a port, but its attractions for visitors remain as fresh and bright as ever, and increase from year to year.

Space precludes more illustrations being included in this number of the supplement, but at some future time the second chimney-piece panel and the antique range shall be given.

———o———

A Remedy for Cuts.—If you cut your finger badly and cannot stop the bleeding, try tying round it a piece of soft rag soaked in turpentine. This will at once stop the bleeding, and make a cut heal very quickly.



Gardening in September.

Early Chrysanthemums.

For whatever purpose chrysanthemums may be cultivated, they need our attention in the early part of September more than at any time. They should be removed to the greenhouse—the sooner the better if we wish to succeed with our plants, obtain early blooms, and make room for later varieties in November.

It is essential, too, that the sod be thoroughly ripened if good and perfect robust flowers are to embellish our houses when other plants are scarce. Be quite sure that the plants are not conveyed to the greenhouse when the leaves are wet, and also determine that no aphis or green fly invades the place where your plants are to complete their growth and display the blooms. Fumigate the structure thoroughly. You may fail to discern the fly with the naked eye, but the little demons are sure to be in hiding, and if they once creep into the opening bloom you will have endless trouble and vexation. Discontent will be stamped on your brow when you should be all smiles at the excellence of the plants you have watched and guarded so zealously all through the summer months in the open. You must pay strict attention to your hobby, and be careful not to overfeed, but to nurse them intelligently and build them up with just sufficient stimulants, moderately applied, so as to make your plants of solid stuff. No stimulants should be given till the buds have formed, but plants which are well rooted may be fed, and soot water used now and again, as this acts quickly on the foliage.

Remove surplus side shoots as soon as they appear. You must not allow them to make a fair growth and then vigorously attack them when they have starved your main leaders. This is like putting the bit into the colt's mouth when it has acquired the bad habits you wished to guard against. It is astounding how quickly plants run wild if they are neglected for even a day or two. It is to be hoped that the main stems have been carefully tied to stakes during the cold and wet weather in the open, as it has been against ripening wood. Sun and air are two benefactors if we want quality in our flowers and wish to show up well in October when chrysanthemums are needed for festivals.

CARVED MANTELPIECE AT BELL'S COURT.

Examine pots, and see that they do not get dry. Use your knuckles and tap the pots at the side, but do not water so freely as to cause the soil to get into a sodden state. But, of course, this will depend upon the manner and method you have adopted to allow a free drainage when potting for the last time.

G. W. Thomson Price.

———o———

Automobile Funerals.

Among so much that is becoming automobile, the funeral motorcar was bound to reach us sooner or later, and it was only fitting that an innovation so logical should come from Germany, where it is not the custom to do things by halves. The novelty is an automotive, which was recently submitted to the police perfecture of Berlin for approval. It is one of the approved lugubrious type, differing only from the ordinary funeral vehicle in not being horse drawn.

Hurry v. Longevity.

Not long ago, while travelling, I chanced to stop at a village on the River Rhine, where I found an astonishing number of old people. There were a dozen over one hundred years of age, and many from eighty years old up to the century mark, yet straight and vigorous. One woman nearly a hundred years old was earning her living by picking hops; her grandchildren were middle-aged.

It was quite wonderful. But there was no mystery about it; it was merely the effect of a simple life spent largely in the fields, with plain diet, consisting largely of a few vegetables and fruits, little meat, and native beer and wine for beverages.

Nothing can be more obvious than that the very complexity of our modern civilisation is shortening our lives. But of all the evils that afflict us the worse and most destructive are hurry and worry. Hurry drives the body machine beyond its capacity, while worry racks it inwardly. Of the two, worry is probably the worse.

This might, indeed, be called the age of worry. Because of the intense nervous strain to which we are subjected, we do vastly more worrying than did our forebears. The average man of to-day is continuously surrounded and pursued with phantom troubles, which, though few of them ever materialise into realities, haunt him continually, ruining his peace of mind and injuring his health.—Dr. J. V. Shoemaker, in "The Reader."

———o———

The World Growing Better.

Sometimes, when we pick up the daily paper and read of crimes and exposures, we feel that the world's anchor is dragging, and we wonder if it will soon be pounding hopelessly upon the rocks. We forget the antidote. We have no means of judging the future except by the past. Take, for instance, England in Goldsmith's time, the eighteenth century. In Forster's Life of Goldsmith, written in the middle of the last century, he discusses the Vicar of Wakefield and Doctor Primrose's adventures in prison.

"This prison," argues Doctor Primrose, "makes men guilty where it does not find them so; it encloses wretches for the commission of one crime, and returns them, if returned alive, fitted for the perpetration of thousands. With what consequence? New vices call for fresh restraints; penal laws, which are in the hands of the rich, are laid upon the poor; and all our paltriest possessions are hung around with gibbets." It scares men now to be told of what no men then heeded. Deliberate and foul murders were committed by the State. It was but four years after this that the government which had reduced a young wife to beggary by pressing her husband to sea, sentenced her to death for entering a draper's shop on Ludgate Hill taking some coarse linen off the counter, and laying it down again as the shopman gazed at her; listened unmoved to a defence which might have penetrated a stone, that inasmuch, since her husband was stolen from her, she had no bed to lie upon, nothing to clothe her two baby children with, nothing to give them to eat, "perhaps she might have done something wrong, for she hardly knew what she did;" and finally sent her to Tyburn, with her infant sucking at her breast, to be hanged.

The principal functions of government in those days seem to have been to collect money for the Court to spend riotously, to build navies and maintain armies, and to administer "justice" with an iron-gloved hand.

There are evils to-day but we must not forget the past, and the good that has developed year by year.

Bead Work.

The use of beads and jewels has become very popular, and many clever designs and decorations can be seen now. A favourite and charming combination is of macramé twine and brilliant coloured beads, arranged so as to make short blinds and curtains. These curtains are useful screens for an open door, such as a greenhouse or French window. Landing windows also are much improved when draped and covered with these bead blinds, the entire length and width being covered, hiding, perhaps, an untidy or dilapidated outlook. The beads should be chosen to harmonise with the room generally; the macramé can be had in all possible shades and sizes. For curtains a very strong thread is required, while the short blinds can be made with a much finer one; there is not the same amount of strain on the blind.

Brilliant and transparent beads have a much prettier effect, and last quite as long. The "reed" has always played an important part in bead fringes, but now the thread is *knotted* to keep the bead in position, and the effect is decidedly lighter. When a rich and striking appearance is desired, small beads are used to keep the large rounds and other different beads

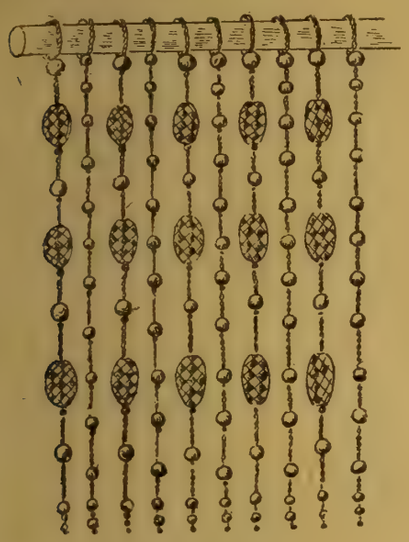


FIG. 1.—BEAD WORK.

at regular distances, the reed tends to make the effect heavy and clumsy.

A "bamboo rod" sufficiently strong to support the curtain or blind is required, and is securely fixed by means of strong hooks.

Illustration I. we have a deep fringe or blind suitable for a window or fanlight. Large loops are formed, and the strings are placed on at regular distances. Each string is separately made and finished; small knots are required to fix and keep in position the large beads; sometimes a small bead immediately beneath the large one looks well, and the knot below to keep the two in order finishes the design, then comes the short length of twine.

Alternate strings of different patterns give satisfaction, and is not so monotonous to work.

Illustration II. is somewhat similar, the heading in this case, however, differs from Illustration I. A narrow border is crocheted, and forms a band sufficiently wide to allow the beaded threads to be laced in and out. This band is securely fastened to a narrow wooden band by means of fine tin-tacks, then an extra band of wood or brass is arranged on the crochet border to hide all imperfections, etc. The fringe springs apparently from the flat rod with neatness and regularity.

Illustration III. Beads of the best quality and finest size are required for fringes of this character; here we have all the most brilliant colours imaginable with velvet pansies arranged as a border around the outer edge of the frame. From this outer edge the fine fringe is suspended; coarse silk should be used for stringing the beads, and each string is neatly sewn on a band of strong narrow or baby ribbon.

The top of the lamp screen is covered with a soft-coloured muslin or silk, and strings or ropes of beads radiate from the centre to the circumference. The top portion is arranged in like manner, and lined with a deeper tone than the lower.

Much depends upon skilful and artistic fingers in work of this description. Loud colouring with heavy drapery has a cruel effect, and never looks worth the labour bestowed.

All materials can be obtained at most art depôts, and general information as to beads and thread.

Dainty bows of ribbon should be arranged here and there they give a charming finished effect, and hide trouble, some defects, and joins.

How a Young Girl should Dress her Hair.

Neatness and youthfulness are the two points emphasised in dressing a young girl's head. After she has reached the age where the hair may properly be turned up the lines of her head are taken into account, and the hair dressed with a view to bringing out the best lines without verging on the elaborate.

* * *

No style of hair-dressing looks well or suits the young girl of to-day unless the hair itself is properly cared for. In fact, the whole charm of the youthful coiffure lies in its being well brushed and carefully tended. The maid gives it as much attention as she does the matron's head, and there is every reason to believe that when the young girl of to-day has grown into womanhood and has reached middle age she will have no need of false pieces, if false pieces are in vogue then. The daily treatment of the hair includes regular and thorough brushing. Every night and morning the hair is let down, and brushed briskly from fifty to one hundred times. This imparts to it a glossy look that no amount of beautificrs can bestow, and it gives the hair a softness and fluffiness that makes one feel well repaid for the extra time given to the hair each day. Besides the daily brushing, the hair is washed regularly and intelligently.

* * *

It is only by careful washing and thorough drying that most hair can be made attractive.

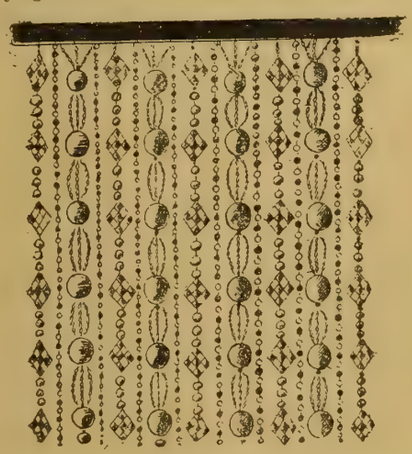

FIG. 2.—BEAD WORK.

Oil and dust will collect, especially when girls spend much of their time outdoors, and dust will spoil the lustre of hair, while oil makes it look darker and less fluffy. Particular attention is paid to the rinsing and drying of the hair, and naturally the very best soaps and tonics are used. Those who have made a study of shampooing know that the final result depends largely on the way the hair is treated after the shampoo is given, so that it is well to have the rinsing and drying done with the greatest care

* * *

Girls who have been out in society sometimes have their hair waved with the irons, but young girls never do this. The effect is too elaborate and old for one thing, and then the hot irons are apt to spoil and break the hair, and the girl who is still in her teens does not want to run the risk of injuring her hair in any way. Even though it is not waved artificially it does not fall straight around the face. On the contrary, it rolls back in soft, loose, slightly marked waves, which are, however, the result of careful training and treatment; that is, if the hair does not wave naturally.

* * *

Pompadours are not considered good style for young girls. Instead of following this fashion they bring the hair back with only a slight roll around the face, and to keep it in place and from looking too tight and severe they use side combs, which hold the hair at the sides and top and yet do not spoil the effect of the dressing. These combs are of shell to match the colour of the hair as nearly as possible, and the rims are not ornamented. The shell is simply polished, though the rims are heavy enough to give a smart finish to the coiffure. Above all things, a young girl's hair is never "roughed." The method of making it look thicker and much more abundant than it is has a decidedly bad effect on hair. "Roughing" it breaks it; it splits the ends and soon spoils a head of hair.

* * *

There are several styles of hair-dressing which are equally fashionable with smart young girls. They differ very slightly, one from another, and the general effect is the same in all. One of the favourite ways to put up the hair after a girl has been wearing it down is that of braiding it in a loose plait, starting low in the neck and then turning up the end until it comes just above the crown, where it is tucked in and fastened with shell pins. This is the highest dressing worn by girls of about sixteen, though it is really not a high coiffure at all. It is very becoming to girls of delicate features, and it emphasises that aristocratic air so widely copied by artists. Girls possessing good profiles find this way of dressing their hair admirably suited to them. A somewhat different effect with similar outlines is achieved by having the same kind of a braid begin at the top of the crown and pinning it down to the head very loosely with the end turning under low in the neck. At the sides, around the ears, the hair is allowed to wave in soft, loose and almost imperceptibly marked undulations.

* * *

Whatever the style followed in arranging the hair, the front and back are always separated, and each division is handled by itself, though when the dressing is done it looks as though the hair had been drawn together very simply either at the crown or at the neck and made into a loose plait. Thick hair is naturally much easier to work with, and it gives better results, as breadth instead of length of braid is the thing desired. It is partly on account of this much prized thickness that such excellent and assiduous care is given the hair in order to improve its condition and promote its growth.

* * *

A lower dressing and one much worn by young girls is where all the hair, after the front has been arranged in a full, soft and becoming effect, is brought in to the neck, where it is twisted into a wide and rather unusual coil, something like a figure eight laid in a horizontal position instead of in the more familiar vertical one. For a girl possessing striking and regular features this way of dressing the hair is particularly good, as it

FIG. 3.—BEAD WORK.

gives just a touch of individuality without being odd.

* * *

Girls between the ages of sixteen and eighteen are permitted to wear their hair dressed in a slightly more elaborate fashion, though it still follows the simple lines of the low coiffure already described. Instead of the wide, flat braid a series of twists or small puffs is laid across the back of the head and allowed to fill in the space at the neck. This may sound somewhat complicated for simple girlhood, but the effect is very little different from the other accepted styles.

* * *

Until a girl has budded into a débutante she does not wear ornaments in her hair. Ribbons tied in very simple bows are always good style for certain ages if they are becoming, but flowers, wreaths, and even plain shell ornaments, except combs, are reserved for her adornment after she has made her bow to society.

Practical Recipes.

STEWED MUTTON AND HARICOT BEANS.

Take 1½ lbs. of neck of mutton cut it into pieces, melt 1 oz. of dripping in a saucepan, then add to it 1 large onion sliced and the mutton. Stir it all together until slightly brown, then add ½ lb. haricot beans previously soaked in cold water for 24 hours, and a stick of celery. Add sufficient hot water to cover, and then simmer together until the meat and bones are cooked. Place the meat in the centre of the dish, and the beans round, slightly thicken the gravy, and add to it a little chopped parsley. Pour over all and serve.

SWEET ROLL.

Dry a tablespoonful of flour and mix it into the same quantity of castor sugar, add a teaspoonful of baking powder. Break 2 eggs into this and beat well together. Spread on a flat tin and bake in a quick oven for 5 to 7 minutes. Turn out on a paper, spread with lemon and curd roll. When cold cut in slices.

SAVOURY EGGS.

Mince very fine some cold meat or poultry, and add a little melted butter, chopped parsley, pepper, salt, and 2 eggs. Moisten with some stock and put into a saucepan to cook for about 8 minutes. Pile up on a dish, place sippets of toast around it, and on the top as many poached eggs as will be required for the number of persons at breakfast.

BEST WAY TO MAKE COFFEE.

Coffee should be fresh ground before each meal. It should never be allowed to boil and is best made in an earthenware jug; the proportion of 1 large teaspoonful of coffee to each person. Pour on it the boiling water, let it stand for a few minutes, then clear three times. Have the milk boiling in another saucepan. Pour the coffee into a coffee-pot made hot by standing boiling water in it for a few minutes, and send to table.

BEEF CROQUETTES.

This is a capital way of using up a joint when people are tired of cold meat. Chop the meat very fine, removing all fat, bone, and skin; add salt, pepper, a sprinkling of lemon thyme, some fine bread-crumbs, a small quantity of mashed potatoes, and 1 well-beaten egg to bind it together. Shape into oblong balls, roll in bread-crumbs, then flour, and fry in boiling lard until a pale golden colour.

PINEAPPLE PUDDING.

Butter a pudding-wish and line the bottom and sides with stale sponge cake or roll, pare and slice thin a large tinned pineapple; place in the dish first a layer of pineapple, then strew with sugar, then more pineapple until all is used. Pour over this a small teacupful of water, and cover with slices of cake or roll which have been dipped in water; cover the whole with a buttered plate, and bake slowly from 1½ to 2 hours.

GERMAN TOMATO SOUP.

Take 3 large tomatoes, 2 large French rolls, 1 onion, 3 ozs. of butter, and 1 quart of medium stock seasoned with pepper and salt. Peel and fry the onions in the butter, cut the tomatoes in 4 parts, and the roll in slices, and add with the seasoning a quart of water. Boil for 1½ hours, then strain, and add the stock boiling.

GREENGAGE JAM.

The fruit must be picked dry and sound. Divide them and remove the stones. Allow ¾ lb. of sugar to every pound of fruit, weighed before being stoned. Put the greengages into a preserving pan with water to cover the bottom; bring them to a boil, then add the sugar, and keep stirring until it is melted. Let it simmer, removing the scum as it rises. About 5 minutes before the jam is done, let it boil up rapidly. When cold, put into pots and cover with oiled papers; then plain note-paper, or tissue-paper, brushed over on both sides with the white of an egg.

CURRANT BUNS.

Mix together 1 lb. of flour and ½ teaspoonful each of tartaric acid and bicarbonate of soda; add 2 ozs. of butter, 2 ozs. of castor sugar, ½ lb. of currants or sultanas, and when well mixed make a hole in the middle and stir in ½ pint of new milk into which has been beaten 1 egg. Mix quickly, and set the dough in good-sized lumps on a baking-tin. Bake in a quick oven for about 20 minutes. When done, take out of the oven; slit them down and butter, returning to the oven for a minute to melt the butter.

ROUND-ABOUT NOTES.

Ida Lewis, better known throughout the United States as the Grace Darling of America, recently very quietly observed the fiftieth anniversary of her connection with the Lime Rock Lighthouse in Newport Harbour. Just half a century ago Miss Lewis went to the lighthouse to assist her father, who was the keeper. He became paralytic and the daughter attended to the work. After his death Miss Lewis, on account of her great work in saving lives from death by drowning, was made keeper of the lighthouse by a special act of Congress. As it will require another act of Congress to depose her, she will probably be connected with the Light until her death. During her 50 years at the lighthouse Miss Lewis has saved 18 persons from death by drowning. Five of the persons rescued were soldiers stationed at Fort Adams. Miss Lewis has been honoured by President Grant, General Sherman, and Admiral Dewey, and thousands of persons from all parts of the country have visited Lime Rock Lighthouse for the sole purpose of seeing its heroic keeper. Medals and trophies of all kinds have been awarded for her deeds of bravery. Miss Lewis is a native of Newport, and is about 75 years of age.

* * *

In the great Canadian North-West, where the erstwhile wilderness is waving with golden grain and towns are springing up overnight, not a few women have gone to seek their fortunes alone. A homestead grant of 160 acres is free, and any "head of a family," man or woman, may secure it on application to the Canadian Government. Usually, of course, the applicant is a man, but occasionally a woman essays to make her fortune on the prairies without masculine aid.

* * *

Miss Marie Gilroy of Saskatchewan is one of the most famous woman settlers of the West. She put her last shillings into a prairie farm and spent seven years in a hand-to-hand tussle with fortune, sitting on her own binder, cutting her own grain, handling the plough in the furrow, and doing stable duty. In 1906, her holding excited the admiration of a young Englishman, and Miss Gilroy was induced to hand over lock, stock and barrel to him for the round sum of £3,000. To-day Miss Gilroy is touring Europe on the proceeds.

* * *

Mrs. McGilvray, who came to the Canadian West twenty years ago with six small children, is another prominent woman farmer of Saskatchewan. Beginning almost penniless, her 160 acres of homestead have now grown to an eight hundred acre estate, and her children are settled round her in comfort and affluence.

* * *

Mrs. Ferros is known as the "woman farmer" of the Portage Plains. Left with a family of young children, she has managed her farm most successfully since the death of her husband. She comes from Belfast, Ireland, and when she arrived in Western Canada with her husband 32 years ago, they had no capital at all. She now has an estate of 760 acres, and her two sons are settled near at hand, each the owner of a section and-a-half of land—about 500 acres. Many women teachers, too, are found on the Canadian prairies, but they never remain long in the schools, though they do not leave the prairies.

* * *

The Countess of Warwick has the most charming garden in England, filled not so much with the fashionable flowers of to-day as with the old-fashioned favourites of long ago, that are allowed to grow in untrammelled luxuriance. One corner of this delightful spot she calls her Garden of Friendship, and there she plants all the flowers that are associated in her mind with friends, each blossom being fragrant with a memory. A sentimental idea, but certainly a very pretty one.

* * *

Sir Wilfrid Laurier was once on an electioneering tour in Ontario, and, as the elections were bitterly contested, every effort was made to stir up race and religious prejudice. One day a Quebec Liberal sent this telegram to Sir Wilfrid: "Report in circulation that your children have not been baptised. Telegraph denial." To this the Premier replied: "Sorry to say report is correct. I have no children."

The Collectors' Guide.

Delft China.

In giving prominence to blue Staffordshire, many collectors have overlooked the charms of Delft. The scarcity of old pieces partially accounts for this lack of enthusiasm, and the fact that good specimens are seldom found outside of antique shops. Yet the Dutch ware has a ceramic history, which, by comparison, makes the oldest blue Staffordshire seem a rank parvenue, a history into which is woven the commercial rise of Holland.

About the end of the sixteenth century, the Dutch, through trading with Japan, imported many pieces of oriental china, and it was their desire to reproduce or imitate these that led to the foundation of an industry destined to grow to immense proportions. Their ware was made from clay of Bruyelle, near Tournay, which was skilfully mixed with sand and very carefully potted. The sand made it hard and capable of being made into pieces for table use. To hide the coarseness of the surface and to come more approximately near the Oriental china it imitated, it was covered all over with smooth, bluish, opaque enamel, so at a short distance it was possible to mistake the one for the other. On this surface, artists of note copied first Oriental designs in blue, and afterwards more original creations both in blue and polychrome. The industry grew steadily, and did not begin to decline until the close of the eighteenth century. In addition to plaques, vases, statuettes, etc., the quaint forms of the Orient were copied.

The manufacturers were numerous, and each fabrique was distinguished by a sign such as "The Three Bells," "The Porcelain Hatchet," etc., which were all registered in the city archives, so it is possible to trace with much accuracy the development of the industry.

The clay was thrown or moulded in the ordinary way, and submitted to a first firing. The article was then dipped in a white liquid, which formed a coating to the body of the earthenware. The painting was effected on this white porous substance. The article was then covered with a transparent glaze and fired again. In the second firing, the white coating and the glaze were both fused, the former becoming a white enamel, generally of a milky tone, and the latter a thin layer of glass. Both firings took place in the same kiln, but a higher temperature was required on the second firing to fuse the enamel. The articles in their raw state were placed for their first firing at the top of the kiln, where the heat was less. The clay in its biscuit state was very absorbent, and when dipped in the liquid, rapidly drank in, so to speak, the water, leaving behind, upon the surface, a white coating of solid matter.

In order to paint upon this spongy substance, which may be compared to blotting paper, very great dexterity, as well as suppleness of hand, was required, which could only be obtained by early training and long practice. The difficulty was increased by the nature of the paints, which were formed of a mixture of the colouring matter, itself very fluid, with pure water, without the addition of gum or any other substance to give it cohesion. On account of the excessive thirstiness of the ground, and the very liquid character of the pigments, the artist had to manipulate his brush with great skill and quickness. It is clear, that painting executed upon so uncongenial a substance could not be very accurate or exact in detail, but the boldness and vigour imposed by the conditions, gave to the finished work a special character and charm which are quite its own.

Frederick Litchfield, an authority on furniture and china, says: "The old Dutch town of Delft, between The Hague and Rotterdam, belonging to a nation, which, at one time, was the only European power that the Japanese allowed an entrance into their ports, availed itself of the large importation of Eastern porcelain to attempt copies thereof. These resulted in a product known as Delft, which, though an earthenware in substance, has much of the feeling and colour of oriental porcelain, and in the fine colour and peculiar bluish white of the ground of some of the best specimens, is very closely assimilated to its original models. Like the term Majolica, 'Delft' is often carelessly applied to all sorts of glazed earthenware."

The marks on Delft are numerous, and puzzling. Potters often used their own initials without further indentification, and today, it is often impossible to assign a vast number of specimens. Some of the various devices are: The letter K within the letter G, used by Garret Kam in 1674; three crudely-drawn flowers, the mark of de Roos in 1671; a cipher of an L. and an I., meaning Janvon der Laen, 1675; a bold L. K., standing for Lucas Von Kessel, a six-pointed star used by de Witte Star in 1690; a shield bearing three stars and the name Gaal, the mark of John Gaal; C. K. and the date 1729, the mark of Carn von der Klopt; P. V., standing for Peter Vanburg, 1759; K. V. D., Kornelis von Dyke.

AN OLD DELFT PLATE.

A famous mark is the bird's claw De Klaauw, potter, 1764. Several potters used a variation of a claw or talon, and it is a mark frequently forged.

One of the most common of Delft decorations is that of the peacock, which was used as early as 1651. An early potter, D. Pauw by name, called his factory "The Peacock" founding, according to Jervis, a pottery which existed until the end of the eighteenth century. The products of this factory, always carefully executed, often bear as mark the letters of the name of the sign formed in a monogram. Pieter Parce, master potter, established in 1759, at Delft, at the sign of the "Metal Pot." The rare products of this pottery, during the directorship of P. Parce, are marked with a monogram formed by the initials of the sign.

Bookbinding at Home.

The home workman can bind papers and magazines at a very small expense with the aid of a few tools and appliances. You will need two or three wooden hand clamps 5 or 6 in. long, two thin strips of board 2 in. wide, and as long as the longest papers or magazines you have to bind, a bradawl, linen carpet thread, wax, coarse needles, glue, a sharp knife, if you are to trim the edges to the books yourself; but it is far better to get the trimming done at a job printing office, and it costs but a few pence.

If you want stiff covers for your books, use millboard, not common pasteboard, as that will warp. If you use bookbinder's muslin, get the plain holland, not the stamped muslin, as that is very hard to get on smoothly. For the back of the books use sheepskin, enamel cloth, or holland curtain cloth. This last I find gives me excellent satisfaction for covers, as well as backs and corners, and is very easy to work, either on stiff or flexible covers, and is all right for printing, writing, or painting on, so that it is easy to ornament the back or covers of your book with gold or silver paint. For flexible covers I use manilla stock cardboard, that is a little thicker than a postal card.

Now, to bind the books: First, arrange the periodicals in proper order. Second, remove the covers and advertising pages. If there is glue on the backs, scrape it off with a sharp knife. Third, remove the wire staples or twine that holds the sections together. Now knock the backs up even, and place on front and back two or three plain sheets of white paper. Clamp together between the two strips of board, leaving just sufficient space at the back to punch holes through with your bradawl, or, if your book is very thick, to bore through with a very small gimlet. Make the first two holes about an inch from top and bottom of book, and make two or more between. The longer and heavier the book the more sewing it needs. Thread two needles with double waxed linen, tie the thread together at the ends, and put one needle through the upper hole. In all other holes, except the bottom one, put both needles through, one up, one down. When all is sewn, tie the ends firmly. If you are going to have square backs and flexible covers have the edges trimmed all around; if rounded backs and stiff or flexible covers trim only the front edge, and have the ends trimmed after the back is rounded After the books are trimmed put them between the clamping boards. Two or more volumes may be clamped at one time if they are the same length and the clamps will hold them. Cover the backs with an even, but not too heavy, coat of thick, hot glue, and allow to dry.

To round the back requires time and patience. Lay the book on a solid bench or table, and with a large hammer pound first one side and then the other of the back, and it will be seen that it rounds out. Continue this hammering until the book assumes the desired shape, and then place the book between the clamping boards again and screw tight, allowing the back to project slightly. Hammer now on the back until the sections bend over on each side and form a shoulder. It will be seen here that the sections in each half of the book bend towards that side, and the more evenly this is done the better your book will open when finished. If the books are to be bound in stiff covers you will learn more by taking an old book and tearing it carefullly apart and examining the work than you can from printed directions.

As soon as each book is covered it must be put under heavy pressure until it is dry, or it will have warped covers.

The backs of books that have rounded backs and ffexible covers must be covered the same as those with stiff covers.

For square-back books first cut your manilla cardboard a little larger than you need for your book, back and all in one piece; then bend the cardboard over a straight-edge board, and so fit it to the back of the book; glue this on and let it dry; then trim the edges even with the book. Next cover with any material you choose, allowing the cloth to turn over inside the cover ½ in. I cover one side at a time, using a paste made of part flour, part powdered glue, and, with a quite hot smoothing iron, press until dry. The inside of the covers I finish the same as the ones with millboard covers.

COOKERY.

Treacle Balls.

Mix ½ cup lard, ½ cup brown sugar, ½ cup sour milk, 1 cupful treacle, 1 teaspoonful ginger, 1 level teaspoonful of soda dissolved in cold milk, and enough flour to keep the dough from adhering to the board. Tear off pieces the size of a roll into balls; set on greased pans, and bake. While hot roll in sugar and almonds.

Making Soup.

It will always happen, and especially in large families, that there are refuse bones and pieces of meat, which are left either in the dish or in the plates. Every scrap of these should be collected together, with any odds and ends of all kinds of animal food, such as heads and necks of poultry, trimmings of meat, etc. If these are not approved of for the house, they will, at all events, afford good useful soup for the poor, who will, many of them, be grateful for the broth or soup produced from them. Besides these, the boilings of all meat should be saved, and the strength increased by adding bones, scraps, etc. The liquor from salt meat is too salt, and part only must be mixed with more boilings or water to form the foundation of all sorts of soups, gravies, etc.; the liquid thus furnished being on this account called by the name "stock."

The Utensils.

These are:—1st, the digester; and 2nd, the stock-pot. The digester, usually named after its inventor, Pepin, is a strong iron vessel with a movable handle, by which it may be suspended over the fire. In the centre of the lid is a metal valve, which should always be attended to, as it might otherwise rust in its socket, and occasion the bursting of the pot. A little grease prevents this, but the greatest preventive is cleanliness. Besides this valve, which allows the steam to escape as soon as it rises with sufficient force to overcome the weight of the piece of metal, there is a peculiar adaptation of the lid, by which it is very securely closed. It is not only placed upon the top of the digester, but by a twist it is hooked under three projecting arms, and is consequently kept down closely, its under surface being ground to correspond with the upper edge of the pot. When, therefore, the bones, etc., are placed in the digester with water, and the lid adapted to it properly, the heat is raised considerably above 212 degrees, because the pressure is greater than that of the atmosphere by the weight of the valve. The consequence is that bones are compelled to give out their gelatine, and are left almost with nothing but their lime. This is the most economical of all cooking utensils, and is the means of saving an immense amount of nutritive matter; but it is of no use whatever unless the lid is securely adapted to the pot.

The stock-pot is merely a common saucepan with a well-fixed lid. It is intended for the slow boiling of meat in the liquor which has come out of the digester from the bones. Some people use the digester as a stock-pot, but it is better to put the bones in by themselves with any piece of gristle, as much more gelatine is dissolved by water than by a strong soup made from meat; besides which, the increased temperature in the digester is unfavourable to the solution of the meat. At all events, the bones should be first boiled, and the meat added afterwards; but the better plan is to boil the bones first, and extract everything from them; then pour off into the stock-pot, and add what meat or other soft bits it may be intended to use, stewing them for some hours very slowly.

Most soups will require from four to six hours' gentle boiling, and almost all should be prepared the day before they are to be used, by which plan they may be allowed to become cold, when the fat collected on the top, and become solid, may easily be separated.

In making the various sorts of soups, three different kinds of gelatinous solutions are alluded to: 1st, boilings, which mean the water in which meat has been boiled; 2nd, brown stock, which is soup made from beef, and cow-heels, or knuckle of veal, with or without the addition of any boilings; and 3rd, white stock, which is made from veal, or any white meat, as chickens, turkey boilings, etc.

To Make Good Stock.

Put whatever bones are at hand in the digester (previously breaking them in pieces); boil them for three or four hours at least, then pour off the liquor into the stock-pot, and add to each gallon the meat off a knuckle of veal, 1 lb. of lean beef, and 1 lb. of the lean of a gammon of bacon, all sliced, with 2 or 3 scraped carrots, 2 onions, 2 turnips, 2 heads of celery sliced, and 2 quarts of water. Stew the meat quite tender, but do not let it burn. When thus prepared it will serve either for soup, or brown or white gravy.

Pot-au-Feu.

The celebrated French Pot-au-Feu, according to the recognised authority of M. Soyer, consists of 6 lbs. of beef, 4 quarts of water, set near the fire and skimmed; when nearly boiling, add 1½ spoonsful of salt, ½ lb. of liver, 2 carrots, 4 turnips, 8 young or 2 old leeks, 1 head of celery, 2 onions (one of them burnt), with a clove in each, and a piece of parsnip. Skim again, and simmer four or five hours, adding a little cold water now and then; take off part of the fat put slices of bread into the tureen, lay half the vegetables over, and half the broth, and serve the meat (bouilli) separately with the other half of the vegetables.

French Soup.

This is very good and cheap. A sheep's head and pluck boiled gently in a gallon of water till reduced to half the quantity, a small teacupful of pearl-barley, 6 large onions, 1 turnip, 1 carrot, a bunch of sweet herbs, and a few cloves and peppercorns. Add a little mushroom ketchup, and thicken with some flour rolled in a lump of butter. It is better to boil it the day before it is wanted. Cut the meat off the head in slices as for hashed calf's head (taking it out for this purpose as soon as it is sufficiently tender), and then into small squares, which must be put into the soup again when it is warmed up for use. Finish it up with forcemeat, and little egg-balls, and a teacupful of white wine, which, with the addition of a little sugar, makes it nearly equal to mock-turtle.

TREACLE BALLS.

Mulligatawny Soup.

Take a knuckle of veal, 5 lbs. weight, put it on with enough water to cover it. When it is about half done take it off, cut the meat in slices, put it in a cool place till the next day, then take the fat off and fry the veal in a little butter, and put it in the soup with 4 dessert-spoonsful of curry powder, a little salt, and 4 onions sliced and fried in butter. Let all simmer together for two hours; if too thin, thicken it with flour and butter. Serve it up with rice in another dish. Another: Take 4 lbs. of beef, 1½ lbs. of scrag of mutton, 2 lbs. of ham, and a knuckle of veal; cut in small pieces, and put in a gallon of water; reduce to 2 quarts; add 2 onions, 4 turnips, and plenty of carrots. Strain it off, let it cool, take off the fat, and warm it up with 2 or 3 sticks of celery, and rub it through a sieve; put it back in the saucepan, and add walnut or mushroom ketchup, a tablespoonful of curry powder, a little cayenne pepper, and the juice of a lemon. Prepare rice as for curry to hand round with it.

Mock-Turtle Soup.

Half a calf's head, take out the brains, and put as much water as you wish to make soup, with sweet herbs, parsley, a few onions, and some lemon peel. Stew it gently until the meat is tender; then take it out and let it get cold; thicken the soup with a little flour and butter and strain it through a sieve. Add sherry, a little walnut and mushroom ketchup, pounded mace, and cayenne. Take the brains and beat them up with a little flour and 2 eggs into a light batter, adding pepper and salt, and some parsley chopped very fine; then take the yolks of 2 eggs and beat them up; make them into as many portions as you please, trying each in a bit of muslin, and boil them in little round balls: the batter made with the brains is to be fried into cakes a light brown.

When the head is cold it must be cut into small pieces and laid in the gravy, the cakes and eggs, with some forcemeat balls, to be laid on the top of the soup just before it is sent to table. Every particle of fat must be removed from the surface before warming the soup for the table.

The Toilet.

The Use of the Tooth-brush.

"It is but a little thing," says "The Hospital," "yet on its proper use depends much of the happiness of modern man. Why civilised teeth should be so rotten is a question which has often been debated, and probably the true answer is more complex than some would think. Many good mothers are content to put all toothache down to lollypops; but that sugar in itself is not responsible for bad teeth is proved by the splendid 'ivories' often possessed by negroes who practically live upon the sugar cane, and thrive upon it, too, during the whole of the season when it is in maturity. Dental decay is common enough, however, among negroes in towns, and it seems clear that the caries of the teeth, which is so common among most civilised races, is due not to any particular article of diet so much as to digestive and nutritive changes imposed upon us by our mode of life, and to some extent by the fact that by hook or by crook we do somehow manage to live, notwithstanding our bad teeth; whereas, in a state of nature, the toothless man soon dies. Recognising, then, that until the time arrives when some great social reformer either mends or ends our present social conditions, our teeth will tend to rot, and that, whatever the predisposing causes, the final act in the production of caries is the lodgment of microbes on and around the teeth, we see that for long to come the tooth-brush will be a necessity if the health is to be maintained. It is only by the frequent use of this little instrument that those minute accumulations can be removed which are at the root of so much mischief. A few elementary lessons in bacteriology would, we fancy, greatly startle many people, and certainly would show them the futility of trusting to one scrub a day. The fact is, that if people, instead of looking at the tooth-brush from an æsthetic point of view, and scrubbing away with tooth-powders (!) to make their front teeth white, would regard it merely as an aid to cleanliness, they would see that the time to use it is after meals and at night, not just in the morning only, when the *débris* left from the day before has been fermenting and brewing acid all night through. They would also see how inefficient an instrument the common tooth-brush is unless it is used with considerable judgment. One of the secondary advantages of spending a good deal of money on dentistry is that at least one learns the value of one's teeth. By the time we have got them dotted over with gold stoppings and gold crowns we learn to take care of them, even although that may involve the trouble of cleaning them more than once a day, and using perhaps more than one brush for the purpose."

Dark Brown Stain for Floors.—Soak ½ lb. of glue in water till soft, and when dissolved add to it ½ oz. of bicarbonate of potash and ¾ oz. of aniline brown, previously mixed in a quarter of a pint of water. An extra quantity of water, about a pint and three-quarters more, should be added afterwards. This stain should be applied when hot, and varnished when dry.

THE NEWEST FASHIONS.

Season after season, and year after year, short jackets, both plain and elaborate, are brought into vogue, and at first apparently succeed in winning Dame Fashion's heartiest approval, but just as regularly there is sure to be a reversion to the long fitted or box back coats that cannot fail to look smart, and are bound to be becoming to any figure, whether tall and slender or below average height and not as slight as the prevailing mode sanctions—for weight and height are governed by fashion's dictates just as much as are the correct models in hats, gowns, wraps, and the minor accessories of dress. Since these long, severely plain, tailor-made coats tend to give long and slender lines to any figure, it is not remarkable that this style of dress has such continuous popularity, and regularly returns to vogue by the middle of the season, even if at its commencement long coats are announced as completely out of fashion, and a reign of Eton, blouse, and bolero inaugurated.

* * *

Nor has this year been any exception to the rule. Last autumn all the new models showed every conceivable design in short jackets—some fitted, others loose; the majority decidedly elaborate, but a number conspicuously unadorned—but by December long tailor jackets were again noticeable and continued to gain favour until the spring, when the introduction of summer costumes brought out light, cool, short jackets of silk, pongee, voile, and linen. But even these, with common-sense as a great point in their favour, have been forced to give way before the smart tailor-made costumes with three-quarter length half-fitted jacket, with long or sometimes three-quarter length sleeves, and quite short pleated skirt. Whether the costume be of serge or silk, of pongee or of rajah, a plain three-quarter length jacket is quite evidently preferred, whether the costume is intended for travelling or automobiling, yachting, sailing, or on any occasion calling for a smart coat skirt costume. Naturally the original model may be elaborated upon. Lace or lingerie collar and cuffs look nice at this time of the year, and do much to make the costume attractive and becoming, and stitched bands of the material or of silk or cloth give a nice finish.

* * *

Dark blue is, perhaps, the most satisfactory of all shades for travelling, or for any occasion that necessitates a good, serviceable colour, but if the deeper shades are unbecoming there are any number of deeper tints from which to select, from a bright electric colour to a soft Japanese shade that is becoming to blonde and brunette alike. Bordering on the latter shade an exceedingly smart costume was made up with half-fitted cutaway jacket and full walking length skirt. The coat, which fell not quite to the knees, was but semi-fitted in the back, with loose box front, and instead of collar, revers or cuffs there were bands of embroidery finishing the coat, worked in the exact shade of linen thread. The loose kimono sleeves were in one piece with the coat itself and were, if anything, shorter than elbow length, and were finished off like the coat, with bands of embroidery worked direct upon the material. The skirt was a plain, but unusually full, circular model.

* * *

The visiting gown illustrated this week is made in biscuit coloured cloth embroidered on the corsage with silk of the same shade.

Hints for the Laundry.

A little pipeclay, dissolved in the water employed in washing linen, cleans the dirtiest linen thoroughly, with about one-half the labour, and saving full one-half of the soap. The clothes will be improved in colour, equally as if they had been bleached.

Scald flannel before you make it up, as it shrinks in the first washing. Much of the shrinking arises from there being too much soap and the water being too cool. Never use soda for flannels.

A pailful of ley, with a piece of green copperas half as big as a hen's egg boiled in it, will be a fine nankeen dye, which will never wash out, and will be very useful for linings of furniture.

Skimmed milk and water, with a bit of glue in it, made scalding hot, is excellent to restore old rusty black Italian crape; if clapped and pulled dry, like muslin, it will look as well or better than new.

China crape scarfs, if the fabric be good, can be washed as frequently as may be required, and no diminution of their beauty will occur. Make a strong lather of boiling water, suffer it to cool; when cold, or nearly so, wash the scarf quickly and thoroughly, dip it immediately in cold, hard water in which a little salt has been thrown (to preserve the colours); rinse, squeeze, and hang it out to dry in the open air, when the more rapidly it dries the clearer it will be.

To wash chintz, take two pounds of rice, and boil it in two gallons of water until soft; then pour the whole into a tub; let it stand till about the warmth you in general use for coloured linens; then put the chintz in, and use the rice instead of soap, wash it in this until the dirt appears to be out; then boil the same quantity as above, but strain the rice from the water, and mix it in warm, clear water; wash it in this until quite clean.

A VISITING GOWN.

CAREERS FOR GIRLS.

Gardening.

"A garden," says Lord Bacon, "is the purest of all human pleasures." Perhaps that is why its care has so great an attraction for women, who, at all periods, have loved their gardens, and found delight in tending them. And it is quite in agreement with the practical spirit of the age that they should turn, what, in more leisurely times, was one of their favourite recreations into a means of livelihood.

Gardening as a career is attractive to most girls, but it is to be feared that many do not realise what it is when deciding to enter upon it. As a hobby it is pleasant and fairly easy. But things are different when one takes it up in earnest, intending to live by it. Hard work has to be done, all kinds of weather faced, unpicturesque things like draining, manuring, etc., to be studied, and a good many subjects gone into that the amateur gardener does not dream of connecting with her work.

Still, to a bright, active girl, the advantages of this profession are manifold. It is healthy and full of interest, yet not overcrowded; it offers fair remuneration, and its different branches give plenty of choice for specialising when trained.

The qualifications needed to make a successful woman gardener are, besides a taste for the work, intelligence, a fair amount of physical strength, good business capacity, the power of making others work as well as of working hard oneself, perseverance, order, and good taste.

Rather a long list, perhaps, for the girl aspirant to contemplate! Supposing that she has satisfied herself as to her own possession of them, she must not rush off in her teens to a Horticultural College. Twenty, is a good age for her to begin the college course, for this gives her time to get a thoroughly good general education, a fair idea of elementary botany, chemistry, physics, and perhaps geology and forestry, and a much needed year of practical work under a working gardener. The latter is greatly to be recommended, for without it, a student is at a disadvantage in college, and loses much of its teaching. Lectures on the chemistry of soils and manures will have but half their value for her if she has not practical experience to fit them in with, and she will waste time learning rudimentary things instead of bringing a ready-prepared mind in which the higher teaching can take root.

Her college training should last from two to three years, preferably the latter period, and will cost her from £200 to £500, including residence, travelling expenses, etc. Besides the Lady Warwick College at Studley Castle, Warwickshire, and the Horticultural College at Swanley, Kent, there are classes on gardening and its allied subjects arranged now by nearly all County Councils and Polytechnics, and some of the national gardens take women pupils for a longer or shorter period.

Besides lectures and study, students at these colleges have to do the ordinary work of a garden, such as trundling wheelbarrows about, pickaxing up paths, sweeping up dead leaves, and so on. In the Glynde School for lady gardeners, no men are employed at all, the whole work being done by the girl students; and at Swanley, the students are to be seen in the winter in their thick boots and leggings, digging, trenching, root-pruning, and doing all the menial work of gardening.

This is, of course, quite necessary, if a woman gardener is to know enough about her business to direct wisely those under her, but it is not the kind of work best suited to her. It may be taken as proved, that the higher branches of gardening are those in which woman excel. There are several of these for her to choose from. One of the least exacting is the teaching of cottage gardening and simple botany in country schools, in most of which practical work in these subjects is taking a recognised place. To girls fond of teaching it would prove interesting. The training necessary could be had at a Horticultural College by specialising in the subjects required.

A girl with a scientific turn would perhaps find her vocation in the higher side of gardening, viz:—Hybridisation, experimental work, and all the other branches needing care and thought. She might obtain a post on these lines with one of the large horticultural firms or in one of the national gardens. The salary to be had would probably depend a good deal on her own qualifications, but it would be safe to put it down as not less than £35, resident, or from £60 to £70, non-resident, to begin with.

One of the most interesting forms of the profession for a woman is landscape gardening, or the laying out of public and private grounds. This naturally requires taste and an eye for form; in fact, the girl who takes it up must

have some artistic talent to make her work of any value at all.

In preparing for it the course already detailed should be followed, with the addition of studying, at any rate to some extent, outside subjects bearing directly or indirectly upon the work, such as geology and architecture. Forestry is so important that the student might well devote the third year of her college course to it. As there are no schools of forestry in England, she would have to go to one of those under Government direction in France or Belgium, unless she could find a consulting forester in England or Scotland willing to take her as a pupil.

She should also get a thorough grasp of road-making, pondmaking, levelling, draining, embanking and rockwork, and be able to estimate the cost of such operations. Soils and manures should, of course, claim her attention also.

As in most other professions the "start" in this one is uncertain. Many municipal bodies are willing to employ women landscape gardeners, but there are not often vacant posts of this kind to step into. Architects also are often ready to engage capable women to work with them in this way.

The best course perhaps for a girl to take when she has finished her training would be to start on her own account, working up a connection by advertisement, and always keeping on the alert for the coveted appointment. Her income at first would be quite uncertain, the fee for consultation varying from one to five guineas according to the size of the work, and the amount charged for carrying out the scheme depending on her own plans and estimates.

For an energetic business-like girl, fruit and flower cultivation offers a promising opening. Capital is of course needed for this, and it is generally advisable for two or more women to start in the venture, as the work can be divided with profit. A town on a main line, with sufficient regular custom to give them something to count upon all the year round, should be near enough to their gardens to allow of easy transit. Or, if in the neighbourhood of London itself, the women gardeners would do well to get into touch with one or more of the large hotels, as they would be almost sufficient for them to depend on.

The training for this branch would cost from £200 to £300; there should be enough capital in hand, after starting, to keep on with for two or three years, as the garden will barely pay its way at first.

Still another line of gardening is open to the trained woman; that of "jobbing," and, undignified as it may sound, there are tempting possibilities in the idea. There seems to be a good opening in the suburbs of London and all large towns for a woman of taste and knowledge to keep small gardens in order for a fixed yearly sum. She would be a vast improvement on the usual jobbing gardener, who is a good deal more "jobbing" than gardener, and has about as much idea of making a pretty garden as skill to do it according to the owner's suggestion.

The woman "jobber" would undertake to have a well-planned show of flowers for each season, arranging an attractive colour scheme, and having all the necessary work done during the year for anything from £5 to £10, for ordinary sized suburban gardens.

It would be almost necessary for her to have a small nursery to grow the stock needed, as it would otherwise hardly pay well enough. Indeed, the partnership idea would come in here well, two or three by-industries, such as bee-keeping, being worked as well. One of the partners should certainly have a good business head, and a fair amount of capital would be required to start this business also.

The income would of course depend entirely on the "jobber's" energy, enterprise, and capability.

Other ways of utilising gardening knowledge and taste will probably suggest themselves to the girl thinking of this career, but enough has been said to show what possibilities lie in its direction for competent, hardworking women.

JOSEPHINE BULLEN.

To Prevent Lamp Chimneys Cracking.

Place the chimney in a pot filled with cold water and add a little cooking salt; allow it to boil well, then cool slowly. Chimneys become very durable by this process, which may be extended to crockery, stoneware, porcelain, china, etc. The process is simply one of annealing, and the slower the process, especially of cooling, the more effective will be the work. If the glass chimney of a lamp be cut with a diamond on the convex side, it will never crack, as the incision affords room for the expansion afforded by the heat.

ROUND-ABOUT NOTES.

Never before has there been such a call for ostrich feathers. Dame Fashion has decreed that all girls and women who make the smallest pretensions of following her inexorable ruling must have huge plumes plucked from the ostrich in their hats. For years back ostrich farming has been one of the staple businesses of South Africa, of which country the largest living bird is a native. Now there are large farms in Florida, where the winter climate is suitable to the birds, and others in the State of New York, where the ostriches enjoy summer quarters. The stock of these farms consists of more than two hundred adult birds ranging from seven to ten feet high, and weighing on an average three hundred pounds. Some of them tip the scale at more than four hundred.

* * *

For a nest the ostrich merely scratches a hole in the sand about four feet in diameter and one foot deep. In this the hen lays one egg every other day until about fifteen have been deposited. The eggs each weigh from three to four pounds, and contain as much meat as about three dozen ordinary hen's eggs. The process and labour of hatching are shared by male and female alike. Up to the age of half a year the chicks grow at the rate of about a foot a month. Nothing grows so quickly as a healthy baby ostrich. After then the growth is much slower. Both sexes look alike, and are indistinguishable until about eighteen months old, when their feathers, which have been a mixture of grey and white, turn to dark drab in the female and black and white in the male.

* * *

Every eight months the adult birds yield a crop of feathers. The small feathers are plucked out without pain to the birds, as they are ripe when extracted and would soon fall off. The heavy wing and tail feathers, which are the most valuable, are cut off with scissors, the stumps being left in the skin. In due time these drop out. While being plucked the bird is confined in a small enclosure, with a long, narrow bag placed over its head. Thus blindfolded, it rarely attempts to get away, but passively submits to the operation of being denuded of its feathers. The finest plumes come from the back of the wings and the tail. The male ostrich yields twenty-four fine feathers from each wing, and as many more from the tail.

* * *

The dolls of some famous women, says a writer in an American paper, let in many side-lights on the characters of their small owners. Charlotte and Emily Brontë dressed up ugly wooden images as men, and called their favourites the Duke of Wellington and Napoleon, had sham battles, and wrote plays for the dolls to act on a tiny stage. Charlotte also composed long poems in "Wellington's" honour, to which she compelled him to listen with his wooden ears. Jane Welsh Carlyle, as a child, loved only one doll. When it was time to translate Virgil, instead of playing, Jane made a pyre of various articles (including lead pencils, cinnamon stricks, and grated nutmeg!), pretended that the doll had stabbed itself, laid it on the pyre, and set fire to it. Childlike, she then snatched it from the flames, but too late. George Eliot's story of Maggie Tulliver's doll, Fetish, into the body of which nails were driven for poor Maggie's childish faults, was the true account of the writer's own early days.

* * *

Jean Ingelow's favourite was a wax doll named Amelia, which met its end by a bath on a hot day, and was sorrowed for for many months. Anne Thackeray's dolls were taken when injured to her father, who pretended to carry them to the family doctor, but in reality took them to a toy shop for repairs—just what one can imagine Thackeray doing. George Sand, at fourteen, locked all her dolls into a closet, with farewell tears and hugs; then would sit outside the door every day, whispering words of comfort to the poor exiles. She kept her vow, however, of having no more to do with them. Florence Nightingale's many dolls were always sick and in need of close attention. She would frequently insist on sitting up all night with them, only dissuaded by promises of her mother and her nurse to take her place as watcher.

— COOKERY. —

Delicious Entrees.

Fricassee of Chicken.

Take the cold remains of one or two chickens (roast or boiled) and cut into joints and fairly big pieces. Put in a saucepan some milk, flour, and butter (the quantity, of course, depends on the amount of chicken), and rub down till there is not a lump, add the chicken, some nutmeg, pepper, and salt, and allow it to slowly boil up (stirring so that it does not burn) two or three times. Turn it out on a dish and serve with sippets of dry toast and rolled pieces of nicely fried bacon placed alternately round the dish. Cold veal can also be done up like this.

Mushroom Toast.

Prepare some mushrooms and put them in a frying-pan with some pepper, salt, a little water, plenty of butter, and a dash of Worcester sauce, and fry until quite crisp. Have ready some dry toast cut into pieces about three inches square. Put the mushrooms on these and send to the table very hot, and, if possible, on a silver dish.

German Eggs.

Boil 6 eggs for 10 or 15 minutes. Mix up in a saucepan a tablespoonful of flour with a piece of butter, add a little mace, pepper, salt, sugar, and nutmeg, and a teaspoonful each of finely-chopped onion and parsley; pour over it ½ pint of milk. Stir till it thickens and boils, then put in the eggs, shelled. When quite hot lay them on buttered toast and pour the sauce over.

Lamb Fritters.

Cut some strips from a cold leg of lamb, ½ in. thick and 3 in. long, dip them into a thick batter, and fry in boiling lard until they are a light brown. Put a pile of mashed potatoes on a dish, leaving a cavity in the middle of the potatoes to be filled with tomato sauce; arrange the fritters round the potatoes and beyond them a border of nicely boiled spinach. Serve quite hot.

Lamb Cutlets.

Take some nice lamb cutlets, lard, and with strips of truffle, braise them carefully. When cooked set them aside to press until cold, then cover with mayonnaise sauce. When quite set, trim them neatly and serve around some nicely boiled peas, tossed in mayonnaise sauce.

Breakfast Dishes.

Smoked Haddock Savoury.

Dip a smoked haddock into boiling water, take all the flesh from the bones, and pound flesh in a mortar. When thoroughly done, add a pinch of cayenne, a few drops of lemon juice, a piece of butter the size of a walnut, yolk of an egg, and a tablespoonful of milk or cream. Carefully stir all over the fire till it thickens, then serve as hot as possible on squares of hot buttered toast. The pounding and separating the flesh can, of course, be done the day before.

Beef Fritters.

These are very nice for breakfast. Chop pieces of steak or cold roast beef very fine. Make a batter of flour, milk, and an egg, and mix the meat with it. Put a lump of butter in a pan, let it melt, then drop the batter into it from a large spoon. Fry till brown; dish up, season with pepper and salt, and garnish with parsley.

Fish Balls.

A good and cheap breakfast dish is made from the following:—Cold boiled potatoes and any kind of cooked fish left from the previous day. Take any bits of bone from the fish, then mix well with the potatoes. When this has been done, beat up the fish with a fork into a smooth paste, season with pepper and salt, and, if liked, a little anchovy sauce. It is then ready for use. Fry the bread in boiling fat till golden brown. Keep hot, then into the remaining fat, put the prepared fish, and stir about until it is thoroughly hot, then spread on the slices of bread, and sprinkle with a little chopped parsley, and serve at once.

Kidgeree Haddock.

One smoked Finnan haddock, 1 teacupful boiled rice, 1 oz. butter, 1 teaspoonful of made mustard, 2 soft-boiled eggs; cayenne and salt to taste. Pick the fish carefully from the bones, and mix with the other ingredients, and serve very hot. Garnish, if wished, with hard-boiled egg cut in quarters. Cost, 7d.

JELLIED APPLES.

Scotch Tomatoes.

One pound rather small tomatoes, 1 lb. sausage meat, 1 dessert-spoonful finely chopped parsley, pinch powdered thyme. Little grated nutmeg, breadcrumbs, and egg. Take the sausage meat and parsley and seasoning, mix together, add sufficient breadcrumbs to make it into a paste that you can handle easily. Take a piece of this mixture, flatten it out on your hand, cover the tomato with it, as you would do an apple dumpling, flour it over with an egg, roll it in breadcrumbs, and fry in smoking hot fat a golden brown. Cut each one in half and dish it with watercresses and parsley. Sufficient for six persons.

Sausage-meat Cakes.

Ingredients: To 1 lb. of lean pork add ¾ lb. of fat bacon, ½ oz. of salt, 1 saltspoonful of pepper, ¼ teaspoonful of grated nutmeg, 1 teaspoonful of minced parsley. Mode: Remove from the pork all skin, gristle, and bone, and chop it finely with the bacon, add the remaining ingredients, and carefully mix all together, pound it well in a mortar, make it into convenient sized cakes, flour these, and fry them a nice brown for about 10 minutes.

A Practical Recipe.

Jellied Baked Apples.

Core tart apples, fill the cavities with chopped dates and grated maple-sugar, and bake, basting with water in which scraped maple-sugar has been dissolved, or thinned maple-syrup will do. Cool; then scrape all the jellied juice and pack into the core centres. Place an apple in a cup, and fill up with this jelly. Heat 1 pint of sweet cider, and add to it half a box of gelatin soaked in ½ cup of cold water for ½ hour; stir until the gelatin is dissolved in the hot liquid; set in a pan of ice-water and stir slowly until it begins to congeal, then fill the cups, and set on ice until firm; dip into hot water a second, slip out on to a chilled dish. Decorate with whipped cream.

A few Rules to follow in Washing Lace.

1.—Never pull the lace, but gently pat and squeeze it.

2.—In drying it, always stretch it evenly on a piece of clean linen or cotton which is pinned to some flat surface, bed or floor or table.

3.—If possible never iron lace, or if it must be ironed, always do it on the wrong side with a piece of thin muslin laid over it.

4.—Do not use strong soaps in washing lace. Use pure white or castile soap.

To Wash White Silk Lace and Blond Lace.

Cover a large bottle with linen or muslin and wind the lace around it, always covering the outer edge of the lace as you proceed. Place the bottle in a basin or bucket full of cold lather of white soap and very soft water. Let it stand in the sun, gently rubbing the suds into the lace. Change the lather every day for several days, always leaving the lace in the sun if possible. After several days, take the lace off the bottle, and without rinsing, pin it backward and forward on a large pillow covered with a clean, tight pillow-case. Every scallop should be pinned down with a small pin. When dry it will not be necessary to iron, press, or starch the lace. Lay it in loose folds in a pasteboard box.

To Wash Thread Lace.

Attach thread lace to a bottle in the same manner as the silk and blond lace. Saturate it thoroughly with good sweet oil. Fill the bottle with cold water to prevent its bursting and place it in a wash-pan of cold lather of clear water and white soap. Let the bottle boil in the suds until the lace is perfectly clean and white. Drain off and dry the bottle in the sun. When dry, remove the lace and roll on a smooth stick or block or fold evenly, wrap in tissue paper and press between two large books.

Moon Phases.

The phases of the moon may be explained by the fact that the moon is a dark spherical body which shines only by reflected light. The new moon, popularly so called, is seen only when the sky is sufficiently dark to present a complete outline of the disc. This illumination is due to the light which comes first from the sun, is reflected to the earth and back to the moon and thence to the earth. What we really see is the earth light shining on the moon.

Great Gamblers.

The greatest gamblers in the world are the Spaniards and their descendants. The Kanaka tribes of the South Seas, who push the hazard of gambling beyond the grave, stake their bones of a last throw of the cowrie shells which they use as dice. Among African tribes the Haussas are nearly as great at games of chance as the Chinese.

Compass Embroidery or "Thimble Work."

In looking over our grandmothers' keepsakes in the shape of lingerie we find the decorations, with few exceptions, made by hand;

FIG. 1.—COMPASS EMBROIDERY.

and the work most extensively used, and also most effective, is compass embroidery. When we consider that the design itself is so easily drawn, and can be used in a variety of ways, we do not wonder that its use has been revived and become so popular at the present time.

As the name implies, it is drawn with a compass, and consists of overlapping circles. It has also been given the name of "Thimble work," because it is frequently drawn with the aid of the thimble, which makes a nice size for dainty work. The circles, however, may be made any size desired to harmonise with the material and article upon which it is used.

The size of the floss used also depends upon the quality of the material. Filo silk is very appropriate for India linen and finer woollen goods, while the coarser silks commonly used for borders are better for heavier work, and the linen flosses make beautiful decorations for scarves, etc.

If a lining is used under the work, the floss is usually the same colour as the material, the lining being of a contrasting colour.

After the pattern is traced, there are three methods of procedure. The one formerly employed was to run each circle with very small stitches, then to carefully cut away the linen in the oval spaces, and buttonhole around these spaces. The other way is convenient for use on sunbonnet crowns, or where two thicknesses of material are required. It is to cut away the material, allowing the width of a tiny seam inside the space. Turn these to the inside and over and over.

The third, and one most convenient for large work, and especially the floral designs given later, is to buttonhole around the design, fill in the spaces with lace stitches, and then to cut material away.

Compass embroidery may be used alone or combined with lace stitches and drawn-work, or it may be used as insertings or headings, or as all-over embroidery for yokes and revers.

Floral Compass Embroidery.

A new interest is given to embroidering a piece designed by one's self, but it is very seldom we find a person attempting anything of the kind.

In the use of this new way of treating an old embroidery, it is made possible for a person, however unskilled in designing, to draw a design which, when worked, is unusually effective. This work may be used on articles of all sizes and materials. It is a good example of the rule that a little, simple design works out better than a close, elaborate one. It also gives a conventionalised effect, so greatly admired by many.

The accompanying illustrations will show how the compass forms are combined with lace and lace stitches to form flowers and foliage, sprigs, etc.

The centre of the daisies, Fig. 1, is one complete circle, while the petals are the ovals formed by quarters of circles. The green bud of the tulip, Fig. 2, is a circle. The green bud at the base of the thistle blossom, Fig. 3, is an oval, while the wheat grains are very small ovals.

In some flowers, as in the rose, the foliage may be made by small ovals arranged as rose leaves are. Other leaves may be worked with outline stitch in rows to form solid work. The latter way of making leaves harmonises with the compass flowers better than ordinary solid embroidery.

In drawing this work, different sizes of silk reels may be divided into quarters and used instead of compasses.

To Use up Scraps

I suppose every girl has a bag or drawer containing scraps left over from former work—bits of silk, ribbon, velvet, etc. If not, she could easily collect some among her friends as anyone knows how pieces accumulate, especially where dressmaking or millinery is done at home.

We will, in imagination, turn out the contents of such a scrap-bag. Here is about half a yard of some plain, dark material, left from last year's winter gown. The very thing for a work-bag or cosy lined with some soft-coloured sateen, which you probably have also. Of course, if the collection can contribute a piece of pongee silk, so much the better; but sateen is very nice. We will suppose it to be fawn-brown, and the dress material dark blue (though many other colours would do equally well). Cut out the shape of your bag or cosy, and lay the stuff on a flat table. Next choose some of your small scraps of silk, velvet, or bright cloth, and cut them into various fanciful shapes, such as hearts, diamonds, flowers, shamrocks, triangles, butterflies, etc. If you

FIG. 2.—COMPASS EMBROIDERY.

prefer, you can first draw the forms on stiff cardboard, and cut them out; then lay them on your scraps as a guide.

Do not use any large pieces, as they will come in for a purpose to be suggested later. When you have enough ready tack them lightly on your stuff, dotting them about carelessly without any particular method, but avoiding the juxtaposition of colours that "quarrel" too violently.

The next process will be to buttonhole them round with dull gold embroidery silk, thus making the edges neat and securing them to the material. Satin and silk pieces need to be worked thickly, lest they should fray out; and some of the forms—flower shapes, for instance—will be much improved by a few French knots or light stitches in the centre.

The quainter you make the work the more pleasing will be the effect. Any large pieces that you may have will come in for a variety of this work called "flower patchwork."

Suppose you possess a bit of dull pink velveteen—about a quarter of a yard. Make a cardboard model of a star-shaped blossom, lay it out on your velveteen, and cut out as many flowers as the piece will make.

Be careful to economise your stuff by beginning at one end and getting the long points of each star to fit in between those of the last one—a remark that you will at once comprehend when you have the work in your hand. A clever cutter will thus get many more flowers than one who carelessly began in the middle of her stuff, and chopped away at random. Now place the flowers at intervals on a dark material—say, olive green and buttonhole them with the gold silk, or with a paler green than the ground.

If you are clever enough to work a few leaves and stems to connect them all the better, but it is not necessary to do so.

FOR SCOURING DIRTY BOARDS, etc., there is nothing better than fine sand, used with a stiff scrubbing-brush, soap, and hot water.

The Care of Gloves.

When you are buying kid gloves, remember that there is such a thing as false economy. A good pair of gloves will wear out three pairs of inferior make, and will also pay for cleaning. If your purse is limited, do not indulge in light colours. Aim at securing gloves of good cut and quiet style. Examine them to see that the stitching is perfect. The kid should stretch easily to make a good fit and to wear well. Do not buy gloves that are too small. Nothing looks worse than to see a fat hand tightly enclosed in kid. The glove will not last long, and the wearer's circulation will suffer, to the detriment of her complexion.

When putting on new gloves, remember that haste is fatal to gloves and temper. Much depends on the way in which gloves are put on the hand the first time, and also on the manner in which they are removed, especially if the hand is hot. When putting them on, use gentle persuasion, and button the top button last. When removing, unbutton the lowest button first of all, and when all are undone, turn back the wrist part of the glove and ease it off the fingers gradually; then turn back, and pull the glove lengthwise gently into shape again.

HOW TO MEND GLOVES.—The first symptoms of a tear in a seam or kid should be attended to. If cotton be used to mend the rent, it will not cut the kid as readily as silk, and the repair will last. The best method of mending a small tear is to work a buttonhole-stitch round the edges, and then, if necessary, a second row of the same worked into the former. Then draw the edges carefully together. In some cases, a small piece of an old glove placed under a rent of this description is useful to give strength to the repair. Silk gloves should, of course, be mended with silk to match.

HOW TO CLEAN GLOVES.—Kid gloves, when dirty, may be cleaned at home in the following way:—Take a pint of pure benzoline spirit, and put it in a basin, far from fire and heat. Place a pair of soiled gloves in the spirit, and rub them, as though washing with soap and water. Pay special attention to the fingers. Rub any dirty spots till the dirt disappears. Gloves may also be cleaned by removing them from the spirit, stretching them on a clean soft cloth, and rubbing them all over with another soft cloth till they are dry. They occasionally need rinsing in a little fresh spirit. They should then be hung to dry in a cool place, where there is a current of air, so that all odour may be removed. They may be finally placed with a scent-sachet, to do away with any lingering trace of the benzoline. While drying, the fingers should be pulled into shape, so that they may not harden or stiffen. This quantity of spirit will cost about threepence, and will clean about three pairs of ordinary-sized gloves.

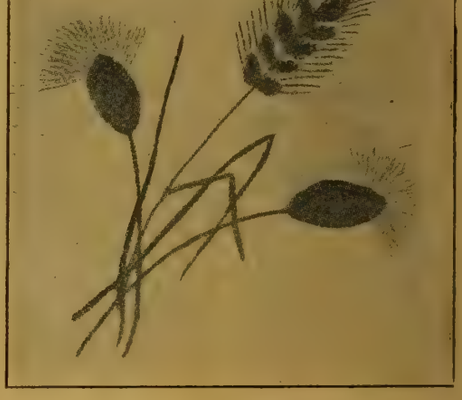

FIG. 3.—COMPASS EMBROIDERY.

Silk gloves should be washed in lukewarm, soapy water, rinsed, dried, and pressed with a warm iron.

Measurements of the Perfect Woman.

The ideal woman physically, according to the authority of the most eminent artists, who, however, insist that no such being has ever been created, will, when the quest for her has at last been successful, exhibit the following measurements:—

Height	5 feet 5 inches
Waist circumference	27 inches
Bust under the arms	34 inches
Bust outside the arms	43 inches
Upper arm circumference	13 inches
Wrist circumference	6 inches
Thigh circumference	25 inches
Calf of leg circumference	14½ inches
Ankle circumference	8 inches
Weight (at the outside)	142 pounds

THE NEWEST FASHIONS.

This year there is quite a distinct style of dress for the driving costume. This is made up of a light gown of silk, gauze, chiffon, or lace, according to the time of year and temperature of the day (not at all an analogous phrase), and has always a smart silk or lace wrap, although the gown is quite complete without the cloak. The wraps are exceedingly attractive, some of them fitted and others quite loose, but all being more or less trimmed or hand embroidered. A soft lace jabot at the throat is sure to be becoming, and this jabot is of white, cream, or ecru lace, whichever is most effective with the colour of the wrap. A bright coloured silk jacket with a plain white or cream coloured lace gown is no longer new, but does not suffer in effect for that reason. Little fantastic boleros in silk or soft satin, trimmed with lace and embroidery, are still seen, and these make an attractive finish to any gown, and are destined to remain in vogue for some little time yet. Long wraps are, however, more numerous than the shorter coats, and, of course, these have common sense on their side, for a bolero can afford no protection to a light gown, and certainly gives little or no warmth.

* * *

The long carriage wraps are all intended to be useful as well as ornamental, and, as is not always the case, they certainly accomplish well both purposes. Some of the new wraps are of gauze lined only with chiffon, and, while these can scarcely afford any appreciable warmth, a cloth gown can be worn underneath. A silk coat half fitted, a little more than three-quarters in length, and trimmed with a deep cape of Irish lace and soft Valenciennes ruffles on the sleeves and at the throat, makes a useful, pretty wrap, and whether carried out in all white or made up in a becoming soft or brilliant shade of silk brocade and flowered silks, has been popular now for no little time, though not quite as fashionable as the plain colours which are relieved by handsome lace and perhaps a narrow piping of some artistic contrasting colour. If one must order a costume with an eye to economy it is well to select a style of wrap that will be smart with a number of frocks, although designed primarily for the one gown.

* * *

Linen and all linen materials are still worn, but, a linen dress to be smart to-day must be fashioned on a truly elaborate plan, as the material is a favourite one for morning dresses and all simple walking costumes. Handsome lace generously used will, however, render any linen sufficiently handsome for all occasions, and when hand embroidery is combined with that lace the result is all that can be desired. White still continues the favourite but a light coloured hat and parasol relieve the plain effect. At the same time, coloured linens and taffeta batistes are much in demand, and are in a way more satisfactory than the all-white as against a coloured background. Embroidery and trimming of all kinds are doubly effective. Long and short lace coats are still much in vogue, and, while handsome and effective with any gown, are especially attractive worn over a handsome linen dress.

* * *

Embroidered and painted chiffons are at present fashionable for a very elaborate style of afternoon costume. The printed chiffons have lost none of their popularity by being so long in vogue, and are still among the favourite materials for dainty afternoon dress. Pink and mauve are the favourite shades just now, and then the colour is brought out more noticeably by bands of soft messaline the exact shade of the flower. One of these gowns was exceedingly attractive the chiffon was almost covered with a large design in deep pink roses, which naturally lost much of their colour, being made up over a white foundation, while the colour was brought out by three bands of pink messaline laid about the skirt. The lowest band of silk was somewhat wider than the other two, and was carried up on the skirt in six deep mitred points.

* * *

The bodice was made with a Dutch neck and transparent square yoke, below which fell a soft vest formed of ruffles of the lace. Over the shoulders was laid a wide surplice of the material, bordered on each side with the silk, while the sleeves, which fell from under the surplice, were composed simply of wide ruffles of lace and chiffon laid over a fitted undersleeve of the lace, which came just to the elbow. The ribbon girdle was carried up just a little at the back, with a suggestion of the Empire, and a soft rosette with short ends was attached just a little on one side. The back of the bodice was made just as the front, with square yoke and lace ruffles forming a sort of vest. The Dutch neck and collarless yoke are seen on a number of dresses, but are more popular for high dinner gowns and restaurant costumes.

* * *

Embroidered and figured crêpes of all kinds and varieties are in favour at present, and the lighter weight crêpe material make charming costumes for afternoon. Plain colours are always safe, but the fancy weaves and dotted and flowered patterns are attractive from year to year. Embroidered crêpe de Chine is effective in any colouring, and the comfort to be derived from a handsome crêpe de Chine gown is almost inestimable. One of the most delightful things about a crêpe de Chine gown is that it seems appropriate at any season of the year.

* * *

A very pretty gown is shown in the illustration. It is made in Reseda green cloth, the lapels of the corsage being hand embroidered. The folded belt is of green velvet.

To Clean Hair Brushes.

The best way in which to clean hair brushes is with spirits of ammonia and warm water. Take a tablespoonful of ammonia to one quart of water; dip the bristles up and down in the water without wetting the back; rinse in clean warm water; shake well and dry in the air, but not in the sun. Soap and soda softens the bristles, and will turn an ivory-backed brush yellow.

A SMART CLOTH DRESS.

The Cultivation of Grace.

How strangely the art of graceful gesture has been neglected of late years! While the muscular physique of our girls is undoubtedly improving, it almost seems as if graceful movements of the body were going out of fashion. At one time deportment was a very important item in the curriculum of education of girls' schools; girls were taught how to enter and leave a room, how to bow and courtesy gracefully, and, above all, how to walk correctly. The development of the muscles by physical exercise is, of course, widely recognised; but this is by no means all that is required. Some women have an inborn grace, and need no tuition in little refinements of movement and manner which add so much to personal charm; others are by nature awkward and nervous, and however pretty in feature a woman may be, she fails to attract if she is afflicted with gaucherie.

All young girls should be trained to walk correctly. A swinging gait should be avoided; the head should be held correct, and the arms should not be allowed to swing backwards and forwards like the pendulum of a clock. Girls who grow fast frequently develop the habit of stooping the shoulders and thrusting the head forward as they walk. Nothing can be more ungraceful than this, and the habit, once formed, is difficult to cure. The peasant women in most foreign countries early acquire a good carriage of the figure, as they are accustomed to carry baskets and other burdens upon the head, thus keeping the body well balanced. In walking, the head should be thrown well back, the shoulders should be kept down and well squared, and the leg should be thrown out from the hip, not from the knee. If you would see the poetry as well as the correct method of walking, watch a well-trained company of soldiers. Could anything in the way of walking be more beautiful? How they seem to move without effort, as the birds fly; and how gracefully and lightly each body is poised! It is perfectly possible for others besides military men to be trained—to train themselves—to good walking habits. A good walker plants the foot firmly on the ground, throwing some of the weight of the body upon the balls of the feet, and gently tossing it from one foot to the other by a small spring from the ball of the foot. A very little persevering practice will give you the trick of it, and you will be astounded to find how much farther it is possible to walk without feeling tired by this method than by the less scientific one. Do not try to use the calves of your legs; put your whole mind on the ball of the foot, and all the muscles elsewhere will swing into line of themselves.

Having given a few rules as to the correct method of walking, the next thing to be considered is what to avoid. Do not kick out your knees when you walk. Nothing is uglier than this. Neither must you mince or stride. Take a good dignified step, and give it the necessary spring as I have described. Practise it till you make it your own, by second nature at least. Remember that the walk is, to a very large extent, an indication of character. So if yours happens to be weak, mend it before the world has seen and criticised it.

Cultivate graceful gestures of the arms and hands. The girl or woman who does not know what to do with her hands is a pitiable object. If you hand a book or any other article to a friend do it gracefully, and with a pretty bow and smile. Avoid very quick movements of the head and neck, bend the neck gracefully a little forward when engaging in conversation with anyone, and be careful not to distort your features by such ugly tricks as suddenly and violently raising the eyebrows or showing the gums when smiling. All these details may sound very unimportant, but in reality they are not so. Knitting the brows, biting the lips, constant yawning, and other unpleasant habits of this kind are often fallen into almost unconsciously, and it is wonderful how quickly these tricks destroy the beauty and expression of the face. Be as cheerful as you please, and laugh as often as you may, but let your laugh be refined in tone, and your voice sweet and musical. A subdued, sweet voice (that excellent thing in woman) is one of the graces which every girl should try to cultivate; her laugh should be clear and bell-like, and free from all coarseness of tone. Nothing is more unpleasant or shows greater want of good breeding than a rough laugh. Learn, then, not only to [illegible], but to converse with grace. If you are beautiful these will be so many added charms to your personality; if you are [illegible] and attributes will go [illegible] others forget your defects of good looks, and you will have the [illegible] that if you are not a beautiful woman you are at least a refined and [illegible] one.

ROUND-ABOUT NOTES.

The wreath which graces the head of a bride on her wedding day has been sung of by more poets, even the great ones like Schiller, than any other chaplet of fame or honour. In the early days the Jews saw in the wreath the sign of what, for them, was most beautiful and precious—the promised land; and of the myrtle the bridal crown was woven. Later this myrtle wreath became the symbol of womanly purity, and as such is worn by every girl-bride in Germany. In many parts of Germany the sprigs from which the wreath shall be twined must be taken at a fixed hour of the night between certain holy days. And in both Denmark and Germany families possess myrtle trees which have, for quite a generation or more, furnished the bridal wreaths at family weddings. In Greece the myrtle and the rose were considered the favourite flowers of Venus, the twining of the two together signifying the union of love and virtue. In England, France, Poland, and in America, the orange blossom reigns supreme in wedding chaplets. In Italy the white rose has taken the place of the evergreen and fragrant myrtle wreath. In Spain it is the red, red rose that adorns a bride, and Portugal's wedding flower is the carnation.

* * *

One of the most important requisites for a happy home is self-control, especially a good command over temper and tongue. There are many occasions when the peace of a family might be preserved by a timely recollection of the proverb that "silence is golden." Many of the efforts necessary for the preservation of peace and happiness in the home circle are of a negative kind, and consist in refraining from the things that jar on others, such as rudeness, impatience, fault-finding, and other "lesser forces that spoil the vine." Yet this negative work is as important as the most energetic exertions of bustling activity, perhaps even more so.

* * *

It is of great importance that courtesy be strictly observed in the family circle. It is the lubricating oil that makes the jarring machinery of life go on smoothly. Insist on your children observing the rules of politeness towards each other as strictly as towards strangers. Above all, let husband and wife do this towards each other, and the children will easily and naturally imbibe the same spirit and form the same habit. Innocent amusements are one of the elements of a happy home, and none is more refining than music. We should cultivate as a fine art the habit of talking cheerfully and good-humouredly in the family circle—excluding harassing and depressing topics, except when it is absolutely necessary to introduce them.

* * *

A little social enjoyment is necessary in order to complete the circle of home happiness. It is not right always to seclude ourselves in the privacy of home. We should sometimes open the doors, and admit others to share its pleasures and comforts. In doing this we shall receive as much as we give, for it will enlarge the circle of our ideas, our affections, and our sympathies. Flower culture is a great addition to the happiness and general attractiveness of a home. Indeed, no place seems thoroughly homelike without lovely and fragrant forms of flowers. Being a pursuit that is carried on in the fresh air and sunshine, flower culture adds to our health, besides gratifying our taste and inclinations.

* * *

But when all is summed up, it seems to me that the great value of home life lies in something better than even happiness itself. It gives us the finest and best discipline life could possibly afford. It teaches—if we will receive its training aright—lessons of unselfish love, patience, forbearance, forgiveness, self abnegation, and other lovely virtues and graces, such as no other school on earth could possibly afford. In a high state of development, home life reminds me of a well-trained orchestra, in which the members, by dint of practising with each other, and tuning their instruments (*i.e.*, their dispositions) to accord with each other, learn to give forth a lovely and harmonious symphony.

THE NEWEST FASHIONS.

Princess styles, so wonderfully popular for every sort of dress this autumn, have invaded the ranks of wrappers and lounging robes with the prettiest imaginable results. Instead of loose, full things, perhaps tied with a broad ribbon into a faint semblance of shapeliness, tucks or row after row of guaging, arranged something in the form of a deep girdle, define the waist. Sometimes a ribbon is used to gather the fulness in still more closely, but it is unnecessary except, perhaps, as an added bit of beauty.

* * *

Every soft, lightweight material under the sun is impressed into service for these princess robes; the most satisfactory from a practical point of view, being French flannel, not too light in colour for service, nor so dark as to be prosaic. The French flannel, chosen for one particularly pretty wrapper, had a ground of soft blue—a little deeper and less strong in tone than the usual turquoise blue. On it were scattered tiny garlands of wee bright roses in all the cheery, beautiful rose pinks. The ground was so well covered with them, that at a little distance the general effect was of a rich Persian design.

* * *

Small tucks formed the shallow yoke and defined the waist, and the collar was a plain little stand-up affair, redeemed from actual severity of line by a frill of ruching. The sleeves were just simple, moderately full ones, finished with straight cuffs, two or three inches deep, each with its frill of ruching. Unless you are an exceptionally chilly mortal, though, dispense with a high collar. Those broad, rolling collars, coming out to the tops—or further—of the sleeves are a hundred times more becoming, and there is more rest in having your throat absolutely free when you are relaxing. Crêpe de chine makes the most exquisite of all the princess robes; crêpe de chine, plain or embroidered—that is the loveliest sort of all if you are making a trousseau. And it is not quite the extravagance it sounds, for it cleans and dyes and even washes indefinitely.

* * *

If you use crêpe, trim it with narrow frills of lace, preferably valenciennes. Those soft old blues are ideal, touched up with lace; and, by the way, old blue is a very serviceable colour. A mandarin's coat formed the model for one curious lounging robe. The sleeves, from quite small at the shoulder, fan out into wide cuffs, turned back in the broad, flat way charasteristic of a mandarin's coat. Pongee in a medium shade of blue is effective made up in this style, especially when trimmed with bands of Chinese embroidery, with storks and dragons and wonderful impossible flowers done in gay, bizarre combinations of colour.

* * *

Almost every style of robe and wrapper, with three marked exceptions, is made on more shapely lines this year. These three exceptions are kimonos (they are still flourishing), these new mandarin's robes, and bath robes, though bath robes only in a measure, for lots of them are being made with much more of an attempt at fitted lines than hitherto.

* * *

In dressing jackets there is no end to the innovations, although most of the new ideas are expressed in little ways. Sleeves are shorter, following dress styles, and embroidery, when a jacket is embroidered at all, is confined to yokes and the top of sleeves, instead of wandering at random all over the front of the jacket. Most of the new jackets are belted in, too, either with girdles that hold the fulness in, or by inset girdles.

* * *

The graceful gown illustrated on this page is made in Vicuna cloth in the new shade of purple. The bodice is prettily draped on the shoulders, and the folded velvet belt is of a darker shade of purple than the gown.

A GRACEFUL GOWN
PAPER PATTERN, 1 6½, POST FREE.

MILLINER'S BOWS.

It is an easy matter for girls with deft fingers to construct the numerous pretty bows that give the latest touch and style to hats.

A very attractive bow is called the "Princess Tam," and is to be worn in the front hat. Take one yard of stiff watered ribbon three inches wide, fold it over, making it one-half inch wide, and lay it in eight loops on the brim of the hat up against the crown. No knot is put in the centre, but the bow is caught down firmly to the hat with a two inch buckle. The eight loops are then pulled up to stand as stiffly as the ribbon will warrant.

Among the very latest bows is the "Fish-tail." Take ten pieces of stiff ribbon, each one inch in width and five inches long. Cut each V shape at one end. Hold them in a bunch and tightly wrap the square ends with a narrow piece of corresponding ribbon, one end cut to a V, which ties at the side and completes the bow. This tight wrapping makes the stiff ends stand apart from each other. The "Fishtail" is worn as a cockade.

To make a "Virot" bow take one yard of silk cut on the bias and three-eighths of a yard in width. The edges are well turned in and blind stitched. The two ends of the silk are sewn together so that the strip becomes a circle. It is folded into four loops, two on either side, the upper ones longer than the lower ones, and the lower edge of each loop drawn tighter than the upper edge. The loop should be held in place with the fingers; the left loops are turned over the right ones, and the whole tied into a tight knot. This knot completes the bow. Put a jet buckle over the knot or fasten to the hat with stick pins.

Butterfly bows are still in favour. They are made from silk or satin on the bias, and are attempted only with brimless hats. Take two pieces eight inches wide and five-eighths of a yard in length. Lay together and sew around the edges of the wrong side, then turn and pull the bias ends to a point; tie the strip into a double bow, leaving the ends quite long. Place at the back of the hat, run a stick pin through the centre of each loop so that it looks like two. Pull the knot in the centre, and draw the pointed ends down over the hair.

———o———

How to Treat Shock.

Shock is an accompaniment of many, indeed, of all, serious cases of poisoning, says a doctor in the "People's Friend." Its onset may be suspected when the patient either complains of chilliness or is actually cold to the touch. The extremities and face show this first. The skin is pale, beaded with cold sweat about the nose and brow, and the temperature falls. The breathing is very quiet; the pulse is weak and rather fast. The treatment for shock—quite apart from measures to counteract the poisoning—consists in endeavours to keep up the falling temperatures and strengthening the failing heart-beat. Blankets or other warm coverings must be tucked round the patient. Warm bottles—proper hot-water bottles or india-rubber bags, or any large bottles filled with hot water, or warm bricks or plates—may be wrapped in flannel and laid to the feet or alongside the trunk, or placed across the abdomen. A fire should be lighted in the room. Warm drinks may be administered. A teaspoonful of sal volatile mixed with these is helpful. And, because respiration is feeble, it is very important that the air supply should be pure and plentiful, hence windows must be opened, and the room cleared of all but one or two necessary occupants, and the patient's clothes at neck and chest and waist must in no way impede the breathing.

A Simple Lesson in Embroidery.

The first point to remember in putting the material in the frame or hoop is that it should be stretched tightly and evenly and not on the bias.

A hoop is not advised for work on materials not washable, as plush or velvet. These materials should be stretched on a small, square frame, like a quilting frame.

The Needle.

For neat and uniform work, the needle is of great importance, and care should be taken in its selection. The eye must be smooth, and not too long, and large enough to admit the thread. The needle should be large enough to make an opening through the cloth, to avoid roughing the silk, but not so large as to leave open and uneven work.

Simple Outline Stitch.

Detail A and B is made by inserting the needle at the end of the outline to be worked, and taking a simple back stitch, the next stitch is made in the same manner, but the needle must come out at the end of the preceding stitch.

There is no rule for the length of an outline stitch, which should be governed by the size of the thread and the nature of the design, but the length once established, it should remain the same throughout, except where the outline curves, here it must be shortened, and the sharper the curve the shorter the stitch. A medium length for outline stitch is about ⅜ of an inch.

Stem Outline.

Detail C and D is worked from left to right; start stitch on outline a short distance from the end of stem or vein, insert needle downward at end of outline, bring the needle up on the outline about ⅛ of an inch in advance of point where it first came up to form first stitch and downward beside the first stitch ¼ of an inch, put the point of the needle under the preceding stitch each time. Figure 1 D shows the stem partly worked with the needle in position; note how the point is covered by the thread of the preceding stitch.

Long and Short Stitch.

Skeleton or half solid embroidery is most effective for decorative designs; for this work the long and short stitch is most frequently used. This stitch, while apparently very simple, in reality offers some difficulty to the beginner, because the tendency invariably is to make the stitches all the same length; this is fatal to artistic results. The stitches must be as irregular as possible on the inner edge. The outer edge must be kept true, close and even. The length of the stitches depends on the size of the petals and size of the thread used, but in no case should a stitch be longer than ¾ of an inch. If a petal requires a deeper stitch effect put in two rows instead of one. To take the long and short stitch bring the needle up from the back of cloth on the stamped outline of surface to be worked (see "A"), pull thread through, and insert needle at point "b"; when thread is drawn through stitch is completed. This is the detail of making the stitch; one stitch, however, does not constitute long and short "stitch," but several stitches of unequal lengths placed side by side; how these stitches shall be taken, whether longer or shorter, straight or slanting, depends upon the outline of the surface being worked. For instance, to work a flower petal with the long and short stitch: Begin petal at middle part of stamped outline, and work long and short stitches to the left and down the side to the base of petal, return to starting point and work to the right, down the right side to the base of the petal. Where a second row of stitches is needed proceed as for the first row, placing the second row of stitches between the stitches of the first row, but instead of keeping the outer end even, be quite sure that both edges are very uneven, the upper part of the second row of stitches must fill in the broken uneven spaces left in the lower part of the first row, and this second row must be carried forward, in the broken irregular lengths, to form the inner edge of the long and short second row.

Satin Stitch.

Satin stitch used commonly in solid French embroidery is either a straight or slanting stitch reaching entirely across the figure to be covered. Each stitch placed exactly parallel and close beside the preceding stitch.

Solid Long and Short Stitch.

This stitch is a modification of the Kensington, and has superseded the latter. The difference between the two is in manner of working, and not in appearance. Solid long and short stitch is a succession of rows of stitches blended one into the other and conforming always to the outline of figure being worked. Figure 4 shows method of taking the stitches, as follows: Petal A shows first row, Petal B shows first row and second row part way across, Petal C shows third row, Petal D shows three rows completed and fourth row part way across, Petal E shows surface of petal filled to the base with solid long and short stitch. Each row is made to show clearly in the illustration by means of light, medium, and dark threads.

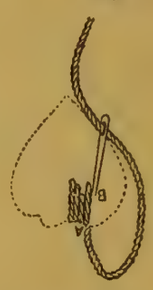

FIGURE 3
Long and Short Stitch.

FIGURE 4
Solid Long and Short Stitch

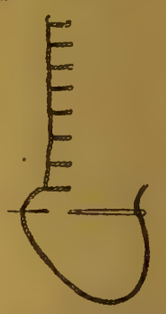

FIGURE 5
Simple Buttonhole Stitch.

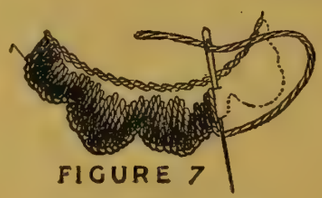

FIGURE 7
Long and Short Buttonhole Stitch

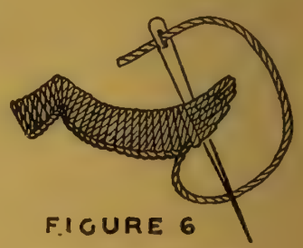

FIGURE 6
Simple Buttonhole Stitch

While the solid long and short stitch is merely a succession of rows of stitches, blended one into another, and taken in a direction that should conform to the outline being worked, yet there is a well-defined method for placing the stitches. For instance, the stitches forming the first row in the petal will be set close together, both on the outer and inner edge; the second row will be blended well back in the stitches of the first row but leaving a space the width of a stitch at their lower end. Into this space the stitches of the next row must be blended, and so on until the lower and narrower part of the petal is reached, where the stitches will be crowded closer together and no space can be left between (see Petal E).

Simple Buttonhole Stitch.

Work from left to right; insert needle in the upper line, bring point out on lower line, throw thread to the right to form loop; see that thread is under needle point, pull needle through. Repeat, setting the stitches close together to form a solid edge, or a short distance apart, as in Fig. 5. This is called blander stitch.

Fig. 6 illustrates simple buttonhole stitch worked over padding which is composed of stitches run into the fabric the long way of the scallop. The amount of padding used depends upon the taste of the worker.

Long and Short Buttonhole Stitch.

This stitch is used for ornamental borders in centre-pieces, doilies, dresser covers, etc. It is also used to work the outer edge of such parts of a design as form a portion of a border where the material is to be cut away. The scallop designed for this stitch need not be padded. A narrow border will not require more than one row of the long and short buttonhole stitches, but if the border is wide between the upper and lower edges, then another row of long and short stitches may be put in between the stitches forming the first row. Sometimes a third and fourth row will be needed, but only the first row should have the buttonhole edge. Be sure to have the inner edge of first and second rows very irregular. The scallop is not designed to be worked solid.

A Woman of the World.

When a person says she is a woman of the world, the phrase does not imply in the least that she is a worldly woman. Such an one enjoys only those delights that are essentially of the earth earthly. Pleasure is her aim, and fashion her god; but a "woman of the world" is an entirely different type altogether. She is, to give a concise definition, one who possesses a rare knowledge of the world, gained by a wide and varied personal experience.

A woman of the world is wise, and can sit in judgment on men and affairs, because she knows whereof she speaks, while a worldly woman, in many cases, has not a single sensible idea in her frivolous head.

A woman of the world is to be trusted. She is, as a rule, cool and calculating, with a discrimination worthy of a diplomat. She never reveals the secret of another, or tells anything of her own. She does more thinking than talking, but what she says always means something. She rarely condemns, for from her vast experience she knows that there is good in everyone, and that the motive for many a seemingly ill-advised action may be of the purest, though the thing itself seems grossly unconventional. The worldly woman, on the other hand, looks no deeper than the surface, and is influenced entirely by what society would say.

Sheet Lead Decorations for Doors.

No matter what kind of a cabinet, chest, or doorway you may have in the home, it will need hardware to complete it, and whether it be only a pair of strap hinges and a padlock or a more elaborate kind of ornamental fittings, it is still hardware, and one of the essential features in the complete object or piece of furniture.

Plain hinges and a lock will answer every purpose to swing a door or lid and lock it, but often on a nice chest or case it looks well to have some ornamental hinge straps, escutcheons, lock plates, or handles. All of these fixtures can be purchased at hardware

ESCUTCHEONS.

shops, but they are usually beyond the ability of the average person to make.

The accompanying illustrations and descriptions will enable anyone to make these fittings from sheet lead, and when given a coat of black paint it would be difficult to detect the difference between them and wrought-iron pieces.

Scraps of sheet lead varying in thickness from one to three-sixteenths of an inch can be purchased from a plumber, and with an old pair of shears, a penknife, one or two small chisels, and a light wooden mallet, the lead can be cut out and fashioned into any shape.

When making escutcheons or door plates, it would be well to remove the old plate from a door and lay it over a piece of lead, then marking the location of handle and keyhole.

A pattern of stiff paper is cut the shape of the ornamental piece to be made, and with a large pin scratch the lead around the edge of the pattern. Then with shears or chisel it will be an easy matter to follow the line.

The illustrations show designs for escutcheons, drawer pull, knocker and monogram plate, all of which can be made in sizes to suit the object or door to which they will be attached. It will not be possible to give any sizes, however, as that will have to be decided upon by the craftswoman who is fashioning them for a particular object.

It is not always necessary to cut a pattern to follow in marking the lead, although it is somewhat more accurate where two sides of an object are alike. The pattern can be drawn in free hand on the lead with pen and ink, or scratched on with any sharp-pointed object. If a small hand jig saw is available it will be found very useful to cut out the space openings where scissors cannot be used. A chisel will do this work very well, but it sometimes pushes the lead out of shape, and it is necessary then to beat it back again. To insert the fine saw it will be necessary to make a hole in the lead with a small awl or drill, and when sawing the lead it can be held down to the edge of a table, or if a small vice is in the house, that will be the best tool to hold the piece of lead.

Large oval-headed upholsterer's nails can be used to attach the sham hardware, or if a more artistic head is desired bellows nails, or those beaten from thick sheet lead, can be used and applied with slim steel wire nails, whose heads will be concealed in the lead if they are hammered in well. The edges of the lead plates can be beaten with a small hammer so the hammer marks will show and give the metal the appearance of hand-wrought iron.

Small drawer pulls of rings and eyes, also rings on bolts, can be had at a hardware shop, and with the back plates cut from lead, as shown in the illustrations, some very artistic bits of hardware can be made.

For bureau or book-case drawers, the back plate can be removed from the handles and keepers, and the new plate can be cut from lead to fit the same space the old plate occupied.

For front doors, drawer fronts, or fancy boxes, beautiful monograms, plain or within borders, can be cut from the lead, painted black, and applied with screws or nails as the case may require. These plates can be made in any size to fit the object, and if desired in copper or brass, that metal can be cut with a jig saw.

A very good black paint for metal can be made by adding dry lamp-black to brass lacquer until it is the consistency of cream, or the dry black may be added to thin shellac until a black paint is obtained. These blacks dry with a dead finish which is preferable to a glossy surface for metals. One or two thin coats should be applied smoothly with a soft hair brush, so no hair marks will show.

If preferred, Berlin black, ready prepared, may be used for painting the metal.

Cleaning Furniture.

If truth be told, modern mistresses and their maids are far too apt to think that cleaning furniture means simply annointing it with something out of a bottle or tin that the obliging shopman assures them is the very best furniture polish on the market. Whether it be the best or the worst, if a maximum amount

KNOCKER.

is applied with a minimum amount of elbow grease, it will completely spoil the surface of any polished woodwork within a very short space of time. Another point which ordinary people are prone to overlook is that the kind of polish that will suit oak furniture, for instance, will be ruinous to French polished mahogany. "Sauce for the goose" is certainly not "sauce for the gander" so far as the treatment of furniture is concerned.

Nothing is better for solid, dull-polished oak furniture, antique or modern, than beeswax and turpentine. The wax should be the best quality obtainable, so should the turpentine; the former must be shredded finely and dissolved in the turpentine in a warm, but not hot, place, until it is of the consistence of thick cream. Another recipe, also good, directs that one ounce of beeswax should be scraped into half a teacupful of linseed oil, and enough turpentine added to make the mixture creamy when dissolved.

The furniture should be thoroughly freed from dust before polishing. High-relief carving must be gone over with a dry, clean, long-bristled brush, and straight mouldings or groovings with a short-bristled, rather hard one. When every speck of dust has been removed, the beeswax mixture—if the furniture is oak—should be applied with a piece of flannel as sparingly as possible, and thoroughly rubbed in until no suspicion of stickiness remains, soft dusters free from fluff or nap being used. A final polish to flat surfaces may be given with an old silk handkerchief lightly rolled into a pad, and for deep-cut patterns, mouldings, etc., a polishing brush can be used.

French polished wood calls for different treatment. Unless in very bad condition, it is best to abjure the use of all polishing agents and merely wash it with a soft sponge wrung out of tepid water, rubbing it dry with soft linen cloths, finishing with an old silk handkerchief. If something more than this simple treatment is thought desirable, the furniture may be polished, after it has been washed, with a mixture of equal quantities of linseed oil, vinegar, and turpentine shaken well together, but only a very small quantity must be used, and it must be rubbed until every sign of smeariness has vanished. Furniture that has been deeply scratched may be dressed with two parts of turpentine to one part linseed oil, well blended and coloured to the requisite tint with burnt sienna or Vandyke brown.

For the leather seats of chairs a little of the beeswax and turpentine mixture may be used, or one-third sweet oil and two-thirds vinegar boiled together can be tried; it answers well in some cases, but the beeswax polish is preferable on the whole. Rush seats should be thoroughly brushed, the dust blown out of the crevices with a pair of bellows, and the seating then rubbed over with a cloth wrung out of salt and water.

How to Test a Typewriter.

Always look one over well before buying or renting.

The first test which a stenographer makes of a new typewriter is to ascertain whether all the keys work and whether the types are all perfect or not.

The sentence "The quick brown fox jumps over the lazy dog" is the one which is usually used, for it contains every letter of the alphabet. Many use "Now is the time for every good man to come to the aid of his country." But this one is not so good, for four or five letters are missing.

After punching out the test sentence on the small letters it should be repeated, using the capital letters. Then the figures should be punched in rotation, for they are often inaccurate.

The most vulnerable points in a typewriter are the keys and types; with a little use they are apt to fly off, and it is highly important to ascertain that these are all securely affixed.

Another point is the action. If the typewriter does not have a free and easy movement you are certain to have trouble with it.

In buying a second-hand machine, or in renting, always look carefully at the types, for usually they are worn uneven from use or have been jarred slightly out of place. If two or three types are inaccurate they will ruin the whole appearance of the typewritten sheet.

It has been found by many large firms that the renting of machines is much cheaper than the owning of them. A typewriter needs constant attention and repairs; usually the renting company includes the repairing in the rental contract, and that is where the saving comes in.

A typewriter is as delicate as a watch. Never attempt to repair a break yourself; it will probably evolve into a series of complications which will make a costly repair job.

Always keep the machine clean; the work will be neater and cleaner if the machine is clean and well oiled, and the life of the typewriter depends directly upon the cleaning and oiling.

MONOGRAM PLATE.

DRAWER PULL.

Try dipping lamb chops in lemon juice just before broiling them. They are delicious.

When broiling steak try brushing it over with butter and flour to keep the juice in.

Milk changed from a cool atmosphere to a hot kitchen will sour in a very few minutes.

If freshly cleaned tiles are rubbed over with paraffin they will keep clean for a long while.

A few drops of lemon juice added to scrambled eggs while cooking will improve them.

ROUND-ABOUT NOTES.

At the beginning of this year women physicians were practising successfully in 123 cities and towns in England and Wales, 46 in Scotland, and 20 in Ireland. In 63 cities and towns in India, 14 in China, and 10 in South Africa, there were women practitioners. Seventeen women have been Gold Medallists at London University from 1881 to the present year. And the Englishwoman's Year-Book for 1907 shows a long list of hospitals in the United Kingdom which have women on their staffs.

* * *

In Australia and New Zealand women hold many important medical positions. In Victoria alone thirteen women hold medical appointments in hospitals. Canada has the fewest women doctors of any of the larger British colonies, but the professorship of physiology at Bishop's College, Montreal, and the directorship of the clinical laboratory in the Royal Victoria Hospital of the same city, are held by Dr. Maria Bruere, an M.D. of the Universities of Paris and Edinburgh.

* * *

A boat large enough to carry six persons may be carried in a valise or corner of a trunk. This is because the principle of the pneumatic tyre has been applied with such success to boat building. These boats are of two kinds, either of rubber cloth inflated with air and divided into two compartments, or of a series of inflated tubes coiled lengthwise. These are fitted with pneumatic seats, and the oarlocks are buckled on the sides. When deflated they are reduced to the smallest conceivable weight and compass, and the process occupies only a few moments.

* * *

Experiments prove that these craft will not founder in the heaviest seas. They are so buoyant when filled with water that they will float a weight of several hundred pounds, while the rubber of which they are constructed is absolutely proof against puncture. This invention promises an entirely new era in boat-building for purposes of sport and travel.

* * *

The scientific journals are finding out from their back files that the pneumatic tyre and the X-rays were both matters of half a century ago. One of these journals finds in its issue of May 8th, 1847, the following paragraph: "A number of cabs with newly-invented wheels have just been put on the pave. Their novelty consists in the entire absence of springs. A hollow tube of indiarubber about a foot in diameter inflated with air encircles each wheel in the manner of a tyre, and with the addition of this simple but novel appendage the vehicle glides noiselessly along, affording the greatest possible amount of cab comfort to the passengers." And the following in another issue of the same year: A Belgian savant says he has just discovered that electric light directed on the human body makes it so diaphanous as to enable the arteries, veins, and nerves to be seen at work, and their action to be studied." Whether this light was produced by methods such as those used by Rontgen is not known, but its properties seem to have been somewhat similar.

* * *

Contrary to the practice that prevails in other countries, the deference shown to women in Austria increases with age. No Austrian would ever dream of receiving a lady's extended hand without bowing to kiss it. Children, even when grown-up, always touch the hands of their parents with their lips before venturing to raise their faces for a kiss. Girls and young married women, no matter how lofty their station, do not consider it in any way beneath their dignity to kiss the hands of ladies who have attained a certain age, and the result is that in Austria a greater degree of sympathy prevails between young and old women than anywhere else in the world. Indeed, Austria may be described as the Paradise of old ladies. Nor is this polish of manner confined to the relations that exist between men and women, or among the women themselves. The men are courteous in the extreme to one another, even in cases where the closest kind of intimacy prevails. Thus a couple of officers may be sufficiently warm friends to have no secrets from one another, and to address one another with the pronoun "du," or "thou"; but this association is never regarded as warranting the neglect of those many little courtesies and manifestations of regard that are held in Austria to be indispensable to social intercourse.

Hygiene.

Removing Obstacles in the Throat.

Nothing is so apt to create a scene of confusion in the family as the accidental disappearance of some foreign body into the throat or windpipe of an infant or child.

Why children are for ever putting bodies where they do not belong cannot be explained, but it is none the less true that they are incessantly placing anything that is small enough into their mouths; so constant is this that it can be called one of the habits of infancy and early childhood.

The entrance of a foreign body into the windpipe usually occurs in this manner. The child may be playing or engaged in some absorbing occupation when its attention will be suddenly called to something else; it has been toying with some small object which it has taken in its mouth; its suddenly diverted attention will cause the child to take a deep breath, and then the foreign body, whatever be its nature, is drawn in with the inspired air. Very often the child will be made to laugh while it has its mouth full, or has in it some small plaything; the act of laughing is preceded by a long-drawn inspiration, and this carries the foreign body with it. Again, the object may drop down the windpipe without any such exciting causes. Every mother will remember many occasions when baby was apparently choking from some article of food, and yet the intruding substance was promptly dislodged, and no harm ever came from it. Nature usually effects the dislodgment or aids it by causing coughing or vomiting. But suppose, as sometimes happens, that such spontaneous relief does not occur, what should be done?

If the foreign body be of some size it will probably be arrested in the throat before it reaches the windpipe; this often happens with pieces of meat, which the child swallows before it chews them properly. Under these circumstances it is proper to put the finger into the child's mouth and endeavour to extract the offending mass, and this attempt will usually be successful. If, however, the foreign body be of small size, it will often be drawn in until it reaches the vocal cords—two small bands of tissue which are situated at the upper part of the windpipe, and are the agents through which sound is produced.

Bodies are usually arrested here, because one of the functions of these vocal cords is to contract tightly whenever any foreign body attempts to intrude upon the sensitive walls of the windpipe. Under these circumstances, if the child does not cough or vomit, and thus dislodge the body, the small sufferer should be inverted, and by a moderate beating of the back an attempt to effect the dislodgment be made. The child should be laid upon the lounge with its face down, and then the feet grasped and raised above the level of the head. This will often be successful. If the foreign body has already reached the windpipe below the vocal cords the method just recommended may still be successful, though not as often as when it has not entered so deeply.

Such methods are often efficacious, and are harmless. They will not push the intruding substance farther down. Should they fail the services of a physician must be called in immediately, for instrumental aid in securing dislodgment or removal of the material is necessary.

Health Notes.

Sedentary habits, with indulgence in fat meats, sweets, pastry, and all rich foods, have often caused biliousness. A regulation of the diet, and a glass of hot water taken before meals and at bedtime, will serve to prevent the attacks.

The health is injured by tempting the appetite with bitters and nicties when the stomach says no, and forcing food into it when Nature does not demand, and even rejects it; gormandising between meals is also a way to injure health.

Chloroform liniment is excellent in cases of sprains and bruises, and is made by mixing two ounces each of chloroform, ammonia, spirits of camphor, and sweet oil. After rubbing the liniment well into the skin, wrap the affected part in flannel.

An afternoon bath, followed by a fifteen minutes' rest, lying at full length on a couch, with the eyes closed, in a darkened room, whether you sleep or not, will be of inestimable value to the woman who wishes to keep in good health and cheerful spirits.

Worcester China, 1768-1783.

By H. W. Lewer.

Scale Blue and Powder Blue.

"Hence beauty which repairs the waste of war,
Beauty may triumph on a china jar;
And this, perhaps, with stronger faith to trust,
Than the stained canvas, or the marble bust."
—*Cynthis.*

A correspondent, writing in the "Annual Register" of 1763, mentions: "I have seen potteries of all the manufacturies in Europe. Those of Dresden, and Chantilly in France, are well known for their elegance and beauty. With these I class our own of Chelsea, which is scarcely inferior to any of the others. . . . We have, indeed, many other manufacturies of porcelain which are sold at a cheaper rate than any that is imported, but except the Worcester, they all wear brown, and are subject to crack, especially the glazing." This letter was written in 1763, and by 1768 the paste and glaze of Worcester had improved still further, being of a high translucent nature, with luscious cream-white glaze.

In a previous article we dealt with the first period of the Worcester porcelain, which carried its hall-mark in the simplicity of shape, design, and colouring; also for the reproduction of Oriental patterns. This period (1756-1768) closed with the arrival of several artists and workmen at Worcester from the china factory at Chelsea, which was then at the height of prosperity. These introduced the elaborate shapes, ornate painting, and gilding which was then in vogue at Chelsea. The productions of Sèvres and Dresden largely influenced the craftsmen of Chelsea, and the style and characteristics of these factories became, so to speak, the models for the artists who entirely revolutionised the output of Worcester china from 1768 to 1783. This is known as the second period, and it was during these years that the artistic excellence and fame of Worcester porcelain will ever rest. The paste and glaze, the shapes, the rich enamel colours employed, the technique of the painting on the elaborate vases, jars, dishes, tureens, plates, tea-services, etc., show not only the influence of the school in which these artists had been trained, but in addition (as so often has been the case) the marked individuality of the English craftsmen. Rising above slavish imitation and copying of his model, he gave a characteristic English touch, which enables the connoisseur and collector at a glance to distinguish a specimen of old Worcester of the second period.

The first advertisement of the sale of the new productions appeared in December, 1769, although even in 1768, according to one authority—J. E. Nightingale—served important suites of Worcester vases, after the style of the best Chelsea decoration, had been made. Mention is made in this first sale of "a set of three elegant hexagon jars and covers of the very rich Mazarine blue and gold, beautifully enamelled in birds and insects." These jars, although described as Mazarine blue, were painted in exotic birds, with scale-blue ground, showing that "blue-scale" ground, and, in all probability, the "powder blue" were both utilised as a decoration by 1769. This practically gives an approximate date of their introduction. By whom the colour and method of its use were introduced is not known, but there is little doubt it must have been by one of the artists from Chelsea. Cobalt had lately been introduced as a colour, by Littler, of Longton Hall China Factory, and the result of experiments at Worcester gave us this intense blue. It was called "scale blue" from the fact that in using the colour, the piece was enamelled first in blue, and then a darker blue was painted over this in a pattern of the scale of a fish, giving a richness and depth of colour which has never been excelled. It is stated by Mr. Binns in his book entitled "The First Century of English Porcelain," that "the scale blue ground was probably done at two burnings, first the scale being painted in the darker blue on the brisque . . . the ware was then burnt or heated in order to fix the scale; it was then pencilled over its whole surface with the blue ground colour, then fired in the glost oven."

"Powder blue" was obtained by dusting the colour in the form of a fine powder on a greased or oily surface, and then fired in the oven, the heat evaporating the oil, leaving the colour adhering to the piece. The "scale blue" and "powder blue" were applied before the glaze—being technically known as "underglaze-blue." Both were principally used for the finer productions of the factory, and in addition to the jars, vases, etc., we have already spoken of, these colours were utilised for the production of costly coffee, tea, and dessert services. The favourite designs were flowers, fruit, exotic birds, figures, and landscapes. Some of the vases decorated in these colours reached a height of nearly 2 ft., being a mass of brilliant colour and gilding. The shapes were often rococo, with scrolls, or borders of scale blue and gold. Such was the love of decorating porcelain at this period, that a story is told of an artist who was reproved for painting too well an inferior piece of ware, that he exclaimed: "I would paint a brick if they gave it to me."

SPECIMENS OF WORCESTER CHINA.

Little is known as to the painters who were employed at Worcester, but Donaldson, was responsible for many of the costly vases produced, these generally being figure subjects. O'Neale was an artist who excelled in animal-painting. In a little work published in 1865, on the Worcester factory, speaking of the fine examples produced during the second period mentioned there, "indicate to us the oversight of a man of superior taste and the employment of first-rate workmen. We are sorry that we know nothing of the former, and very little of the latter. The names of Dontil, Duvivier, Willman, Dyer, and Lills, have been quoted to us as workmen of superior character, who possibly came from Chelsea; we honour them generally in their works, but we would gladly have recorded a more distinctive testimonial to their ability."

During the whole of this period, the factory appears to have been worked at a loss, disagreements occurred between the partners, and in 1772 the factory and plant was advertised for sale. Dr. Wall, the founder, still had faith in the enterprise, and the works were purchased, on his behalf, by his son, John Wall. When Dr. Wall died in 1776, the beginning of the end became foreshadowed, and in 1783 the factory was purchased by Thomas Flight, the agent of the Company in London. Flight was a strong business man, and the artistic side had to give way to more practical principles. Casting aside the costly productions, and developing the works in producing cheaper and more serviceable china, to the exclusion of the *objets d'art* which had made the splendour and name of Worcester known throughout the ceramic world.

The marks during this second period are nearly all in underglaze blue, although there are instances of red and gold impressed on the the glaze. The open crescent, the solid and shaded crescent, were much utilised, but the so-called "square-mark" in underglaze blue, supposed to be in imitation of a Chinese sale mark, is the most prized by the collector of to-day. Increasing in value are the "scale blue" and "powder blue" Worcester of this period, and when we read of ten and even twenty pounds being given for a small teapot, the ordinary collector can only look with envious eyes on the collection of his more fortunate brother. Rare and choice is such an assemblage, and to those who have wealth we say buy whenever it can be purchased. In every sense of the word it is "a gilt-edged investment."

How to Clean Pictures.

Engravings.—To clean an engraving, put it on a smooth board, cover it thinly with common salt finely powdered; squeeze lemon juice upon the salt so as to dissolve a considerable portion of it; elevate one end of the board so that it forms an angle of about 45 or 50 degrees with the horizon. Pour on the engraving boiling water from a tea-kettle until the salt and lemon juice are all washed off; the engraving should now be perfectly clean and free from stains. It must be dried gradually on the board or some other smooth surface, being secured by drawing or other pins. If dried by the fire or in the sun it will be tinged with yellow.

Chromos.—Dampen a linen cloth slightly and go over them gently. If the varnish has become defaced, cover with a thin mastic varnish.

Oil Paintings.—To clean them, first brush them free from dust; then wash them with warm milk diluted with water; rub with a piece of flannel dipped in turpentine, and then with a dry flannel.

Gilt Frames.—Clean them with a brush dipped in rain water in which flour of sulphur has been stirred. Or, wipe with a sponge wet with turpentine..

Bronzes.—Plunge first into boiling water until warm, then clean with strong soapsuds and rub with old linen cloths until perfectly dry.

Alabaster.—Strong soap and water is good for cleaning alabaster; if too much discoloured, make a paste with quicklime and water, cover the article with it, and let it remain all day; wash off with soap and water, rubbing hard where stained. Or clean with diluted muriatic acid, having previously washed it well.

To Mend Glass.

Pound flint glass as fine as possible in a stone mortar or on a painter's stone. Mix it with the unbeaten white of an egg. Rub the mixture on the edges and bind together, having fitted the pieces carefully. Set aside for some days or weeks, and one can scarcely discern the crack at all. It will not come apart.

From Falmouth.

(Continued.)

By Eliza Turck.

Our readers will call to mind the little notice given in a former supplement of the "Mark Lane Express," of the interesting old house in Bell's Court, Falmouth, and of the handsome design drawn from one of the chimney-pieces there. Another of these effective panels is illustrated in Fig. 1; the design is one that could be worked out in a great many ways and for various purposes. For instance, as an over-door decoration it would be entirely appropriate, or at the back of a cabinet or shelves, whilst the centre portion is

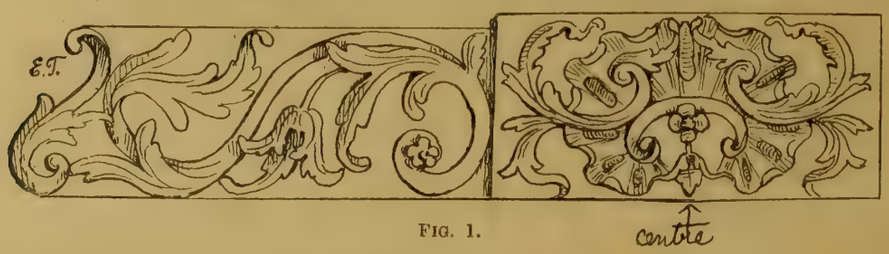

Fig. 1.

well suited for the front of drawers and small doors.

The original is of course in carved wood, but it is hardly necessary to point how perfectly the design would be adapted for treatment in pyrography, marqueterie, gesso or metal-modelling. Copper relief on a green stained ground or albo-metal on poker work are both most effective, and quite uncommon.

Fig. 2 represents a quaint old stove, set in the chimney-piece from which the panel in Fig. 1 is drawn. It is of a most unusual pattern with its curved fronts and roomy hobs; the ornamentation is in relief, and very carefully wrought, is of a character that would admit of the design being carried out in an infinite number of ways. Perhaps it may appear rather a strange idea to suggest that the plan of the range is one admirably suited for a small cabinet or set of shelves, but on consideration it will not turn out to be so out-of-the-way. The scheme would be to make cupboards at the two sides, with the doors having the curved pieces attached, just as in the original, but opening on the straight upright line. The whole middle part fitted with bookshelves and no doors. The carved panel, Fig. 1, would be just the thing for the back. Marqueterie might possibly be the best treatment for the purpose, the little figures, wreaths, etc., are exactly the style so often seen in the best old work, and two stains, let us say satinwood and walnut, should be all that is needed.

A Toy Chest for the Nursery.

For the child who has a number of small toys and no particular place to keep them, a suggestion is given in the illustration for a chest that any mother or father can make from two boxes and some thin boards for partitions. The lower box is 24 in. long and 18 in. wide. From 10 to 15 in. in height will be sufficient, and to the front edge of the chest a lid is made fast with hinges.

Above this another box is mounted, in which partition and shelf will divide the space into four compartments. One partition in the bottom box will divide the space into two compartments, and on the top of the upper box a wall plate can be cut and made fast. Handles at the ends and on top of the lid will make it easy to move the box and lift the lid.

How to Clean Windows.—To begin with, have the windows thoroughly dusted every day when the rest of the room is done—window sills, ledges, sashes, and all. It stands to reason that if the windows are thoroughly dusted regularly they will not require to be washed or cleaned nearly so frequently. When the cleaning is inevitable, have ready a muslin bag full of whiting and two wash leathers. Dust the glass thickly with whiting, then rub it off thoroughly with a damp—not wet—leather, and finally polish it well with a clean, dry one. This is a method pursued by workmen when cleaning the windows of a new house, and gives a polish unknown to the glass washed in the ordinary way. Another excellent method for giving brilliancy to glass is to damp a cloth with spirits of wine, rub the glass well with this, and then polish as before with a clean, dry leather.

Cleaning and Re-varnishing Old Oil Paintings.

The art of cleaning oil paintings has been very much neglected, and many valuable pictures have been destroyed in consequence of the persons operating upon them employing the same means for removing all kinds of dirt, as they do for dust and varnish commingled, so that frequently a valuable painting has actually been scoured away.

Most paintings are varnished, and as the nature of the varnish differs, so also must the means by which it is removed. In some cases it is better to allow the varnish to remain untouched than to interfere with it, as the painting might be damaged in the latter instance.

The materials required consist of water, olive oil, pearl ashes, soap, spirits of wine, oil of turpentine; sponge, woollen and linen rags; essence of lemons, and stale bread-crumbs.

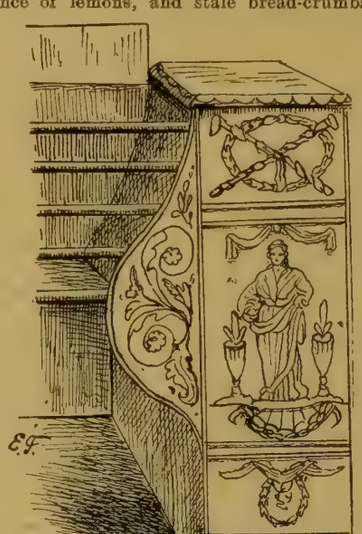

Fig. 2.

Soluble varnishes, such as sugar, glue, honey, gum arabic, isinglass, white of egg, and dirt generally, may be removed by employing hot water. To know when the painting is varnished or coated with such materials, moisten some part with water, which will become clammy to the touch. To clean the picture, lay it horizontally upon a table or some convenient place, and go over the whole surface with a sponge dipped in boiling water, which should be used freely until the coating begins to soften; then the heat must be lowered gradually as the varnish is removed. If, however, the coating is not easily removed, gentle friction with stale bread-crumbs, a damp linen cloth, or the end of the forefinger, will generally effect it, or assist in doing so. White of egg may be removed (if not coagulated by heat) by using an excess of albumen (white of egg and cold water); but if coagulated, by employing a weak solution of a caustic alkali as potash.

Coated dirt is removed by washing with warm water, then covering with spirits of wine, and washing off with water, but without rubbing. The process is to be repeated until the whole is removed.

Spots should be washed with warm water, dried, with soft linen rags, and covered with olive oil warmed; after the oil has remained on the spots for twenty minutes, gentle friction with the finger should be used, the foul oil wiped off, and fresh laid on, until the spot disappears. Should this fail, spirits of wine, essence of lemons, or oil or turpentine may be carefully applied, observing that only such parts as are dirty must be covered with them; they are to be cleaned off first with water and then with olive oil. Sometimes even these means fail, and then strong soap-suds, applied directly to the spots, and retained there until they soften or disappear, will prove effectual. The spots must then be washed with water.

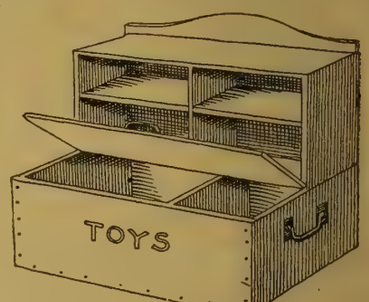
In employing these means, as, indeed, throughout the whole process of cleaning, the greatest care should be taken in removing any coating upon the surface of a painting, and it is, therefore, better to employ mild measures first, then, if they fail, to use stronger; or, in the event of these not succeeding, to very carefully apply the strongest. For our own part, we prefer leaving the painting in a half-cleaned state, as it sometimes happens that, with the most scrupulous care, under experienced persons, some of the fine touches or delicate tints of a painting are damaged by the process. When we state this we mean only such pictures as are covered with insoluble varnishes—varnishes of gum-resins or old oil varnishes, which cannot well be removed without injury to the painting.

Varnishes of long standing are very difficult to remove, as they generally consist of linseed oil combined with gum-resins, and if not easily taken off by the means given below, it is better to leave them as they were.

To remove these varnishes, use spirits of wine in the manner recommended for coated dirt, or oil of turpentine, which requires greater care than the spirits of wine, or warm olive oil; but if the varnish is very hard, the painting should be washed by means of a sponge, with a warm solution of pearl-ash (an ounce to a pint of water) until the coating is removed, when the surface must be washed well with fresh water frequently renewed.

Varnishing.—Oil paintings are varnished to protect them from injury, whether the result of chemical or mechanical causes, and to give a brilliancy to their colouring.

Varnishes for pictures should be capable of being easily spread without leaving pores or cavities, able to resist the action of the atmosphere, and not liable to crack or scale, and should be white, light, and quite transparent, so as not to impart any tint to the colours, either by combination or their own colouring, Another essential property is that of being easily removed without injuring the picture.



Varnishes should be kept in clean, dry, well-corked bottles, with a label on each.

Materials.—Flat or varnish brushes of two sizes, and mastic, copal, and white lac varnishes. Some persons employ a solution of gum arabic, the whites of eggs, isinglass size, and oil varnishes, but they are bad.

To Lay on the Varnish.—Observe that the painting is thoroughly dry, and the surface free from dust or dirt; then spread the varnish over the painting quickly, evenly, and not too thick, taking care that the strokes are broad, and that they do not cross one another. One coat should be quite dry before the next is applied, and it is better always to apply the varnish in a warm place, to prevent chilling.

If the first coat becomes dull or rough, it should be removed, and a fresh one applied.

Turpentine varnish should be laid on gently and sparingly at a time, because the oil of turpentine is liable to combine with the colours and destroy the effect of the painting.

A TOY CHEST FOR THE NURSERY.

It spreads easier, and is not so liable to chill as spirit varnish.

To Clean Gloves.—Put the gloves on hands, or lay them flat on a clean board. Take equal parts of finely-powdered alum and Fuller's earth, and brush the mixture well into the gloves. Let the gloves remain for an hour before brushing out the alum and Fuller's earth. Dust them well with fine bran and whiting, after which give them a good shaking, to free them from powder, and they should be perfectly clean. Should the gloves be very greasy, this method may not be found to affect the much-soiled parts. These may be cleaned with burnt bone-powder, and then rubbed with a piece of flannel dipped in dry Fuller's earth.

THE NEWEST FASHIONS.

The pretty gown, of which front and back views are given on this page, is composed of vieux-rose cloth, trimmed with bands of the same material and a silk fringe.

* * *

There is always much discussion about whether it is better to place voile over a lining the shade of the material or on a white foundation. As a rule, it is safest to match the voile as nearly as possible in the silk lining, for, of course, if laid over white or over a lighter shade much of the colour of the material is forfeited, and with pale and delicate shades there is little question that there should be an underslip of the exact colour of the dress itself. If, however, one desires a gown that will look smart and be appropriate for really elaborate wear, but which must at the same time be really useful and be able to stand considerable knocking about, then a dark green or a deep blue, relieved by considerable white at the neck and sleeves, will undoubtedly answer the purpose well. When in search of a costume that will be at once really smart and effective and yet really serviceable, then, as so much depends upon the colour, it is well to procure a light shade of blue or an unusual shade of raspberry-pink or a good deep mauve, for these colours are all smart and also do not become readily soiled.

* * *

The same rules hold good for a stripe or fancy voile as for the plain surface. If the colour is naturally rather pale and indefinite, then the only way to save it and give character to the dress is to make it up over its own colour. When, however, a dark blue check or a striped green and white or brown and white is selected because it is to be a more useful gown, then the sombre tones will be relieved by a lining of a lighter shade of the same colour or by white. With a check or plaid or two or more colours, as green and blue, the colour of the lining should be in one of the shades most becoming to the wearer and the trimming of the gown must bear out the same scheme. Frequently a dark blue check or plaid will be made up over a shot green and blue silk taffeta, and this has a most artistic and smart effect.

* * *

Effective embroidery is every bit as fashionable as ever, and there are conspicuously few of the more expensive costumes, whether for afternoon or evening wear, that have not more or less elaborate handwork in their construction. Sometimes a sharp note of contrast will be introduced in the embroidered bodice or the revers bordering the lace vest, and then, again, a delicate yellow voile will have considerable embroidery worked in some way upon the bodice, and all will be done in two, or, at most, three shades of the same yellow. Gold and silver threadwork is used on many of the newest models this autumn, but, unless used with exceeding cleverness, is too heavy for the more delicate materials.

A Good Face Cream.

Take of white wax, ¼ oz.; oil of sweet almonds, 1½ oz.; curd soap (in fine shavings), ¼ oz.; glycerine, 3 oz.; borax, in powder, ¼ oz.; rosewater, 3 oz. Perfume with a few drops of oil of bergamot or otto of roses. Proceed by dissolving first the finely-shaved soap in the rosewater, which should be done by placing them in a good sized bottle with a wide neck. Then allow the bottle to stand in a pan of water, which should be put on a gas stove, and gentle heat applied. When all the soap has dissolved, add the glycerine and borax, and shake well together. Now put the white wax with the almond oil in a jar or bowl, placing it in a pan of water in the same manner as the soap, and apply gentle heat until the wax is dissolved. Pour the oil, while warm, into the soap solution, and shake well up. Continue the shaking now and again until it becomes cold, when the perfume may be added. The finished product should be white and of a nice creamy consistence. Preserve it in a bottle and shake well each time before using.

An Eye for Colour.

Should there ever be formed a universal sisterhood, may the garb of the order be pink hued. That this shade is really becoming to the greatest number of people would then be demonstrated. Many women would look well for the first time. Often it is in very truth "the pink of perfection."

A general delusion is that anyone can wear black and look well. Perhaps its association in many minds with respectability helps this. With bright trimmings, black is well suited to the fresh complexion of youth. Sallowness arrayed in black takes on a deeper shade.

Many brunettes believe red to be their only colour. There are wonderful possibilities for them in gold, tan, orange, and terra-cotta.

The red-haired woman, far from being an object of ridicule or sympathy, should be one of envy, because of the many colours that she can wear. Grey, it would seem, was mixed especially for her. No other white-gowned woman can equal her. She can choose from among lavender, violet, blue, Nile green, black, and the darker shades of brown, green, and blue. Of course, she is one exception to the rule of pink.

Magenta, crushed strawberry, rose, and any of the uncertain shades are becoming to but a few. It is not safe to venture much with these.

But to these few suggestions nothing better can be added than a simple rule of selection: "Observe, think, experiment."

Old Chiffon made New.

Don't throw away chiffon, as so many do, when it becomes soiled. Quantities of this expensive and lovely material are wasted each year that could be saved, and brought to do

A NEW GOWN. FRONT AND BACK VIEW.

duty again, almost as good as new. It requires care and a little extra trouble, but it is certainly worth both of these. Make a lather of good white soap, and let it stand until nearly cold. Put the chiffon in it and let it soak a while. Then shake it gently around in the water, passing it between the fingers, but not rubbing it. Now shake it out in clean water, changing the baths until there is no trace of cloudiness in the water. Fill a cup half full of water; drop in a morsel of pure gum arabic, and let this dissolve. Add to it a few drops of white vinegar. Dip in the chiffon. Don't squeeze or wring it dry, but lay it between very soft white muslin and gently pat it with the hand. Have an iron moderately hot and iron the fabric on the wrong side, having tissue paper between it and the iron. Embroidered mousseline de soie and other filmy tissues can be renovated by the same process.

Gardening in October.

We have now reached a period of the year when it is rather difficult to bring oneself to decide what action to take with regard to the removal of dying plants which still continue to bloom and make us believe that winter is still far behind. There is still sufficient brilliancy to remind us that the summer has not yet wholly departed, as our annuals are bearing many blooms owing to the exceptionally warm and bright weather which prevailed throughout September. To tear up sweet peas and other plants too numerous to mention would strip the ground and render spaces at present pleasant to the eye barren for some weeks. Still, the time is at hand to consider what is necessary to be done for the coming spring.

Bulbs should be planted this month, and, therefore, we must not hang on to decaying plants because of the record sunshine in September, but resolve to clear some parts of our garden and set to work and put in bulbs; besides, we must not neglect the transplanting of spring-sown perennials. These should be in their permanent places for next season. The development of these largely depends upon the turning over and preparation of the soil, which should be mixed with plenty of rotted manure, and the plants set far enough apart to enable them to grow freely. Mixed hyacinths with choice names should be potted at once in a rich, sandy loam, composed of two parts of well-rotted turf, one part well-rotted cow manure, with a fair proportion of silver sand, or, to avoid expense, any river sand will do. This has a tendency to keep the soil open and pure.

Place the bulb in the pot with the crown or apex just above the soil, and see that your bulb is entirely whole and free from decay. I greatly favour very rich soil, well manured, but this must be old and well-rotted. It cannot be too rich, but it is of the greatest importance to use only old material. I would much rather grow weeds than imperfect, half-starved plants.

The single and double white, blue, lilac, primrose, and pompon hyacinths are far too numerous to mention here, but some of the varieties which have been especially selected by seedsmen for pot culture and bedding comprise those which produce most brilliant colours, and the finest spikes and forms. There is no question that bulbs potted in October produce the best blooms. The narcissus, an elegant and charming spring flower, should also receive our attention at once, and the treatment should be the same as the hyacinth. It is easy to cultivate, and may be grown in pots for room decoration. Not more than three to six bulbs should be placed in a 5-in. pot.

G. W. Thomson-Price.

(To be continued.)

To Polish Mahogany.

The ingredients: Quarter lb. of best white curd soap, 1 pint of water, ¼ lb. of white wax, and 3 oz. of common beeswax. Mode: Cut the soap very fine, put it into the water in a pipkin, and hold it over the fire till dissolved; then add the wax and beeswax cut into very small pieces. When the whole is incorporated the polish is fit for use. Clean well the surface of the table, then dip a piece of flannel in the varnish while warm, and rub the table all over with it; leave it for the space of an hour, then rub it with a furniture brush in all directions, and afterwards polish it with another piece of clean flannel. This will produce a beautiful glossy surface.

ROUND-ABOUT NOTES.

Women pilots are employed by the Danish and Scandinavian Governments. Many Scandinavian captains say they prefer them to men, because they have more patience. Norway and Sweden also employ women in the mercantile marine; they do the same work as the men before the mast, and take their turn at night lookout duty.

* * *

Among the qualities most to be desired in a girl's character is a high sense of honour. It may happen to you, for instance, to be visiting in the home of a relative or a friend, where there may be a little friction at the table, or where some anxiety arises about the conduct of a member of the family. No matter what you see or hear, in such circumstances you are bound, if you are an honourable person, to be silent about it, neither making comments nor looking as if you could tell something if you chose, nor in any way alluding to what is unpleasant at any future time. A guest in a home cannot be too careful to guard the good name of those under its roof, for it is an honour to be a guest in the first place, and honour is demanded in return.

* * *

There is a story told of the late Sir Edward Burne Jones which shows that he loved children very dearly. It is said that when his small children were naughty, their mother punished them by standing them for a few minutes in the corner with their faces to the wall. This seemed to be very severe punishment to their beauty-loving father, so he painted in the corners where his children were punished sprays of flowers, saying, "If they have to go in the corner, I am determined they shall enjoy themselves there."

* * *

The inhabitants of the Scilly Islands have had many occupations. At one time they lived as wreckers, and at another period they sold early potatoes at a great profit. When the latter trade was killed by the competition of the Channel Islands, they betook themselves to the flower industry. For the last ten or fifteen years the cultivation of flowers, chiefly narcissi, has ousted almost every other occupation of the five islands. In St. Mary's alone nearly a-quarter of the cultivated area of the island is devoted to flower growing. In the month of February of last year three hundred and twenty-two tons of flowers were exported from this one island. About two hundred boxes go to the ton, and each box contains from three to twelve spikes of flowers. As soon as the forcing of the narcissi is over the houses are filled with tomato plants, and for months there is a continuous supply of this popular fruit.

* * *

Cat lovers may be interested to know that the United States Government supports hundreds of cats, contracting for the supplies necessary to their subsistence very much as it does for its soldiers. These cats are employed by the Government, their wages being simply board and housing, to protect the storehouses of the Government from rats and mice. The Government has to keep large supplies of food for the army—including many things that are very greatly enjoyed by rats and mice—and if cats were not kept in sufficient numbers to protect these stores, the Government would lose large sums of money, for not only would the food disappear, but boxes and packages would be nibbled, and the food wasted and destroyed in handling.

* * *

At Margate can be seen a most curious and interesting relic of pagan times. It was discovered there in 1837. It is a subterranean passage and cavern supported by a central column and arched roof, whose walls are formed of a beautiful mosaic of small English shells embedded in cement. An area of two thousand feet is ornamented in this way, with panels containing various symbols, including the sun, moon, stars, fire, flowers, fruit, fish, birds, and implements of warfare. There is no emblem of the Christian faith, and it is conjectured that this chamber was constructed about two thousand years ago as a burial place by some wealthy person during the Roman occupation of Britain.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by "PEPITA"

THE NEWEST FASHIONS.

The models shown by the leading costumiers at this season of the year are the ones which practically set the fashions for the next six months to come, if not for a year; though, of course, a certain amount of weeding and elimination is necessary before ideas settle down to a definite basis. Everywhere one looks one sees various interpretations of the same general style of dress, skirts full and simple in line, if not in trimming; the long, sloping shoulder; the ubiquitous indefinite Japanese sleeves forming part of the bodice itself. All these are modifications of the idea which has carried us through the spring and summer. The success of the Japanese sleeve has interfered more or less with the introduction of a new model—a long sleeve coming well down over the wrist and hand. This sleeve is a new idea which may have important influence later on.

* * *

Another note is the reappearance of the long, slender waistline. The shoulder line may be very sloping, and the bodice loose, vague, and voluminous to eccentricity; yet the waist is defined trimly by a deep belt or corslet; for in gowns, if not in wraps, the short waistline seems to have lost favour. Many of the coats, however, both the short, jaunty affairs, and those of the popular redingote type, show the Empire waist, and some of the models are charming.

* * *

The redingote is a decided acquisition. Its usefulness with the afternoon gown is undisputable. The cut or general line of this garment usually forms its chief feature, though the method of decoration is important also, such as stitching in close, even rows, braiding and arrangements of buttons, large and small. Many of these long garments open over a vest which, in some cases, is very long—almost the length of the wrap, and in other cases, short as the Empire waistline. The vest fastens with a row of buttons closely placed. Indeed, buttons, large and small, play an important part in the season's fashions. Braiding, too, of the finest quality is to be an approved style of trimming. The work is done with the finest sort of soutache, and is employed on wraps and on gowns of the finest sort.

* * *

One of the smartest gowns, a geranium red voile de soie, was embellished with this fine braid trimming. The bodice was of Japanese character, formed by several deep folds of the material laid over the shoulder, from which emerged the pretty undersleeve of creamy lace. This folded bodice opened back and front over a deep V-shaped vest of the lace, and was allowed to pouch slightly above a high, tight girdle of silk. There were deep revers of silk, depending, rather than folding, back from the V opening, and these revers were braided in this pretty silk soutache work. The skirt was full at the hem and long, lying in beautiful folds; while over it fell a tunic, cut into three deep points, each point braided with soutache designs and finished with a large silk tassel.

* * *

Tassels of all sizes, and quaint, old-fashioned fringe are to the fore. Both are employed in various ways, one of the prettiest arrangements being their use as a finish to wide bretelles. These bretelles pass over the shoulder to form a sleeve setting, and continue down both at the back and front of a gown in stole fashion. The waist is defined by affixing the stole against the girdle by means of large, flat buttons; and at the bottom of the stole the finish will be tassels or deep fringe, usually knotted on, as though it were a part of the material itself.

* * *

Among the gowns intended for street wear, one will find models of all sorts, from the simplest to those decidedly elaborate. In some of the examples the coat is bound all around with a wide braid, either black or in self colour, a favourite combination being a wide black braid on a black and white striped suit. In the smart little "trotter" gowns, the styles of the jackets are so varied as to offer models suitable to every taste.

* * *

For autumn street wear there are shown gowns of voile surmounted by the most fascinating little mantlets or shoulder capes of taffeta, rather like the cape boleros, though somewhat more fussy and overtrimmed. They are often intricate and uncertain of shaping, some having quaintly folded fronts ending in long points with saucy short little backs most becoming to youthful figures. The ornamentations consist of quillings, puffings, galloons, large buttons, and so on; and the garment is a very feminine little affair, which supplies just the necessary protection required during the first cool days. The same idea is developed in velvet for use in the colder weather; and also in furs, the inexpensive skins like caracul and Russian pony lending themselves charmingly to the severer models of this small wrap.

* * *

The Princess gown, shown in the illustration, is comprised of vicuna cloth in the new bronze shade. The corsage is trimmed with silk embroidery and lace, and the bodice slip worn underneath is of ivory silk.

How to Treat Umbrellas.

Umbrellas require a great deal of attention to keep them in good repair, but at the same time they are well worth it, and repay all trouble. How often have our bonnets and hats been saved by them from ruin when we have been caught in a sudden downpour with no shelter near. After one of these downpours, on arrival home, the umbrella should not be stuck in the stand and left to drain, as the moisture, gradually accumulating in the silk just above the ferrule, causes it to rot and go into holes in a very short time. It should be placed open in a dry, airy room until it is thoroughly dry. Many people roll up their umbrellas while still damp, and then think the silk must have been very common when they find it in holes. When put away the umbrella should be left unrolled, as if it is constantly kept in a tight roll the creases are apt to rapidly wear through. One's best silk umbrella should never be put in the stand where the common property ones are kept, as anyone coming in in a hurry, and popping stick or umbrella in the same place is very liable to unintentionally poke a hole right through, and no amount of darning or covering the place with black court plaster will ever restore the umbrella to its pristine beauty. Many umbrellas nowadays, after they have seen some service, though sound in other respects, are disfigured by worn-out, elastic, and dilapidated, discoloured tassels; these should be promptly discarded, and new ones, which can be bought for a trifle at any draper's, securely fastened on.

Asthma.

Those who have seen the struggles of a victim of asthma realise how bad the trouble is, yet it is very largely an affection of the nerves. In many cases the patient wants to exhale, and cannot finish before there is a spasmodic attempt to inhale. The effort to breathe out and breathe in meet in the middle, as it were, with the result that the patient can do neither, and simply struggles and gasps. A doctor conceived the idea of putting his hands, one on the back and the other on the front of the chest, and squeezing the air out to help the inspiration. When the lungs were deflated inhalation was easy. After several manœuvres of this sort the patient expressed relief from the straining and struggling.

NEEDLEWORK.

Possibilities of Embroidered Kid.

This pretty band is of soft white kid, on which a garland of delicate flowers in faint pastel shades and tarnished silver wire is exquisitely worked. There is a perfect craze among Parisian modistes just now for these touches of embroidery upon kid, which are introduced as revers, belts, and as collar and sleeve bands. The one illustrated is about 3 in. deep, and is intended for an elbow sleeve, the little shaped medallion-like piece being fitted on to the cloth sleeve point upwards at the back of the elbow. The collar band is to be worked to correspond with a small jabot, and both collar and sleeve band are edged with a lilliputian ruche of very narrow real Valenciennes lace laid down with thread of the tarnished silver wire, also used for the scrolling stems in the design. French women are enthusiastic at the present moment about the working of these kid embellishments, which they turn to the nattiest account in a score of ways. A favourite adaptation of them is the loose "ceintures," or fronts, to be worn beneath the fashionable bolero of cloth or velvet. The band of kid, made of the right depth to fill in the space between the bolero fronts to the belt, embroidered in silk and metal wire, often decorated with spangles, paillettes, and "jewels," is quite the mode at present. This is made loose and full, drawn into a band at the waist, and finished with a collar of kid. Little loops are placed at the sides and these fasten to hooks sewn inside the bolero. Sleeve bands are often added, and the effect is that of an entire blouse of kid worn beneath the coat. The work has other uses, too, besides that of dress trimmings, for it can be charmingly made up for opera bags and porte-monnaies, or mounted as coverings for jewel caskets or bon-bon boxes.

EMBROIDERED KID.

Lady's Jersey Mittens.

These mittens are very elastic, and fit nicely made in single crochet stitch with the hook put under the side of the stitch nearest the worker and up through the centre of the stitch, instead of the usual way.

Take knitting silk or Saxony yarn and rather a large hook. Crochet loosely.

Make a chain of 53 stitches and join in a ring.

1. Single in every chain.
2. One single in every stitch.

Repeat second round 40 times.

43. Make 11 chain, miss 11, join in twelfth stitch (to start the thumb), 41 singles.

44. One single in every stitch. Repeat this round to end of forty-ninth.

50. Narrow (by missing 1 stitch).

51. Single in every stitch.

52. Repeat fiftieth round.

53. Narrow 1, 51 singles.

54th and 55th rounds. One single in every stitch.

56. Narrow 1, 50 singles.

57. One single in every stitch. Repeat this round to end of seventieth round.

71. Narrow 1, 10 singles, narrow 1, 13 singles.

72. Narrow 1, 10 singles, narrow 1, 11 singles, narrow 1, 10 singles.

73. Narrow 1, 9 singles, narrow 1, 10 singles, narrow 1, 9 singles, narrow 1, 10 singles.

74. Narrow 1, 8 singles, narrow 1, 9 singles, narrow 1, 8 singles, narrow 1, 9 singles.

75. Narrow each alternate stitch to the end of round. Repeat this last round to the end of mitten and fasten thread.

For the Thumb:—1. Twenty-two singles.

Repeat till there are 18 rounds, then narrow every alternate stitch in 3 successive rounds and fasten thread.

Finish at wrist with a single row of shells.

Fluffy Fascinator.

Use pink or white Shetland wool floss for this fascinator.

Begin at one corner to make the foundation.

Make 7 chain. Turn, skip 3 stitches, make 2 doubles in the next one, and make 2 in each of the next 3. Turn.

2. Make 3 chain, then 4 2-double-crochet groups, making them between each group in the last row, and make 1 double at the end. Turn.

3. Make 3 chain, 1 double in first space, then the 2-double-crochet groups in each of the next 4 spaces, 3 chain. Turn.

4. Make 2 doubles in first space, then 2 doubles in each of the next 3 spaces, 2 doubles in middle of the 2-double-crochet group to widen, and 2 doubles in last space; 3 chain. Turn.

5. Make the 2-double-crochet groups in each of the next spaces and 1 double in last space.

Next Row. Like the fourth, and continue in this way, making the 2-double-crochet group come in the middle of the group at one end in every other row until there are 20 rows, then decrease in the same proportion for the remaining half, being careful to keep the widening and narrowing on one side only, as the other must be perfectly straight, to make the foundation three-cornered when finished.

Next join floss to first double in the point, make 7 loose chain, skip 1 double and catch down with a single around the next one. Repeat across the row, making a single and chain come at each edge around the end double. Work in this way in every row, unless the chain part seems too thick, in which case occasionally skip a 2-double-crochet group.

Sew on ribbon ties at the corners and tie at the back of the head. The point of the fascinator rests above the forehead.

Autumn House Cleaning.

We, in England, suffer a good deal from the epidemic which develops in most households in the early part of the year, and which is known as "spring fever." I do not wish to introduce a second epidemic when I insist on the necessity for an autumn cleaning in addition. Indeed, the feverish symptoms should be banished from all cleaning in all well-regulated households always!

Although, in our climate, and particularly in country houses, where variations in the weather are more felt than in towns, it is not possible to assign any dates between which sitting-room fires are not needed, yet there is a moment, sometime during October generally, after which they become constant, and it is before that time that the cleaning should be done.

The first thing to be thought of is the disposal of summer clothing, curtains, etc., and there are many reasons why this should be done more carefully than is sometimes the case. Our grandmothers always put away their summer muslins rough dried: that is, with the starch washed out. This, however, is unnecessary, unless space is a great object, when, of course, they can be more tightly packed. But if carefully got up, the small amount of starch we use nowadays will not injure the fabric, and when, as happened this year, we get almost the warmest weather of the year somewhere about Easter-time, there is a great deal to be said for having blouses and other garments ready to put on at short notice. Never put away soiled clothes or curtains. This, sooner than anything else, causes stuffy wardrobes and rooms, and is likely to bring moth. And do not put away any that need repair till this has been done. Go through your wardrobes, and through your cupboards, and, indeed, all through your house carefully, and decide which articles can, by cleaning, mending, etc., be made to serve another season. Then *empty* the drawers, cupboards, etc., in which winter things have been stored. Clean these, place fresh papers, and, if you have been wise enough to save and dry your lavender, woodruff, etc., during the summer days, lay sachets filled with these among the summer garments and draperies. Never put things away on the *top* of drawers or boxes till you have examined every article at the bottom. It is these that "the rust and moth corrupt." Don't put away things unless there's a very reasonable chance of your making use of them again. Remember they will never be better than they are now—so if it is not likely you can use them, give them to some of your poorer neighbours who may (and you need not wait till the end of the season to do that either), and if they don't seem like being useful to *any* one—burn them. There's no real cleaner like a good bonfire!

Another idea which wise women who have to study appearances on small incomes will adopt is to decide some time before the end of a season which clothes are nearly finished, and which are *dated* by their make or cut. These should be worn as much as possible to finish them out, keeping those to put by which for condition as well as style will seem fresh and good another year.

Any woollen garments that you are putting by—if not washable—should be thoroughly dried and aired in sun and wind. If this is done, and the boxes and drawers they are stored in are clean, dry, and dust and air-proof, no camphor or naphthaline need be added, though in spite of their somewhat disagreeable odour these are useful if the conditions of storage are doubtful. In many houses now the same curtains are used winter and summer, and where these are as they should be merely window-screens, shading the light but not obstructing the air—there is no need for change; but in addition to putting away any light ones that will not be used, it is a good plan also to put by, carefully wrapped in silver paper, any photo-frames, cushions, or similar articles that are made of easily soiled materials. The atmosphere of even the most carefully-kept house during the winter months contains a good deal of soot. The days are short, the light, especially in the early mornings when most rooms are cleaned, is bad, and household work generally heavier. A little forethought in this direction makes the autumn cleaning a sort of "going into winter quarters," not only lessening work, but keeping the house freer from dust and dirt, which cannot be so easily turned out in bad weather, and, consequently, healthier.

Flower vases, too, should be carefully cleaned, and the larger portion put away in the china pantry, only leaving ready to hand the few that are likely to be used. All these and similar details will help to make room for the winter pursuits of a family which in the summer time has been spread abroad over house, garden, and fields, but which now will be gathered close round the hearth.

MARY LOVELL.

To Wash Silk and Merino Stockings.

Lay the stockings in a soap lather, and rub the soiled parts gently with the hands. Then rinse thoroughly; this part of the process is not always completely done, and, if omitted, the stockings are disagreeable to wear. Wring them dry in a cloth, turning them wrong side out. Do not iron silk stockings, but when they are almost dry stretch and rub them in the hands, and bring them into shape. Ironing makes an ugly crease down the centre, and does not improve the appearance at all. Always have merino stockings ironed with a cool iron before folding them.

How to Clean Alabaster Figures.

Alabaster figures are cleaned with the following mixture:—1 oz. of borax and a quart of boiling water. When cool, wash the figures gently, and dry with a silk handerchief. If badly stained, try a paste of quicklime and water, and let it remain on for a day, then wash off in soap and water.

IN THE NURSERY.

Defective Vision in Children.

It is rather astonishing when we come to think about it how prevalent defective vision is among the children of this generation. Physiologists used to tell us that no child is born near-sighted. I do not know whether this condition of things is altered, but it is a fact that near-sightedness among small children is becoming painfully common.

It would seem (judging from a good many of our educational methods) as though it is a part of our sense of the fitness of things that this should be so. Certainly we exercise considerable ingenuity in devising contrivances to bring about the result. My personal recollection runs not back to the time when those versed in the science of caring for the eyes did not tell us that a flat-topped desk is particularly bad for youthful, or, for that matter, for adult eyes. A child sitting writing or reading at a flat desk bends forward his head in order to bring the page within the range of vision. As a consequence the eyeball, which is susceptible of slight changes in shape, becomes more convex under the influence of gravitation. In the course of a few months of this bending over of the head the convexity becomes permanent, and the result is near-sightedness. A very slight slant in the surface of desk or table does away with the necessity for this bending of the head, but in a large and popular schoolroom recently I saw tiny children and half-grown pupils sitting industriously bent forward working at perfectly flat tables. Here, too, as a matter of course, I observed the omnipresent spectacles.

About as mischievous an employment as has been devised to destroy the eyes of children is the pricking work at which they are busied in our kindergartens. I was looking at a collection of this work only a day or two ago—birds, baskets, trees, flowers, and a varied assortment of figures laboriously pricked by tiny, eager fingers in coloured paper and cardboard. The designs were complicated and minute. The infinitesimal perforations were close together, and made with a regularity that would have tried older eyes and steadier nerves to accomplish. Such work is particularly bad for young, growing eyes.

Too much—I had almost written any—microspical work is bad for very young eyes, particularly if the instruments used are, as is generally the case, adapted for using but one eye at a time; yet the microspical work done in some of our schools is of an amazing sort. Biology is a study for infants nowadays. I came across some papers in biology the other day than an eight-year-old child had prepared. They were full of long words, of which my own comprehension was the vaguest, and contained some queer little drawings of germ-cells in the course of propagation. At least, this is how my memory serves me.

Blackboards and slates are capital sight destroyers. It is possible, by the aid of coloured crayons, to avoid a good deal of the evil attendant upon the use of the first named, but the slate and pencil in common use are without a redeeming feature. One of these days, when we are wise, we shall give our little children tablets of thick ground glass and soft black-lead pencils to use in their first attempts at writing. We are already learning not to let them print their early lessons. It used to be thought that the babies must learn to print (a laborious eye, brain, and hand-troubling process) before they could be trusted to write. Nowadays they are taught to write at once, with satisfactory results. We are also coming to see the folly of slanting letters, hair lines, and shading in penmanship, and the introduction of the vertical writing in our schools will doubtless prove a great saving to youthful sight, but we shall never attain to the best results until we have consigned the school slate to limbo.

Little children are given entirely too much writing work at school. It seems a pity that so much should be required to satisfy the demands of modern education.

The work of sight-destroying which we begin in the infant classroom is faithfully continued through adult life. A pessimistic philosopher has recently advanced the theory that we are a less intelligent and thoughtful race because of our having learned to read and write. Unquestionably this is the view of the extremist, but there can be no question that our modern making of books, so far as the mere mechanical results are concerned, is a bad thing for the eyes.

Even our school books offend seriously in this regard. I have before me several books designed for young children, yet printed in types calculated to try and strain strong, well-developed eyes. Now, it should be borne in mind that children's eyes are no more mature and strong than are their bones and muscles. Books printed for them should be adapted to the requirements of their eyes, as well as to the immaturity of their minds. They should be printed in plain, black letters, with no attempt at hair lines or decoration, and should be on unglazed paper.

The introduction of the ubiquitous half-tone illustrations into our school books has been a bad thing in many ways. They require smooth,

MISS CURLY LOCKS.

shiny paper, just the thing on which books designed for growing eyes should not be printed.

Some of our more recent attempts at book-making have aimed at improved designs in type faces. Notable are the efforts in this direction of the books that have come from William Morris's famous Kelmscott Press. Some of these have been admirable and worthy of imitation for their clear, beautiful print.

Children's Headaches.

That children should be afflicted with headaches is manifestly unnatural, and the cause should be investigated, and the remedy applied at once, if parents would preserve the health and lives of their children. One of the first causes of headache is too rapid growth. As a remedy, keep them from overwork, and feed them with rather cooling foods and little meat. Plenty of fresh air and outdoor life will neutralise any ill-effects arising from too much intellectual acitivity. Indigestion is a fruitful cause of headaches, and is a result of improper food or over-eating. Regular hours and suitable diet is the only remedy. Headaches frequently have a nervous origin, in which case the head should be kept cool by cold applications, and the feet warm by hot foot baths, also massage to the limbs and back, and tepid baths. Sometimes they are hereditary, and poison of the blood may cause them, arising from being born of gouty, or rheumatic, or scrofulous parents. Sea air and sea bathing are recommended for such children; and let them go barefooted and live out of doors all they can. Too little blood and too little fresh air cause many headaches; good food and gentle exercise will correct this in time, if one will be convinced of the necessity. Blows on the head, or injury of any kind, will produce pain in the head, when, of course, rest is the medicine required, with cold cloths on the head and hot foot-baths. The large majority of headaches in children is caused by bad air in bedrooms and schoolrooms, and faulty diet at home. Correct these, and usually the headaches will disappear.

— COOKERY. —

Tea Table Dainties.

PARIS BUNS.—Flour half a pound, sugar two ounces, baking powder one teaspoonful, one egg, lard two ounces, candied peel two ounces, a little milk. Add the lard to the flour, and rub in well. Add the other dry ingredients, then whisk the egg well, and add with enough milk to form a stiff, fluffy paste. Pile in heaps on a greased tin, sift a little sugar over them, and bake in a quick oven for ten minutes. Put a strip of candied peel on, if liked.

RASPBERRY BUNS.—Take half a pound of flour, and mix well with two ounces of lard, two ounces of sugar, one teaspoonful of baking two ounces of sugar, one teaspoonful of baking-powder, whisk one egg thoroughly, and then add it to the dry ingredients with a little milk, and make into a stiff paste. Roll out, and cut in small rounds with a wine glass, put a teaspoonful of raspberry jam on part of the rounds, wet the edges, and put a round of paste on the top, and press the edges together. Cut a cross on the top, but not to the jam, then sprinkle a little crystallised sugar over each, and bake on a greased tin for ten to fifteen minutes, until a pale brown, in a quick oven.

BATH BUNS.—Take one pound of sifted flour, the rind of three lemons, grated very finely, half a pound of butter (melted), with a large teacup of cream, a teaspoonful of baking-powder, and three eggs, whisked well. Mix it thoroughly, then add half a pound of castor sugar, and work all thoroughly together for a few minutes. Let it stand in a warm place for a while to rise, roll out, and cut into rounds, and bake in a moderately hot oven for twenty minutes to a good golden-brown; when done, sift a little sugar over each bun.

COCOANUT SANDWICHES.—Roll out half a pound three-fold puff paste a quarter of an inch thick, place it in a baking-tin, and bake a golden-brown; when cooked, let it get cold, beat half a pint of cream to a stiff froth, add to it three ounces of castor sugar and three ounces of grated cocoanut; cut the paste into strips three inches long and one inch wide, spread some cream on each piece.

RATAFIA CAKES.—Blanch and pound (with the whites of two eggs) half a pound of Jordan almonds, add to this one pound of castor sugar, beat these ingredients into a paste, then take two more whites of eggs and whisk briskly to a stiff froth, add this, and mix the whole together, then drop in small teaspoonsful of wafer paper, and bake in a slow oven for ten minutes till the biscuits are pale brown.

For Invalids.

BEEF TEA IN HASTE.—Scrape one pound of lean beef into fibres on a board, place the scraped meat in a clean granite or white-lined saucepan, and pour half a pint of boiling water upon it. Cover closely and set by the side of the fire for about ten minutes, strain into a teacup, place the teacup in a basin of ice-cold water, then remove all the fat from the surface, pour into a warmed cup, warm this gently in hot water, add salt, and serve. This can be ready in fifteen minutes.

BEEF AND CHICKEN BROTH.—One pound of good lean beef and a chicken boned should be pounded together in a mortar, a little salt added, and the whole placed in a saucepan with three pints of cold water. Stir over the fire until it boils, then boil half an hour, strain through a coarse sieve, and serve.

MILK AND LIME WATER.—One or two ounces of lime water may be added to four ounces of new milk, or equal parts of milk and soda water make a good drink in sickness, and in irritable and sour stomachs. Fifteen grains of bicarbonate of soda (baking soda) added to a quart of fresh milk will prevent it turning sour for several hours, and will rather aid than impair its digestibility.

Gardening in October.

(*Continued.*)

In continuation of my remarks last week on bulbs, I wish particularly to draw attention to the tulip. It has been recognised by seedsmen that this is without exception one of the most brilliant and effective of spring bulbs, and should be freely planted now to ensure a gorgeous display in beds and borders in the early part of next year. The bulb unquestionably imparts to our gardens as rich a display of colour as any of the flowering plants we elect to plant for a gay show in the best months of summer.

The bulb merchants in Holland and our own country have realised how imperative it is to send out the latest varieties and the best quality, as their industry is likely to suffer severe depression if inferior stock is sold. Bulb culture is now zealously pursued in England, but exceptionally fine specimens are sent to this country from abroad. The humblest inhabitants of small towns and villages are just as well able to procure bulbs as the wealthy, and often beds arranged in most tasteful ways may be seen in the cottager's garden.

A bed of tulips with the colours judiciously arranged may be filled for a few shillings. The early varieties are too numerous to mention here, but any seedsman will furnish you with a list of bedding and pot culture varieties. I may, however, mention a few of the special single and double kinds for pot culture, viz.: Duc Van Thol. This is a distinct, very early selection blooming quite a fortnight earlier than others, bright, and sweet scented. L'Immaculee (white), La Matelas (deep rose, edged white, very large), Mon Tresor (deep golden yellow, large and fine form, very early), Pottebakker (four colours, white, yellow, new scarlet, and golden yellow), Prince of Austria (brilliant orange red), Proserpine (delicate satin rose), Vermillion Brilliant (vivid vermillion scarlet), Alba Plena (pure white, very early), Duc Van Thol (scarlet and yellow), Attractive (rich scarlet, dwarf and early), Princess Alexandra (crimson and gold, very showy), William III. (brilliant orange scarlet, quite new), Murillo (double blush, very fine for pots).

The Parrot, or Dragon tulips are also a very distinct species, producing brilliantly-coloured large flowers, the petals of which are flamed like the plumage of some pretty parrots. They are very effective and gay for mixed borders and beds, bloom later than the other sections, and are splendid for vase decoration when cut. For pot culture they are useful for house decoration, being so vivid in their variety of tints and quaint, deeply-fringed petals. The very strongest bulbs are needed, and very gentle forcing. The varieties I should recommend are Admiral de Constantinople (red, tipped with yellow), Perfecta (yellow, scarlet, and green), Monstre Cramoise (deep crimson), Lutea Major (yellow, flaked scarlet and green).

They require very simple treatment. The soil should be the same as that used for hyacinths, and as soon as potting is completed, a liberal supply of water should be given, and the pots placed upon a bed of ashes out of doors, covered with six inches of cocoa-nut fibre to save from frost.

Another method I should recommend as being highly satisfactory is to dig a trench about a foot deep, cover the pots over with a good supply of fallen leaves, and bury the whole with soil for about two months. I adopted this latter method, and successfully competed with nurserymen at spring shows with my blooms. It is cheaper and less troublesome than the fibre, and a decided preventive against frost.

G. W. Thomson-Price.

Cleaning Wall Paper.

Before cleaning fill any broken places there may be in the walls with this mixture. Take equal parts of plaster of paris and silver sand, and make it into a stiff paste with water. Fill the holes and smooth them over with an old knife, then cover them with a piece of wall paper if you have it; if not, colour the plaster with paint of the same colour as the grounding of the paper. When you have finished the repairs begin cleaning. Take half a loaf of dry bread, and with it rub the wall gently downwards, beginning from the ceiling and taking in the length of the arm at each stroke. In the second round commence the stroke slightly above where the first stroke ended. Be very careful not to rub up or across the paper. Ordinary paper cleaned in this way will look almost as good as new again. You will use a good deal of bread if the room is large, but if you intend doing the work yourself, you will not find cleaning wall paper an expensive operation.

ROUND-ABOUT NOTES.

The Franco-British Exhibition, which is to be opened in May next at Shepherd's Bush, has already had a remarkable effect on property in the district. Values have been enhanced, and the opinion among owners is that Shepherd's Bush is to experience a "boom," approaching that which prevailed on the opening of the Central London tube.

* * *

One of the startling facts brought out at the recent Hygiene Congress in London was the prevalence of child suicide. A professor stated that in Russia three time as many suicides took place among school children as among all the rest of the population. In Germany also there has been a remarkable increase in the number of child suicides. During the last twelve years 1,152 cases have been investigated by Professor Eulenburg, of Berlin. He says that most of them were due to failure in examination and overwork. Clearly, mothers are needed on the German school boards.

* * *

The Imperial Board of Health in Germany is discussing the dust question. It has become so serious as to influence politics. The automobiles whirl up such clouds of dust that the parks and boulevards have ceased to be breathing places where the common people can go to take the air with their families. They now return to their homes in the city at night choked with dust, instead of being refreshed by their outing. A prominent medical magazine of Germany cites Rubner's saying, that it is now incumbent on the cities to provide pure air for their citizens to breathe, just as they have made arrangements to provide good drinking water.

* * *

The Empress of China is meeting with support as well as opposition in her effort to suppress opium smoking. In several places the closing of the opium dens has been hailed with enthusiastic demonstrations. Crowds of students paraded the streets with lanterns and flags, and hundreds of shops were decorated. An observer says the demonstrations were accompanied with talk of such a patriotic character that one might have supposed the town was celebrating a military victory. The strongest opponents of closing the opium joints in China are the foreign monied interests, who want to know where the loss of revenue is to be made up.

* * *

The manufacture of wooden shoes, or clogs, is quite a picturesque industry of Wales. There is a large demand there for these shoes, for they are the popular footwear, not only for the Welsh country folks, but for hundreds of men, women, and children who work in the factories. Wherever alder trees can be purchased from their owners, these clog makers appear on the scene, and, having bought the wood, are allowed to set up their little tents on the spot, and commence work. They begin by sawing the wood into blocks about a foot in length, six inches across, and six inches deep.

* * *

The next thing is to shape these pieces into the resemblance of a sabot, or shoe. This is done with the aid of a powerful cutter, sharp enough to slice off the wood as easily as one would sharpen a pencil. In a few moments the shapeless block of wood assumes the shape of a shoe. Though in rather rough shape, the clog is now ready to be carted to the nearest town, where the finishing touches are added. These consist of a certain amount of leather to form the upper part of the shoe, and an iron rim round the sole and heel. When completed the clogs are sent away in great quantities, some being reserved to stock the neighbouring village shops, where they can be purchased for a few pence a pair.

* * *

Hottentot women, who have long been supposed to be almost the lowest type of human beings, have an extensive literature of folk stories, folk songs, and baby songs, with which they amuse their children. Many of their songs and stories are of considerable beauty, and seem to show that in some forgotten period the race was much higher in the scale of civilisation than at present.

THE COLLECTORS' GUIDE.

Bellarmine Jugs.

By H. W. Lewer.

"With jugs, mugs, and pitchers, and bellarmine of state."

It is somewhat strange that at a time when England's home productions (such, for example, as the celebrated ironwork of Sussex) were justly held in high esteem, the potter's art should have been at so low an ebb, that we had to import our stoneware from the Netherlands and Germany. This earthenware, the so-called "stoneware," taking its name from its hardness and colour, included the Bellarmine, Greybeard (or Bartman), generally known in this country under the first appellation. The earliest notice we have of this importation is in the Lansdowne MS.S., which records that in the year 1581 "the pots made at Cullein (Cologne) called 'drinking stone potts,' were first imported into England by Garrett Tynes, of Aken, or Acon, who had previously supplied the Low Countries."

The reason for its introduction is not difficult to trace, and the chief cause was the low state of the potter's art in this country. Little progress had been made since mediæval times, as the coarse vessels and pots we see to-day in our museums and private collections testify. Although the craft of the silversmith and the pewterer had almost reached its zenith in Queen Elizabeth's reign, yet the fictile art lay nearly dormant, waiting for the magic touch of John Dwight, of Fulham, a century later, to imbue it with life, and give it that resistless charm which we see in his work, and in that of the master potters who followed in his steps till the close of the eighteenth century.

So successful was the exportation of this stoneware to England that when the Spaniards' tyranny drove so many good artificers from the Netherlands, potters fled to this country, and established manufactories. The Bellarmine jug was made in various sizes, the *little pot* (a pint), the *pot* (a quart), the *pottle pot* (two quarts), the *gallonier* (containing a gallon), and larger sizes. In form, a Bellarmine is narrow-necked, furnished with a handle on one side, the belly of the vessel being protruded to obtain the requisite holding capacity, and narrowing to its base.

These jugs vary in colour, some being of a mottled-brown, while others are almost of a greystone hue. The former predominate, and are to be preferred, the deep rich colour and glazing being in harmony with its form and, perhaps we may add, with its period. Every true Bellarmine is ornamented with an impressed mask (a face with a long beard), below the ornamented bands, underneath the lip of the vessel, and frequently with an additional impressed decoration on the swelling body beneath the mask—a coat of arms, or a symbol.

The ornamental work is supposed to have been executed to order, sometimes appertaining to the place of origin of the jug or vessel, but in other instances raising the interesting question whether we may not imagine the old-time bagman coming over here, taking his orders perhaps from some great householder possessing a coat of arms he wished impressed on his pottery, or more often a tavern-keeper desirous of perpetuating his inn sign. As regards the latter, the lion rampant, or the Tudor rose enclosed in an ornamental border, seems to be not uncommon. It should be noted that in place of armorial bearings or inn-signs, we find in the earliest jugs medallions formed by impression of coins. These are, however, rare in England.

Bellarmines with an impressed date are extremely rare, but by the permission of Mr. Phillips, of Hitchin, we are able to illustrate an example from his collection.

There is little doubt that during the latter part of the seventeenth century these jugs were not only exported to this country, but that many were made here. Dwight, a potter of great originality, took out a patent in 1671, and in the petition for which he stated "he had discovered the mistery of transparent earthenware . . . as alsoe the misterie of the stoneware, vulgarly called 'Cologne ware'; and that he designed to introduce a manufacture of the said wares into our Kingdome of Englande, where they have not hitherto been wrought or made."

It has been stated by some experts that it is possible to distinguish between the home-made Bellarmine and its foreign brother, the difference being in the finish of the base. It is the manner or method of cutting the pot off the wheel after throwing. If the string, or wire, is pulled across straight, making more or less parallel lines across its base, they are said to be English. When the wire is crossed, making concentric circles, they are attributed to foreign origin. It is not also probable that those Bellarmines without the coat of arms of the towns of their origin, and the plainer shapes, and rougher ornamentation, are of English make.

The story of the nomenclature of the jug is that it was derisively named after the celebrated Cardinal Bellarmine, who was detested

A BELLARMINE JUG.

by the Protestants, especially in the Low Countries, and one method of expressing their feelings was by making use of the potter's art to express their contempt by portraying his features and rotund figure. The Cardinal was a controversial writer of repute, and took an active interest in the affairs of the Low Countries at the time of the Reformation, being a zealous Papist.

On the other hand, in Germany, where these vessels were largely manufactured, the mask was supposed to be a representation of the bearded head of Charlemagne. Marryat, in his "History of Pottery," states these "vessels were called in this reign of James I. 'Bellarmines,' in derision of Cardinal Bellarmine, and in compliment to the King; Bellarmine's celebrated letter, in which he sought to detach the English Roman Catholics from their oath of allegiance, having called forth a rejoinder from the royal author."

Mention is made by the dramatic authors of that time, who stood around "the throne of Shakespeare, sturdy, but unclean," of Bellarmines. Ben Jonson, in "Bartholomew Fair," speaks of "the man with the beard." At a later date, in the "Ordinary," by William Cartwright, written in 1651, we have a reference:—

"Thou thing.
Thy belly looks like to some strutting hill
O'er shadowed with thy rough beard like a wood;
Or like a larger jug that some men call
A Bellarmine, but we a Conscience."

These jugs must have been largely utilised for over a century in England, and especially in London. Excavations of the last few years in the City have brought many to the light of day again, and as a typical instance, we may mention that when the old city ditch adjoining All Hallows' Church was being cut through in 1906, the most numerous vessels of the stoneware class discovered were Bellarmines. Sound specimens are difficult to procure to-day, except the forgeries now on the market, so the collector must be content with such genuine examples as may come in his way. A collection of Bellarmines, varying in size and ornamentation, on some old oak mantelpiece, presents a striking picture, the crude and quaint shapes, the rich, mottled-brown colouring, with here and there a piece of lighter hue, adds a quiet dignity and distinction to the "setting" of a room. To the imagination there comes the history of the times and the life of the people when these Bellarmines were in daily service—the period of Elizabeth, and the seventeenth century. Who shall gainsay it? that when viewing these old jugs a wealth of memory arises, we say with Shakespeare of our country that at this period it was—

"the envy of less happier lands;
"This blessed spot, this earth, this realm, this England."

CAREERS FOR GIRLS.

Jewellery Making and Enamelling.

By Josephine Bullen.

One of the most popular art handicrafts of to-day, when everyone seems to have taken up artistic work, either professionally or otherwise, is the fascinating one of enamelling, with its allied craft of jewel-setting. And the fact that such artists as Herkomer, Frampton, and Alexander Fisher have devoted thought and care to it has given an impetus to its adoption, beside raising the standard of work done in it. Women, as might be expected, bulk largely among these jewel-makers, for the field seems one especially adapted to their talents, as well attractive to them.

The present vogue for enamelled ornaments makes the prospects of a career of this kind rather rosy, but it should not be forgotten by a girl choosing it that fashion probably will change, sooner or later, and the demand for these things decrease.

To a girl with some artistic talent and a good deal of artistic feeling, this work especially appeals. It gives her play for great variety in design, and can be made the medium for very poetic expression, without demanding any unusual gifts. Her eye for colour should be good, for it is largely upon its colour values that the charm of jewellery, enamelled or otherwise, depends; whilst she should not be without a sense of beauty and fitness in form. The work needs great care and patience, and is physically somewhat trying, particularly to the eyesight, upon which the "firing" of the enamel, and the strain of the fine work often required in jewel-setting, bears rather hardly. Hence, good health and sound eyes are essential to her.

Some people fancy that enamelling can be learnt in a few lessons. This, however, is just the point of view a girl taking up the work seriously should avoid. It may be fairly easy to decorate buttons with a bit of enamel, but to practise the handicraft in its best form is not easy. The picturesque, effective style of jewellery in which the enamels, stones, and metals, are combined with some eye to colour

in a quaint design, but without much finish of workmanship, has merit and charm, and is largely the accepted idea of what such jewellery should be. But a comparison of it with the beautiful, carefully perfected work of really good craftsmen and women shows how much it lacks.

The delicate glowing sheen of patiently-wrought enamel is infinitely more lovely than the lustre of the less finished article; and both metals and gems gain immensely by the elaboration of toil upon them.

To a girl who aims at the very best work a great deal is possible, and she has less to fear from the change of fashion than the one who wants just to make things that will catch the eye and sell well.

A word as to the nature of the work. Translucent enamel, the kind most in use nowadays, on account of its beautiful colours and satiny lustre, is made from the silicates and borates of sodium, potassium, and lead. To make the different colours various metallic oxides are added, and on the proportion of these used depends the colour of the "flux," as it is called. These are poured on the metal background in a liquid state and fused to it in a furnace. As the process of firing changes the colour slightly, this has also to be taken into account in mixing the chemicals, so that the whole process is rather an anxious one. As will be seen, patience, perseverance, and industry are necessary to the enamel worker.

There are several branches of the work, in any of which a girl, after training, might specialise. That of jewel-making is the most usual one, but she might instead devote herself more to the designing and making of such things as caskets, panels, book-covers, etc., in metal decorated with gems and enamel. They will give her opportunity, too, of using pictorial enamelling in her designs, the sides of a casket for instance, lending themselves admirably to the expressing of a poem or story in this medium.

Then there is pictorial enamelling pure and simple, perhaps the highest form of the handicraft, but the one most demanding talent in the worker. Very beautiful pictures, in which the canvas is metal and the colours enamels, are made by true artists in this work, who delight also in working fitting frames of metal for them.

Ecclesiastical objects, such as crosses, challices, croziers, and so on, of the precious metals, studded with gems and enamels, form another branch of the art, in which there is always a fair demand.

Training for the career should be a much more thorough one than some modern enamel-workers seem to think necessary. There should be a good knowledge of drawing and painting to begin with, if the aspirant is to do really well in her craft. This can be had in a year or two's work at any of the art schools, whose fees are usually moderate, ranging from two to eight guineas per term, with half-guinea entrance fee. Or Polytechnic classes might meet the needs of a talented girl.

The foundation laid, the best step to take next, is to apprentice oneself for three years to a worker with a good connection. The premium asked by one well-known woman whose jewellery is in good demand is 30 guineas for the three years. The hours are from 10 to 5; Saturdays are free, and there are eight weeks' holidays in the year.

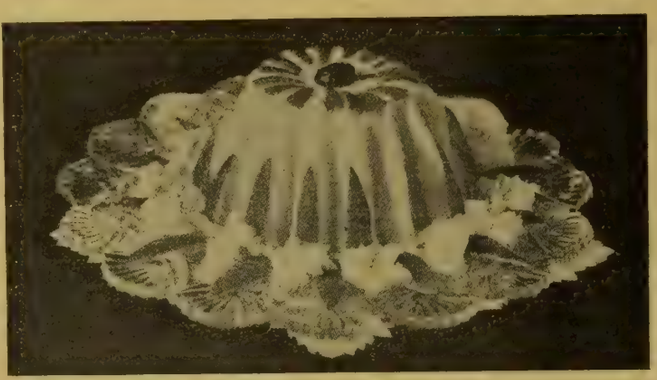
One advantage of this plan is that the learner has an opportunity of seeing different kinds of work, for a jewellery-maker generally finds it necessary to combine metal working of all kinds with her jewel-setting and enamelling. She also gets a thorough practical knowledge of her craft.

An alternative course would be to take a series of lessons in each branch required, viz: metal-working, enamelling, and jewel-setting, from good artists. In this case the time spent on training might be shorter, but the cost would certainly be greater. However, there are now classes in these subjects at most polytechnics and technical schools, which might obviate the latter difficulty.

The next question to consider is that of the career itself when the training is over and the craftswoman ready to begin it. In what way is it best undertaken? No doubt many girls lack the initiative and enterprise to build up a good paying connection for themselves, for it is not to be denied that, as in everything else undertaken as a means of livelihood nowadays, the road to being a successful jewel-maker is no easy one. It would, perhaps, be better for them to remain with their teachers as assistants, earning salaries varying very much with their own value as workers and the circumstances of their employers, at any rate for a time. Later, they might seek partnership with someone who would supply the motive power they lack.

A girl starting the work on her own account should have a fair amount of capital to keep her going until she has found a footing. The materials for her work, for one thing, are expensive. Although, with originality in design and effective use of their colour values, silver, copper, and even steel may be largely used instead of gold in this kind of jewellery-making, and such stones as crushed turquoises take the place of the more costly gems; still, the outlay even on these is a great drain on a beginner's purse.

She will find it distinctly helpful to become a member of any societies or clubs making a feature of the interests of artists and bringing her into touch with people of culture.



She must, of course, have a studio, but she can easily find someone to share with her, thereby halving expenses. It should be as central as she can get it, other things being equal. The initial outlay on furnace, gas arrangement for melting, etc., and so on, should be also taken into consideration when planning a "start."

Once launched, our craftswoman ought to seize every opportunity of exhibiting her work And if she can strike out some speciality that will take the public fancy so much the better. It will draw attention to her work.

She should aim, too, at making the latter as original as possible, always remembering that the excellence of her wares is really their best recommendation.

Obviously, it is impossible to state any fixed income to be counted upon by a girl undertaking this career. So much depends upon herself, upon the mode in jewellery, and upon circumstances. But there are ways in which it can be made, to some extent, regular, such as teaching in the classes often held in connection with exhibitions and schools; taking apprentices at a stated premium, or pupils for certain fees per term; and a successful woman can reasonably count on a very fair income.

JOSEPHINE BULLEN.

WATER-LILY MOULD.

Practical Recipes.

BOILED SALMON.

Wipe over carefully a 2-lb. cut of salmon, tie in a piece of cheese-cloth, and cook at a low temperature for about 30 minutes in hot water, to which has been added a tablespoonful of salt and a tablespoonful of vinegar or lemon juice. Set the fish on a trivet so that it will not touch the bottom of the kettle. Remove from the cloth, drain, remove the skin and serve on a napkin, with shrimp sauce. Garnish with parsley and sliced lemon. Mashed potato, green peas, and cucumbers are all suitable to serve with it. Salmon being such a rich, oily fish, is somewhat difficult of digestion, and should not be served to children or invalids.

EGGS AU GRATIN.

Drop six fresh eggs in salted water, dropping them inside muffin rings, to give them a good shape. Lay them in a buttered dish which has been sprinkled with grated cheese, and pour around them a sauce made with one tablespoonful each of butter and flour, half a cupful of milk, half a cupful of stock, one egg yolk, and salt and pepper. Cover with crumbs and grated cheese, and brown delicately in a very quick oven on the centre grate. If a pie-knife is used in serving them, they will be less liable to break.

LETTUCE AND TOMATO SALAD.

Serve sliced or halved tomatoes on lettuce leaves, and garnish with Mayonnaise.

PRESERVED PEARS.

The fruit should not be too ripe, and must be pared, halved and cored. Then, to every 4 lbs. of pears take 3 lbs. of sugar, with just enough water to cover it well, the rind and juice of one lemon and a root of green ginger, cut into small pieces. Place all together in a jar, and steam until the fruit is perfectly tender when pierced with a straw. Or, if preferred, the pears may be boiled soft in the syrup. Put up in small jars, and seal very securely.

POTATO PASTRY.

Pare, boil, and mash very fine a few potatoes. Season with salt, pepper, and add a large lump of butter. Make a good pie paste, and roll out the size and shape of a medium-sized pie plate. On one half of this place the potato, fold over the other half, pinch the edges closely together, and bake in a moderate oven.

ONIONS IN CREAM.

Wash, peel, and cut rather fine four large onions, put into a stewpan with enough cold water to cover them; add a little salt, and boil briskly for about 20 minutes or until onions are tender. Drain off the water, add cream enough to cover the onions, let the whole come to a boil, add two tablespoonsful butter, melt, mix, and serve. Season to taste.

SAGO JELLY.

Boil 3 ozs. of fine sago in a quart of water for two hours, stirring frequently. When the sago is quite cooked, add the juice of a large lemon, and 4 ozs. of loaf sugar. Boil all together for a few moments, add a gill of raisin wine, and pour into a wetted mould. Next day turn out the jelly, garnish with whipped cream, and serve.

Water-lily Mould.

Put one breakfast cupful of orange juice and half cupful sugar to scald, and then add two tablespoonfuls of cornflour wet with two tablespoonfuls of cold milk, stirring until the mixture is creamy; then add one teaspoonful of grated lemon-peel and one tablespoonful of the juice and fold into the hot mixture the stiffly beaten whites of four eggs and one tablespoonful melted butter; fill a fluted mould or a plain bowl and stand in a cool place to become cold. When ready to serve arrange petals of crystallised orange peel about the edge and on top, placing whipped cream at the base with more petals. A custard sauce that is flavoured with orange or plain sweetened cream can be passed in a separate dish.

Home-made Biscuits.

ABERNETHY BISCUITS. — Mix together one ounce of butter, one pound of flour, a dessert-spoonful of sugar, half-an-ounce of caraway-seeds, two eggs, and, if necessary, a little milk. Roll the batter out thin, knead it into small round cakes, making holes with a fork to allow the steam to escape, and bake in a moderate oven for fifteen minutes.

ARROWROOT BISCUITS.—Beat a quarter of a pound of butter to a cream. Add gradually three beaten eggs, a quarter of a pound of each of flour and sifted sugar, and three ounces of arowroot, and mix smoothly together. Drop pieces the size of a florin into well-greased tins, and bake in a slow oven for fifteen minutes.

CAPTAIN'S BISCUITS.—Make a stiff paste of flour, a pinch of salt, and a little new milk. Knead well, make into small cakes, and bake for fifteen minutes.

WATER BISCUITS.—One pound of flour, one ounce of butter, a quarter of a pint of cold water, and a pinch of salt. Roll out into very thin paste, prick with a fork, and bake for fifteen minutes.

CORNFLOUR BISCUITS.—Mix well together four eggs, eight ounces of cornflour, eight ounces of sugar, four ounces of clarified butter, and one teaspoonful of baking-powder. Roll out, and cut in small thin shapes. Bake in a quick oven, and sprinkle with castor sugar.

ROUT DROPS.—Mix together a quarter of a pound of loaf sugar, a quarter of a pound of sweet almonds, a quarter of an ounce of bitter almonds, and the white of an egg. Drop in teaspoonsful on white paper, and bake in a moderate oven.

WAFER GINGERBREAD.—One gill of treacle, one ounce of ground ginger, half a pound of brown sugar, and two ounces of butter. Mix together, and spread on a greased tin. When baked, turn it with a knife, and roll like wafers.

THE NEWEST FASHIONS.

There are always sudden changes in fashion, and now that short coats have for such a period of time been fashionable, the indications all point to the fact that long coats are to be worn for the next few months. The great majority of women look better in long coats than in short, so there is something to be thankful for in the latest dictates of fashion that command the long coats. And it must be stated that the newest models are extremely effective, and should be becoming to almost any woman. Then, too, long coats are far more practical for winter in any place where the climate is at all severe. So that the long coats are sure to be hailed with enthusiasm by the majority.

* * *

The long coat costumes in cloth are to be very smart this winter, and there are several different models of this style. Following out the lines that have been in evidence for some time, the figure is more clearly defined in the new coats, especially the back and sides, although this is not proof positive that the loose back coats are losing favour; they represent the fashion of last year, not of this, and, consequently, are not so smart, excepting if made of fur, or if intended to be worn only as loose wraps. The coat, to complete the costume, is considered much smarter now if it fits almost close, excepting just in front, where the fancy waistcoat still gives the straight line. The tight-fitting coat of the winter is intended to be not severely plain, but more or less fanciful in design, and this can only be accomplished by trimmings when the model itself is on severely plain lines. Fancy buttons play an important part, braid is most cleverly put on, there are facings of silk or satin, there are bands of cloth, and then come the fancy waistcoats that do so much to give an air of individuality to a costume and to lend a note of colour—and this question of colour contrasts is an all-important one this winter.

* * *

The cloths of the present day are of most exquisite fabric and colour, light in weight, and are of wonderful finish. They are excellent for any garment that has to be tight-fitting, for, the material being soft, it is easy to mould it to the lines of the figure, but it requires good workmanship if it is to turn out well. It is possible to find among the new cloths a weight that is delightful to wear, quite light, and at the same time with much more warmth to it than in the heavier and rougher surfaces or in the less closely-woven materials.

* * *

In every shade of colour are these cloths, and this winter the dark and the light colours will be seen made up in these long coat costumes. Light greys and tans, as well as brighter colours, are affected, and there are most charming and effective shades in the dark colours as well. There are two or three new shades of purple and blue, a charming green that is quite novel, a dark grey, and an unusual variety in black. And it is said that black is to be extremely fashionable again this winter for street gowns. This is generally the case when fancy waistcoats are in fashion, for it is possible to get so many different varieties of colouring and effect, and the black and white combination, which is sure to be becoming, is always most effective, both for the young and the older woman.

* * *

The handsome tailor-made gown illustrated this week is of cinnamon-brown cloth with a raised stripe. The coat is cut in Empire style, and both coat and skirt are trimmed with bands and frogs of braid. The vest and turn-over collar are of biscuit cloth embroidered with yellow silk. The hat is of biscuit-coloured felt, trimmed with cinnamon-brown velvet and ostrich plumts shading from deep brown to golden yellow. The cut and style of this gown is perfect; the illustration is from the original costume made by a Parisian tailor.

Neglige Necklaces.

Among the dainty and fascinating belongings of the modern woman is usually found one of the new négligé necklaces. So wondrously attractive are they in all their variations that it would be impossible to imagine anything lovelier or more becoming.

Surely it has ceased to be a fashion to envelop one's neck in heavy, massive ornaments, regardless of the fact that in almost every case they are unbecoming and look ugly. Still, if fashion should so dictate, the ardent follower of modes would encircle her throat with these ostentatious ornaments.

Chic négligé necklaces are so fairylike and dainty in their construction that admiration results from an inspection of them.

Beautiful gems of priceless value may be employed in the designs, and the arrangement is made in such a way as to avoid all apparent show.

Parisian diamonds make up exceedingly well in these fashionable chains when the matter of cost enters into the consideration, and if set in either gun metal or solid silver mountings they are scarcely discernible from costlier ones. Besides, they are within the reach of the average woman.

The truly elegant necklaces are made of platinum, with fine chains to encircle the neck, and hang down in two slender, pendent ends that are finished with pearl or coloured jewel drops, mounted in diamonds or rhinestones.

When the chain is clasped together in the front with a charming ornament of some fanciful or characteristic style, a happy result is obtained, and if a beautiful arrangement of a rococo pattern is selected, with a small brilliant placed at each crossing of the slender bands and around the irregularly-shaped outer edge, an exquisite touch is given.

Another design of a little more significance is a true lover's knot, completely studded with diamonds or turquoise, and the platinum chain is finished at the bottom in two tiny bows to correspond, each holding a single mounted pearl.

A novelty of service to the woman with a throat that has lost its roundness, and who is anxious to hide this unavoidable defect, is a piece of tulle or cobwebby lace threaded through Parisian diamond slides.

Hints for Dressing Baby.

Do not put stays of any kind on your children before the age of 14 or 15; until then a light-fitting band of jean, sufficient to support the under-clothing comfortably, is all that is needed to preserve the grace and contour of the figure. During childhood the bones are comparatively plastic, and undue stricture or pressure of any kind is liable to produce deformity. Beware, therefore, of impeding or spoiling the development of the form by artificial bandages, whether corsets, garters, waist-strings, or an excess of weight hung from the lips.

All garments worn by children should depend from the shoulders; a simple sash, lightly tied over the outer frock, is quite enough to indicate the waist. In this respect the French are very wise. No French child is ever seen with a "waist."

As for the stockings, they should be held up by means of suspenders, never by ligatures above or below the knee. Garters impede the circulation grievously, and thereby give rise to the distressing and disfiguring complaint of varicose veins.

In our variable climate children should wear high-necked frocks, with sleeves reaching at least to the elbow. In winter the sleeves should be quite long, or else warm mittens should be worn as a protection against frost bites. When out of doors the feet should be stoutly shod. Never buy for your children pointed or high-heeled shoes or boots, but see that they are made with square broad toes, and a simple lift at the heel of not more than a quarter, or at most half an inch in thickness.

While your children are still infants, let them roll and tumble about on the floor as much as and in what fashion they please; do not be too anxious to set them on their legs, otherwise you will run the risk of imposing a strain on the bones and muscles of the lower limbs, that may induce feebleness of the ankles, curvature of the thighs and legs, and similar evils. When they begin to get strong, and to acquire the power of control over their limbs, accustom them to the use of rhythmic exercise of the arms, legs, and body.

THE MARK LANE EXPRESS SUPPLEMENT FOR THE HOME

Conducted by "PEPITA"

THE NEWEST FASHIONS.

A great deal of latitude is allowed, this season, in the making of evening gowns. The high-necked evening bodice, that is to say, the bodice with lace covering neck and shoulders, is again allowable, and a very convenient fashion it is for thin or elderly ladies. The remarkably pretty gown in the illustration is of pale blue Liberty satin. The bodice is draped with black Chantilly lace, and the collar and yoke are of transparent lace. The undersleeves are of mousseline de soie. Pearls are the only ornaments worn with this gown. The design is an exceedingly simple one, but it is of that exquisite simplicity which charms and fascinates. Note the graceful draping of the skirt. This is due to its perfect cut. The illustration is a photograph from life, and has been specially obtained for the readers of the "Mark Lane Express Supplement."

* * *

Little shawl wraps are among the most fascinating outer garments which a woman may possess. Anyone who has a small shawl, one of the fine embroidered crêpe shawls or an India shawl of small size, may possess one of these little wraps at comparatively little cost. They are, of course, not sufficiently heavy for out-of-door winter wear, but will do nicely as indoor wraps for those who find their houses full of menacing draughts.

* * *

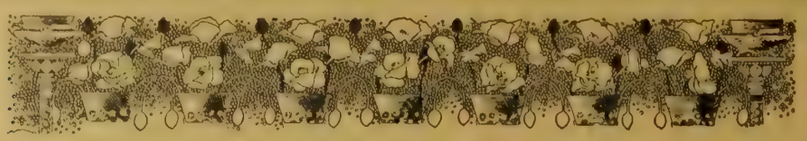
The small or medium-sized embroidered shawls usually have a fringe and heavy embroidery border. Such a shawl is made into a little wrap having kimono sleeves and the border around the bottom and down the front. It takes the best kind of manipulation to make up these little shawl wraps so that they are becoming and not clumsy without cutting the shawl. Many dressmakers cut the shawl to make a more perfect fit, but this seems a pity, as a very fine shawl is a thing of beauty in itself. Besides this, when one has succeeded in making the wrap without cutting the shawl the effect is somehow much more attractive. The material is so soft and pliable that in skilful fingers it is quite possible to attain all the adaptation to the figure that is necessary without cutting the shawl. The crêpe shawls especially are very easy to mould to the figure. India shawls are more difficult of management, and the cashmere shawls even more troublesome. The cashmere shawls, in fact, are hardly handsome enough for this purpose. Only the handsomest shawls really are worth making up in this fashion.

* * *

In making up the crêpe shawls no more other material than is actually necessary should be used, but when it is necessary the crêpe is matched exactly in colour if possible. Small button moulds are sometimes covered with this crêpe and used to fasten the folds of the shawl. The crêpe is sometimes guaged for this purpose, as this disguises the difference in colour. Satin or silk of the ivory shade which the white shawls usually attain after some years is often a better match, or rather more harmonious with the shawl, than crêpe, as it is sometimes very difficult to get exactly the right shade in crêpe. The satin matches the texture of the embroidery of the shawl more closely than any other fabric. The satin may be used to supplement the material of the shawl in such a way as to avoid cutting the shawl. Tassels of cream silk and cord are also used to tie or decorate the shawl wraps. Sometimes they are made to fasten down the front with buttons of satin or crêpe and cord loops.

* * *

The black crêpe shawls are never quite so attractive as those of ivory crêpe, but for those who dress only in black they are very handsomely made into wraps, sometimes quite without any trimming but the decorations of the shawl itself, and sometimes with bands, buttons, and cord. The India shawls are also made up without any trimming or with buttons of silk, as the fancy of the owner dictates. Black silk or satin sometimes goes very well with these India shawls. Dull, rich colours, such as are used in the shawl itself, are also matched in satin for buttons, cords, and other fastenings.



* * *

The embroidered crêpe shawls in light colours, pink, blue, and yellow, are also fascinating for these small wraps. The colours which are obtained at some of the good dyeing establishments with these old shawls are wonderfully beautiful, the pinks especially being charmingly deep and soft. Yet it is a question whether any colour which could be obtained would be so beautiful as the old ivory of a shawl which has lain wrapped in fine linen for many years.

Evening Gown of Liberty Satin, trimmed with Black Chantilly Lace,

PAPER PATTERN 1/6½. POST FREE.

GARDENING IN NOVEMBER.

The weather during the past month has not been very favourable for work out of doors, and, consequently, much attention will be needed at every opportunity to clear the ground of weeds and annuals which have ceased to bloom and no longer add to the beauty of the garden.

The lawn should be carefully gone over as required with the machine, and afterwards well rolled, as the ground is now full of moisture and worm-casts are much in evidence. It is always a mistake to cut the grass when it is wet, as the mower does not work cleanly, and invariably leaves a smeary surface in places. It is better to use the mower when the lawn is quite dry, or after wind has dried the grass. The machine that carries a box for collecting the cut grass is better than one without, as it does away with the unpleasantness and irksomeness of vigorously sweeping the lawn with a besom. Where there are trees about which are casting their leaves, it is well to pick up the fallen foliage before mowing operations commence, otherwise they choke the blades and necessitate the stopping of the machine, and the restarting generally makes the smear spoken of above.

This is the month when surface sprinkling of rich compost half-an-inch or so thick should be applied. It should be raked over lightly, and all stones or hard substances removed.

Lawns which are used almost as freely as grass walks need a stimulator. This is also a good time to lift the turf and relay any parts which are unsightly or uneven. The weeds and coarse grasses may be taken out and dwarf growing lawn grass sown. This should be entirely free from rye grass and clover. In case it is not possible to execute the work spoken of at once, the same process may be carried out in the latter part of March.

The best lawn seed may be purchased for 1s. to 1s. 3d. per lb, and should be lightly sown where bare patches have been created by the removal of weeds.

By the way, I may say that Daisy Destroyer can be applied at any time during the year (excepting in winter), the autumn and early spring months being, however, the times most recommended. Cut the grass closely beforehand, and apply the destroyer in fairly dry weather. The same destroyer will operate and produce the best results if applied to other objectionable weeds, such as docks and dandelions, but the heads should be cut out of these and a little of the powder placed on the crown. Messrs. Dicksons, Chester, supply a small sample tin for 1s., or 1s. 5d. post free. The patentees state that the destroyer is not poisonous, and no danger need be apprehended to birds or animals from its use, and it is not injurious to the hands.

The drainage should be thoroughly satisfactory, or disappointment will ensue.

Dahlias should be taken up at once, as they have now finished blooming. The best plan is to go over the plants, see that they are true to name, and carefully label them before they are cut down. If we wait till the frost kills them, we cannot sort the roots out and select the colours we particularly wish to preserve for planting next year. Lifting should be performed on a dry, sunny day, and the stalks cut to within four or five inches above the surface. It is advisable to use a digging fork and raise the roots tenderly, being quite sure that the name and colour of the variety is distinctly tied to each root.

The reason for recommending a fine day is in order to allow the earth adhering to dry, and it will easily be removed before putting the roots away. Some people wash the roots, as they imagine that if stored with even a little soil, they do not keep so well during the resting period. As soon as name-plates have been attached to each root, and they are quite ready for the store, the stalks may again be reduced to a little more than an inch. I have found a cellar shelf a very suitable place to keep roots free from the frost, heat, or any dampness. They should be covered up with any dry material—old bags answer the purpose very well—and if an occasional glance is given to them to see that no damp has found its way to the store, you may rest assured that your dahlias are all right. Should decay be found, cut it away and save it from spreading. They will not be replanted till May, and, therefore, it is important to keep an eye on the roots during the resting season.

The anemone is a floral beauty which enriches the flower garden, and may now be planted. It is neat and compact, and some of the blooms positively dazzling. The soil in which they are planted should be well drained, and fairly rich and light. They produce a unique effect if the colours are mixed in beds which are given up entirely to the plant. The finest varieties in mixed colours are:—The Sultan, a remarkably fine, large, handsome flower, dazzling scarlet, with striking yellow disc; St. Brigid, a splendid class of large, semi-double flowers, crimson, rose, violet, and pure white; Single Peacock, of diverse and brilliant colours, with a distinct ring surrounding the dark centre; Lord Nelson, brilliant blue; L'Eclair, bright scarlet, rather large; Garribaldi, rose and scarlet; Victoria Grant, beautiful variety of colours, and free flowering; Rose de Nice, new variety totally distinct from the ordinary type, the petals being all of the same form, are regularly imbricated like those of a fine chrysanthemum, very early, vigorous, and free bloomer, exquisite, soft, satiny rose colour. The ranunculus is another flower which may be planted this month. The tubers should be

CHUMS.

planted with the claws down, in well-drained, light, rich soil, about an inch and a-half deep. Prepare soil and pots for cuttings of chrysanthemums, as the period for dealing with these popular flowers is rapidly approaching. I shall refer to the cultivation of them in my next article.

G. W. Thomson-Price.

IN THE NURSERY.

The Odd One in the Family.

Whence comes the strange diversities in families? Children born of the same parents and brought up in the same environment, moulded by similar influences and trained alike, develop different traits, and show opposite dispositions and tendencies to a degree most puzzling to the observer. Occasionally there is an odd one in the household, an ugly duckling, a child who almost seems like a changeling in the brood, and the onlooker seeks in vain for an explanation of the intrusion in the commonplaces of the family life. If there were ancestral portraits or ancestral records, probably the occasion of the dissimilarity would be found in a reversion to type, in a resemblance in feature and character to some far-away great-grandfather or mother, who almost appears to be reincarnated in the person of the descendant.

When parents are sensible, they study the peculiarities of each child, and if one has a decided bias in any direction, they try to give it a chance for development. To insist on stifling the artistic impulse in the music-loving child, and to put him at the book-keeper's desk, to stunt the mechanical talent and compel the boy who has that as his God-given dower to spend years over Latin and Greek—in brief, to legislate for the odd child in an arbitrary manner, instead of giving him air and space, and consulting his individuality, is to make a criminal blunder.

Rainy Days in the Nursery.

Rainy days are especially trying for children. Mother has her usual duties to do, besides the extra work of the children, always noisy and often fretful with the restraint imposed upon them. Some hints may be of use to those who do not live within easy access of shops, or whose means are limited to such an extent that toys cannot be afforded. The piece-bag, a reel of thread, needles, and thimble, will furnish enough to keep the most restless child quiet for many an hour. Dolls are the delight of every little girl's heart, and such "lovable" ones can be fashioned from cotton and stuffed with wool, eyes painted with a little blue paint, the nose pinched and stitched into place, and a little mouth made with a bit of red threads of any brown or black woollen stuff; thread; hair can be furnished from ravelling then dress the dollie, adding stockings cut from an old pair, and a little pair of boots of bright flannel or crocheted with bright yarn. All these may be done at odd minutes—if a mother ever has any—and kept for a surprise when most needed.

For boys it is more difficult to furnish amusements, if they are not old enough to read, but I have found a supply of acorns a boon to children. Elephants, horses, dogs, cats, mice, rats—indeed, nearly all the animal kingdom—can be fashioned out of cloth and stuffed with wool. Gay-looking birds can be made the same way, and a flat feather sewn on or glued on for wings and tail. Each mother should study the tastes of her children, and try to furnish amusement for them in times of necessity. Do not expect the poor wee things to sit about and amuse themselves all day; show them how to play, and they will easily take to it. Scrap books are an endless source of amusement to both boys and girls. Collect the pictures at your leisure, and any old book will do to paste them in. A cupful of flour paste, and the stiff quill of a goose-wing will do for a brush. These few hints enlarged upon will secure you many a leisure hour, and give your children a taste for occupation, which will, perhaps, tell for their benefit in the years to come.

Artificial Feeding.

To bring up a child successfully by means of artificial feeding, several points must be carefully regarded with reference to the food—regularity, cleanliness, quantity, and manner of administering. Regular hours must be insisted upon, and if the infant cries in the intervals, water may be given, but not food. Overloading the stomach is sure to produce indigestion if persisted in, although an infant's stomach will endure a surprising amount of ill-treatment without rebelling.

Cleanliness is indeed next to godliness in the care of an infant's food and milk vessels. Experience has proved that no arrangement for artificially administering food to a baby is equal to a glass bottle with a rubber nipple. Many so-called improvements have been made, but they have all proved a snare and a delusion. The bottle should have smooth, round corners, so no particle of milk will adhere to it; and on it should be fitted a black rubber nipple with a very small hole. Too many or too large holes allow the child to take the milk very rapidly, so that it forms hard curds in the stomach. In fact, the little one should be forced to work for some of its food the same as though it were taking it from the breast. Several bottles and nipples should be kept on hand; and when not in use, the bottles should be filled with water containing a little baking soda, and the nipple should be dropped into water similarly prepared. The instant the child has finished using a bottle, the latter should be washed, scalded, and treated as above mentioned. Never allow milk to stand in a bottle. If a bottle looks cloudy, as if not perfectly clean, it may be made bright and clear by putting grains of rice or broken bits of egg shells in it, with a little hot water, and shaking vigorously.

To Wash Mirrors and Glass of any Sort.

Put a few drops of ammonia on a moist rag and make short work of it. If the glass is very dirty, put some finely powdered whiting in a small piece of muslin. Dab it over the glass. The dirtier the glass the more whiting is required. Then smear evenly with a damp rag, and let it remain until dry. Then rub off with chamois. If alcohol be used instead of water the glass will receive a fine polish.

NEEDLEWORK.

Bead-work Photo Frame.

Among the decorative articles made of beads none are prettier than the bead frames, and, best of all, these will remain in style longer than purses or collars, and so one will not feel that it is time mis-spent in fashioning them. The groundwork is of small opal beads, and the corners quaint rosebuds with green leaves. The design is sewn upon net and mounted with a light ormolu border, and is particularly dainty when set under glass.

Mosaic Embroidery.

The illustration shows a dainty doiley of mosaic work with net centre, which cannot fail to be admired by all lovers of coloured embroidery. Mosaic embroidery, which is simple and artistic, resembling stained glass in its many hues and richness of effect, is wrought after the manner of jewel-work, but differs in design. The jewel-work is confined to disks and ovals largely, while mosaic takes in almost any form of a conventional or geometrical character, diamonds and squares being a distinguishing feature in numerous designs.

The various parts of the design are first heavily padded or raised by stitches taken across the form in the opposite direction to the embroidery proper. This padding may be done with the same silk as will be used for the outside, or a padding cotton made for the purpose may be used. The work is all done in satin stitch across the forms, which are afterward outlined in a contrasting colour, black being the most effective. In the illustration black is used as an outline, while the diamonds and squares are of pink, old-rose, blue, green, lavender, and yellow in soft shades and varied combinations.

Two popular features of this style of embroidery are the simple stitchery used and the lack of shading, as the term is known in ordinary coloured embroidery. This gives opportunity to the beginner who does not command an intimate knowledge of a long list of complicated stitches, such as are called for in Mountmellick and numerous embroideries, and also frees her from the necessity of combining a number of shades in such a manner as to bring out the contour and beauty of a more or less intricate design.

The grouping in an artistic manner, which is all that is required as to colouring in the mosaic work, is by no means difficult, for the black outline separates any colours which might others conflict. Frequently the black outline is carried across solid masses of colour, marking them off into diamonds or squares.

In the doiley under discussion a centre of net is inserted, but solid linen may be used if preferred. On combining net and linen, the net is basted into position on the linen and the edge buttonholed or worked over and over neatly. The linen is then cut away from beneath the net, except for a seam's width. Corners are clipped in and the raw edge of the linen turned back and caught into place along the embroidery stitches. This gives a stronger edge than is obtained by cutting the linen close to the embroidery.

All buttonholed edges should be padded in order to carry out the raised appearance of the work. Sets of doileys like the illustration, with a larger centrepiece, are very attractive, especially when used on a polished surface.

COOKERY.

Egg Dishes.

Everyone knows how to boil eggs; from three minutes to three and a-half is the time required to dress them properly; but the water must boil before they are put in, and must continue boiling during the time they are in.

There are various modes of making omelettes. To make the common omelette, break six eggs into a basin, or rather break them one by one into a tea-cup, and then pour them into the basin—for one might perchance be bad. Add to the eggs a tablespoonful of soft water, and some pepper and salt. Beat up the whole well together, and remember that the more an omelette is beaten the lighter and better it is. Put 1½ ozs. of butter into a small frying-pan; when it boils, and has done hissing, throw in the beaten eggs. As the omelette hardens on the edge of the pan, draw the hardened part towards the middle. Raise the pan every now and then from the fire, to prevent the omelette from burning. When the whole is hard enough to be turned out, but still soft in the middle, it is done enough. It should be turned from the pan into the dish, and one-half folded over the other, as it slides from the former into the latter. A savoury omelette should never be turned in the pan; it should be dressed only on one side.

To make an omelette, with herbs, add some parsley and shallots to the beaten eggs before they are thrown into the frying-pan. If you wish to have an omelette with ham or bacon, cut the latter into very small bits, and fry it in the butter before you throw in the beaten eggs, in which, when you use ham or bacon, no salt is required. Sheep's kidneys may also be cut very fine and fried in the butter before the beaten eggs are thrown in; or veal kidney, cold, cut from a roasted loin of veal, may be added to the eggs, as may ham, when it is dressed; and also anchovies, shred very fine.

BEAD-WORK PHOTO FRAME.

In short, in making savoury omelettes, anything savour may be added; oysters, for instance, or shrimps, or prawns, or minced lobster, or crab, or dried salmon, or Lyons sausage, or hung beef.

Sweet omelettes must be fried on both sides, but care must be taken not to do them too much; there must be a little salt put into them, but no pepper. When they are done, spread them over with sweetmeats, and roll them into rolls; strew powdered sugar over them, and send them to table.

MOSAIC EMRROIDERY.

Egg Sponge.—Separate the yolks from the whites, taking care to keep the yolks whole, and placing them on a dish wet with cold water, so they will readily slip off. Beat the whites perfectly stiff, and dip into egg cups, as many as there are eggs. Make a little hollow with a teaspoon in the middle of each, and slip in a yolk. Set the cups into a pan of boiling water, and place in a hot oven for two or three minutes. Sprinkle with salt, pepper, and a trifle of butter, and serve immediately in the cups.

Celery Omelette.—Two eggs, two tablespoonfuls of milk, two tablespoonfuls of chopped celery, salt and pepper to taste. Beat the yolks, add milk, celery, and seasoning. Beat the whites stiff, and fold and cut them into the yolks. Cook in a hot buttered pan till brown underneath. Place in the oven till dry on top. Fold over and turn out.

Egg Fondu.—Beat six eggs lightly with a fork, add four tablespoonfuls of finely-chopped cheese, a quarter of a teaspoonful of salt, and a dash of cayenne pepper. Pour into a saucepan containing a tablespoonful of hot butter; stir constantly until the eggs are smooth and jelly-like. Serve at once on squares of buttered toast, on a hot dish garnished with parsley.

Puff Omelette.—Stir into the yolks of six eggs, and the beaten whites of three, one tablespoonful of flour mixed smooth in a tea-cup of thin, sweet cream, with salt and pepper to taste. Pour into a pan containing a tablespoonful of hot butter, place in a hot oven until it thickens, then pour over it the remaining whites, well-beaten; return to the oven, and bake a delicate brown. Do not fold.

ROUND-ABOUT NOTES.

There was a large gathering of artistic, literary, and Society people at the Private View of the Society of British Artists, in Suffolk Street, Pall Mall. The Exhibition, this season, includes some exceptionally good work, and in the water-colour room there are several water-colours which command attention as being considerably over the average, not only from the point of view of technique but as examples of perfect atmospheric effect. "An Autumn Evening" (50), by Mr. H. K. Rooke, is one of these, and a delightful study of heather, "The Caravan of Witley Common" (55) is evidence of Mr. S. Grant Rowe's charming drawing. Mr. T. F. M. Sheard has some masterly examples of his clever work in oils. His almost unique power as an exponent of bright noon-day sunshine effects is strikingly shown in a charming study entitled "Madge, the Gleaner" (322), a country-girl in a sun-bonnet standing amidst the corn. Mr. Sheard also shows two vigorously painted portraits (Nos. 364 and 422).

* * *

Mr. Allan Davidson sends two very good genre paintings, "Jack and Jill" (No. 310), a country lad avowing his love to a pretty village girl, and "The Belle of the Farm" (369). Mr. Davidson's landscape studies "The Still River" (264) and "A Yorkshire Stream" (286) are both excellent in tone and quality. Adolph Brougiers' fine water-colour sketch of Church Row, Hampstead, showing a row of early Georgian houses is a delightful rendering of this old-world picturesque spot. "The Cab Rank, Trafalgar Square" (178) by Algernon Talmage is a clever bit of painting, showing London by night. "St. Martin's Church: Evening" (274), by the same artist, should not be missed, and another picture well worth attention is "Walberswick Ferry" (427), by W. Luker, Junr.

* * *

Miss Grace Jean Crocker, the American raconteuse, is again in town, and I notice that she is announcing two recitals to take place at the Steinway Hall, one on November 11th, at 3.30, the other on December 2nd, at 8.30. She is to be assisted on November 11th, by Mr. Denis O'Sullivan. Miss Crocker has a special gift as a humorous raconteur, and her dramatic abilities are well known, so that the hall, on each occasion, is likely to be well-filled.

* * *

The world has been watching with deep interest the so-called awakening of China. Almost daily we learn of some new step forward covering the fields of modern endeavour. The latest intelligence is of the growing popularity of the piano. The invasion of this Oriental land by the piano has given the instrument manufacturers of Germany, England, and the United States a new field to work in, and they are trying hard to meet the whims and fancies of Oriental taste. In their efforts they stumbled over some rather humorous obstacles which required some careful study to overcome. At first the existence of a piano in China seemed as perilous as that of a plant out of its native climate. The excessive dampness during the summer months, and in North China the extreme dryness during the winter, caused the wood to swell, the keys to stick together, and they do not rise after being struck. Owners endeavour to obviate this by placing charcoal fires inside the lower part of the piano to dry them out, but this, of course, is never satisfactory, and in many cases has led to the destruction of the instrument by fire.

* * *

A special style of piano which is now being made for the Chinese has the case formed of strips of wood not solidly glued together, thus allowing the wood to expand and contract without affecting the instrument. Another misfortune reported to have been experienced by many shippers was that of improper packing. Invariably such labels as "This side up with care" and other instructions are to be seen on the outside of the boxes, but to the Chinese mind they convey no impression, and owing to the fact that almost everything in China is done backwards, the piano more often arrives upside down than in its proper position. Now that the modern piano has arrived in the Celestial Empire, the time should be not far distant when a Chinese pianist will visit the American concert stage.

"Pepita."

Don't Neglect Your Hair

Your looks demand that you take care of your hair—that you make it more beautiful, more lustrous, softer. You can readily and easily do all this by using

ROWLAND'S MACASSAR OIL

"For *Your* Hair."

—a preparation which had proved its worth over a century ago.

Rowland's Macassar Oil is a hair food—it nurtures, strengthens and promotes the growth of fine, silky hair. You will notice an improvement in the appearance of your hair from the first time you use it.

You cannot risk your beauty by experimenting with unproved remedies—therefore order a bottle of Rowland's Macassar Oil to-day, **3/6**, **7/-** and **10/-**. Rowland & Son, 67, Hatton Garden, London, E.C.

"Miol"

A perfect substitute and superior to Cod-Liver Oil, Emulsions, and Malt. By its use the increase of body weight is steady and maintained. Pleasant to the taste, and greatly enjoyed by children and adults. Send for booklet giving full particulars and Medical Opinions.

COOKERY.

Some Economical Dishes for Autumn Evenings.

With the return of the long, chilly evenings of autumn, supper becomes a more important meal than during the summer, when in most households that dine in the middle of the day, a cold meal is generally served. Old-fashioned housekeepers, indeed, often seemed to believe that cold meals were more economical, as well as less trouble, than hot ones. But this is not the case. A little trouble on the housewife's part will often produce tasty dishes, which are not only more nourishing, but really cost less than continual cold meat and bread and cheese. Soup is always welcome, and, if the stockpot is kept continually going, as it should be, can always be made.

Potage aux Croutons.—For this, take about 2½ lbs. of mealy potatoes, and boil. Place 1 quart of stock in a large saucepan, and boil in it some outer stalks of celery (reserving the centre to be eaten raw), and 2 large onions, till thoroughly done, flavour well with salt and pepper; strain out the vegetables. Beat the potatoes through a sieve, or potato masher, till all lumps are removed, and add to the soup with ¼ pint of milk or a little cream. Bring to the boil. Take some slices of bread, and cut in squares or fancy shapes. Fry these slightly in a little dripping. Scald a small bunch of parsley in the boiling soup, then chop very fine. Place the fried croûtons and parsley in the bottom of the soup tureen, pour over the boiling soup, and serve very hot.

Fried Liver Cakes.—Take 1 lb. of calf's or sheep's liver, and stew till tender, 4 ozs. of cold bacon or ham, ½ lb. bread-crumbs, 1 small onion. Pass the liver, bacon, and onion through a mincing machine, or chop finely. Season well, and mix with the bread-crumbs. Use 2 eggs to bind together into balls, adding a third or a little water, if necessary, to make it adhere. Flour the balls, and fry a rich brown, and serve with some good brown gravy.

Potatoes and Cheese (A Vegetarian Dish).—1½ lbs. of hot, mashed potatoes, ¼ lb. of grated cheese (and a sprinkling of grated Parmesan if it is at hand), 3 tablespoonfuls of milk, and 1 oz. of butter, to be well seasoned, and thoroughly mixed together. Butter a pie-dish, and line it with brown, dried bread-crumbs. Put in the potato and cheese, bake for ½ hour in a hot oven, turn it out, and serve very hot.

Stewed Spanish Onions are one of the most wholesome and nourishing supper dishes that can be served, either alone or as an accompaniment to a dish of hot meat. They should be stewed quite 3 hours, if very large, and may be done in broth, or over a slow fire, with the addition of a large lump of butter, when their own juice will make plenty of gravy. They are much recommended as a cure for colds or influenza, or to induce sleep.

Haricot Beans Boiled with Bacon or Pickled Pork.—Soak some haricot beans for 24 hours. Place in a saucepan with a small onion, and boil for about 4 hours. When they are half done, put in with them some small square pieces of bacon or pickled pork, and continue to cook together. Do not give more water than is necessary to prevent burning and allow the beans to swell, adding more from time to time as necessary. When done there should be just enough liquor to serve with them, and none to throw away, as this would contain much of the nourishment.

A Very Savoury Pudding.—Take ½ lb. of cold minced beef, 2 onions chopped fine, ½ lb. of flour, and ½ lb. of finely-chopped suet, some pepper and salt, and a well-beaten egg. Mix well together, and add sufficient stock to moisten. Steam for 3½ hours in a well-greased basin, and serve with some hot brown gravy.

Jugged Rabbit, if not quite so good as jugged hare, is much less costly. Cut a large rabbit into joints, and fry a rich brown; and at the same time fry some forcemeat balls. Place the browned joints of rabbit in an eathenware jar, stick 2 onions full of cloves, and tie up in a small muslin bag (so they can be easily removed) a bunch of herbs, some peppercorns, and a little allspice. Cover with some good stock well browned, and add nearly a wineglassful of mushroom catsup. Place the lid on the jar, and cook in a hot oven for 4 hours. Just before dishing up, thicken the gravy, and drop in the forcemeat balls. Serve with some red currant jelly. Both this and jugged hare are tremendously improved by the addition of a little port wine, if there should be any at the bottom of the decanter; but that, perhaps, is not an economical ingredient.

For Forcemeat Balls, take ¼ lb. of finely-chopped suet, the rind of ½ lemon grated, 2 ozs. shredded ham, 1 teaspoonful each of dried parsley and sweet herbs, salt, cayenne, and mace, 6 ozs. of bread-crumbs, and 2 eggs. Mix thoroughly together, roll into small, round balls, flour well, and fry a rich brown.

Kedgeree.—Take the remains of any cold, boiled fish, remove skin and bones, and break into small flakes. Then take a breakfastcupful of boiled rice, two hard-boiled eggs, minced small, and seasoned with salt, pepper, and a little cayenne. Melt about 2 ozs. of butter in a frying pan, and brown it slightly. Add the mixed fish and rice, stirring till very hot, and serve immediately.

Mary Lovell.

CREAMED EGGS IN PATÉ SHELLS.

Practical Recipes.

Creamed Eggs in Paté Shells.

Cut hard-boiled eggs into small pieces and reheat in a cream sauce seasoned with minced green parsley; then fill pâté shells made from puff pastry, and on top of each one place a spoonful of whipped cream, over which sprinkle a little of the hard-boiled egg yolk pressed through a sieve. The cream sauce can be of plain sweet cream just heated, or of milk thickened with a little flour and seasoned with salt, pepper, and butter.

Devilled Duck.

Put into a skillet two tablespoonsful of butter, two tablespoonsful of chopped parsley, one of mixed English mustard, two chopped onions, and two tablespoonsful of vinegar. When the butter is melted cook two minutes, stirring all the time. Add a tablespoonful of Worcestershire sauce, a pinch of salt, some black and cayenne pepper. Cut up a cold boiled tame duck, and put the pieces into the sauce, and cook about five minutes, or until thoroughly heated, being careful not to burn.

Roast Beef Hash.

Melt four tablespoonsful of butter in a skillet. Mix one pound of finely-chopped cold roast beef, and the same quantity in bulk of finely-chopped cold boiled potatoes, moistened with one-half cup of cream. Cook in the skillet until beef and potatoes are well warmed; season to taste, sprinkle with a tablespoonful of finely-chopped parsley. Some chopped onion can be added, but must be first cooked with the butter.

Egg Sauce.

Cook together two tablespoonsful each of butter and flour, and add one pint of milk. Add to the beaten yolks of three eggs and season with salt, pepper, and lemon juice. This may be poured around the fish or served separately, as preferred.

Apple Cream.

Pare, core, and slice 2 lbs. of apples; add the grated rind of a lemon, a gill of water, and 5 ozs. of castor sugar. Stew until tender, rub through a sieve, add a pint of cream or tinned milk. Mix well, and serve in a glass dish.

Mutton Ham.

Mutton ham, if properly cured, makes a nice breakfast dish, either boiled or broiled. Choose the small leg from a freshly-killed sheep; then mix 1 lb. of dry salt, 1 oz. of bay-salt, ½ oz. of saltpetre, and 2 ozs. of coarse brown sugar. Make these ingredients hot in the oven, then rub the leg most thoroughly all over; it should lie for a week, but must be most carefully rubbed with the hand every day, and turned on each occasion. At the end of the week mix a half-teacupful of good vinegar and a teaspoonful of black pepper; put this into the pickle, and rub and turn every day for another seven days; then drain off the brine, wipe the meat dry, and hang up in a place free from damp to dry. When a month has elapsed, the ham will be fit for eating, and found most delicious; but on the careful rubbing and turning does its excellence entirely depend.

Boiled Apricot Puddings.

Use an ordinary suet paste, roll it thinly, and make in cups, so that one little pudding is served to each person. Tinned apricots answer well, and two halves should be allowed for each person. Boil up the syrup with a little sugar, and serve poured round the puddings.

Braised Tongue.

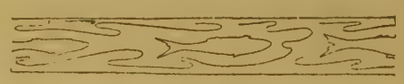
Boil a well-soaked dry tongue for two and a-half hours with a few vegetables, herbs, and spice; then skin it, strew it thickly with breadcrumbs (after it has been brushed over with beaten egg), and either bake or roast it for half an hour, basting it well and browning it carefully. Serve with rich brown sauce, flavoured with port wine and cayenne. Equally good hot or cold.

Florentine Work.

This odd and beautiful work, while it is made with very inexpensive materials, seems at the first glance to be embroidered on cloth-of-gold; and though it would be difficult indeed to copy it from a finished piece, so intricate do the stitches seem, it is really quite simple in its construction. The only drawback is the fact that it requires great patience and accuracy. The finished work is used for purses, card cases, belts, stocks, opera bags, and anything else which is stiff, and may be finished with a silk lining. The first and most necessary part of the work is the canvas on which it is worked. This should be very much like the scrim used so much for cross-stitch—yellowish threads, making tiny even squares, and the stiffer it is the better. The other materials necessary are some twisted embroidery silk, a large-eyed needle and several bunches of gold thread. The latter must be rather fine, the kind that is made of gold paper twisted over cotton string, as it does not tarnish like gold cord.

A belt will be a good thing to begin with, and a straight one will be easier to manage at first, though shaped ones may be very easily made after one has had a little practice. Cut a piece of canvas three inches longer and three inches wider than the belt is to be, and with running stitches of black silk outline the size and shape the belt is to be when finished. The design to be worked must now be drawn on the canvas with a very soft pencil, and the work may be started. The general effect of Florentine work is that cross-stitch patterns have been used, but this is a great mistake, for the stitches are so worked into each other that it would be almost impossible to follow any of these cross-stitch patterns. While some of the designs followed show natural flowers, there are a good many conventional ones, and as the work is imported, the designs are, as a rule, very foreign-looking. While there seems to be no limit to the variety of these designs, they are nearly all worked in the darker tones, and the background filled in with white or some pale tint.

In belts the gold is sewn from side to side, across the narrow strip of canvas, as it would be almost impossible to carry it from end to end; but in purses, bags and card-cases it is always worked from side to side, making the stitches run up and down, while in the belts they run across.



In making a belt, tie a small knot in one end of the gold, and beginning half-an-inch to the right of one of the black outline threads, with a fine thread, overcast in long stitches a single line of gold, covering one thread of the canvas. Having this first line sewn in place makes the remainder of the foundation work easier, for every other thread of the canvas must be covered with a gold thread drawn across and firmly fastened for half-an-inch at each end, beyond the black outline threads. The gold must be turned, and carried back and forth, from one side to the other, without cutting, so that the entire surface of the belt is laid with these loose gold threads. In case a new piece of gold is to be worked in, tie a small knot in the end first, and before each line of gold is sewed in place twist the paper covering tightly, so that a smooth, unbroken line is carried across. This is most necessary, or when the silk stitches are in place, the pink or orange cotton string will show through and ruin the whole thing.

The pattern is now worked over these gold threads, the stitch being straight and covering the gold at right angles. Each stitch must be taken so that two threads of the canvas and one with gold are covered; and they must be far enough apart to show the gold distinctly, which will be the case if the stitches are taken in every other mesh. The stitches on the right side are straight up and down, while those on the wrong side are diagonal, but they are never crossed, and there should be as little waste silk and loose threads on the wrong side as possible. After the first row of stitches has been taken, place the second row so that they fall between the first row, or the gold will show through in stripes.

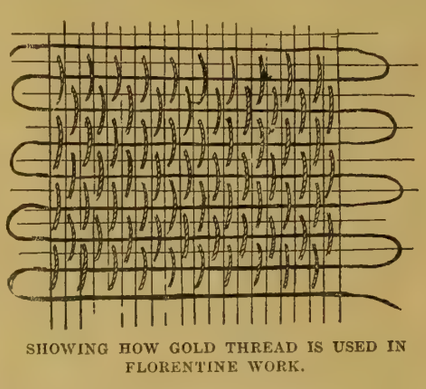
There is special need for accuracy in taking the stitches, as one of the threads will sometimes be found pressed close to the one on which the gold lies, and must be found and brought back into place, or the work will be uneven. If the two parts of the design do not touch, there must be some very careful counting, or the time will surely come when two stitches on the same line seem to belong together, leaving no mesh between, and it will all have to be taken out and made right, or the remainder of the work will be ruined. Every stitch has its own place, and must be in it. After all the pattern is worked, the remainder is very simple, for the whole background is now filled in with the same stitches, in white or some pale tint, and the work is ready to be starched.

Turn the work right side down, on a board covered with a clean white paper, and tack securely with pins, stretching it out smoothly, and be sure it is perfectly straight and "plumb," or it never will be again. Now take some thick boiled starch and rub all over the wrong side of the work, keeping within the black outlines. When this dries, the embroidered surface will be as firm and stiff as though backed with cardboard, while the edges will turn in easily when making up.

Belts of this work are particularly desirable just now, when everything of gold is so sought for; and designs for these should always show that they were made for this purpose alone, and not bought by the yard. No. 1 shows an Oriental design of fish and water, and is very beautiful when the fishes are done in pale sage green, the water in deeper tones of a sea

FLORENTINE BELT, NO. 1.

green, and the background in white. The "swirls" of water will only have to be one, or at the most two stitches wide, and should be so arranged that they do not touch the fish. This belt is to be turned in and lined with white satin, and finished with a French gilt buckle in front.



The dragon fly in No. 2 should have the wings worked with turquoise blue, and a bright green body; the leaves and stems should be in dark blue. The belt should be finished with a bright green or dark blue piping all

FLORENTINE BELT, NO. 2.

around. A buckle with one of the Art Nouveau designs in these colours completes this most attractive belt.

For a dainty opera bag, a pink ground is used, with pale brown leaves and stems, and deep, dull red flowers that spring from a simulated jar having the diagonal lines which form it worked in dark brown. The most unusual and odd part of the design is the triangle of brown, which has a single deep red flower worked in the centre. The bag may either be made up flat or have a stiff shaped bottom, covered with satin like the lining. If it is to be flat, the fold must be at the bottom of the bag, making the canvas twice the length of the bag when finished. But if a stiff bag is preferred, the canvas is cut in one piece, with the fold at the side. In either case, the satin lining must stand up above the embroidered part, in a deep ruffle, with castings and drawstrings.

SHOWING HOW GOLD THREAD IS USED IN FLORENTINE WORK.

A card-case made in one piece and folded through the centre should have a lining of gray satin, with pockets for cards and change. The design may be worked in green and terra-cotta, on a pale grey ground. The design may also be worked in pink and red on a white ground.

Many other beautiful things will doubtless suggest themselves, but let the first piece be a small one, until you are accustomed to the work; for, although it is tedious and a little difficult at first, the finished work will repay one for any amount of time and labour spent upon it.

ROUND-ABOUT NOTES.

The Society of Women Journalists held their Annual Reception at Rumpelmayer's, St. James's, on Monday last. There was a very distinguished gathering of literary and artistic people, and an excellent progamme of music was gone through. Mrs. Humphrey Ward has accepted the Presidency of the Society for the coming year.

* * *

A very pretty operatta, entitled "The Fairy Crown," in which a large number of children took part, was given on the 1st inst. at the Hampstead Conservatoire. The libretto and lyrics were by May Donaldson, and the orchestration by Paul Graener. The operetta was a signal success, not only from a scenic, but from an artistic point of view. Miss Gladys Edwards made a delightful Prince, and as the Princess, Miss Emmeline Chant won enthusiastic applause. Miss Dorothy Mannvoch deserves special mention for her realistic rendering of the character of the "East Wind," and Mrs. Clara Edwarde's old-world songs, as "The Grandmother," were exquisite. Altogether it was a pretty fancy, charmingly produced.

* * *

The Duchess Carl Theodore of Bavaria is attending a cookery school. As the lady is in her fiftieth year, and is the wife of the Duke Carl, one of the best-loved members of the Royal house of Bavaria, besides being a man financially in good standing, the example should be an excellent one for all women who do not know how to cook. The Duchess has joined a cooking class, where she is taught with girls averaging eighteen years of age, and she seems to enjoy the simple task of peeling potatoes and scraping carrots. She can now produce a beefsteak quite creditably, and the other day she made her first German pie and carried her masterpiece to her daughter, the Princess Ruprecht of Bavaria. The Duchess is one of the most accomplished princesses in Europe, speaking ten languages, and being a splendid pianist, besides playing on the organ and harp.

* * *

American sapphires are being used more and more in the manufacture of jewellery. The best ones come from Montana, where there is a mine about four miles long, with an apparently inexhaustible supply of these precious stones. The Montana saphires are small, but of a beautiful deep tint and without flaws. The American sapphire is a brighter blue than the Oriental stone.

* * *

The "lucky" green jade stone is the craze of the moment. It is said that it is impossible to get this gem in uncut form except from the Chinese. Canton is the centre of the trade in Southern China, and buyers must work through the Chinese to secure it. Even the two leading jewellers of Hong Kong buy it in cut form. Jade is sometimes secured in masses of one or two pounds, of varying quality, and sometimes a rich Chinaman's estate will consist in part of a lump of jade. One London firm sent a representative to China some time ago, who reported that he bought jade to the extent of £50,000. He reported it cheaper in Pekin than in the South. Of the coveted light green there are two shades.

* * *

There is at least one place in the world where crime is decreasing, and that is in Sydney, New South Wales. According to a statement made by one of the high Government officials there, the Sydney jails are seldom occupied. There are fewer criminals in proportion to the population than ever before in the history of the country, and the Governor is now wondering what use the jails can be put to if they become entirely deserted.

* * *

It is interesting to learn just now, when there is so much being done to prevent the spread of tuberculosis by expectoration, that the Argentine Health Department has been working on different lines to accomplish the same end. Simple instructions explaining how to prevent the spread of tuberculosis have been printed on the labels of more than eight million match-boxes sent out as an experiment.

THE NEWEST FASHIONS.

It is always conceded that the best-dressed women are those who are the most inconspicuously dressed. At the same time, no woman cares to be so absolutely inconspicuous that her dress never causes any comment. But the day has gone by when garish colours and eccentric styles win approval from the better class of people. It is the woman whose gowns fit to perfection, and only to perfection, who is dressed in dark colours, if they become her more than light, the materials of whose gowns are always of the finest, and whose gowns have that indescribable air about them of having been made after the latest style, who is voted better dressed than any one else.

* * *

The newest models for coat costumes all have long skirts. There are very few women who look their best in the short skirt, unless it is intended for going about in wet weather or for some purely practical use. However, the short skirts have been found so extremely practical and comfortable for the majority of women that there will be a strong effort made this winter to keep up the fashion. Already it is contended that it is quite possible to make up these costumes with short skirts so that they will look very smart and appropriate. The skirt requires to be very carefully cut, and must have a graduated fulness round the feet to look well. And the skirts of the coat must also be wide, or the effect will be very bad and most unbecoming. How the amount of fulness required can be best introduced into the coat and skirt is one of the mysteries of modern dress, but it is a mystery that has been satisfactorily solved of late.

* * *

Such a costume, with coat, skirt, and blouse to match, is very useful, for the blouse and skirt together make a complete dress, to which the coat is merely a charming addition. In the case of the all-silk or all-cloth costume it is possible to have the blouse and skirt made in one, then the coat is more or less of a wrap. And, on the other hand, if it is possible to combine economy with extravagance, it can be done with just such a costume, for, instead of having a skirt and blouse in one, there can be blouse and skirt separate, an additional skirt, either short or long as the case may be, and virtually two costumes are then made out of one. For the difference between a short and a long skirt makes all the difference in the world in the appearance of a gown, transforming it from a purely practical, even though smart, costume into the more elaborate one required by fashion for afternoon wear.

* * *

It is by no means a bad plan to spend the sum allowed for two winter gowns on just such a costume, and have it handsomer than if two were attempted, each with a coat and skirt to match. In the case of the black costume, for instance, this can very easily be done, or in any of the dark shades of colouring. It is, however, not so practical in light colours; but then, too light a shade of colour is not generally useful and should be reserved for the more elaborate models. The figured effects are not good in extremes of this description; but it is said that the figured velvets will be used later on, and for that purpose these same models will be thought extremely good. Velvet costumes are always charming and becoming, and far more practical than is generally supposed.

* * *

There is, however, one great objection to a long velvet coat worn over a velvet skirt—that the two are apt to injure one another, the skirt becoming marked, and besides the two thicknesses of velvet, even when the lining of the coat comes between the two, as it must of necessity do, are not always pleasant or agreeable to wear. All thoughts of economy are laid aside when velvet gowns are made up in this way, for the gown is then only a street costume, and the skirt is made of silk or satin—merely faced with the velvet—and only possible to wear with the velvet coat. On this account many women prefer to have the gown made of silk or satin and the coat of velvet, and then to have the skirt finished with so deep a fold of velvet as to make it look, when worn in the street, as an entire velvet gown. There is a certain false economy about this that will intervene to prevent the fashion being really smart.

* * *

The smart tailor-made gown shown in our sketch is of marine-blue faced cloth, trimmed with insets of blue silk and black fancy braid. The collar is of white cloth, embroidered with blue and white silk.

Variety in Food.

While it is true that "variety is the spice of life," the best judgment of careful students is in the line of simplicity in the matter of food. Have an adequate supply, have it thoroughly and intelligently cooked, but let it be plain, simple, digestible. In this direction a health journal pertinently, if not elegantly, remarks: "Never have a great variety at one meal, but make the variety from one meal to the next. Did you ever stop to think what a conglomerated mass your stomach contained after eating a great variety at one meal? If not, just imagine all you have eaten and drunk mixed up in a bowl, and then ask yourself the question whether it is any wonder that people have dyspepsia."
